

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. GIFT OF

Class

A DICTIONARY,

PRACTICAL, THEORETICAL, AND HISTORICAL,

OF

COMMERCE AND COMMERCIAL NAVIGATION.

BY J. R. M'CULLOCH, Esq. X

EDITED BY HENRY VETHAKE, LL. D.

ONE OF THE PROFESSORS IN THE UNIVERSITY OF PENNSYLVANIA; MEMBER OF THE AMERICAN PHILOSOPHICAL SOCIETY; AUTHOR OF A TREATISE ON POLITICAL ECONOMY, ETC.

WITH AN APPENDIX, CONTAINING
THE NEW TARIFF OF 1846,

TOGETHER WITH
THE TARIFF OF 1842,
REDUCED TO AD VALOREM RATES AS FAR AS PRACTICABLE.

Also 2:50 33

**THE SUB-TREASURY, WAREHOUSING, AND THE CANADIAN
TRANSIT BILLS, OF 1846.**

LIKEWISE,
THE NEW BRITISH TARIFF,
AS AMENDED BY THE PASSAGE OF THE NEW CORN LAW AND SUGAR DUTIES.

WITH
A TABLE OF ALL FOREIGN GOLD AND SILVER COIN,
REDUCED TO FEDERAL CURRENCY, &c. &c. &c.

IN TWO VOLUMES.—VOL. I.

PHILADELPHIA:
A. HART, LATE CAREY AND HART,
126 CHESTNUT STREET.
1852.

"Though immediately and primarily written for the merchants, this Commercial Dictionary will be of use to every man of business or of curiosity. There is no man who is not in some degree a merchant; who has not something to buy and something to sell, and who does not therefore want such instructions as may teach him the true value of possessions or commodities. The descriptions of the productions of the earth and water which this volume contains, may be equally pleasing and useful to the speculatist with any other Natural History. The descriptions of ports and cities may instruct the geographer as well as if they were found in books appropriated only to his own science; and the doctrines of funds, insurances, currency, monopolies, exchanges, and duties, is so necessary to the politician, that without it he can be of no use either in the council or the senate, nor can speak or think justly either on war or trade.

"We, therefore, hope that we shall not repent the labour of compiling this work, nor flatter ourselves unreasonably, in predicting a favourable reception to a book which no condition of life can render useless, which may contribute to the advantage of all that make or receive laws, of all that buy or sell, of all that wish to keep or improve their possessions, of all that desire to be rich, and all that desire to be wise."

JOHNSON, Preface to *Rolt's Dict.*

PREFACE

OF

THE AMERICAN EDITOR.

IN offering to the public an American edition of Mr. McCulloch's valuable Commercial Dictionary, it is unnecessary to add any thing, concerning the object and plan of the work, to what will be found in the subjoined extracts from the author's prefaces to the several editions of it which have appeared in England.

With respect to the labours of the present editor, he has for the most part confined himself to matters relating to his own country, or of especial interest to its citizens. Considerable information of this nature will be found appended to the articles Aliens, Banking, Coal, Coins, Cotton, Importation and Exportation, Imports and Exports, Iron, Roads, Silk, and Tariff, as well as others. A few articles have been inserted on subjects not treated by the author; such as Admiralty Courts, Liverpool, London, &c.

There is, generally speaking, an extreme difficulty in the United States of procuring statistical information, which may be depended upon for its accuracy. Besides the reports, from time to time made to Congress, by the Secretary of the Treasury, and by committees of that body, the principal sources that have been consulted for the purpose are the commercial newspapers published in some of our large cities, particularly the Philadelphia Commercial List,—Mr. Raguet's "Financial Register,—and the "United States Commercial and Statistical Register," edited by Samuel Hazard. The former of the two works just mentioned contains a greater mass of facts, mingled with much valuable disquisition, respecting the subjects to which it is devoted, than is to be found elsewhere. Mr. Hazard's work has just reached the close of its first volume. It is published in weekly numbers, abounds in useful information, and is deserving of extensive patronage.

It is proper to mention that this American has been reprinted from the last English edition. The supplement to this, however, not having been received in time, a page or two was unavoidably omitted to be incorporated with the rest of it in the body of the work, but will be found in a supplement at the end of the second volume. In the same supplement, too, the reader will find further additions by the American editor; some of which, relating to the United States, (the article Fish, for example,) could not be prepared for an earlier insertion; and others, again, consist of the statistics of the commerce of certain foreign ports, brought down to a later date than is given by the author.

EXTRACTS

FROM THE

PREFACE TO THE FIRST EDITION

It has been the wish of the Author and Publishers of this Work, that it should be as extensively useful as possible. If they be not deceived in their expectations, it may be advantageously employed, as a sort of *sacde mœsum*, by merchants, traders, ship-owners, and ship-masters, in conducting the details of their respective businesses. It is hoped, however, that this object has been attained without omitting the consideration of any topic, incident to the subject, that seemed calculated to make the book generally serviceable, and to recommend it to the attention of all classes.

Had our object been merely to consider commerce as a science, or to investigate its principles, we should not have adopted the form of a Dictionary. But commerce is not a science only, but also an *art* of the utmost practicable importance, and in the prosecution of which a very large proportion of the population of every civilised country is actively engaged. Hence, to be generally useful, a work on commerce should combine practice, theory, and history. Different readers may resort to it for different purposes; and every one should be able to find in it clear and accurate information, whether his object be to make himself familiar with details, to acquire a knowledge of principles, or to learn the revolutions that have taken place in the various departments of trade.

The following short outline of what this Work contains may enable the reader to estimate the probability of its fulfilling the objects for which it has been intended:—

I. It contains accounts of the various articles which form the subject matter of commercial transactions. To their English names are, for the most part, subjoined their synonymous appellations in French, German, Italian, Russian, Spanish, &c.; and sometimes, also in Arabic, Hindoo, Chinese, and other Eastern languages. We have endeavoured, by consulting the best authorities, to make the descriptions of commodities as accurate as possible; and have pointed out the tests or marks by which their goodness may be ascertained. The places where they are produced are also specified; the quantities exported from such places; and the different regulations, duties, &c. affecting their importation and exportation, have been carefully stated, and their influence examined. The prices of most articles have been given, sometimes for a lengthened period. Historical notices are inserted illustrative of the rise and progress of the trade in the most important articles; and it is hoped, that the information embodied in these notices will be found to be as authentic as it is interesting.

II. The Work contains a general article on COMMERCE, explanatory of its nature, principles, and objects, and embracing an inquiry into the policy of restrictions intended to promote industry at home, or to advance the public interests by excluding or restraining foreign competition. Exclusive, however, of this general article, we have separately examined the operation of the existing restrictions on the trade in particular articles, and with particular countries, in the accounts of these articles, and of the great sea-port towns belonging to the countries referred to. There must of course, be more or less of sameness in the discussion of such points, the principle which runs through them being identical. But in a Dictionary this is of no consequence. The reader seldom consults more than one or two articles at a time; and it is of infinitely more importance to bring the whole subject at once before him, than to seek to avoid the appearance of repetition by referring from one article to another. In this Work such references are made as seldom as possible.

III. The articles which more particularly refer to commercial navigation are AVERAGE, BILLS OF LADING, BOTTOMRY, CHARTERPARTY, FREIGHT, MASTER, NAVIGATION LAWS, OWNERS, REGISTRY, SALVAGE, SEAMEN, SHIPS, WRECK, &c. These articles embrace a pretty full exposition of the law as to shipping: we have particularly endeavoured to exhibit the privileges enjoyed by British ships; the conditions and formalities, the observance of which is necessary to the acquisition and preservation of such privileges, and to the transference of property in ships; the responsibilities incurred by the masters and owners in their capacity of public carriers; and the reciprocal duties and obligations of owners, mas-

ters and seamen. In this department, we have made considerable use of the treatise of Lord Tenterden on the Law of Shipping,—a work that reflects very great credit on the learning and talents of its noble author. The Registry Act and the Navigation Act are given with very little abridgment. To this head may also be referred the articles on the Cod, Herrings, Pilchard, and Whale fisheries.

IV. The principles and practice of commercial arithmetic and accounts are unfolded in the articles BOOK-KEEPING, DISCOUNT, EXCHANGE, INTEREST AND ANNUITIES, &c. The article BOOK-KEEPING has been furnished by one of the official assignees under the new bankrupt act. It exhibits a view of this important art as actually practised in the most extensive mercantile houses in town. The tables for calculating interest and annuities are believed to be more complete than any hitherto given in any work not treating professedly of such subjects.

V. A considerable class of articles may be regarded as descriptive of the various means and devices that have been fallen upon for extending and facilitating commerce and navigation. Of these, taking them in their order, the articles BANKS, BROKERS, BUOYS, CANALS, CARAVANS, CARRIERS, COINS, COLONIES, COMPANIES, CONSULS, CONVOT, DOCKS, FACTORS, FAIRS AND MARKETS, LIGHT-HOUSES, MONEY, PARTNERSHIP, PILOTAGE, POST-OFFICE, RAIL-ROADS, ROADS, TREATIES (COMMERCIAL), WEIGHTS AND MEASURES, &c. are among the most important. In the article BANKS, the reader will find, besides an exposition of the principles of banking, a pretty full account (derived principally from official sources), of the Bank of England, the private banks of London, and the English provincial banks; the Scotch and Irish banks; and the most celebrated foreign banks: to complete this department, an account of Savings' Banks is subjoined, with a set of rules which may be taken as a model for such institutions. There is added to the article COINS a Table of the assay, weight, and sterling value of the principal foreign gold and silver coins, deduced from assays made at the London and Paris mints, taken, by permission, from the last edition of Dr. Kelly's *Cambist*. The article COLONIES is one of the most extensive in the work: it contains a sketch of the ancient and modern systems of colonisation; an examination of the principles of colonial policy; and a view of the extent, trade, population, and resources of the colonies of this and other countries. In this article, and in the articles CAPE OF GOOD HOPE, HALIFAX, QUEBEC, SYDNEY, and VAN DIEMEN'S LAND, recent and authentic information is given, which those intending to emigrate will find worthy of their attention. * * * The statements in the articles LIGHT-HOUSES and PILOTAGE have been mostly furnished by the Trinity House, or derived from Parliamentary papers, and may be implicitly relied upon. In the article WEIGHTS AND MEASURES the reader will find tables of the equivalents of wine, ale, and Winchester measures, in Imperial measure.

VI. Besides a general article on the constitution, advantages, and disadvantages of Companies, accounts are given of the principal associations existing in Great Britain for the purpose of conducting commercial undertakings, or undertakings subordinate to and connected with commerce. Among others (exclusive of the Banking and Dock Companies already referred to) may be mentioned the EAST INDIA COMPANY, the GAS COMPANIES, the INSURANCE COMPANIES, the MINING COMPANIES, the WATER COMPANIES, &c. The article on the East India Company is of considerable length; it contains a pretty complete sketch of the rise, progress, and present state of the British trade with India; a view of the revenue, population, &c. of our Indian dominions; and an estimate of the influence of the Company's monopoly. We have endeavoured, in treating of Insurance, to supply what we think a desideratum, by giving a distinct and plain statement of its principles, and a brief notice of its history; with an account of the rules and practices followed by individuals and companies in transacting the more important departments of the business; and of the terms on which houses, lives, &c. are commonly insured. The part of the article which peculiarly respects marine insurance has been contributed by a practical gentleman of much knowledge and experience in that branch.

VII. In addition to the notices of the Excise and Customs regulations affecting particular commodities given under their names, the reader will find articles under the heads of CUSTOMS, EXCISE, IMPORTATION AND EXPORTATION, LICENSES, SMUGGLING, WAREHOUSING, &c. which comprise most of the practical details as to the business of the Excise and Customs, particularly the latter. The most important Customs' Acts are given with very little abridgment, and being printed in small letter, they occupy comparatively little space. The article TARIFF contains an account of the various duties, drawbacks, and bounties, on the importation and exportation of all sorts of commodities into and from this country.—(See Preface to Second Edition.) We once intended to give the tariffs of some of the principal Continental states; but from the frequency of the changes made in them, they would very soon have become obsolete, and would have tended rather to mislead than to instruct. But the reader will notwithstanding find a good deal of information as to foreign duties under the articles CADIZ, DANTIC, HAVRE, NAPLES, NEW YORK, TRIESTE, &c.

VIII. Among the articles of a miscellaneous description, may be specified ALIENS, AP PRENTICE, AUCTIONEERS, BALANCE OF TRADE, BANKRUPTCY, CONTRABAND, CREDIT

HANSEATIC LEAGUE, IMPORTS AND EXPORTS, IMPRESSMENT, IONIAN ISLANDS, MARITIME LAW, PATENTS, PAWNBROKING, PIRACY, POPULATION, PRECIOUS METALS, PRICES, PRIVATEERS, PUBLICANS, QUARANTINE, REVENUE AND EXPENDITURE, TALLY TRADE, TRUCK SYSTEM, &c.

IX. Accounts are given, under their proper heads, of the principal emporiums with which this country has any immediate intercourse; of the commodities usually exported from and imported into them; of their monies, weights, and measures; and of such of their institutions, customs, and regulations, with respect to commerce and navigation, as seemed to deserve notice. There are occasionally subjoined to these accounts of the great sea-ports, pretty full statements of the trade of the countries in which they are situated, as in the instances of ALEXANDRIA, AMSTERDAM, BORDEAUX, CADIZ, CALCUTTA, CANTON, COPENHAGEN, DANTZIG, HAYANNAH, HAVRE, NAPLES, NEW YORK, PALERMO, PETERSBURGH, RIO DE JANEIRO, SMYRNA, TRIESTE, VERA CRUZ, &c. To have attempted to do this systematically would have increased the size of the work beyond all reasonable limits, and embarrassed it with details nowise interesting to the English reader. The plan we have adopted has enabled us to treat of such matters as might be supposed of importance in England, and to reject the rest. We believe, however, that, notwithstanding this selection, those who compare this work with others, will find that it contains a much larger mass of authentic information respecting the trade and navigation of foreign countries than is to be found in any other English publication.

The reader may be inclined, perhaps, to think that it must be impossible to embrace the discussion of so many subjects in a single octavo volume, without treating a large proportion in a very brief and unsatisfactory manner. But, in point of fact, this single octavo contains about as much letter-press as is contained in two ordinary folio volumes, and more than is contained in Macpherson's *Annals of Commerce*, in four large volumes quarto, published at 8*l.* 8*s.*! This extraordinary condensation has been effected without any sacrifice either of beauty or distinctness. Could we suppose that the substance of the book is at all equal to its form, there would be little room for doubt as to its success.

Aware that, in a work of this nature, accuracy in matters of fact is of primary importance, we have rarely made any statement without mentioning our authority. Except, too, in the case of books in every one's hands, or Dictionaries, the page or chapter of the works referred to is generally specified; experience having taught us that the convenient practice of stringing together a list of authorities at the end of an article is much oftener a cloak for ignorance than an evidence of research.

Our object being to describe articles in the state in which they are offered for sale, we have not entered, except when it was necessary to give precision or clearness to their description, into any details as to the processes followed in their manufacture. * * *

Such is a rough outline of what the reader may expect to meet with in this Dictionary. We do not, however, flatter ourselves with the notion that he will consider that all that has been attempted has been properly executed. In a work embracing such an extreme range and diversity of subjects, as to many of which it is exceedingly difficult, if not quite impossible, to obtain accurate information, no one will be offended should he detect a few errors. At the same time we can honestly say that neither labour nor expense has been spared to render the work worthy of the public confidence and patronage. The author has been almost incessantly engaged upon it for upwards of three years; and he may be said to have spent the previous part of his life in preparing for the undertaking. He has derived valuable assistance from some distinguished official gentlemen, and from many eminent merchants; and has endeavoured, wherever it was practicable, to build his conclusions upon official documents. But in very many instances he has been obliged to adopt less authentic data; and he does not suppose that he has had sagacity enough always to resort to the best authorities, or that, amidst conflicting and contradictory statements, he has uniformly selected those most worthy of being relied upon, or that the inferences he has drawn are always such as the real circumstances of the case would warrant. But he has done his best not to be wanting in these respects. Not being engaged in any sort of business, nor being under any description of obligation to any political party, there was nothing to induce us, in any instance, to conceal or pervert the truth. We have, therefore, censured freely and openly whatever we considered wrong; but the grounds of our opinion are uniformly assigned; so that the reader may always judge for himself as to its correctness. Our sole object has been to produce a work that should be generally useful, particularly to merchants and traders, and which should be creditable to ourselves. Whether we have succeeded, the award of the public will show; and to it we submit our labours, not with "frigid indifference," but with an anxious hope that it may be found we have not misemployed our time, and engaged in an undertaking too vast for our limited means.

The following notices of some of the most celebrated Commercial Dictionaries may not, perhaps, be unacceptable. At all events, they will show that there is at least room for the present attempt.

The *Grand Dictionnaire de Commerce*, begun and principally executed by M. Savary,

Inspector of Customs at Paris, and completed by his brother, the Abbé Savary, Canon of St. Maur, was published at Paris in 1723, in two volumes folio: a supplemental volume being added in 1780. This was the first work of the kind that appeared in modern Europe; and has furnished the principal part of the materials for most of those by which it has been followed. The undertaking was liberally patronised by the French government, who justly considered that a Commercial Dictionary, if well executed, would be of national importance. Hence a considerable, and, indeed, the most valuable, portion of M. Savary's work is compiled from Memoirs sent him, by order of government, by the inspectors of manufactures in France, and by the French consuls in foreign countries. An enlarged and improved edition of the *Dictionnaire* was published at Geneva in 1760, in six folio volumes. But the best edition is that of Copenhagen, in five volumes folio; the first of which appeared in 1759, and the last in 1765.

More than the half of this work consists of matter altogether foreign to its proper object. It is, in fact, a sort of Dictionary of Manufactures as well as of Commerce; descriptions being given, which are, necessarily perhaps, in most instances exceedingly incomplete, and which the want of plates often renders unintelligible, of the methods followed in the manufacture of the commodities described. It is also filled with lengthened articles on subjects of natural history, on the bye laws and privileges of different corporations, and a variety of subjects nowise connected with commercial pursuits. No one, however, need look into it for any development of sound principles, or for enlarged views. It is valuable as a repository of facts relating to commerce and manufactures at the commencement of last century, collected with laudable care and industry; but the spirit which pervades it is that of a customs officer, and not that of a merchant or a philosopher. "*Souvent dans ses réflexions, il tend plutôt à égarer ses lecteurs qu'à les conduire, et des maximes nuisibles au progrès du commerce et de l'industrie obtiennent presque toujours ses éloges et son approbation.*"

The preceding extract is from the Prospectus, in one volume octavo, published by the Abbé Morellet, in 1769, of a new Commercial Dictionary, to be completed in five or probably six volumes folio. This Prospectus is a work of sterling merit; and from the acknowledged learning, talents, and capacity of its author for laborious exertion, there can be no doubt that, had the projected Dictionary been completed, it would have been infinitely superior to that of Savary. It appears (Prospectus, pp. 353—373.) that Morellet had been engaged for a number of years in preparations for this great work; and that he had amassed a large collection of books and manuscripts relative to the commerce, navigation, colonies, arts, &c. of France and other countries. The enterprise was begun under the auspices of M. Trudaine, Intendant of Finance, and was patronised by Messrs. L'Averdy and Bertin, Comptrollers General. But whether it were owing to the gigantic nature of the undertaking, to the author having become too much engrossed with other pursuits, the want of sufficient encouragement, or some other cause, no part of the proposed Dictionary ever appeared. We are ignorant of the fate of the valuable collection of manuscripts made by the Abbé Morellet. His books were sold at Paris within these few years.

A Commercial Dictionary, in three volumes 4to, forming part of the *Encyclopédie Méthodique*, was published at Paris in 1783. It is very unequally executed, and contains numerous articles that might have been advantageously left out. The editors acknowledge in their Preface that they have, in most instances, been obliged to borrow from Savary. The best parts of the work are copied from the edition of the *Traité Général de Commerce* of Ricard, published at Amsterdam in 1781, in two volumes 4to.

The earliest Commercial Dictionary published in England, was compiled by Malachy Postlethwayt, Esq., a diligent and indefatigable writer. The first part of the first edition appeared in 1751. The last edition, in two enormous folio volumes, was published in 1774. It is chargeable with the same defects as that of M. Savary, of which, indeed, it is for the most part a literal translation. The author has made no effort to condense or combine the statements under different articles, which are frequently not a little contradictory; at the same time that many of them are totally unconnected with commerce.

In 1761, Richard Rolt, Esq. published a Commercial Dictionary in one pretty large folio volume. The best part of this work is its Preface, which was contributed by Dr. Johnson. It is for the most part abridged from Postlethwayt; but it contains some useful original articles, mixed, however, with many alien to the subject.

In 1766, a Commercial Dictionary was published, in two rather thin folio volumes, by Thomas Mortimer, Esq., at that time Vice-Consul for the Netherlands. This is a more commodious and better arranged, but not a more valuable work than that of Postlethwayt. The plan of the author embraces, like that of his predecessors, too great a variety of objects; more than half the work being filled with geographical articles and articles describing the processes carried on in different departments of manufacturing industry; there are also articles on very many subjects, such as architecture, the natural history of the ocean, the land-tax, the qualifications of surgeons, &c., the relation of which to commerce, navigation, or manufactures, it seems difficult to discover.

In 1810, a Commercial Dictionary was published, in one thick octavo volume, purporting

to be by Mr. Mortimer. We understand, however, that he had but little, if any thing, to do with its compilation. It is quite unworthy of the subject, and of the epoch when it appeared. It has all the faults of those by which it was preceded, with but few peculiar merits. Being not only a Dictionary of Commerce and Navigation, but of Manufactures, it contains accounts of the different arts: but to describe these in a satisfactory and really useful manner, would require several volumes, and the co-operation of many individuals: so that, while the accounts referred to are worth very little, they occupy so large a space that room has not been left for the proper discussion of those subjects from which alone the work derives whatever value it possesses. Thus, there is an article of twenty-two pages technically describing the various processes of the art of painting, while the general article on commerce is comprised in less than two pages. The articles on coin and money do not together occupy four pages, being considerably less than the space allotted to the articles on engraving and etching. There is not a word said as to the circumstances which determine the course of exchange; and the important subject of credit is disposed of in less than two lines! Perhaps, however, the greatest defect in the work is its total want of any thing like science. No attempt is ever made to explain the principles on which any operation depends. Every thing is treated as if it were empirical and arbitrary. Except in the legal articles, no authorities are quoted, so that very little dependance can be placed on the statements advanced.

In another Commercial Dictionary, republished within these few years, the general article on commerce consists of a discussion with respect to simple and compound demand, and simple and double competition: luckily the article does not fill quite a page; being considerably shorter than the description of the kaleidoscope.

Under these circumstances, we do think that there is room for a new Dictionary of Commerce and Commercial Navigation: and whatever may be thought of our work, it cannot be said that in bringing it into the field we are encroaching on ground already fully occupied.

EXTRACTS

FROM THE

PREFACE TO THE SECOND EDITION.

THE first impression of this Dictionary, consisting of 2,000 copies, was entirely sold off in less than nine months from the date of its publication. We feel very deeply indebted to the public for this unequivocal proof of its approbation; and we have endeavoured to evince our gratitude, by labouring to render the work less undeserving a continuance of the favour with which it has been honoured. In the prosecution of this object, we can truly affirm we have grudged neither labour nor expense. We have subjected every part of the work to a careful revision; have endeavoured to eradicate the errors that had crept into it; to improve those parts that were incomplete or defective; and to supply such articles as had been omitted. We dare not flatter ourselves with the idea that we have fully succeeded in these objects. The want of recent and accurate details as to several important subjects, has been an obstacle we have not, in all cases, been able to overcome; but those in any degree familiar with such investigations will not, perhaps, be disposed severely to censure our deficiencies in this respect.

The changes in the law bearing upon commercial transactions have been carefully specified. Copious abstracts of all the late Customs Acts are contained in the articles *COLONIES AND COLONY TRADE, IMPORTATION AND EXPORTATION, NAVIGATION LAWS, REGISTRY, SNUFFLING, WAREHOUSING, &c.*

The abolition of the East India Company's commercial monopoly, and the great and growing interest that has in consequence been excited amongst all classes as to the commercial capabilities and practices of India, China, and other Eastern countries, have made us bestow peculiar attention to this department. The articles *BANOKOK, BATAVIA, BOMBAY, BUSHIRE, BUSSORA, CALCUTTA, CANTON, COLUMBO, EAST INDIA COMPANY AND EAST INDIES, INDIGO, MACAO, MADRAS, MANILLA, MOCHA, MUSCAT, NAGASACKI, RAFFLES, SINGAPORE, TATTA, TEA, &c.* contain, it is believed, a greater mass of recent and well-authenticated details as to the commerce of the vast countries stretching from the Arabic Gulf to the Chinese Sea, than is to be found in any other English publication.

In compiling these and other articles, we derived much valuable assistance from John Crawford, Esq.

The article *BANKING* is mostly new. Besides embodying the late act prolonging the charter of the Bank of England, and the more important details given in the Report of the Select Committee on the Renewal of the Bank Charter, this article contains some novel and important information not elsewhere to be met with. No account of the issues of the Bank of England has hitherto been published, that extends farther back than 1777. But this deficiency is now, for the first time, supplied; the Directors having obligingly furnished us with an account of the issues of the Bank on the 28th of February and the 31st of August of each year, from 1698, within four years of its establishment, down to the present time. We have also procured a statement, from authority, of the mode of transacting business in the Bank of Scotland; and have been able to supply several additional particulars, both with respect to British and to foreign banks.

We have made many additions to, and alterations in, the numerous articles descriptive of the various commodities that form the materials of commerce, and the historical notices by which some of them are accompanied. We hope they will be found more accurate and complete than formerly.

The Gazetteer department, or that embracing accounts of the principal foreign emporiums with which this country maintains a direct intercourse, was, perhaps, the most defective in the old edition. If it be no longer in this predicament, the improvement has been principally owing to official co-operation. The sort of information we desired as to the great sea-port towns could not be derived from books, nor from any sources accessible to the public; and it was necessary, therefore, to set about exploring others. In this view we drew up a series of queries, embracing an investigation of imports and exports, commercial and shipping regulations, port charges, duties, &c., that might be transmitted to any port in any part of the world. There would, however, in many instances, have been much difficulty in getting them answered with the requisite care and attention by private individuals; and the scheme would have had but a very partial success, had it not been for the friendly and effectual interference of Mr. Poulett Thomson. Alive to the importance of having the queries properly answered, he voluntarily undertook to use his influence with Lord Palmerston to get them transmitted to the Consuls. This the Noble Lord most readily did; and answers have been received from the greater number of these functionaries. There is, of course, a considerable inequality amongst them; but they almost all embody a great deal of valuable information, and some of them are drawn up with a degree of skill and sagacity, and display an extent of research and a capacity of observation, that reflect the highest credit on their authors.

The information thus obtained, added to what we received through other, but not less authentic channels, supplied us with the means of describing twice the number of foreign sea-ports noticed in our former edition; and of enlarging, amending, and correcting the accounts of such as were noticed. Besides much fuller details than have ever been previously published of the nature and extent of the trade of many of these places, the reader will, in most instances, find a minute account of the regulations to be observed respecting the entry and clearing of ships and goods, with statements of the different public charges laid on shipping, the rates of commission and brokerage, the duties on the principal goods imported and exported, the prices of provisions, the regulations as to quarantine, the practice as to credit, banking, &c., with a variety of other particulars. We have also described the ports; and have specified their depth of water, the course to be steered by vessels on entering, with the rules as to pilotage, and the fees on accounts of pilots, light-houses, &c. As it is very difficult to convey a sufficiently distinct idea of a sea-port by any description, we have given plans, taken from the latest and best authorities, of about a dozen of the principal foreign ports. Whether we have succeeded, is more than we can venture to say; but we hope we have said enough to satisfy the reader, that we have spared no pains to furnish him with authentic information on this important department.

The *TARIFF*, or Table of Duties on Imports, &c., in this edition, is highly important and valuable. It is divided into three columns: the first containing an account of the existing duties payable on the importation of foreign products for home use, as the same were fixed by the act of last year, 3 & 4 Will. IV. cap. 56. The next column exhibits the duties payable on the same articles in 1819, as fixed by the Act 59 Geo. III. cap. 52; and the third and last column exhibits the duties as they were fixed in 1787 by Mr. Pitt's Consolidation Act, the 27 Geo. III. cap. 13. The duties are rated throughout in Imperial weights and measures; and allowances have been made for differences in the mode of charging, &c. The reader has, therefore, before him, and may compare together, the present customs' duties with the duties as they stood at the end of the late war, and at its commencement. No similar Table is to be met with in any other work. We are indebted for it to J. D. Hume, Esq., of the Board of Trade, at whose suggestion, and under whose direction, it has been prepared. Its compilation was a work of great labour and difficulty; and could not

have been accomplished by any one not thoroughly acquainted with the customs acts, and the various changes in the mode of assessing the duties. Its accuracy may be relied on.

The article **SLAVES AND SLAVE TRADE** contains a full abstract of the late important statute for the abolition of slavery.

Among the new articles of a miscellaneous description, may be specified those on **ALIENS, IONIAN ISLANDS, POPULATION, TALLY TRADE, TRUCK SYSTEM, &c.**

On the whole, we trust it will be found, that the work has been improved throughout, either by the correction of mistakes, or by the addition of new and useful matter. Still, however, we are well aware that it is in various respects defective; but we are not without hopes that those who look into it will be indulgent enough to believe that this has been owing as much to the extreme difficulty, or rather, perhaps, the impossibility, of obtaining accurate information respecting some of the subjects treated of, as to the want of care and attention on our part. Even as regards many important topics connected with the commerce and manufactures of Great Britain, we have had to regret the want of authentic details, and been obliged to grope our way in the dark. Nothing, indeed, can exceed the accuracy and luminous arrangement of the customs accounts furnished by the Inspector General of Imports and Exports. But, owing to the want of any details as to the cross-channel trade between Great Britain and Ireland, the value of these accounts is much diminished. The condition and habits of the people of Ireland and of Great Britain are so very different, that conclusions deduced from considering the trade or consumption of the United Kingdom *en masse*, are generally of very little value; and may, indeed, unless carefully sifted, be the most fallacious imaginable; while, owing to the want of any account of the trade between the two great divisions of the empire, it is not possible accurately to estimate the consumption of either, or to obtain any sure means of judging of their respective progress in wealth and industry. As respects manufactures, there is a still greater deficiency of trustworthy, comprehensive details. We submitted the articles relating to them in this work, to the highest practical authorities; so that we incline to think they are about as accurate as they can well be rendered in the absence of official returns. It is far, however, from creditable to the country, that we should be obliged, in matters of such importance, to resort to private and irresponsible individuals for the means of coming at the truth. Statistical science in Great Britain is, indeed, at a very low ebb: and we are not of the number of those who suppose that it will ever be materially improved, unless government become more sensible, than it has hitherto shown itself to be, of its importance, and set machinery in motion, adequate to procure correct and comprehensive returns.

The statistical Tables published by the Board of Trade embrace the substance of hundreds of accounts, scattered over a vast mass of Parliamentary papers. They seem to be compiled with great care and judgment, and are a very valuable acquisition. We have frequently been largely indebted to them. But their arrangement, and their constantly increasing number and bulk, make them quite unfit for being readily or advantageously consulted by practical men. Most part of the returns relating to the principal articles given in this work, go back to a much more distant period than those published by the Board of Trade.

We have seen no reason to modify or alter any **PRINCIPLE OF COMMERCIAL POLICY** advanced in our former edition. In some instances, we have varied the exposition a little, but that is all. In every case, however, we have separated the practical, legal, and historical statements from those of a speculative nature; so that those most disposed to dissent from our theoretical notions will, we hope, be ready to admit that they have not been allowed to detract from the practical utility of the work. * * *

The important service done to us, or rather to the public, by Mr. Poulett Thomson, in the obtaining of the Consular Returns, is a part only of what we owe to that gentleman. We never applied to him for any sort of information which it was in his power to supply, that he did not forthwith place at our free disposal. That system of commercial policy, of which the Right Honourable gentleman is the enlightened and eloquent defender, has nothing to fear from publicity. On the contrary, the better informed the public become, the more fully the real facts and circumstances relating to it are brought before them, the more will they be satisfied of the soundness of the measures advocated by Mr. Thomson, and of their being eminently well fitted to promote and consolidate the commercial greatness and prosperity of the empire.

It is proper, also, to state, that besides the Board of Trade, all the other departments of government to which we had occasion to apply, discovered every anxiety to be of use to us. We have been particularly indebted to Mr. Spring Rice; Sir Henry Parnell; Mr. Wood, Chairman of the Board of Stamps and Taxes; Mr. Villiers, Ambassador at Madrid; and Mr. Mayer, of the Colonial Office.

ADVERTISEMENT

TO THE

LAST ENGLISH EDITION.

IN this edition all the more important returns and accounts as to the *TRADE*, *NAVIGATION*, and *CONSUMPTION* of Great Britain and other countries, have been brought down to the latest period. In some instances, too, the form of the returns has been changed, and new ones, drawn up on a more comprehensive plan, and embracing various additional particulars, have been substituted for those previously embodied in the work. In illustration of this, the reader is referred to the tables now given under the article *IMPORTS* and *EXPORTS*; they will, it is believed, be found to contain, within a brief space, the completest view hitherto laid before the public of the recent trade of the empire. A few articles have also been rewritten, among which may be specified those on *LICHTENHEIM*, *BOMBAY*, *MALTA*, *SYDNEY*, &c.

The *SUPPLEMENT* given with this edition has been greatly enlarged, and, it is hoped, materially improved. It contains as much matter as would fill, if printed with types of medium size, a large octavo volume, and embraces a good deal of important information not elsewhere to be met with. Neither labour nor expense has been spared to render it instructive and trustworthy. It embodies the principal part of the Supplement issued in December, 1836, and has, among others, articles on the following subjects; viz. *AUSTRIAN TARIFF*, and *COMMERCIAL TREATY* with *AUSTRIA*; *JOINT-STOCK BANKS*, embracing a complete list of these establishments, with an examination of the principles on which they should be founded; *NEW CUSTOMS ACT* for *BENGAL*; *NEW COINAGE* of *AMERICA* and *INDIA*; *State of the BRITISH COTTON MANUFACTURE* from 1816 to 1838, both inclusive; *Tables showing the extent of the FOREIGN TRADE* of the Country during each of the *ten years* ending with 1838, with remarks; *TRADE* with *PRUSSIA*, *PRUSSIAN COMMERCIAL LEAGUE* and *TARIFF*; *RAILWAYS* and *RAILWAY LEGISLATION*; *CLASSIFICATION* of *SHIPS*; *State of the SUGAR TRADE*; *ALTERATIONS* in the *BRITISH* and *RUSSIAN TARIFFS*; *COMMERCIAL TREATY* with *TURKEY*; with notices of *CYPRUS*, *VEPCHIA*, *GALATZ*, *GUAY-AQUIL*, *PORT LAMAR*, *MONTVIDEO*, *MAGDEBURG*, *ROSTOCK*, &c.

The author has been able to avail himself, in preparing this edition, of some very valuable communications. In this respect, he is under especial obligations to the government of Prussia. With a liberality of which there are a few (if any) examples, it has not merely taken pains to supply him with ample and authentic details as to the Commerce, Population, Finances, &c., of that flourishing kingdom, but has authorised him to make any use he pleased of the information so communicated, without stipulation or condition of any kind.

We have also been indebted to various private and official gentlemen, at home and abroad, for many useful hints and valuable statements. Mr. Porter, of the Board of Trade, allowed us the use of several unpublished returns belonging to his department; Mr. Wood, Chairman of the Board of Excise, and Mr. Mayer, of the Colonial Office, gave us every assistance in their power; the intervention of Mr. Hall, late vice-consul for the republic of Uruguay, at Liverpool, and of Mr. Kreeft, consul for Mecklenburg, has enabled us to furnish the commercial world with accurate details as to the ports of Montevideo, Rostock, &c.; and gentlemen resident in Bombay, Calcutta, Malta, Singapore, &c., have supplied important information. We are sorry that our limits will not permit of our specifying the different parties to whom we have been indebted; but we beg them to accept our best thanks for their attentions. We are most anxious to have the means of correcting the errors into which we may have fallen, and of rendering our book as accurate as possible. This, however, can only be effected by gentlemen apprising us of the changes that are constantly taking place in the regulations under which commerce is conducted, and in the channels in which it is carried on. This information, so important to the mercantile world might, sometimes, be communicated without much trouble, and will always be most gratefully received by us.

A
 DICTIONARY
 OF
 C O M M E R C E

AND
 7
 COMMERCIAL NAVIGATION.

AAM, AUM, or AUM, a measure for liquids, used at Amsterdam, Antwerp, Hamburg, Frankfort, &c. At Amsterdam it is nearly equal to 41 English wine gallons, at Antwerp to 36½ ditto, at Hamburg to 38½ ditto, and at Frankfort to 39 ditto.

ABANDONMENT, in commerce and navigation, is used to express the abandoning or surrendering of the ship or goods insured to the insurer.

It is held, by the law of England, that the insured has the right to abandon, and to compel the insurers to pay the whole value of the thing insured, in every case "where, by the happening of any of the misfortunes or perils insured against, the voyage is lost or not worth pursuing, and the projected adventure is frustrated; or where the thing insured is so damaged and spoiled as to be of little or no value to the owner; or where the salvage is very high; or where what is saved is of less value than the freight; or where further expense is necessary, and the insurer will not undertake to pay that expense," &c.—(Marshall, book i. cap. 13. § 1.)

Abandonment very frequently takes place in cases of capture; the loss is then total, and no question can arise in respect to it. In cases, however, in which a ship and cargo are recaptured *within such a time that the object of the voyage is not lost*, the insured is not entitled to abandon. The mere *stranding* of a ship is not deemed of itself such a loss as will justify an abandonment. If by some fortunate accident, by the exertions of the crew, or by any borrowed assistance, the ship be got off and rendered capable of continuing her voyage, it is not a total loss, and the insurers are only liable for the expenses occasioned by the stranding. It is only where the stranding is followed by *shipwreck*, or in any other way renders the ship incapable of prosecuting her voyage, that the insured can abandon.

It has been decided, that damage sustained in a voyage to the extent of forty-eight per cent. of the value of the ship, did not entitle the insured to abandon. If a cargo be damaged in the course of a voyage, and it appears that what has been saved is less than the amount of freight, it is held to be a total loss.—(Park on Insurance, cap. 9.)

When by the occurrence of any of the perils insured against, the insured has acquired a right to abandon, he is at liberty either to abandon or not, as he thinks proper. He is in no case bound to abandon; but if he makes an election, and resolve to abandon, he must abide by his resolution, and has no longer the power to claim for a partial loss. In some foreign countries specific periods are fixed by law within which the insured, after being informed of the loss, must elect either to abandon or not. In this country, however, no particular period is fixed for this purpose; but the rule is, that if the insured determine to abandon, he must intimate such determination to the insurers within a *reasonable period* after he has got intelligence of the loss,—and unnecessary delay in making this intimation being interpreted to mean that he has decided not to abandon.

No particular form or solemnity is required in giving notice of an abandonment. It may be given either to the underwriter himself, or the agent who subscribed for him.

The effect of an abandonment is to vest all the rights of the insured in the insurers. The latter become the legal owners of the ship, and as such are liable for all her future outgoings, and entitled to her future earnings. An abandonment, when once made, is irrevocable.

In case of a shipwreck or other misfortune, the captain and crew are bound to exert themselves to the utmost to save as much property as possible: and to enable them to do this without prejudice to the right of abandonment, our policies provide that, "in case of any loss or mis-

fortune, the insured, their factors, servants, and assigns, shall be at liberty to sue and labour about the defence, safeguard, and recovery of the goods, and merchandises, and ship, &c., without prejudice to the insurance; to the charges whereof the insurers agree to contribute, each according to the rate and quantity of his subscription."

"From the nature of his situation," says Mr. Serjeant Marshall, "the captain has an implied authority, not only from the insured, but also from the insurers and all others interested in the ship or cargo, in case of misfortune, to do whatever he thinks most conducive to the general interest of all concerned; and they are all bound by his acts. Therefore, if the ship be disabled by stress of weather, or any other peril of the sea, the captain may hire another vessel for the transport of the goods to their port of destination, if he think it for the interest of all concerned that he should do so; or he may, upon a capture, appeal against a sentence of condemnation, or carry on any other proceedings for the recovery of the ship and cargo, provided he has a probable ground for doing so; or he may, upon the loss of the ship, invest the produce of the goods saved in other goods, which he may ship for his original port of destination; for whatever is recovered of the effects insured, the captain is accountable to the insurers. If the insured neglect to abandon when he has it in his power to do so, he adopts the acts of the captain, and he is bound by them. If, on the other hand, the insurers, after notice of abandonment, suffer the captain to continue in the management, he becomes their agent, and they are bound by his acts."

As to the sailors, when a misfortune happens, they are bound to save and preserve the merchandises to the best of their power; and while they are so employed, they are entitled to wages, so far, at least, as what is saved will allow: but if they refuse to assist in this, they shall have neither wages nor reward. In this the Rhodian law, and the laws of Oleron, Wisby, and the Hanse Towns, agree.

The policy of the practice of abandonment seems very questionable. The object of an insurance is to render the insurer liable for whatever loss or damage may be incurred. But this object does not seem to be promoted by compelling him to pay as for a total loss, when, in fact, the loss is only partial. The captain and crew of the ship are selected by the owners, are their servants, and are responsible to them for their proceedings. But in the event of a ship being stranded, and so damaged that the owners are entitled to abandon, the captain and crew become the servants of the underwriters, who had nothing to do with their appointment, and to whom they are most probably altogether unknown. It is admitted that a regulation of this sort can hardly fail of leading, and has indeed frequently led, to very great abuses. We, therefore, are inclined to think that abandonment ought not to be allowed where any property is known to exist; but that such property should continue at the disposal of the owners and their agents, and that the underwriters should be liable only for the damage really incurred. The first case that came before the British courts with respect to an abandonment was decided by Lord Hardwicke, in 1744. Mr. Justice Buller appears to have concurred in the opinion now stated, that abandonment should not have been allowed in cases where the loss is not total.

For further information as to this subject, see the excellent works of Mr. Serjeant Marshall (book i. cap. 13); and of Mr. Justice Park (cap. 9) on the Law of Insurance.

[The law of abandonment has been pronounced by Lord Eldon to be one of the most uncertain branches of the law; and Mr. Benecke, in his work on *Indemnity*, expresses the opinion—an opinion sanctioned by Chancellor Kent—that little reliance is to be put on any general principles in determining what that law is in a particular case, but that recourse must be had, for this purpose, to actual decisions. See *Kent's Commentaries*, Lecture 46.—*Am. Ed.*]

ABATEMENT, or **REBATE**, is the name sometimes given to a discount allowed for prompt payment; it is also used to express the deduction that is sometimes made at the customhouse from the duties chargeable upon such goods as are damaged. This allowance is regulated by the 6 Geo. 4 c. 107. § 28. No abatement is made from the duties charged on coffee, currants, figs, lemons, oranges, raisins, tobacco, and wine.

(No abatement is to be made, on account of damage on the voyage, from the duties payable on the following drugs, viz: cantharides, cocculus Indicus, Guinea grains, ipecacuanha, jalap, nux vomica, opium, rhubarb, sassaaparilla, and senne.—4 & 5 Will. 4. c. 69, § 5.—*Sup.*)

[In the United States, in respect to all articles imported, that have been damaged during the voyage, whether subject to a duty ad valorem, or which are chargeable with a specific duty, either by number, weight or measure, the *appraisers* (appointed for the purpose) shall ascertain and certify to what rate or per centage the said goods, wares, or merchandises, are damaged, and the rate or per centage of damage, so ascertained and certified, shall be deducted from the original amount subject to a duty ad valorem, or from the actual or original number, weight, or measure, on which specific duties would have been computed: *Provided* that no allowance for the damage on any goods, wares, and merchandises, that have been entered, and on which the duties have been paid, or secured to be paid, and for which a permit has been granted to the owner or consignee thereof, and which may, on examining the same, prove to

be damaged, shall be made, unless proof, to ascertain such damage, shall be lodged in the customhouse of the port or place where such goods, wares, or merchandise, have been landed, within ten days after the landing of such merchandise. And every person who shall be appointed to ascertain the damage, during the voyage, of any goods, wares, or merchandise, shall take and subscribe an oath or affirmation for the faithful performance of the duties assigned him. See Act 2d March, 1799, "to regulate the collection of duties on imports and tonnage," sec. 52, where the form of the oath or affirmation just mentioned may be found.

The mode of appraisement is pointed out in the act of March 1st, 1823, supplementary to that of March 2d, 1799.—*Am. Ed.*]

ACACIA. See GUM ARABIC.

ACAPULCO, a celebrated seaport on the western coast of Mexico, in lat. $16^{\circ} 50\frac{1}{2}'$ N., long. $99^{\circ} 46'$ W. Population uncertain, but said to be from 4,000 to 5,000. The harbour of Acapulco is one of the finest in the world, and is capable of containing any number of ships in the most perfect safety. Previously to the emancipation of Spanish America, a galleon or large ship, richly laden, was annually sent from Acapulco to Manila, in the Philippine Islands: and at her return a fair was held, which was much resorted to by strangers. But this sort of intercourse is no longer carried on, the trade to Manila and all other places being now conducted by private individuals. The exports consist of bullion, cochineal, cocoa, wool, indigo, &c. The imports principally consist of cotton goods, hardware, articles of jewellery, raw and wrought silks, spices, and aromatics. Acapulco is extremely unhealthy; and though it be the principal port on the west coast of Mexico, its commerce is not very considerable. The navigation from Acapulco to Guayaquil and Callao is exceedingly tedious and difficult, so that there is but little intercourse between Mexico and Peru. The moneys, weights, and measures, are the same as those of Spain; for which see CANTZ.

[Ruschenberger, who visited Acapulco in 1836, states its population to be about 3000; and this he asserts to be greater than it ever was previous to the separation of Mexico from Spain.—*Am. Ed.*]

ACIDS are a class of compounds which are distinguished from all others by the following properties. They are generally possessed of a very sharp and sour taste; reddens the infusions of blue vegetable colours; are often highly corrosive, and enter into combination with the alkalis, earths, and metallic oxides; forming compounds in which the characters of the constituents are entirely destroyed, and new ones produced differing in every respect from those previously existing. The quality or strength of an acid is generally ascertained, either by its specific gravity, which is found by means of the hydrometer, if the acid be liquid, or by the quantity of pure and dry subcarbonate of potash or soda, or of carbonate of lime (marble) which a given weight of the acid requires for its exact neutralization. This latter process is termed Acidimetry, or the ascertaining the quantity of *real* acid existing in any of the liquid or crystallized acids.

The principal acids at present known are, the Acetic, Benzoic, Boracic, Bromic, Carbonic, Citric, Chloric, Cyanic, Fluoric, Ferropurassic, Gallic, Hydrobromic, Hydriodic, Iodic, Lactic, Malic, Margaric, Meconic, Muratic or Hydrochloric, Nitrous, Nitric, Oleic, Oxalic, Phosphoric, Prussic or Hydrocyanic, Purpuric, Saccholactic, Suberic, Sulphurous, Sulphuric, Tartaric, Uric, and many others which it would be superfluous to detail. It is the most important only of these, however, that will be here treated of, and more particularly those employed in the arts and manufactures.

Acetic or pyroligneous acid.—This acid, in its pure and concentrated form, is obtained from the fluid matter which passes over in distillation, when wood is exposed to heat in close iron cylinders. This fluid is a mixture of acetic acid, tar, and a very volatile ether; from these the acid may be separated, after a second distillation, by saturating with chalk, and evaporating to dryness; an acetate of lime is thus procured, which, by mixture with sulphate of soda, (Glauber's salt,) is decomposed, the resulting compounds being an insoluble sulphate of lime, and a very soluble acetate of soda; these are easily separated from each other by solution in water and filtration; the acetate of soda being obtained in the crystalline form by evaporation. From this, or the acetate of lime, some manufacturers employing the former, others the latter, the acetic acid is obtained by distillation with sulphuric acid; (oil of vitriol;) as thus procured, it is a colourless, volatile fluid, having a very pungent and refreshing odour, and a strong acid taste. Its strength should be ascertained by the quantity of marble required for its neutralization, as its specific gravity does not give a correct indication. It is employed in the preparation of the acetate of lead (sugar of lead) in many of the pharmaceutical compounds, and also as an antiseptic.

Vinegar is an impure and very dilute acetic acid, obtained by exposing either weak wines or infusions of malt to the air and a slow fermentation; it contains, besides the pure acid, a large quantity of colouring matter, some mucilage, and a little spirit; from these it is readily separated by distillation. The impurities with which this distilled vinegar is sometimes adulterated, or with which it is accidentally contaminated, are oil of vitriol, added to increase the acidity, and oxides of tin or copper, arising from the vinegar having been distilled through tin or copper worms. These may be easily detected; the oil of vitriol by the addition of a little solution of muriate of barytes to the distilled vinegar, which, should the acid be present, will cause a dense white precipitate; and the oxides of tin or copper by the addition of water impregnated with sulphureted hydrogen. Vinegar is employed in many culinary and domestic operations, and also very largely in the manufacture of the carbonate of lead, (white lead.)

Benzoic acid—exists naturally, formed in the gum benzoin, and may be procured either by submitting the benzoin in fine powder to repeated sublimations, or by digesting it with lime and water,

straining off the clear solution, and adding muriatic acid, which enters into combination with the lime, and the benzoic acid, being nearly insoluble in water, falls as a white powder; this may be further purified by a sublimation. Benzoic acid is of a beautiful pearly white colour when pure, has a very peculiar aromatic odour, and an acrid, acid, and bitter taste; it is used in making pastilles and perfumed incense. This acid also occurs in the balsams of Tolu and Peru, and in the urine of the horse and cow.

Boric acid—is found in an uncombined state in many of the hot springs of Tuscany, as also at Sasso in the Florentine territory, from whence it has received the name of Sessolin. In Thibet, Persia, and South America, it occurs in combination with soda, and is imported from the former place into this country in a crystalline form, under the name of Tincal. These crystals are coated with a rancid, fatty substance, and require to be purified by repeated solutions and crystallizations; after which it is sold under the appellation of borax; (bi-borate of soda;) from a hot solution of this salt the boric acid is readily obtained, by the addition of sulphuric acid in slight excess; sulphate of soda is formed, and the boric acid crystallizes as the solution cools. When pure, these crystals are white, and have an unctuous greasy feel; they are soluble in alcohol, communicating a green tinge to its flame; when fused it forms a transparent glass, and has been found by Mr. Faraday to unite with the oxide of lead, producing a very uniform glass, free from all defects, and well adapted for the purpose of telescopes and other astronomical instruments. Borax is much employed in the arts, particularly in metallurgic operations as a flux; also in enamelling, and in pharmacy.

Carbonic acid—This acid occurs very abundantly in nature, combined with lime, magnesia, barytes, aerial acid, fixed air, mephitic acid; from any of these it is easily separated by the addition of nearly any of the other acids. In its uncombined form, it is a transparent, gaseous fluid, having a density of 1.53, atmospheric air being unity; it is absorbed to a considerable extent by water, and when the water is rendered slightly alkaline by the addition of carbonate of soda, and a large quantity of gas forced into it by pressure, it forms the well-known refreshing beverage, soda water. This gas is also formed in very large quantities during combustion, respiration, and fermentation. Carbonic acid gas is destructive of animal life and combustion, and from its great weight accumulates in the bottoms of deep wells, cellars, caves, &c., which have been closed for a long period, and numerous fatal accidents arise frequently to persons entering such places incautiously; the precaution should always be taken of introducing a lighted candle prior to the descent or entrance of any one; for should the candle be extinguished, it would be dangerous to enter until properly ventilated. The combinations of carbonic acid with the alkalies, earths, and metallic oxides are termed carbonates.

Citric acid—exists in a free state, in the juice of the lemon, lime, and other fruits, combined however with mucilage, and sometimes a little sugar, which renders it, if required to be preserved for a long period, very liable to ferment; on this account, the crystallized citric acid is to be preferred. It is prepared by saturating the lemon juice with chalk; the citric acid combines with the lime, forming an insoluble compound, while the carbonic acid is liberated; the insoluble citrate, after being well washed, is to be acted upon by dilute sulphuric acid, which forms sulphate of lime, and the citric acid enters into solution in the water; by filtration and evaporation the citric acid is obtained in colourless transparent crystals. The chief uses to which it is applied are as a preventive of sea scurvy, and in making refreshing acidulous or effervescent drinks; for which latter purpose it is peculiarly fitted from its very pleasant flavour.

Fluoric acid—is found in the well-known mineral fluor spar in combination with lime; from which it is procured in the liquid form, by distillation with dilute sulphuric acid in a leaden or silver retort; the receiver should be of the same material as the retort, and kept cool by ice or snow.

This acid is gaseous in its pure form, highly corrosive, and intensely acid; it is rapidly absorbed by water, communicating its properties to that fluid. Its chief use is for etching on glass, which it corrodes with great rapidity. For this purpose a thin coating of wax is to be melted on the surface of the glass, and the sketch drawn by a fine hard-pointed instrument through the wax; the liquid acid is then poured on it, and after a short time, on the removal of the acid and coating, an etching will be found in the substance of the glass. A very excellent application of this property, possessed by fluoric acid, is in the roughing the shades for table lamps. All the metals, except silver, lead, and platinum, are acted upon by this acid.

Gallie acid—The source from which this acid is generally obtained is the nut gall, a hard protuberance produced on the oak by the puncture of insects. The most simple method of procuring the acid in its pure form, is to submit the galls in fine powder to sublimation in a retort, taking care that the heat be applied slowly and with caution; the other processes require a very long period for their completion. When pure, gallic acid has a white and silky appearance, and a highly astringent and slightly acid taste. The nut galls, which owe their properties to the gallic acid they contain, are employed very extensively in the arts, for dyeing and staining silks, cloths, and woods of a black colour; this is owing to its forming with the oxide of iron an intense black precipitate. Writing ink is made on the same principle; a very excellent receipt of the late Dr. Black's is, to take 3 oz. of the best Aleppo galls in fine powder, 1 oz. sulphate of iron, (green vitriol,) 1 oz. logwood finely rasped, 1 oz. gum arabic, one pint of the best vinegar, one pint of soft water, and 8 or 10 cloves; in this case the black precipitate is kept suspended by the gum.

Hydriodic acid,—a compound of iodine and hydrogen, in its separate form is of very little importance in the arts; its combinations with potash, soda, and other of the metallic oxides, will be treated of hereafter.

Malic acid—exists in the juices of many fruits, particularly the apple, as also in the berries of the service and mountain ash.

Meconic acid—is found in opium, in combination with morphia, forming the meconate of morphia, on which the action of opium principally depends.

Muriatic acid, or spirits of salt.—This acid (the hydrochloric of the French chemists) is manufactured from the chloride of sodium (dry sea salt) by the action of sulphuric acid, (oil of vitriol.) The most economical proportions are 30 pounds of fused salt, and 20 pounds of oil of vitriol previously mixed with an equal weight of water; these are placed in an iron or earthen pot, to which an earthen head and receiver are adapted, and submitted to distillation; the muriatic acid passes over in the vaporous form, and may be easily condensed. The liquid acid thus obtained should have a specific gravity of 1.17, water being equal to 100; it has a strong acid taste, and a slight yellow colour; this is owing to a small quantity of oxide of iron. By redistillation in a glass retort at a low temperature, it may be obtained perfectly pure and colourless. It sometimes contains a little sulphuric acid; this is detected by a solution of muriate of barytes. Muriatic acid, in its uncombined state, is an invisible elastic gas, having a very strong affinity for water; that fluid absorbing, at a temperature of 40° Fahrenheit, 480 times its volume, and the resulting liquid acid has a density of 1.81. So great is this attraction for water, that when the gas is liberated into the air, it combines with the moisture always present in that medium, forming dense white vapours. Its combinations with the alkalies, &c. are termed muriates; those of the greatest importance are, the muriates of tin, ammonia, barytes, and sea salt. The test for the presence of muriatic acid in any liquid is the nitrate of silver, (lunar caustic,) which causes a cloudy white precipitate.

Nitric acid, or aquafortis.—This, which is one of the most useful acids with which the chemist is

acquainted, is prepared by acting upon saltpetre (nitre or nitrate of potass) with oil of vitriol; the proportions best suited for this purpose are, three parts by weight of nitre and two of oil of vitriol; or 100 nitre, and 60 oil of vitriol previously diluted with 20 of water; either of these proportions will produce a very excellent acid. When submitted to distillation, which should be conducted in earthen or glass vessels, the nitric acid passes over in the form of vapour, and a blausulphate of potass (sal azurum) remains in the retort.

Nitric acid of commerce has usually a dark orange-red colour, giving off copious fumes, and having a specific gravity of 150, water being 100. It is strongly acid and highly corrosive. It may be obtained perfectly colourless by a second distillation, rejecting the first portion that passes over. It is much employed in the arts, for etching on copper-plates for engraving; also, for the separation of silver from gold, in the process of quartation. In pharmacy and surgery it is extensively used, and is employed for destroying contagious effluvia. Combined with muriatic acid, it forms aqua regia, (nitro-muriatic acid,) used as a solvent for gold, platinum, &c. This acid is frequently contaminated with the muriatic and sulphuric acids; these may be detected by the following methods.—A portion of the suspected acid should be diluted with three or four times its volume of distilled water, and divided into two glasses; to one of which nitrate of silver (lunar caustic in solution) is to be added, and to the other, nitrate of barytes; if muriatic acid be present, a white curdy precipitate will be thrown down by the former; and if sulphuric, a white granular precipitate by the latter.

Oxalic acid—occurs in combination with potass as binoxalate of potass in the different varieties of sorrel, from whence the binoxalate of potass has been termed salt of sorrel. This acid is usually prepared by the action of nitric acid upon sugar, evaporating the solution, after the action has ceased, to the consistence of a syrup, and redissolving and recrystallizing the crystals which are thus procured.

It is sold in small white acicular crystals, of a strongly acid taste and highly poisonous, and sometimes in its external appearance bears a strong similarity to Epsom salts, (sulphate of magnesia,) which it has been unfortunately frequently mistaken for. It is instantly distinguished from Epsom salts by placing a small crystal upon the tongue; when its strong acid taste, compared with the nauseous bitter of the sulphate of magnesia, will be quite a sufficient criterion. In cases of poisoning, however, by this acid, lime, or chalk, mixed with water to form a cream, should be immediately administered, the combinations of oxalic acid with these substances being perfectly inert. It is employed in removing ink stains, iron moulds, &c. from linen and leather; the best proportions for these purposes are, 1 oz. of the acid to a pint of water. The most delicate test of the presence of oxalic acid is, a salt of lime or lime-water, with either of which it forms a white precipitate, insoluble in water, but soluble in acids. Its combinations are termed oxalates.

Phosphoric acid—is of very little importance in a commercial point of view, except as forming with lime the earth of bones, (phosphate of lime.) It is prepared by heating bones to whiteness in a furnace; from this phosphoric acid is obtained by the action of sulphuric acid, still combined, however, with a small quantity of lime. The action of nitric acid upon phosphorus, the latter being added gradually and in small pieces, yields this acid in a state of purity; its combinations are termed phosphates.

Prussic acid, or hydrocyanic acid.—This acid, which is the most virulent and poisonous acid known, is contained in peach blossoms, bay leaves, and many other vegetable productions, which owe their peculiar odour to the presence of prussic acid. For the purposes of medicine and chemistry, this acid is prepared either by distilling one part of the cyanuret of mercury, one part of muriatic acid of specific gravity 1.15, and six parts of water, six parts of prussic acid being collected; or, by dissolving a certain weight of cyanuret of mercury, and passing a current of sulphuretted hydrogen through the solution, until the whole of the mercury shall be precipitated; if an excess of sulphuretted hydrogen should be present, a little carbonate of lead (white lead) will remove it; on filtering, a colourless prussic acid will be obtained. By the first process, which is the one followed at Apothecaries' Hall, the acid has a density 993, water being equal to 1,000; by the latter, it may be procured of any required strength, depending on the quantity of cyanuret of mercury dissolved. The best test for the presence of this acid is, first to add a small quantity of the protosulphate of iron (solution of green vitriol,) then a little solution of potass, and lastly diluted sulphuric acid; if prussic acid be present, prussian blue will be formed. Its combinations are called prussiates or hydrocyanates; when in its concentrated form, it is so rapid in its effects that large animals have been killed in the short space of 80 seconds, or from a minute to a minute and a half.

Sulphurous Acid—is formed whenever sulphur is burnt in atmospheric air: it is a suffocating and pungent gas, strongly acid, bleaches vegetable colours with great rapidity, and arrests the process of vinous fermentation. For these purposes it is therefore very much employed, especially in bleaching woollen goods and straws. Fermentation may be immediately arrested by burning a small quantity of sulphur in casks, and then racking off the wine while still fermenting into them; this frequently gives the wine a very unpleasant taste of sulphur, which is avoided by the use of sulphate of potass, made by impregnating a solution of potass with sulphurous acid gas.

Sulphuric acid, or oil of vitriol—called oil of vitriol from its having been formerly manufactured from green vitriol, (sulphate of iron.) In some parts of the Continent this process is still followed. The method generally adopted in this country, is to introduce nine parts of sulphur, intimately mixed with one part of nitre, in a state of active combustion, into large leaden chambers, the bottoms of which are covered with a stratum of water. Sulphurous and nitrous acid gases are generated, which entering into combination form a white crystalline solid, which falls to the bottom of the chamber; the instant that the water comes in contact with it, this solid is decomposed with a hissing noise and effervescence, sulphuric acid combines with the water, and nitrous gas is liberated, which combining with oxygen from the air of the chamber, is converted into nitrous acid gas, again combined with sulphurous acid gas, and again falls to the bottom of the chamber: this process continues as long as the combustion of the sulphur is kept up, or as long as atmospheric air remains in the chamber; the nitrous acid merely serving as a means for the transference of oxygen from the atmosphere to the sulphurous acid, to convert it into sulphuric acid. The water is removed from the chamber when of a certain strength, and replaced by fresh. These acid waters are then evaporated in leaden boilers, and finally concentrated in glass or platinum vessels. As thus manufactured, sulphuric acid is a dense oily fluid, colourless, intensely acid, and highly corrosive, and has a specific gravity of 1.846, water being equal to 1,000. This acid is the most important with which we are acquainted; it is employed in the manufacture of the nitric, muriatic, acetic, phosphoric, citric, tartaric, and many other acids; also in the preparation of chlorine, for the manufacture of the bleaching powder, (oxymuriate of lime or chloride of lime,) for the preparation of sulphate of mercury, in the manufacture of calomel and corrosive sublimate, and in innumerable other chemical manufactures. In the practice of physic it is also very much employed. It usually contains a little oxide of lead, which is readily detected by diluting the acid with about four times its volume of water, and allowing the sulphate of lead to subside. Its combinations are denominated sulphates. The fuming sulphuric acid, as manufactured at Nordhausen, contains only one-half the quantity of water in its composition.

Tartaric acid.—This acid is procured from the cream of tartar, (bitartrate of potass,) obtained by purifying the crust which separates during the fermentation of wines by solution and crystallization

When this purified bitartrate is dissolved, and lime or carbonate of lime added, an insoluble tartrate of lime falls, which after washing should be acted upon by sulphuric acid; sulphate of lime is thus formed, and the tartaric acid enters into solution, and may be obtained by evaporation and crystallization. It is employed very much in the arts, in calico-printing, as also in making effervescing draughts and powders in pharmacy.

Uric acid—is an animal acid of very little importance, except in a scientific point of view; it exists in the excrements of serpents, to the amount of 66 per cent., and forms the basis of many of the urinary calculi and gravel.

N. B. *This article, and that on alkalies, have been furnished by an able practical chemist.*

ACORNS (Ger. *Eicheln*, *Eckern*; Fr. *Glands*; It. *Ghiande*; Sp. *Bellotas*; Rus. *Scheduitti*; Lat. *Glandes*), the seed or fruit of the oak. Acorns formed a part of the food of man in early ages, and frequent allusion is made in the classics to this circumstance. (*Virgil*, *Georg.* lib. i. lin. 8.; *Ovid. Met.* lib. i. lin. 106, &c.) In some countries they are still used, in periods of scarcity, as a substitute for bread. With us they are now rarely used except for fattening hogs and poultry. They are said to make, when toasted, with the addition of a little fresh butter, one of the best substitutes for coffee. Their taste is astringent and bitter.

ACORUS (*Calamus aromaticus*), sweet flag, or sweet rush, a red or knotty root, about the thickness of the little finger, and several inches long. "The root of the sweet flag has a pleasant aromatic odour, similar to that of a mixture of cinnamon and allspice. The taste is warm, pungent, bitterish, and aromatic."—(*Thomson's Dispensatory*.) The root, which is used in medicine, was formerly imported from the Levant, but it is now obtained of an equally good quality from Norfolk.

ACRE, a measure of land. The Imperial or standard English acre contains 4 roods, each rood 40 poles or perches, each pole $27\frac{1}{4}$ square feet; and consequently each acre—43,560 square feet. Previously to the introduction of the new system of weights and measures by the act 5 Geo. IV. cap. 74, the acres in use in different parts of England varied considerably from each other and from the standard acre; but these customary measures are now abolished. The Scotch acre contains four roods, each rood 40 falls, and each fall 36 ells; the ell being equal to 37.06 Imperial inches. Hence the Imperial is to the Scotch acre nearly as 1 to $1\frac{1}{4}$, one Scotch acre being equal to 1.261 Imperial acres. The Irish acre is equal to 1 acre 2 roods and $19\frac{1}{4}$ poles; 30½ Irish being equal to 49 Imperial acres.

[The standard English acre is the acre in use in the United States.—*Am. Ed.*]

ADAMANTINE SPAR (Hind. *Corundum*), a stone so called from its hardness, found in India, Ava, China, &c., crystallized, or in a mass. It is ascertained to be a species of sapphire. The Indian variety is the best. Colour grey, with shades of green and light brown; fracture foliated and sparry, sometimes vitreous. It is brittle, and so hard as to cut rock crystal and most of the gems. Specific gravity from 3.71 to 4.18. The Chinese variety differs from the Indian in containing grains of magnetic iron ore disseminated through it, in being generally of a darker colour, and having externally a *chatoyant* lustre; its specific gravity is greater, and its hardness somewhat inferior. It is employed to polish gems.

ADJUSTMENT, in commercial navigation, the settlement of a loss incurred by the insured.

In the case of a total loss, if the policy be an *open* one, the insurer is obliged to pay the goods according to their *prime cost*, that is, the invoice price, and all duties and expenses incurred till they are put on board, including the premium of insurance. Whether they might have arrived at a good or a bad market, is held by the law of England to be immaterial. The insurer is supposed to have insured a constant and not a variable sum; and in the event of a loss occurring, the insured is merely to be put into the same situation in which he stood before the transaction began. If the policy be a *valued* one, the practice is to adopt the valuation fixed in it in case of a total loss, unless the insurers can show that the insured had a colourable interest only, or that the goods were greatly overvalued. In the case of all partial losses, the value of the goods must be proved.

"The nature of the contract between the insured and insurer is," says Mr. Justice Park, "that the goods shall come safe to the port of delivery; or, if they do not, that the insurer will indemnify the owner to the amount of the value of the goods stated in the policy. Wherever then the property insured is lessened in value by damage received at sea, justice is done by putting the merchant in the same condition (relation being had to the prime cost or value in the policy) in which he would have been had the goods arrived free from damage; that is, by paying him such proportion of the prime cost or value in the policy as corresponds with the proportion of the diminution in value occasioned by the damage. The question then is, how is the proportion of the damage to be ascertained? It certainly cannot be by any measure taken from the prime cost; but it may be done in this way:—Where any thing, as a hogshead of sugar, happens to be spoiled, if you can fix whether it be a third, a fourth, or a fifth worse, than the damage is ascertained to a mathematical certainty. How is this to be found out? Not by any price at the port of shipment, but it must be at the port of *delivery*, when the voyage is completed and the whole damage known. Whether the price at the latter be high or low, it is the same thing; for in either case it equally shows whether the damaged goods are a third, a fourth, or a fifth worse than if they had come sound; consequently, whether the injury sustained be a third, fourth, or fifth of the value of the thing.

And as the insurer pays the whole prime cost if the thing be wholly lost, so if it be only a third, fourth, or fifth worse, he pays a third, fourth, or fifth, not of the value for which it is sold, but of the value stated in the policy. And when no valuation is stated in the policy, the invoice of the cost, with the addition of all charge, and the premium of insurance, shall be the foundation upon which the loss shall be computed."

Thus, suppose a policy to be effected on goods, the prime cost of which, all expenses included, amounts to 1,000*l.*; and suppose further, that these goods would, had they safely reached the port of delivery, have brought 1,200*l.*, but that, owing to damage they have met with in the voyage, they only fetch 800*l.*; in this case it is plain, inasmuch as goods that would otherwise have been worth 1,200*l.* are only worth 800*l.*; that they have been deteriorated one-third, and hence it follows, conformably to what has been stated above, that the insurer must pay one-third of their prime cost (1,000*l.*), or 333*l.* 6*s.* 8*d.* to the insured.

In estimating the value of goods at the port of delivery, the gross and not the net proceeds of the sales are to be taken as the standard.

A ship is valued at the sum she is worth at the time she sails on the voyage insured, including the expenses of repairs, the value of her furniture, provisions, and stores, the money advanced to the sailors, and, in general, every expense of the outfit, to which is added the premium of insurance.

When an adjustment is made, it is usual for the insurer to endorse upon the policy "adjusted this loss at (so much) per cent.," payable in a given time, generally a month, and to sign it with the initials of his name. This is considered as a note of hand, and as such is *prima facie* evidence of the debt, not to be shaken, but by proving that fraud was used in obtaining it, or that there was some misconception of the law or the fact upon which it was made. See, for a further discussion of this subject, the article MARINE INSURANCE, *Part* on the Law of Insurance (esp. 6.), and Marshall (book i. cap. 14.).

[See also Kent's Commentaries, Lecture 48.—*Am. Ed.*]

ADMEASUREMENT. See TONNAGE.

[ADMIRALTY COURTS have authority to try and determine all maritime causes, or such injuries, which, though they are in their nature of common law cognizance, yet, being committed on the high seas, out of the reach of the ordinary courts of justice, are therefore to be remedied in a peculiar court of their own. When the court of admiralty has not original jurisdiction of the cause, though there should arise in it a question that is proper for the cognizance of that court, yet this does not alter or take away the exclusive jurisdiction of the ordinary courts of law. And so, *vice versa*, if it has jurisdiction of the original, it has also jurisdiction of all consequential questions, though properly determinable at common law.

If part of any contract, or other cause of action, arises upon the sea, and part upon the land, the common law excludes the admiralty court from its jurisdiction. Seamen's wages, however, though the contract for them be made upon land, as is nearly always the case, are regarded as a proper object of the admiralty jurisdiction; that is, provided the contract be to receive their wages in the usual manner, and be not under seal.

The criminal jurisdiction of the admiralty courts, as well in England as in the United States, has been conferred upon them by statute; in the former country by the act of the 28th of Henry VIII. c. 15.; and in the latter by the judiciary act of 1789, and other subsequent acts, explaining or enlarging its provisions. By one of these additional acts (that of 1825), the jurisdiction in question is made to comprehend all offences which "shall be committed on board of any ship or vessel, belonging to any citizen or citizens of the United States, while lying in a port or place within the jurisdiction of any foreign state or sovereign," by any person whose offence, if committed on board of such ship or vessel on the high seas would be cognizable by the courts of the United States; provided, "that if such offender shall be tried for such offence, and acquitted or convicted thereof, in any competent court of such foreign state or sovereign, he shall not be subject to another trial." This act also provides that the admiralty jurisdiction shall extend, or it is perhaps more proper to say that it assumes that such jurisdiction does actually extend, to certain crimes committed "in any arm of the sea, or in any river, haven, creek, basin, or bay" of the United States, out of the jurisdiction of any particular state.

In case of prizes in time of war between our own nation and another, or between two other nations, which are taken at sea and brought into our ports, the courts of admiralty have an exclusive jurisdiction to determine the same according to the law of nations. The prize jurisdiction extends also to captures made in foreign ports, and to all captures made on land by any force or armament, should a portion of it partake of a naval character.

The court of admiralty in England is held before the lord high admiral, or his deputy, who is called the judge of the court, for the trial of civil causes, which are determined by the judge without the aid of a jury. The proceedings bear much resemblance to those of the civil law, but are not entirely founded thereon; and the court likewise adopts and makes use of other laws, as occasion requires; such as the Rhodian laws and the laws of Oleron; the whole being corrected, altered, and amended, by acts of parliament and common usage, and a body of jurisprudence being thus formed, which owes its authority only to its reception by consent of the crown and people.

For the trial of persons charged with the commission of crimes, three or four commissioners (among whom two common law judges are usually appointed) are added to the admiral or his deputy; and an indictment being first found by a grand jury of twelve men, they are to be tried by a petit jury. The proceedings should be according to the laws of the land.

Admiralty jurisdiction in the United States is vested in the federal courts, and is exercised by them on principles altogether analogous to those by which the English courts of admiralty are guided. By the act of 1789, before referred to, the trial of all causes shall be by jury, excepting civil causes of admiralty or maritime jurisdiction. See *Blackstone's Commentaries*, book 3. c. 5 and 7. and book 4. c. 19. Also *Kent's Commentaries*, Lecture 17.—Am. Ed.]

ADVANCE implies money paid before goods are delivered, or upon consignment. It is usual with merchants to advance from a half to two-thirds of the value of goods consigned to them, on being required, on their receiving invoice, bill of lading, orders to insure them from sea risk, &c.

ADVERTISEMENT, in its general sense, is any information as to any fact or circumstance that has occurred, or is expected to occur; but, in a commercial sense, it is understood to relate only to specific intimations with respect to the sale of articles, the formation and dissolution of partnerships, bankruptcies, meetings of creditors, &c. Until last year, a duty of 3s. 6d. was charged upon every advertisement, long or short, inserted in the Gazette, or in any newspaper, or literary work published in parts or numbers. This duty added about 100 per cent. to the cost of advertising, for the charge (exclusive of the duty) for inserting an advertisement of the ordinary length in the newspapers rarely exceeds 3s. or 4s. In 1832, the duty produced 155,401*l.* in Great Britain, and 15,248*l.* in Ireland.

Last year (1833) the duty on advertisements was reduced to 1*s.* 6*d.*; and thus, we have no doubt, will occasion such an increase of advertising as to prevent the revenue from being materially injured by the reduction. But, instead of being modified merely, this is a duty that ought to be wholly repealed. Its operation is necessarily most unequal, and, in many instances, most oppressive. Can any thing be more glaringly unjust than to impose the same duty on a notice of the publication of a sixpenny pamphlet, or of a servant being out of place, as on an intimation of the sale of a valuable estate? But as it is altogether impossible to impose the duty on an *ad valorem* principle, this injustice cannot be obviated so long as it is maintained. In a commercial country, a duty on advertisements is peculiarly objectionable, inasmuch as it checks the circulation of information of much importance to mercantile men. We, therefore, hope that this unjust and impolitic tax may be speedily given up. Its abandonment would not cause any diminution of revenue; for it is abundantly certain that its loss would be more than made up by the increased productiveness of the duties on paper and newspaper stamps. For an account of the operation of the stamp duty on literature, see BOOKS.

ADVICE is usually given by one merchant or banker to another *by letter*, informing him of the bills or drafts drawn on him, with all particulars of date, or sight, the sum, to whom made payable, &c. Where bills appear for acceptance or payment, they are frequently refused to be honoured for want of advice. It is also necessary to give advice, as it prevents forgeries: if a merchant accept or pay a bill for the honour of any other person, he is bound to advise him thereof, and this should always be done under an *act of honour* by a notary public.

AGARIC, a fungus growing on the trunks of trees. That produced in the Levant from the larch is accounted the best. It is brought into the shops in irregular pieces of different magnitudes, of a chalky whiteness, and very light. The best is easily cut with a knife, is friable between the fingers, and has no hard, gritty, or coloured veins. It is used in medicine and dyeing.—(*Lewis, Mat. Med.*)

AGATE (popularly CORNELIAN), (Ger. *Achat*; Du. *Achat*; Fr. *Agate*; It. *Agata*; Rus. *Agat*; Lat. *Achates*). A genus of semi-pellucid gems, so called from the Greek *αχαιος*, because originally found on the banks of the river of that name in Italy. It is never wholly opaque like jasper, nor transparent as quartz-crystal; it takes a very high polish, and its opaque parts usually present the appearance of dots, eyes, veins, zones, or bands. Its colours are yellowish, reddish, bluish, milk-white, honey-orange, or ochre-yellow, flesh-blood, or brick-red, reddish-brown, violet-blue, and brownish-green. It is found in irregular rounded nodules, from the size of a pin's head to more than a foot in diameter. The lapidaries distinguish agates according to the colour of their ground; the finer semi-transparent kinds being termed oriental. The most beautiful agates found in Great Britain are commonly known by the name of *Scotch pebbles*, and are met with in different parts of Scotland, but principally on the mountain of Cairngorm; whence they are sometimes termed Cairngorms. The German agates are the largest. Some very fine ones have been brought from Siberia and Ceylon. They are found in great plenty at the eastern extremity of the settlement of the Cape of Good Hope; and are still met with in Italy. But the principal mines of agate are situated in the little principality of Rajpepla, in the province of Gujrat, fourteen miles distant from the city of Broach, where they are cut into beads, crosses, snuff-boxes, &c. They are exported in considerable quantities to other parts of India, and to this country; and hence, perhaps, the jewellers' term "broach."

AGENT. See FACTOR.

AGIO, a term used to express the difference, in point of value, between metallic and paper money; or between one sort of metallic money and another.

ALABASTER (Ger. *Alabaster*; It. *Alabastro*; Fr. *Albâtre*; Rus. *Alabastr*; Lat. *Alabastrites*). A kind of stone resembling marble, but softer. Under this name are confounded two minerals, the *gypseous* and *calcareous* alabasters; they are wholly distinct from each other when pure, but in some of the varieties are occasionally mixed together. The former, when of a white, or yellowish, or greenish colour, semi-transparent, and capable of receiving a polish, is employed by statuary. It is very easily worked, but it is not susceptible of a polish equal to marble. Calcareous alabaster is heavier than the former; it is not so hard as marble, but is notwithstanding susceptible of a good polish, and is more used in statuary. The statuary distinguishes alabaster into two sorts, the common and oriental. Spain and Italy yield the best alabaster. That produced at Montania, in the papal states, is in the highest esteem for its beautiful whiteness. Inferior sorts are found in France and Germany. Alabaster is wrought into tables, vases, statues, chimney-pieces, &c.

ALCOHOL (ARDENT SPIRIT), (Fr. *Euprit de Vin*; Ger. *Weingeist*; It. *Spirito ardente*, *Spirito di Vino*, *Aequariente*), the name given to the *pure spirit* obtainable by distillation, and subsequent rectification, from all liquors that have undergone the vinous fermentation, and from none but such as are susceptible of it. It is light, transparent, colourless, of a sharp, penetrating, agreeable smell, and a warm stimulating taste. It is quite the same, whether obtained from brandy, wine, whiskey, or any other fluid which has been fermented. The specific gravity of alcohol when perfectly pure is from .792 to .800, that of water being 1.000; but the strongest spirit afforded by mere distillation is about .820; alcohol of the shops is about .835 or .840. Alcohol cannot be frozen by any known degree of cold. It boils at 174°. It is the only dissolvent of many resinous substances; and is extensively used in medicine and the arts.—(Drs. A. T. Thomson, *Ure*, &c.)

ALDER, the *Betula alnus* of botanists, a forest tree abundant in England and most parts of Europe. It thrives best in marshy grounds, and on the banks of rivers. It rarely attains to a very great size; its wood is extremely durable in water or in wet ground; and hence it is much used for piles, planking, pumps, pipes, sluices, and generally for all purposes where it is kept constantly wet. It soon rots when exposed to the weather or to damp; and when dry, it is much subject to worms. The colour of the wood is reddish yellow, of different shades, and nearly uniform. Texture very uniform, with larger septa of the same colour as the wood. It is soft, and works easily.—(Tredgold's *Principles of Carpentry*.)

ALE and BEER, well-known and extensively used fermented liquors, the principle of which is extracted from several sorts of grain, but most commonly from barley, after it has undergone the process termed malting.

1. *Historical Notice of Ale and Beer*.—The manufacture of ale or beer is of very high antiquity. Herodotus tells us, that owing to the want of wine, the Egyptians drank a liquor fermented from barley (lib. ii. cap. 77.). The use of it was also very anciently introduced into Greece and Italy, though it does not appear to have ever been very extensively used in these countries. Mead, or methegin, was probably the earliest intoxicating liquor known in the North of Europe. Ale or beer was, however, in common use in Germany in the time of Tacitus (*Morib. Germ.* cap. 23.). "All the nations," says Pliny, "who inhabit the West of Europe have a liquor with which they intoxicate themselves, made of corn and water (*fruge madida*). The manner of making this liquor is somewhat different in Gaul, Spain, and other countries, and it is called by many various names; but its nature and properties are everywhere the same. The people of Spain, in particular, brew this liquor so well that it will keep good for a long time. So exquisite is the ingenuity of mankind in gratifying their vicious appetites, that they have thus invented a method to make water itself intoxicate."—(*Hist. Nat.* lib. xiv. cap. 22.) The Saxons and Danes were passionately fond of beer; and the drinking of it was supposed to form one of the principal enjoyments of the heroes admitted to the hall of Odin.—(*Mallet's Northern Antiquities*, cap. 6, &c.) The manufacture of ale was early introduced into England. It is mentioned in the laws of Ina, King of Wessex; and is particularly specified among the liquors provided for a royal banquet in the reign of Edward the Confessor. It was customary in the reigns of the Norman princes to regulate the price of ale; and it was enacted, by a statute passed in 1273, that a brewer should be allowed to sell two gallons of ale for a penny in cities, and three or four gallons for the same price in the country.

The use of hops in the manufacture of ale and beer seems to have been a German invention. They were used in the breweries of the Netherlands, in the beginning of the fourteenth century; but they do not seem to have been introduced into England till 200 years afterwards, or till the beginning of the sixteenth century. In 1530, Henry VIII. enjoined brewers not to put hops into their ale. It would, however, appear that but little attention was paid to this order; for in 1552 hop plantations had begun to be formed.—(*Beckmann's Hist. Invent.* vol. iv. pp. 336—341. Eng. ed.) The addition of hops renders ale more palatable, by giving it an agreeable bitter taste, while, at the same time, it fits it for being kept much longer without injury. Generally speaking, the English brewers employ a much larger quantity of hops than the Scotch. The latter are in the habit of using, in brew

ing the fine Edinburgh ale, from a pound to a pound and a half of hops for every bushel of malt.

2. *Distinction between Ale and Beer, or Porter.*—This distinction has been ably elucidated by Dr. Thomas Thomson, in his valuable article on Beewing, in the Supplement to the Encyclopædia Britannica:—"Both ale and beer are in Great Britain obtained by fermentation from the malt of barley; but they differ from each other in several particulars. Ale is light-coloured, brisk, and sweetish, or at least free from bitter; while beer is dark-coloured, bitter, and much less brisk. What is called *porter* in England is a species of beer; and the term "*porter*" at present signifies what was formerly called *strong beer*. The original difference between ale and beer was owing to the malt from which they were prepared. Ale malt was dried at a very low heat, and consequently was of a pale colour; while beer or porter malt was dried at a higher temperature, and had of consequence acquired a brown colour. This incipient charring had developed a peculiar and agreeable bitter taste, which was communicated to the beer along with the dark colour. This bitter taste rendered beer more agreeable to the palate, and less injurious to the constitution than ale. It was consequently manufactured in greater quantities, and soon became the common drink of the lower ranks in England. When malt became high priced, in consequence of the heavy taxes laid upon it, and the great increase in the price of barley which took place during the war of the French revolution, the brewers found out that a greater quantity of wort of a given strength could be prepared from pale malt than from brown malt. The consequence was that pale malt was substituted for brown malt in the brewing of porter and beer. We do not mean that the whole malt employed was pale, but a considerable proportion of it. The wort, of course, was much paler than before; and it wanted that agreeable bitter flavour which characterized porter, and made it so much relished by most palates. The porter brewers endeavoured to remedy these defects by several artificial additions. At the same time various substitutes were tried to supply the place of the agreeable bitter communicated to porter by the use of brown malt. Quassia, cocculus indicus, and we believe even opium, were employed in succession: but none of them was found to answer the purpose sufficiently. Whether the use of these substances be still persevered in we do not know; but we rather believe that they are not, at least by the London porter brewers."

3. *Adulteration of Ale and Beer—substitution of Raw Grain for Malt.*—The use of the articles other than malt, referred to by Dr. Thomson, has been expressly forbidden, under heavy penalties, by repeated acts of parliament. The act 56 Geo. 3. c. 58, has the following clauses:—

"No brewer or dealer in or retaller of beer shall receive or have in his possession, or make, or use, or mix with, or put into any worts or beer, any liquor, extract, calx, or other material or preparation for the purpose of darkening the colour of worts or beer; or any liquor, extract, calx, or other material or preparation other than brown malt, ground or unground, as commonly used in brewing; or shall receive, or have in his possession, or use, or mix with, or put into any worts or beer, any molasses, honey, liquorice, vitriol, quassia, cocculus indicus, grains of paradise, Guinea pepper, or opium, or any extract or preparation of molasses, honey, liquorice, vitriol, quassia, cocculus indicus, grains of paradise, Guinea pepper, or opium, or any article or preparation whatsoever for or as a substitute for malt or hops, upon pain that all such liquor, extract, calx, molasses, honey, vitriol, quassia, cocculus indicus, grains of paradise, Guinea pepper, opium, extract article, and preparation as aforesaid, and also the said worts and beer, shall be forfeited, together with the casks, vessels, or other packages, and may be seized by any officer of excise; and such brewer of, dealer in, or retailer of beer, so offending, shall for each offence forfeit 200*l*."

"No druggist, or vendor of or dealer in drugs, or chemist, or other person whatever, shall sell, send or deliver to any licensed brewer of, or dealer in, or retailer of beer, knowing him to be so licensed, or reputed to be so licensed, or to any other person for, or on account of, or in trust for, or for the use of such brewer, dealer, or retailer, any colouring, from whatever material made, or any other material or preparation other than unground brown malt, for the purpose of darkening the colour of worts or beer; or any liquor or preparation heretofore or hereafter made use of for darkening the colour of worts or beer, or any molasses or other articles, as mentioned in the first section, for or as a substitute for malt or hops respectively; and if any druggist, or vendor of or dealer in drugs, or any chemist, or other person whatever, shall so do, all such liquor called colouring, and material or preparation for the purpose aforesaid, and liquor and preparation used for darkening the colour of worts or beer, molasses, and article or preparation to be used as a substitute for malt or hops, shall be forfeited, and may be seized by any officer of excise; and the druggist, vendor, dealer, chemist, or other person so offending, shall forfeit 500*l*."

By the act 1 Will. 4. c. 51, for the repeal of the ale and beer duties, it is enacted (§17), "that no brewer shall have in his brewery, or in any part of his entered premises, or in any mill connected with such brewery, any raw or unmaltered corn or grain; and all unmaltered corn or grain which shall be found in such brewing premises or mill, and all malted corn or grain with which such unmaltered corn or grain may have been mixed, shall be forfeited, and may be seized by any officer, together with all vessels or packages in which such raw or unmaltered corn or grain shall be contained, or in which such unmaltered corn or grain, and the malted corn or grain with which the same may have been mixed, shall be contained; and every brewer shall for every such offence forfeit 200*l*."

4. *Descriptions of Ale and Beer.*—Previously to 1823, there were only two sorts of beer allowed to be brewed in England, viz. *strong beer*, that is, beer of the value of 1*l*. 6*s*. and upwards the barrel, exclusive of the duty; and *small beer*, or beer of the value of less than 1*l*. 6*s*. a barrel, exclusive of the duty. In 1823, however, an act was passed (4 Geo. 4. c. 51.) authorizing the brewing, under certain conditions, of an *intermediate beer*. But this sort of beer was either not suited to the public taste, or, which is more probable, the restrictions aid on the brewers deterred them from engaging extensively in its manufacture.

This limitation and classification of the different sorts of ale and beer, according to their

strength, originated in the duties laid upon them; and now that these duties have been repealed, ale and beer may be brewed of any degree of strength. This is an immense advantage.

5. *Regulations as to the Manufacture of Ale and Beer.*—Since the abolition of the beer duties these regulations are very few and simple; and consist only in taking out a license, entering the premises, and abstaining from the use of any article, other than malt, in the preparation of the beer. A brewer using any place or mash-tun, for the purpose of brewing, without having made an entry thereof at the nearest excise office, forfeits for every such offence 200*l.*; and all the worts, beer, and materials for making the same, together with the mash-tun, are forfeited, and may be seized by any officer. Brewers obstructing officers shall, for every such offence, forfeit 100*l.*—(1 Will. 4. c. 51. § § 15, 16.)

6. *License Duties.*—Number of Brewers.—The license duties payable by brewers of ale and beer, under the act 6 Geo. 4. c. 81, and the numbers of such licenses granted during the years 1829 and 1832 are as follows:—

					Sums charged for Licenses.	Number of Licenses granted.	
						1829.	1832.
Common brewers of strong beer, not exceeding 20 barrels	-	-	-	-	£ 0 10 0	2,854	8,593

Retail brewers of strong beer	-	-	-	-	5 5 0	1,379	50

The great increase in the number of brewers in 1832, as compared with 1829, is to be ascribed to the abolition of the beer duties in 1830. The increase since 1832 has not been very universal.

N. B. The barrel contains 36 gallons, or 4 firkins of 9 gallons each, Imperial measure. It is enacted (1 Will. 4. c. 51. § 7.), that, from the 10th of October, 1830, brewers are to pay their license duty according to the malt used by them in brewing, and that every brewer shall be deemed to have brewed one barrel of beer for every two bushels of malt used by such brewer.

Account of the Number of Brewers, Licensed Victuallers, Persons licensed for the sale of Beer, to be drunk on and off the Premises, &c.; with the Quantities of Malt used by such Brewers, &c. in England, Scotland, and Ireland, during the Year 1835.—(Part. Paper, No. 259. Sess. 1836.)

Collections.	Number of				Number who brew their own Beer.				Bushels of Malt consumed by each Class.			
	Brewers.	Victuallers.	Persons licensed to sell Beer.		Victuallers.	Persons licensed to sell Beer.		Brewers.	Victuallers.	Persons licensed to sell Beer.		
			To be drunk on the Premises.	Not to be drunk on the Premises.		To be drunk on the Premises.	Not to be drunk on the Premises.			To be drunk on the Premises.	Not to be drunk on the Premises.	
England	2,099	54,551	35,536	4,118	25,092	14,840	987	10,419,440	9,521,797	3,703,317	218,616	
Scotland	212	17,026	-	-	335	-	-	986,860	110,360	-	-	
Ireland	215	-	-	-	-	-	-	1,529,587	-	-	-

It is enacted, (1 Will. 4. c. 51.,) that every person who shall sell any beer or ale in less quantities than four and a half gallons, or two dozen reputed quart bottles, to be drunk elsewhere than on the premises where sold, shall be deemed a dealer in beer.

7. *Progressive Consumption of Ale and Beer.*—Malt liquor early became to the labouring classes of England what the inferior sorts of wine are to the people of France, at once a necessary of life and a luxury; the taste for it was universally diffused. There are, however, no means by which an estimate can be formed of the quantity actually consumed previously to the reign of Charles II. But duties, amounting to 2*s.* 6*d.* a barrel on strong, and to 6*d.* a barrel on small ale or beer, were imposed, for the first time, in 1660. These duties being farmed until 1684, the amount of the revenue only is known; and as there are no means of ascertaining the proportion which the strong bore to the small beer, the quantities that paid duty cannot be specified. But, since the collection of the duty was intrusted to officers employed by government, accurate accounts have been kept of the quantities of each sort of beer on which duty was paid, as well as the rate of duty and its amount. Now, it appears, that, at an average of the ten years from 1684 to 1693 inclusive, the amount of ale annually charged with duty was as follows:—Strong ale - - 4,377,293 barrels.
Small do. - - 2,2 6,278 do

Soon after the Revolution several temporary duties were imposed on ale and beer; but in 1694 they were consolidated, the established duties being then fixed at 4s. 9d. a barrel on the strong, and at 1s. 3d. on the small beer, instead of 2s. 6d. and 6d., which had been the rates previously to 1690. This increase of duty had an immediate effect on the consumption, the quantity brewed during the ten years from 1694 to 1703 being as follows:—

Strong ale - - - 3,374,604 barrels.
Small do. - - - 2,180,764 do.

The whole of this decrease must not, however, be ascribed to the increase of the beer duties only; the duties on malt and hops having been, at the same time, considerably increased, operated partly, no doubt, to produce the effect.

During the five years ending with 1750, the ale brewed amounted, at an average, to 3,803,580 barrels of strong, and 2,162,540 barrels of small.—(*Hamilton's Principles of Taxation*, p. 255.)

The ale brewed in private families for their own use has always been exempted from any duty; and it may, perhaps, be supposed that the falling off in the consumption, as evinced by the statements now given, was apparent only, and that the decline in the public brewery would be balanced by a proportional extension of the private brewery. But, though there can be no doubt that the quantity of beer brewed in private families was increased in consequence of the peculiar taxes laid on the beer brewed for sale, it is abundantly certain that it was not increased in any thing like the ratio in which the other was diminished. This is established beyond all dispute, by the fact of the consumption of malt having continued very nearly stationary, notwithstanding the vast increase of population and wealth, from the beginning of last century down to 1750, and, indeed, to 1830!—(See *MALT*.) Had the fact, as to malt, been different, or had the demand for it increased proportionally to the increase of population, it would have shown that the effect of the malt and beer duties had not been to lessen the consumption of beer, but merely to cause it to be brewed in private houses instead of public breweries; but the long continued stationary demand for malt completely negatives this supposition, and shows that the falling off in the beer manufactured by the public brewers has not been made up by any equivalent increase in the supply manufactured at home.

1813	5,382,946	—	1,455,759	—	—	—	2,837,043 18 0
1814	5,624,015	—	1,432,729	—	—	—	2,955,980 8 0
1815	6,150,544	—	1,516,362	—	—	—	3,227,102 4 0
1816	5,982,979	—	1,514,807	—	—	—	3,142,676 4 0
1817	5,236,048	—	1,453,960	—	—	—	2,763,430 0 0
1818	5,363,009	—	1,434,642	—	—	—	2,825,466 14 0
1819	5,629,240	—	1,460,344	—	—	—	2,960,644 8 0
1820	5,206,701	—	1,444,280	—	—	—	2,792,779 10 0
1821	5,373,830	—	1,430,070	—	—	—	2,931,912 0 0
1822	5,712,437	—	1,492,261	—	—	—	3,005,686 12 0
1823	6,177,371	—	1,419,599	—	—	—	3,230,594 8 0
1824	6,188,271	—	1,401,091	—	—	—	3,234,237 12 0
					Intermediate Beer.		
					9,559	5 0	
1825	6,560,604	—	1,463,750	—	—	—	3,401,206 15 0

It appears from the foregoing table, that the quantity of strong beer manufactured by the public brewers had increased about a third since 1787; but the quantity of malt consumed in 1787 was quite as great as in 1828; a fact, which shows conclusively, either that the *quality* of the beer brewed in the public breweries has been deteriorated since 1787, or that less, comparatively, is now brewed in private families; or, which is most probable, that both effects have been produced.

II. An account of the Quantity of all the different Sorts of Beer, stated in Barrels, made in each Year, from 5th of January 1825, to 5th of January 1830; the Rates of Duty per Barrel in each Year, and Total Amount thereof in each Year in England and Scotland.—(*Parl. Paper*, No. 160. Sess. 1830.)

N. B. The duty on beer being repealed in 1830, there are no later accounts of the quantity brewed.

III. An account of the Number of Barrels of Strong Beer exported in each Year, from 5th of January 1825 to 5th of January 1830.

Years ended 5th of January		Number of Barrels (Imperial Measure) exported from		
		England.	Scotland.	Ireland.
1826	-	53,013	1,827	9,655
1827	-	42,502	1,079	10,000
1828	-	69,471	2,509	11,261
1829	-	71,842	2,304	14,499
1830	-	74,902	3,181	15,307

The exports in 1832 were 70,130 barrels.

It has been contended by some, that the condition of the bulk of the people has declined since the commencement of the late French war; and that this decline, and not the duties and restrictions on the manufacture and sale of malt and beer, has been the real cause that the consumption of malt liquors continued stationary during the thirty years ending with 1830. But nearly *four* millions of persons were added to the population of England and Wales during the eighteenth century, and it is admitted, on all hands, that the condition of the middle and lower classes was, at the same time, vastly improved. Instead, however, of increasing, as no doubt it would have done but for some very powerful counteracting cause, we have seen that the consumption of malt liquor continued stationary during the whole of *last century*, so that the fair presumption is, that it continued stationary during that period of the *present century* already referred to, not because the people have become less able to purchase beer, but because the same causes which formerly prevented the increase of consumption have continued to operate. If we except a portion of the peasantry in some of the southern counties, where the pernicious practice of paying wages out of the poor's rates has been introduced, it will be found that the condition of the labouring classes has been, speaking generally, changed very much for the better during the last thirty years. Their health has been remarkably improved; a result which could hardly have taken place without an improvement in their habits as to cleanliness, and in their ordinary accommodations; and, independent of this circumstance, the fact that the lower classes have lodged upwards of *fifteen* millions sterling in Savings' Banks, and that upwards of a million of them are members

* The ale gallon contains 282 cubic inches, and the Imperial gallon 277½: the latter being $\frac{1}{37}$ part less than the former.

of Friendly Societies, shows pretty clearly that, though they may not be anywhere so comfortable as could be wished, and though, in Kent, Hampshire, and some other southern counties, they are exposed to very great privations, their condition is, on the whole, superior to what it has ever previously been. It has further been contended, that if the decline in the consumption of beer cannot be ascribed to any falling off in the condition of the people, or in their power to purchase malt liquors, the fair inference is, that it has originated in a change of taste; and the increased consumption of spirituous liquors that has taken place of late years has been appealed to in proof that such is the fact. But this increase has been very greatly exaggerated: admitting, however, that the circumstances are really such as have been represented, the question instantly recurs, to what is this change of taste owing? How comes it that the people of England should be less partial than heretofore to that palatable and nutritious beverage to which they have been long accustomed, and that they should be resorting to ardent spirits and other deleterious compounds, destructive alike of their health and morals? If we mistake not, it will be found to be wholly owing to the duties and restrictions that have been laid on the manufacture and sale of beer.

8. *Duties on Ale and Beer: old licensing System.*—The duty on malt is 20s. 8d. a quarter; on hops 2d. a pound; and on strong beer, which forms five-tenths of the whole quantity brewed, the duty was 9s. 10d. a barrel. It is commonly estimated, that from three to three and a half barrels of beer are manufactured from a quarter of malt; and that each quarter of malt requires twelve pounds of hops. Now, supposing that three and a quarter barrels of beer are produced from a quarter of malt, the duties affecting it, down to the 10th of October 1830, were

	s.	d.
Duty laid directly on malt	20	8
Beer duty on three and a quarter barrels	31	11
Hop duty	2	0
	54s. 7d.	

and dividing this sum of 54s. 7d. by $3\frac{1}{4}$, the duties affecting each barrel of beer will be 17s.

Such duties are obviously oppressive. The price of barley does not at an average exceed 35s. per quarter. But the duties on malt or beer produced from a quarter of barley (exclusive of the hop duty) amounted to 52s. 7d., being equal to 150 per cent. upon the cost of the barley employed! Need we seek elsewhere for the cause of the stationary demand for malt liquors? The taxes on wine, British spirits, tea, and coffee, do not, in any case, exceed 100 per cent. Nor can there be a doubt that the disproportionately heavy burden that has thus been imposed on the natural and healthy beverage of the lower classes has principally contributed to lessen its consumption, and to cause them to resort to less salubrious substitutes.

In another point of view, the beer duties were still more indefensible. They affected only that description of beer which was brewed for sale; and as all the higher classes brewed their own beer, the duty fell only on the lower and middle ranks of the community, and particularly the former. It is singular, that a tax so grossly unequal and oppressive should have been so long submitted to. Should the public necessities require, at any future period, that an effort should be made to increase the revenue from beer, the fair and proper method would be to increase the malt duties. They affect alike those who brew the beer which they consume, and those who buy it from a public brewer. Their increase would not require the employment of any additional officers; for it is obvious, that the same officers and regulations that serve to collect a duty of 20s. 8d. would equally serve to collect a duty of 30s.; and, what is most important, an increase of this sort would not require any interference with the process of brewing.

But besides the obstacles to the consumption of beer arising from the oppressive duties with which it was burdened, the system recently in force of granting licences for its sale, opposed obstacles that were hardly less formidable. Previously to 1830, no one could open a house for the sale of beer without first obtaining a licence renewable annually from the magistrates; and as these functionaries were accustomed only to grant licences to the occupiers of particular houses, the brewers naturally endeavoured, in order to ensure the sale of their beer, either to buy up those houses or to lend money upon them; and in many extensive districts a few large capitalists succeeded in engrossing most of the public houses; so that even the appearance of competition was destroyed, and a ready market and good prices secured for the very worst beer!

We, therefore, look upon the abolition of the beer duties, and the granting permission to all individuals to retail beer upon taking out an excise licence costing 2l. 2s., as highly advantageous measures. The repeal of the duty has put an end to the unjust distinction that previously obtained; the poor man is no longer burdened with a heavy tax, from which the noble and affluent of the land were exempted; but all classes are placed, in so far at least as the duties on beer are concerned, in the same situation. The fall of price caused by the abolition of the duty, by rendering beer more easily obtainable, will do much to check the consumption of spirits; and will, at the same time, powerfully contribute to the health and comfort of

the poor. The change in the mode of licensing houses for the retail of beer has introduced into the trade that system of free competition that is so advantageous. It is no longer in the power of any combination of brewers to maintain the price of beer at an unnatural elevation; and the public may now depend on being supplied with malt liquors at the lowest price that will serve to indemnify the brewers.

9. *Complaints of the Increase of Beer Shops.*—In despite, however, of what has now been stated, it is strenuously objected to the late measure for licensing houses for the sale of beer, that it has led to their excessive multiplication in different parts of the country, and has, in consequence, had a most pernicious influence on the public morals: but there do not seem to be any good grounds for such statements. The whole number of public houses licensed for the sale of beer and ale only in England and Wales, during the year ended 31st of March 1833, was 4,821; while 47,286 houses were licensed, during the same year, for the sale of beer, ale, and spirits.—(*Parl. Paper*, No. 426. Sess. 1833.) Whatever, therefore, may be the inconveniences arising from the number of the latter, it does seem ludicrous to imagine that they can be materially increased by the opening of the beer shops. On the contrary, we should think that every measure which has a tendency to substitute beer shops for spirit must be advantageous; and such is the precise effect of the act 1 Will. 4. cap. 64. Its privileges are acquired by those only who confine themselves to the sale of beer; and until it has been shown that the drinking of beer is less advantageous, or more pernicious, than the drinking of spirits, we shall not be inclined to lay much stress on the complaints so frequently put forth as to the number of beer shops. In order, however, to check their unnecessary multiplication, and to ensure as far as possible the maintenance of good order in them, it might be expedient, perhaps, to increase the licence duty, and the security required from those applying for a licence, and to facilitate the suppression of disorderly houses: but we protest against any attempt to lessen the number of public houses by reviving the old licensing system, with the injustice and jobbing inseparable from it, and from every modification of it.

10. *Existing Regulations with respect to the Sale of Beer.*—The sale of ale, beer, &c. by retail in England, is now regulated by the act 1 Will. 4. c. 64., of which we subjoin a pretty full abstract.

Licences to be granted by commissioners of excise, or by persons authorised by them; to cost 2l. 2s. a year; not to authorise the sale of wine or spirits: not to be granted to sheriffs' officers, nor to any person executing the legal process of any court of justice, nor to any person not being a householder assessed to the parish.—§ 2.

The party requiring such licence to enter into a bond to the commissioners, with one sufficient surety in the penalty of 20l., or with two sufficient sureties in the penalty of 10l. each, for the payment of any penalty or sum of money, not exceeding the amount of such 20l. or 10l. respectively, which shall be incurred for any offence against this act by the party to whom such licence shall be granted; and no person licensed to sell beer by retail, or not being a householder paying the poor rates, shall be surety in any such bond.—§ 4, 5.

Every person who shall be licensed under this act, shall cause to be painted, in letters three inches at least in length, in white upon a black ground, or in black upon a white ground, publicly visible and legible, upon a board, to be placed over the door of the house in which such person shall be licensed, the christian and surname of the persons mentioned in such licence, at full length, together with the words "Licensed to sell Beer by Retail;" and every such person shall keep up such name and words during all the time that such person shall continue so licensed, upon pain of forfeiting for every omission 10l.—§ 6.

No person to sell any beer by retail, under this act, after the expiration of any licence granted, nor in any house not specified in such licence; and any person selling beer by retail, not being duly licensed, as the keeper of a common inn, ale-house, or victualling-house; or if any such person, so licensed, shall deal in or retail any wine or spirits, he shall, for every such offence, forfeit 20l., half to go to the informer and half to the king; such penalty to be recovered as other excise penalties; and the powers of the excise act 7 & 8 G. 4. c. 53, &c. extended to this act.—§ 7, 8, 6.

Persons trading in partnership, and in one house, shall not be obliged to take out more than one licence in any one year: provided also, that no one licence shall authorise any person to sell beer, in any other than the house mentioned in such licence.—§ 10.

In cases of riot or expected riot or tumult, every person licensed under this act, and keeping any house situate within their jurisdictions, shall close his house at any time which the justice or justices shall direct; and every such person who shall keep open his house at or after any hour at which such justices shall have so ordered or directed such house to be closed, shall be deemed to have not maintained good order and rule therein, and to be guilty of an offence against the tenor of his licence.—§ 11.

Every person licensed to sell beer by retail, shall sell (except in quantities less than a half pint) by the gallon, quart, pint, or half pint measure, sized according to the standard; and in default thereof, he shall for every such offence forfeit the illegal measure, and pay not exceeding 40s. together with the costs of the conviction, to be recovered within thirty days next after that on which such offence was committed, before two justices; such penalty to be over and above all penalties to which the offender may be liable under any other act.—§ 13.

Every seller of beer by retail, having a licence under this act, who shall permit any person to be guilty of drunkenness, or disorderly conduct, in the house mentioned in such licence, shall forfeit the same following: for the first offence, not less than 40s. nor more than 5l. as the justices, before whom such retailer shall be convicted, shall adjudge; and for the second offence, any sum not less than 5l. nor more than 10l.; and for the third offence, any sum not less than 20l. nor more than 50l.; and it shall be lawful for the justices, before whom any such conviction for such third offence shall take place, to adjudge, if they shall think fit, that such offender shall be disqualified from selling beer by retail for the space of two years next ensuing such conviction, and also that no beer shall be sold by retail, by any person in the house mentioned in the licence of such offender; and if any person so licensed shall, knowingly, sell any beer, ale, or porter, made otherwise than from malt and hops, or shall mix, or cause to be mixed, any drugs or other pernicious ingredients, with any beer sold in his house, or shall fraudulently dilute, or in any way adulterate, any such beer, such offender shall, for the first offence, forfeit not less than 10l. nor any more than 20l., and for the second such offence, such

offender shall be adjudged to be disqualified from selling beer, ale, or porter, by retail, for the term of two years, or to forfeit not less than 20*l*. nor more than 50*l*., and shall be subject to a like penalty at every house where he shall commit such offence; and if any person shall, during any term in which it shall not be lawful for beer to be sold by retail on the premises of any offender, sell any beer by retail on such premises, knowing that it was not lawful to be sold, such offender shall forfeit not less than 10*l*. nor more than 20*l*.; every person suffering the conditions of the licence to be infringed to be deemed guilty of disorderly conduct.— \rightarrow 13.

Retailers' houses not to be open before four in the morning, nor after ten in the evening; nor between the hours of ten in the forenoon and one in the afternoon, nor at any time between the hours of three and five in the afternoon, on any Sunday, Good Friday, Christmas-day, or any day appointed for a public fast or thanksgiving; and any person offending herein shall forfeit 40*s*. for every offence; every separate sale to be deemed a separate offence.— \rightarrow 14.

All penalties under this act, except for selling beer by any person not duly licensed, shall be recovered, upon the information of any person before two justices in petty sessions; and every such penalty shall be prosecuted for within three calendar months next after the offence; and every person licensed under this act, who shall be convicted before two justices, shall, unless proof be adduced to the satisfaction of such justices, that such person had been theretofore convicted before two justices, within the space of twelve calendar months next preceding, be adjudged by such justices to be guilty of a first offence against this act, and to forfeit and pay any penalty by this act imposed for such offence, or if no specific penalty be imposed, then any sum not exceeding 5*l*., together with the costs of the conviction; and if proof be adduced to the satisfaction of such justices, that such person had been previously convicted, within the space of twelve calendar months next preceding, of one such offence only, such person to be adjudged guilty of a second offence against this act, and to forfeit and pay any penalty by this act imposed for such offence, or if no specific penalty be so imposed, then any sum not exceeding 10*l*., together with the costs of conviction; and if proof shall be adduced that such person had been previously convicted within the space of eighteen calendar months next preceding, of two such separate offences, and if proof be adduced that such person, so charged, is guilty of the offence charged against him, such person shall be adjudged to be guilty of a third offence against this act, and to forfeit and pay any penalty imposed by this act, in respect of such offence, or if no such specific penalty shall be imposed, then to forfeit and pay the sum of 50*l*. together with the costs of conviction.— \rightarrow 15.

The party, convicted of any such third offence, may appeal to the general sessions, or quarter sessions, then next ensuing, unless held within twelve days after conviction, and in that case, to the then next subsequent sessions; and, in such case, the party convicted shall enter into a recognizance, with two sureties, personally to appear at the said general or quarter sessions, to abide the judgment of the court; and to pay such costs as shall be by the court awarded: or, in failure of the party convicted entering into such recognizance, such conviction shall remain good and valid; and the said justices who shall take such recognizance are also required to bind the person who shall make such charges to appear at such general or quarter sessions, then and there to give evidence against the person charged, and, in like manner, to bind any other person who shall have any knowledge of such offence; and it shall be lawful for the said general or quarter sessions to adjudge such person to be guilty of such third offence against this act, and such adjudication shall be final: and it shall be lawful for such general or quarter sessions to punish such offender by fine, not exceeding 100*l*., together with the costs of such appeal, or to adjudge the licence to be forfeited, or that no beer be sold by retail in the house for the term of two years, and if such licence shall be adjudged to be forfeited, it shall henceforth be void; and whenever, in such case, the licence of such offender shall be adjudged to be void, such offender shall be deemed incapable of selling beer, ale, or porter, by retail, in any house kept by him, for the space of two years, to be computed from the time of such adjudication; and any licence granted to such person during such term shall be void.— \rightarrow 16.

In default of payment of penalties, proceedings may be had against the sureties.— \rightarrow 19.

Any person summoned as a witness, who shall neglect or refuse to appear, and not make such reasonable excuse for such neglect, &c. as shall be admitted by such justices of sessions, or who, appearing, shall refuse to be examined, shall, on conviction, forfeit not exceeding 10*l*.— \rightarrow 20.

Offenders refusing or neglecting, within seven days after conviction, to pay the penalty imposed, and any costs assessed, such justices may issue their warrant, to levy the amount by distress and sale, together with the costs of distress and sale; and in every such case, such offenders, if in custody, shall be forthwith discharged; but if the goods and chattels are not sufficient, such justices may commit the offender to the common gaol or house of correction for not exceeding one calendar month, if the penalty shall not be above 5*l*.; for not exceeding three calendar months, if the penalty shall be above 5*l*. and not more than 10*l*.; and for not exceeding six calendar months, if the penalty shall be above 10*l*.; provided, that whenever such offender shall pay to the gaoler or keeper, or to whomsoever such justices shall have appointed, the penalty and costs, together with all the costs of apprehension and conveyance to gaol, at any time previous to the expiration of the time for which such offender shall have been committed, such offender shall be forthwith discharged.— \rightarrow 21.

No conviction under this act, nor any adjudication made upon appeal therefrom, shall be quashed for want of form, nor removed by certiorari.— \rightarrow 27.

Every action against any justice, constable, or other person, for any thing done in execution of his duty under this act, to be commenced within three calendar months, and not afterwards; and if any person be sued, he may plead the general issue, and give the special matter in evidence.— \rightarrow 28.

This act not to affect the two universities, nor the vintners' company in London; nor to prohibit the sale of beer at fairs, as heretofore.

11. Scotch Ale and Beer Duties.—The duties on ale and beer in Scotland have been for a lengthened period the same as in England.

At the union in 1707, the English duties on ale and beer were introduced into Scotland. But, besides strong and small beer, the Scotch had an intermediate species, which they called *two-penny*, and which was their favourite beverage. The duty on this description of beer was fixed, at the union, at 2*s*. 1½*d*. a barrel. For thirty years after its imposition, the quantity of two-penny that paid duty was always above 400,000, and sometimes exceeded 500,000 barrels a year. But in 1760 the duty on two-penny was increased to 3*s*. 4½*d*. and the consumption immediately fell off to between 100,000 and 200,000 barrels! The quantity that paid duty in 1800 amounted to 149,803 barrels. The manufacture of this species of beer ceased entirely in 1802.

No account has been kept of the quantity of beer brewed in Ireland since 1809, when it amounted to 960,300 barrels.—(*Morewood on Intoxicating Liquors*, p. 353.) Perhaps it may now amount to from 1,000,000 to 1,200,000 barrels.

12. Regulations as to the Exportation of Beer.—Ale or beer exported to foreign parts as merchandise is allowed a drawback of 6s. the barrel of 36 gallons, Imp. meas. But before any debenture for the above drawback shall be paid, the exporter or his principal clerk or manager shall make oath thereon, before the proper officer of excise, that such ale or beer was put on board the exporting ship as merchandise to be sent beyond seas, and no part thereof for the ship's use; and that, according to the best of his knowledge and belief, the same has been brewed wholly from malt which has been charged with and paid the duty of 2s. 7d. a bushel, and shall also specify in such oath the time when and the place where; and the brewer, being an entered and licensed brewer for sale, by whom such beer or ale was brewed, and that the quantity of malt used in brewing was not less than two bushels (Imp. meas.) for every 36 gallons of such beer or ale. Persons making false statements forfeit the sum of 200*l.* and the debenture is void.—(1 Will. 4. cap. 61. § 11.)

In consequence of the complaints, whether well or ill founded, of the inconveniences arising from the increase of beer shops—(see *Dict.* p. 14), a material change has been made in the mode of licensing houses for the sale of beer. Under the act 1 Will. 4. c. 64.—(*Dict.* p. 14), the commissioners of excise, or other persons duly authorised, were bound to grant licences, costing 2*l.* 2s. a year, to all persons not excepted in the act, empowering them to sell ale, beer, porter, cider, &c. to be drunk *indifferently either on or off the premises*. But the act of 1834, 4 & 5 Will. 4. c. 85. made the obtaining of a licence to retail beer to be drunk on the premises contingent on the applicant being able to produce a certificate of good character, subscribed by certain persons rated at a certain amount to the poor: it has also raised the cost of such licence to 3*l.* 8s.; and reduced the cost of a licence to sell beer not to be drunk on the premises to 1*l.* 1s. We subjoin a full abstract of the act:—

Persons applying for a Licence to sell Beer to be drunk on the Premises, to deposit a certificate of good Character, &c.—Every person applying for a licence to sell beer or cider by retail, to be drunk in the house or on the premises, shall, in addition to the application setting forth the particulars required by the act 1 Will. 4. c. 64., annually produce to and deposit with the commissioners of excise, collector, or other person authorised to grant such licence within the parish or place in which the person applying intends to sell beer or cider by retail, a certificate signed by 6 persons residing in and being and describing themselves to be inhabitants of such parish, place, &c. and respectively rated therein to the poor at not less than 6*l.*, or occupying a house therein rated to the poor at not less than 6*l.*, none of whom shall be maltsters, common brewers, or persons licensed to sell spirituous liquors or beer or cider by retail, nor owners or proprietors of any houses licensed to sell liquors, beer, or cider by retail, stating that the person applying for the licence is of good character; and at the foot of such certificate one of the overseers of the parish, township, or place shall certify (if the fact be so) that such 6 persons are inhabitants respectively rated as aforesaid; and such certificate shall respectively be in the form of the schedule annexed to this act: provided always, that in any parish, township, or district maintaining its own poor, in which there are not 10 inhabitants rated to their relief to the amount of 6*l.* each, or not occupying houses respectively rated to the poor at 6*l.* each (not being maltsters, common brewers, or persons licensed to sell spirituous liquors or beer or cider by retail,) the certificate of the majority of the inhabitants of such parish, township, or district maintaining its own poor, as are rated to the amount of 6*l.* each, shall be deemed to be a sufficient certificate for the purposes of this act.—§ 2.

Penalty on Overseers.—Any overseer who shall, without due cause, refuse to certify that the persons who have signed the certificate are respectively rated to the poor's rate as aforesaid, to forfeit not more than 5*l.*—§ 3.

Beer drunk in Sheds.—Any person licensed under the act 1 Will. 4. c. 64., to sell beer, cider, &c. not to be consumed on the premises, who shall employ, permit, or suffer any person or persons to take or carry any beer, &c. from his house or premises, to be drunk or consumed for his benefit or profit, in any other house, tent, shed, &c. belonging to, or hired, used, or occupied by such licensed person, such beer, &c. shall be held to have been consumed on the premises, and the person selling the same shall be subject to the like forfeitures and penalties as if it had been actually drunk or consumed in a house or upon premises licensed only for the sale thereof.—§ 4.

Billeting.—Provisions for billeting soldiers under mutiny acts to extend only to those licensed to sell beer or cider to be drunk in the house or on the premises, and not to extend to those licensed to sell beer not to be consumed on the premises.—§ 5.

Justices to regulate the Opening and Closing of Houses.—Justices in petty sessions are authorised to fix the hours at which houses and premises licensed to sell beer under this act shall be opened and closed; but any person thinking himself aggrieved by any such order may appeal at any time, within 4 months from its date, to the justices in quarter sessions, on giving the justices making the order 14 days' notice of his intention; and the decision of the justices in quarter sessions shall be final: provided, however, that the hour to be fixed for opening any house shall not in any case be earlier than 5 o'clock in the morning, nor for closing the same later than 11 o'clock at night, or before 1 o'clock in the afternoon on Sunday, Good Friday, Christmas-Day, or any day appointed for a public fast or thanksgiving; and the hours so fixed by the justices, with reference to the districts within their jurisdictions, shall be taken to be the hours to be observed and complied with under this act as fully as if the same had been specially appointed by it.—§ 6.

Constables, &c. to visit Licensed Houses.—All constables and officers of police are authorised to enter into all houses licensed to sell beer or spirituous liquors to be consumed upon the premises whenever they shall think proper; and if any person licensed as aforesaid, or any servant or person in his employ or by his direction, shall refuse to admit such constables, &c. into such house or premises, the person having the licence shall for the first offence forfeit and pay any sum not exceeding 5*l.*, together with the costs of conviction, to be recovered within 20 days before one or more justices; and it shall be lawful for any two or more justices, upon any person being convicted of such offence for the second time, to adjudge (if they think fit) that such offender be disqualified from selling beer, ale, porter, cider, or perry, by retail, for 3 years after such conviction, or for such shorter space as they may think proper.—§ 7.

Penalty for making or using false Certificates.—Persons certifying any matter having reference to this act as true, who know the same to be false, or using any certificate, knowing the same to be forged, shall, on conviction of such offence before 2 or more justices, forfeit and pay the sum of 20*l.*; and every licence granted to any person making use of any certificate to obtain the same, such person knowing such certificate to be forged, or the matters certified therein to be false, shall be void to all

intents and purposes; and any person using such certificate shall be disqualified for ever from obtaining a licence to sell beer or cider by retail.—§ 8.

No licence to be granted without a Certificate.—No licence for the sale of beer or cider by retail to be consumed or drunk in the house or on the premises shall be granted, except upon the certificate hereby required: provided, that in all extra-parochial places the certificate required by this act may be signed and given by inhabitants rated to the poor at 6d. in any adjoining parish or parishes.—§ 9.

Retailers to produce their Licences on Requisition of 2 Magistrates.—In case any complaint be laid before 2 justices against any licensed person for an offence against the tenor of his licence, or against this act or the act 1 Will. 4. c. 64., the said justices may require such person to produce his licence before them for their examination; and if he wilfully neglect or refuse so to do, he shall forfeit for such offence any sum, not exceeding 5s., the said justices shall think proper; and such person may be convicted, proceeded against, and dealt with for such offence in the same manner, *velutis mutandis*, as is directed by the act 1 Will. 4. c. 64. with regard to persons guilty of a first offence against said act; and the penalty imposed for such offence is to be applied in the manner that a penalty for a first offence against said act is directed to be applied.—§ 10.

Continuance of Powers, &c.—The powers, provisions, and penalties of 1 Will. 4. c. 64. to apply to persons licensed under this act, and to their sureties, &c.—§ 11.

Act 1 Will. 4. c. 61. to continue in force, except as hereby altered.—§ 12.

Duties on Beer Licences under the 1 Will. 4. c. 64. repealed, and new Duties granted in lieu thereof.—From and after the passing of this act, the duties payable on excise licences for the sale of beer by retail under the act 1 Will. 4. c. 64. shall cease, and in lieu of such duties there shall be paid upon the licences hereby authorized to be granted the duties following; viz.:

For and upon every licence to be taken out by any person for the sale of beer by retail, not to be drunk or consumed in or upon the house or premises where sold, the annual sum of 1l. 1s.

For and upon every licence to be taken out by any person for the sale of beer by retail, to be drunk or consumed in or upon the house or premises where sold, the annual sum of 3l. 3s.—Sec. 13.

The duties to be under the management of commissioners of excise, and to be recovered and accounted for under the provisions of the act 1 Will. 4. c. 64.—§ 14.

Not to affect Duty on Licences to Retail Cider and Perry.—Nothing in this act shall affect the amount of duty payable under the 1 Will. 4. c. 64. on licences to retail cider and perry; but every such licence shall specify whether it be granted for the sale of cider and perry by retail not to be drunk in the house or premises where sold, or for the retail of the same to be drunk in the house or premises where sold.—§ 15.

Licences under this Act not to authorize Persons to sell Wine.—No licence granted under the act 1 Will. 4. c. 64. and this act shall authorize any person to take out or hold any licence for the sale of wine, spirits, or sweets or made wines, or mead or metheglin; and if any person licensed under the act 1 Will. 4. c. 64. and this act shall permit or suffer any wine, spirits, &c. to be brought into his house or premises to be drunk or consumed there, or shall suffer them to be drunk or consumed in his house or premises, he shall, over and above any excise penalties to which he may be subject, forfeit 20l.—§ 16.

Penalty on unlicensed Persons.—Such persons selling beer and cider by retail to be drunk off the premises, 10l.; to be drunk on the premises, 20l.—§ 17.

Board over the Door.—Every person licensed to sell beer, cider, or perry, by retail, under the authority of the act 1 Will. 4. c. 61. and this act, shall, on the board required by the former act to be placed over his door, paint and keep thereon, after the words "licensed to sell beer or cider by retail," the additional words "not to be drunk on the premises," or "to be drunk on the premises," as the case may be, on pain of forfeiting the penalty imposed by such act for not having such board over the door.—§ 18.

What is retailing of Beer, &c.—Every sale of beer, or of cider or perry, in any less quantity than 4½ gallons, shall be deemed and taken to be a sale by retail.—§ 19.

Penalties for selling Spirits or Wine without Licence.—Persons licensed to sell beer or cider under the act 1 Will. 4. c. 61. and this act, who sell spirits or wine, sweets, &c. without being licensed, are liable to the penalties imposed by the laws of excise for selling spirits or wine, sweets, &c. without licence.—§ 20.

Certificates not to be required for Houses in certain Situations, if Population exceed 5,000.—The before-mentioned certificate shall not be required as to any house situated within the cities of London and Westminster, or within any parish or place within the bills of mortality, nor within any city or town corporate, nor within the distance of 1 mile from the place used at the last election as the place of election or polling place of any town returning a member to parliament, provided that the population, determined according to the last parliamentary census taken in such city, town, &c. shall exceed 5,000; provided, that no licence for the sale of beer, ale, porter, cider, or perry by retail on the premises in the cities of London and Westminster, or in any parish within the bills of mortality, or in any such city or town corporate, or town returning a member to parliament as before mentioned, shall be granted after the 5th day of April, 1836, unless the house or premises specified as those in which beer or cider is intended to be sold shall be of the value of 10l. per annum.—§ 21.

Services of Summoners.—Summoners or orders not legally served, unless by some constable or other peace officer.—§ 22.

Commencement.—Act shall commence and take effect from and after the 10th day of October, 1834.—§ 23.

Form of Certificate referred to in § 2.

We, the undersigned, being inhabitants of the parish (or township, as the case may be) of _____ and respectively rated to the poor at not less than 6d. per annum, and none of us being mulsters, common brewers, or persons licensed to sell spirituous liquors, or being licensed to sell beer or cider by retail, do hereby certify, that *J. N.*, dwelling in _____ street (here specify the street, lane, &c.) in the said parish (or township, &c.) is a person of good character.

[Here insert the day of signing the certificate.]

(Signed)

[Here state the residence of each of the persons signing.]

I do hereby certify, That all the above-mentioned persons whose names are subscribed to this certificate are inhabitants of the parish (or township, &c.) of _____ and respectively rated to the poor at not less than 6d. per annum.

(Overseer of the parish or township, &c.)
Date.

(Sup.)

[Ale, porter, and beer, are made in the United States in large quantities; and their consumption appears to be steadily increasing.

The early emigrants from Great Britain brought with them their tastes and habits; and we find, at an early period, that breweries were established on a small scale in all the principal seaports. Their success to the south of the Potomac was prevented by the heat of the

climate, together with the short duration of the winter. In Baltimore, Philadelphia, New York, and Boston, however, they have succeeded, and continue to flourish. Breweries are also to be found in large numbers throughout the *state* of New York; and there is scarcely a village in it where good ale cannot be procured. Along the banks of the Hudson river, almost every town has one or more breweries, and some of these are of a considerable size. At Albany, the business is carried on to a great extent. Beer was brewed in Philadelphia previous to the revolutionary war. The manufacture of porter was introduced here after the peace; which was soon followed by that of ale. These two articles are now generally manufactured; and beer, properly so called, is rapidly going into disuse. A continued extension of the business of brewing has been taking place in Pennsylvania, and throughout the western country. We find breweries at all the principal towns along the banks of the Ohio. At Pittsburg, Wheeling, and Cincinnati, there are a number, which not only supply those places and the surrounding country, but furnish large quantities for export down the Ohio and the Mississippi. And large quantities are exported from the northern to the southern states generally, where their consumption is fast taking the place of that of ardent spirits.

The quality of the malt liquors manufactured in the United States has improved in the last few years, and will now not suffer by a comparison with the best foreign. From the great abundance and low price of the staple articles from which they are made, no temptation exists to adulterate them. The public, consequently, are furnished with a pure and wholesome beverage.

Nearly all the beer, ale, and porter, which are imported in the United States, is brought to us from Great Britain. A small portion of what is imported is re-exported, for the most part to the island of Cuba. The countries to which the corresponding articles of domestic production are chiefly exported, we have no means of stating with any accuracy; since they are classed together with *cider* in the annual statements of the commerce of the United States, made to Congress by the Secretary of the Treasury. We may mention that this class of our products is chiefly exported to the British North American Colonies, Cuba, Texas, the British West Indies, and Mexico.—*Am. Ed.*]

ALEXANDRIA, so called from its founder, Alexander the Great, the principal sea-port of Egypt, on the coast of the Mediterranean. It is situated about 12 miles W. of the Canopic mouth of the Nile; the Pharos being in lat. $31^{\circ} 12\frac{1}{2}'$ N., long. $29^{\circ} 53\frac{1}{2}'$ E. The situation of this famous city was most admirably chosen. Until the discovery of the route to India by the Cape of Good Hope, Egypt formed the natural seat of the commerce between the eastern and western worlds; and Alexandria was placed in the most favourable position in Egypt for an emporium. It is the only port on the whole northern coast of that country where there is, at once, deep water, and security for shipping throughout the year. The ports of Rosetta and Damietta, the former on the west, and the latter on the eastern arm of the Nile, are both difficult of entrance, each having a bar, upon which there is always a dangerous surf. Ships bound for Alexandria avoid this serious inconvenience; and by means of an artificial navigation, stretching from the city to the western branch of the Nile, it has for a while at least, almost the same facilities of internal navigation that are enjoyed by the cities referred to.

It may be proper, however, to mention that this artificial communication with the Nile has not always been open. It existed in antiquity, but fell into decay during the barbarism of more modern times. After being shut up for some centuries, it has been re-opened by Mohammed Ali, who has dug a canal from Alexandria to Foulah on the Nile, about 27 miles above Rosetta. This important work is 48 miles in length, 90 feet in breadth, and from 15 to 18 feet deep. It was opened in 1819; but owing partly to the nature of the ground, partly to some defects in its construction, and partly to the mud deposited by the water of the Nile, it is difficult to keep in repair; and cannot now, it is said, be navigated except during the period of the inundation. Its free navigation at all periods would, however, be of the greatest advantage, not to Alexandria only, but to all Egypt; and it is believed that this might be secured by facing the canal with brick, and putting it otherwise into good order.

Ports, &c.—The ancient city was situated a little more inland than the modern one, opposite to the small island of Pharos, on which was erected the lighthouse, so celebrated in antiquity.—(*Cæsar de Belli Civili*, lib. iii. cap. 112.) This island was, partly by artificial means, and partly by natural causes, gradually joined to the land by a mound, and on this the new town is principally built. The isthmus and island have now the form of a T, its head being N. E. and S. W. A square castle or tower, built on a small islet or rock, at the extremity of a mole projecting from the north-east angle of the city, is still called the Pharos, and a light is regularly exhibited upon it. On each side of the city there is a port. That on the western, or African side, called the Old Port, is by far the largest and best. It stretches from the town westwards to Marabout, about six miles, and is about a mile and a half wide. It is bounded on the north, partly by the western tongue or angle of the island on which the city is partially built, and partly by rocks and sand banks. It has three entrances. The first, or that nearest the city, having 17 feet water, is about two miles S. W. from the large building, situated a little to the westward of the town, called the palace; but it is too narrow and difficult to be attempted by any one not thoroughly acquainted with the port. The eastern side of the second or middle entrance is marked by buoys which lie about two miles and three quarters S. W. from the palace; it is about a quarter of a mile wide, and has, where shallowest, 27 feet water. The third or western entrance has its western boundary within about three-eighths of a mile from the east end of Marabout island; it is about half a mile wide, and has from 25 to 27 feet water in its shallowest places. This last is the best an-

trance. Ships, when in, may anchor close to the town in from 22 to 40 feet water, and there is good anchorage in deep water all along the shore. Foreigners were formerly excluded from this port; but this prohibition no longer exists.

The new or Asiatic harbour is on the eastern side of the town. A rock called the Diamond lies a little to the east of the Pharos tower; and ships entering the port ought to have this rock about a cable's length on the right. If they get much further to the left, they will come in contact with a shoal which stretches westward from the Pharillon, or little tower, on the east side of the port. The water immediately within the port S. W. from the Pharos is from 30 to 40 feet deep; but the space for anchorage is very limited, and is exposed to the northerly gales; and the ground being foul and rocky, hempen cables are very apt to chafe, and several accidents have happened in consequence to ships unprovided with iron cables. Ordinary tides rise 2 feet; but during the overflow of the Nile the rise is 4 feet. Variation 15° west.—(See *Plan of Alexandria*, by Lieut. Falbe.)

Ancient and Modern City.—Under the Ptolemies and Romans, Alexandria was the first commercial city in the world. It suffered greatly by its reduction by the Saracens in 640; but it continued to be a place of considerable commercial importance till the despotism of the Mamelukes and Turks, and the discovery of the route to India by the Cape of Good Hope, completed its ruin. Under the Ptolemies, the population is believed to have amounted to about 300,000, and the city was adorned by a vast number of magnificent structures. At present the population varies with the seasons of the year, but, when greatest, it is not supposed to exceed 25,000; and may vary between this amount and 16,000 or 13,000. The appearance of the modern town is most unpromising. "It may be justly said, that in the new city of Alexandria we find a poor orphan, whose sole inheritance has been the venerable name of its father. The vast extent of the ancient city is contracted in the new, to a little neck of land between the two ports. The most superb temples are changed into plain mosques; the most magnificent palaces into houses of a bad structure; the royal seat is become a prison for slaves; an opulent and numerous people has given way to a small number of foreign traders, and to a multitude of wretches, that are the servants of those on whom they depend: a place formerly so famous for the extent of its commerce, is no longer any thing more than a mere place of embarkment, in fine, it is not a phoenix that revives from its own ashes, it is, at most, a reptile, sprung from the dirt, the dust, and corruption with which the Alcoran has infected the whole country."—(*Norden's Travels*, Eng. trans. 8vo ed. p. 37.) There is reason, however, to think that this striking description, though accurate at the time when it was written (1737), conveys too unfavourable an idea of the present state of Alexandria. The vigorous government of Mohammed Ali, by introducing comparative security and good order into Egypt, has latterly revived the commerce of Alexandria, which has again become a place of considerable importance in the trading world.

Trade of Alexandria.—The imports principally consist of cotton stuffs, timber, hardware, iron and tin, tobacco, machinery, ammunition, silk goods, woollens, staves, &c. The exports consist of raw cotton, wheat and barley, rice, linen, flax, linseed, sugar, coffee (from the Red Sea), drugs, gums, sal-ammoniac, saffron, wax, &c.

The principal articles of importation into this country from Egypt are cotton, flax and linseed, senna, and gum. Of these, cotton is by far the most important. We began to import it in 1833; and since then the imports have been as follows:—

Years.	Bales.	Years.	Bales.	Years.	Bales.
1834	38,023	1837	32,450	1830	14,733
1835	111,023	1838	32,889	1831	38,124
1836	47,621	1839	24,739	1832	41,183

In 1833, the French imported 25,807 bales of Egyptian cotton; the imports at Trieste during the same year were about 50,000 bales; and those at Leghorn and Genoa were, together, about the same as at Trieste. The bale of Egyptian cotton weighs about 230 lbs. This important trade owes its existence almost entirely to the exertions of the Pacha, by whom the cotton plantations have been established. The cotton exported is all long-staple, but of two sorts: one called in Egypt makko, and in England common Egyptian; the other, the produce of sea-island seed, called in Egypt Sennaar, and in England sea-island Egyptian. Besides these two descriptions, Egypt produces from 15,000 to 30,000 bales of short-staple cotton, similar in quality to that of Smyrna, and chiefly consumed in the country. The cotton brought from Egypt is found to be amongst the most useful that is grown: that raised from sea-island seed ranks next to American sea-island. The exports from this country to Egypt principally consist of cotton goods and twist, earthenware, iron and steel, arms and ammunition, &c. Their real value amounted, in 1831, to 132,532*l*; but besides what goes direct, a good deal of British produce finds its way to Egypt at second-hand from Malta, Smyrna, &c. Constantinople and the islands of the Archipelago are the great markets for the wheat and other grain exported from Egypt, the quantity sent to them being sometimes very large. The supplies are, however, extremely uncertain. Every thing in Egypt depends on the Nile; and when it does not rise to the usual height, the crops are very much below an average. Beans are extensively cultivated, and have sometimes been brought to England, but rarely, if ever, with advantage to the importers. They are very inferior to English beans, and are peculiarly subject to the worm. No oats are raised in Egypt, the horses being entirely fed upon barley. Besides cotton, the Pacha has turned his attention to the culture of sugar, indigo, &c. The first has long been raised in Egypt, but the exports are not very considerable. Silk is grown to some extent. The date-palm thrives in every part of Egypt, and the fruit is largely exported. It is singular, that notwithstanding the luxuriance of many of its vegetable productions, Egypt should be entirely destitute of timber.—(*Lords' Report of 1837, on the Price of Foreign Corn, Min. of Econ. p. 120., and private information.*)

In 1831, there entered the port of Alexandria 1,315 ships, of the burden of 108,299 tons. Of these, the Austrian were the most numerous; next, the English and Ionian; and then the French, Sardinian, Spanish, &c.

Money.—Accounts are kept at Alexandria, as at Cairo, in current piastres, each piastre being equal to 40 paras, or medini, and each medino to 30 aspers. The medino is also divided into 8 brril, or 6 foril. A purse contains 25,000 medini. The piastres struck in 1826 contain a great deal of alloy; 15*l* or 16 piastres = 1 Spanish dollar; hence 1 piastre = 3*d*. sterling, very nearly. Payments in transactions of any importance are generally made in Spanish dollars.

Weights and Measures.—The yard, or pik, = 26.8 English inches; hence 100 piks = 74.438 English yards. The measures for corn are the *chabeke*, and the *quillet* or *kisles*; the former = 4.364 English bushels, the latter = 4.739 ditto. The *cantaro* or *quintal* = 100 *rottoili*, but the *rottoilo* has different names and weights: 1 *rottoilo ferfore* = 9347 lb. avoirdupois; 1 *rottoilo saidino* = 1.335 lb. ditto; 1 *rottoilo sauro* or *saro* = 2.07 lb. ditto; 1 *rottoilo mina* = 1.67 lb. ditto.—(*Manuel Universel de Nellenbrecher.*)

Duties.—With the exception of the commercial monopolies of the Pacha, and the arbitrary principles on which he fixes the prices of commodities, there is nothing objectionable in his policy as to commerce. The duties on imports are only 3 per cent. We believe, however, that a small increase of the customs duty would compensate the Pacha for the abolition of most of his monopolies; and there can be little doubt that his subjects would be materially benefited by the change.

Policy of the Pacha.—It is to be regretted that Mohammed Ali, who, in many respects, is one of the most extraordinary persons of the age, should have no just idea of the principles, by the adoption of which his plans of improvement might be perpetuated, and industry be rendered really flourishing. He leaves nothing to the discretion and enterprise of individuals. He may, indeed, be said to be the sole proprietor, manufacturer, farmer general, and wholesale merchant of Egypt. He has monopolised the entire foreign trade of the country; and has fixed the price to be paid for every article to the cultivator, and the price at which it is to be sold to the foreigner. Hence the extension of cultivation, and the growth of commerce and manufactures, have been of no real advantage to the bulk of the nation; and hence, also, the risk, in the event of the reins of government falling into less vigorous or able hands, that the fabric of apparent prosperity which the Pacha has been attempting to raise, may fall to pieces: but we would fain hope that the influence of the many intelligent Europeans now in Egypt, and the observations which the Egyptians sent to England and France by the Pacha cannot fail to have made upon the advantages resulting from the security of property and the freedom of industry, may be instrumental in paving the way for the gradual introduction of a more enlarged and liberal system.

Ancient Trade of Alexandria.—As already remarked, Alexandria was, for a long series of years,—first under the Greek successors of Alexander, and subsequently under the Romans,—the principal *entrepôt* of the ancient world. Most part of the traffic between Asia and Europe that had at a more early period centered at Tyre, was gradually diverted to this new emporium. An intercourse between the ports on the eastern coast of Egypt, and those on the opposite coast of Arabia, had subsisted from a very early period. That between Egypt and India was more recent. It was at first carried on by ships, which having sailed down the Red Sea from Myos Hormos and Berenice, coasted along the Arabian shores till they reached Cape Rasselgate, whence a short course brought them to India near the mouth of the river Indus. This was the course followed during the dynasty of the Ptolemies: but about 80 years after Egypt had been annexed to the Roman empire, Hippalus, the commander of an Egyptian ship trading to India, having observed the regular shifting of the trade winds, ventured to sail with the western monsoon from the Straits of Babelmandeb right across the Arabian Ocean; and was fortunate enough, after a prosperous voyage, to arrive at Musiris, in that part of India now known by the name of the Malabar coast. Having taken on board a cargo of Indian produce, Hippalus returned in safety with the eastern monsoon to Egypt. This discovery was deemed of so much importance, that the name of the discoverer was given to the wind which had carried him across the ocean to India: and how trifling so ever this voyage may now appear, those who consider that Hippalus had no compass by which to direct his course, and that owing to this circumstance, and the otherwise imperfect state of the art of navigation, the ancients seldom ventured out of sight of land, even in seas with which they were well acquainted, will be forward to admit that his enterprise and daring were nowise inferior to his success; and that he was well entitled to the gratitude of his contemporaries and the respect of posterity.

From the epoch of this discovery, fleets traded periodically from Egypt to Musiris, conveying the products of Europe to India, and conversely. The Indian goods having been landed at Myos Hormos and Berenice, were thence conveyed by caravans to Coptos (the modern Kenné), on the Nile, where they were put on board lighters and sent to Alexandria, whence they were distributed all over the western world. The goods sent to India were conveyed to Myos Hormos and Berenice by the same route. Myos Hormos was situated on the shore of the Arabian gulf, about a degree to the north of the modern port of Cosseir. The distance from it to Coptos, in a straight line, is about 70 English miles. Berenice was situated a good way further to the south, being nearly under the tropic. It was built by Ptolemy Philadelphus. Its distance from Coptos is stated by Pliny at 258 Roman miles; the different resting places on the road were determined by the wells, and the journey occupied about 12 days. Ptolemy seems to have preferred this station to Myos Hormos, though the land carriage to Coptos was so much further, from its greater proximity to the Straits of Babelmandeb, and its lessening the voyage up the Red Sea.

Pliny says that the cost of the Indian commodities brought to Rome through Alexandria was increased a hundred fold (*centuplicato veneant*) by the expence of carriage, &c. We suspect that this is a rhetorical exaggeration, meaning merely that their price was very materially enhanced. If the increase was to any thing like the extent mentioned, it must have been owing to the imposition of oppressive tolls and duties, for it could not possibly have been occasioned by the mere expenses of conveyance.*—(*Phin. Hist. Nat. lib. vi. cap. 23; Ameilhon, Commerce des Egyptiens*, pp. 161—176. &c.; *Robertson's Ancient India*, note 20. &c.)

Besides this important traffic, which supplied Rome and the western world with the silks,

* In the 16th century, the cost of Indian commodities brought to Western Europe by way of Alexandria and Aleppo was about three times the cost of those brought by the Cape of Good Hope.—(See post, *EAST INDIA COMPANY, History of*.) But Egypt was then occupied by the Mamelukes and Turks, who threw every sort of obstacle in the way of commerce, and loaded it with the most oppressive exactions.

spices, precious stones, and other products of Arabia and India, a great trade in corn was carried on from Alexandria to Rome. Egypt, for a lengthened period, constituted the granary from which Rome, and afterwards Constantinople, drew the principal part of their supplies; and its possession was, on that account, reckoned of the utmost consequence. Augustus employed merchantmen of a larger size than any that had previously traded in the Mediterranean, to convey the corn of Egypt to Ostia. They were escorted by ships of war. The fleet received the names of *sacra* and *felix embole*; and enjoyed several peculiar privileges. The ships belonging to it were the only ones authorised to hoist the small sail called *supparum*, when they drew near the coasts of Italy. Some of the fast-sailing vessels attached to the fleet were sent on before, to give notice of its approach; and a deputation of senators went down to Ostia to receive the ships, which anchored amid the acclamations of an immense number of spectators. The captains were obliged to make oath that the corn on board their ships was that which had been delivered to them in Egypt, and that the cargoes were entire as shipped.—(*Huet, Commerce et Navigation des Anciens*, cap. xlviii.; *Seneca's Epist.* cap. lxxvii. &c.)

Intercourse with India by Alexandria.—These few details will, perhaps, serve to give a faint idea of the importance of Alexandria in the commerce of antiquity. It is impossible, indeed, for any one to glance at a map of the world, or of the ancient hemisphere, and not to perceive that Egypt is the natural *entrepôt* of the commerce between Hindostan and Europe. Nothing but the barbarism in which it has been so long involved, could make the intercourse with India and the East be wholly carried on by the Cape of Good Hope. The difficulty of navigating the Red Sea seems to have been much exaggerated. Generally speaking, its western side is shallow and infested with coral reefs; but on the Arabian side the water is deep and unobstructed; and vessels availing themselves of the proper seasons for sailing up and down the sea, may navigate it expeditiously, and in perfect safety.—(See *Captain Chesney's Report in Papers relating to India*, printed by order of the House of Commons, August 16, 1832.) We have, therefore, little doubt that, in the event of good order and civilisation being again established in Egypt, some considerable portion of the Indian trade will revert to its ancient channel. There is not, we apprehend, much reason to think that the project entertained by the Ptolemies, of cutting a canal across the Isthmus of Suez, will ever succeed. The distance is not great, but, notwithstanding this circumstance, and the flatness of the ground, the fact of its consisting almost wholly of moveable parched sand, presents obstacles to the undertaking, that Volney (*Voyage en Syrie*, &c. cap. xiv.) and other good judges, have declared insuperable. The route by Cosseir (nearly the same as that by Myos Hormos) seems, all things considered, to present the fewest obstacles. The water in the port of Cosseir is deep, and the anchorage pretty good.—(*Chesney's Report*.) The distance from Cosseir to Kenné (Coptos) may be taken at about 70 English miles; and it would not be very difficult to construct a road between these points. After reaching Kenné, the goods would, as of old, be embarked on the Nile for Alexandria, &c. Hence the importance, in a general point of view, of the civilisation of Egypt. Even were it productive of no other consequences than the facilitating of the correspondence between Europe and the East, it would not be easy to overrate its importance; but the fair presumption undoubtedly is, that other results would follow; and that the Mediterranean ports would in future derive the principal part of their Indian commodities by way of Alexandria. The more westerly European ports would continue, we believe, to use the present channel of intercourse with India.

Whether these anticipations are ever destined to be realised, it is impossible to say; but the progress already made by Mohammed Ali in introducing a better order of things into Egypt, and the present state of the Ottoman empire, which seems fast falling to pieces, would appear to warrant the conclusion that important changes may be expected in the East. At all events, the brief statements now made, can hardly be deemed out of place in a work intended to exhibit, however imperfectly, the history, principles, and channels, as well as the details of commerce.

ALICANT, a sea-port town of Spain, in Valencia, in lat. $38^{\circ} 20' 41''$ N., long. $0^{\circ} 30'$ W. Population about 14,500, and declining. The port is an open and spacious bay, between Cape de la Huerta on the north-east, and Isla Plana on the south, distant from each other S. W. and N. E. about 10 miles. Ships may enter on any course between these points, steering direct for the castle, which stands on an eminence about 400 feet high. Those of considerable burthen moor N. and S., distant from $\frac{1}{2}$ to 1 mile from shore, in from 4 to 8 fathoms water; they are exposed to all winds from E. N. E. to S. by W.; but the nolding ground is good, and there is no instance during the last twenty years of a ship having been driven from her moorings. Small craft lie alongside the mole, which is already 320 yards in length, and is to be projected still further into the sea. There are no pilots. The trade of Alicante, though still considerable, has declined much within the last few years; a consequence partly of the emancipation of America from the Spanish yoke, but more of the oppressive duties laid on the importation of most articles of foreign produce in Spain—(see BARCELONA), and the extensive smuggling carried on from Cadiz and Gibraltar. Its exports

consist principally of barilla, almonds, wine, and raisins, with small quantities of olives, olive oil, brandy, figs, salt, wool, silk, anise, &c. The barilla of Alicante, which is of the finest quality, is almost wholly taken off by England. The exports amount to from 50,000 to 90,000 quintals.* The celebrated sweet wine, tent (*vino tinto*), is exported from this port, principally for Brazil; a little dry wine goes to Gibraltar. Almonds, of which about 10,000 quintals are exported, go mostly to Hamburgh. The raisins are not of the finest quality; those brought to England are principally used in confectionary. Oil, which was formerly sent in large quantities to South America, is now comparatively neglected. Dates are exported, and are not unfrequently sold here as Barbary dates. The imports consist principally of linen, salted fish, tobacco, grain, iron, timber, sugar, coffee, indigo, cochineal, cotton and cotton stuffs, &c. The linens, of which from 350,000 to 500,000 yards are annually imported, are furnished almost wholly by France and Genoa. In 1831, there entered the port of Alicante 157 foreign vessels, of the burden of 16,715 tons; of these were British 54, burden 5,719 tons; French 45, burden 3,080 tons; Sardinian 40, burden 4,166 tons; Swedish 5, burden 1,350 tons, &c.

It was stated in the former edition of this work, that large quantities of Benicarlo wine were shipped at Alicante for Cete: but this is a mistake; almost all the Benicarlo being shipped from the northern ports of Valencia, and principally from Benicarlo, whence it has its name.—(*Ingles's Spain* in 1830. I. 342.)

Shipping Charges.—These vary according to the burden of the ship, and the country to which she belongs. On a ship of 300 tons unloading and loading mixed cargoes, they would be, following consular, as follows:—

			£	s.	d.				£	s.	d.		
Spanish	-	-	-	6	9	4	Swedish	-	-	-	15	1	10½
British	-	-	-	11	12	4½	Russian	-	-	-	14	11	10½
French	-	-	-	15	7	10	Dutch	-	-	-	13	19	6½
Danish	-	-	-	15	16	10½	American	-	-	-	13	17	10½

Custom-House Regulations.—A manifest of the cargo, the ship's tonnage, and number of crew, must be presented within 24 hours after pratique being given, when two officers are put on board to prevent smuggling. The consignees then make entry of the articles consigned to them, and obtain an order to land and bring them to the Custom-house, where they are inspected, and the duties ascertained; but before obtaining this order, the consignees must produce a *certificate of origin* from the Spanish consul at the port of lading, if it be in a foreign country, for without this the entry is not allowed, and the goods are deposited in the Custom-house until it be obtained. When the discharge is completed, the vessel is searched by the surveyor, who reports having done so to the collector. To load the whole or part of an outward cargo, the master has to report his intention to the collector, who gives him order permitting goods to be shipped, and the shippers make their specific entries. When the vessel is loaded, the waiting officers make their return to the collector; who, on being presented with the receipts of the captain of the port and of the Pratique office for their respective charges, grants his clearance, upon which a bill of health is obtained, and the vessel is clear for sea.

Warehousing System.—Goods that may be legally imported, may be deposited in bonded warehouses for twelve months, paying, in lieu of all charges, 2 per cent. *ad valorem*, but at the end of the year they must be either taken for home consumption or re-shipped. The 2 per cent. is charged, whether the goods lie for a day or the whole year. In charging duties, no allowance is made for waste or damage in the warehouses.

Rates of Commission are usually 2 $\frac{1}{2}$ per cent. on sales and purchases; $\frac{1}{4}$ per cent. is commonly charged on the negotiation of bills. Goods are commonly sold at three months' credit. Ordinary discount at the rate of 6 per cent. per annum.

Alicant is not a favourable place for repairing ships, and provisions of all sorts are scarce and dear. Vessels with foul bills of health, or coming from an infected or suspected place, though with clean bills, are usually ordered to Port Mahon to perform quarantine. But vessels coming with clean bills obtain, under ordinary circumstances, immediate pratique.

Money.—Accounts are kept at Alicante in libras of 20 sueldos; each sueldo containing 12 dineros; the libra, also called the peso, = 10 reales; and a real of Alicante = 27-2 maravedis of plate, or 51-2 maravedis vellon. The libra may be valued at 3s. 6d. sterling, and the real at 4 $\frac{1}{2}$ d. ditto.

Weights and Measures.—The cargo = 24 quintals = 10 arrobas. The arroba consists either of 24 large pounds, or of 36 small ditto; the latter having 12 Castilian ounces to the pound, the former 18. The arroba = 27 lbs. 6 oz. avoirdupois; but at the Custom-house the arroba = 25 lbs. of 16 oz. each.

The principal corn measure is the cahiz or cañise, containing 12 barchillas, 96 medios, or 192 quartillos. The cahiz = 7 Winchester bushels, nearly.

The principal liquid measure is the cantaro of 8 medios, or 16 quartillos. The cantaro = 3-05 English wine gallons. The tonelada or ton contains 3 pipes, 80 arrobas, or 100 cantaros.

The yard or vara, divided into 4 palmos, is = 29-96, or very nearly 30 English inches.

(*Consul's Answer to Circular Queries*; *Ingles's Spain* in 1830, vol. II. p. 304. &c.; *Kelly's Combi.*, &c.)

ALIENS. According to the strict sense of the term, and the interpretation of the common law, all individuals born out of the dominions of the crown of England (*alibi natus*) are aliens or foreigners.

It is obvious, however, that this strict interpretation could not be maintained without very great inconvenience; and the necessity of making exceptions in favour of the children born of native parents resident in foreign countries was early recognised. The 25 Edw. 3 stat. 2, enacts, that all children born abroad, provided *both* the parents were at the time of their birth in allegiance to the king, and the mother had passed the seas by her husband's consent, might inherit as if born in England. And this relaxation has been carried still further by several modern statutes: so that all children born out of the king's allegiance, whose fathers, or grandfathers by the father's side, were natural born subjects, are now deemed to be themselves natural born subjects; unless their ancestors were outlawed, or banished

* This is the consul's statement. Mr. Ingles represents the exports as considerably greater.

beyond sea for high treason, or were at the birth of such children, in the service of a prince at enmity with Great Britain.

Naturalisation of Aliens.—Aliens may be naturalised by act of parliament, which puts them in exactly the same condition as natural born subjects, except that they are incapable of being members of the Privy Council, of being elected to serve in parliament, or of holding any office of trust under the crown.

A *denizen* is an alien born, who has obtained letters patent, *ex denatione regis*, to make him an English subject. He occupies a kind of middle station between a natural born subject and an alien. He may acquire lands by purchase or device, but not by inheritance; and may transmit such lands to his children born after his denization, but not to those born before.—(*Blackstone's Com.* book 1. cap. 10.)

An alien may also be naturalised by serving on board any of his Majesty's ships of war, in time of war, for three years, or, if a proclamation has been issued to that effect, for two years.—(6 *Geo.* 4. cap. 100. § 16, 17.)

Influence of the Residence of Aliens.—There can be no doubt that, generally speaking, the resort of foreigners to a country, and their residence in it, are highly conducive to its interests. Those who emigrate in order to practise their calling in an old settled country, are pretty uniformly distinguished for activity, enterprise, and good conduct. The native inhabitants have so many advantages on their side, that it would be absurd to suppose that foreigners should ever come into any thing like successful competition with them, unless they were acquainted with some branch of trade or manufacture of which the others were ignorant, or possessed superior skill, industry, or economy. But whether aliens practise new arts, or introduce more perfect processes into the old, or display superior economy, &c., their influx cannot fail to be of the very greatest advantage. They practically instruct those among whom they reside in what it most concerns them to know, that is, in those departments of art and science in which they are inferior to others; and enable them to avail themselves of whatever foreign sagacity, skill, or practice has produced that is most perfect. It is not easy, indeed, to overrate the benefits conferred on most countries by the resort of aliens. Previously to the invention of printing there was hardly any other way of becoming acquainted with foreign inventions and discoveries; and even now it is far easier to learn any new art, method, or process, from the example and instruction of those familiar with its details, than from the best possible descriptions. The experience, indeed, of every age and country shows that the progress of nations in the career of arts and civilisation depends more on the freedom of commerce, and on the liberality with which they have treated foreigners, than on almost any thing else.

English Legislation as to Aliens.—But, notwithstanding what has been stated above, an antipathy to resident foreigners seems to be indigenous to all rude and uncivilised nations. Whatever is done by them appears to be so much taken from the employment, and, consequently, from the subsistence of the citizens; while the advantages resulting from the new arts or improved practices they introduce, for the most part manifest themselves only by slow degrees, and rarely make any impression on the multitude. Hence the jealousy and aversion with which foreigners are uniformly regarded in all countries not far advanced in civilisation. The early Greeks and Romans looked upon strangers as a species of enemies, with whom, though not actually at war, they maintained no sort of friendly intercourse. "*Hostis*," says Cicero, "*apud majores nostros is dicebatur, quem nunc peregrinum dicimus.*"—(*De Off.* lib. 1. cap. 12.) It may, therefore, be considered as a striking proof of the good sense and liberality of those by whom it was framed, that a clause is inserted in Magna Charta which has the encouragement of commerce for its object; being to the effect, that "all merchants (if not openly prohibited before) shall have safe and sure conduct to depart out of and to come into England, to reside in and go through England, as well by land as by water; to buy and sell without any manner of evil tolls, by the old and rightful customs, except in time of war; and if they be of a land making war against us, and such be found in our nation at the beginning of the war, they shall be attached without harm of body or goods, until it be known unto us, or our chief justice, how our merchants be entreated in the land making war against us; and if our merchants be well entreated there, shall be so likewise here."

But until the era of Edward I. the stipulation in the Great Charter as to foreign merchants seems to have been little attended to. It is doubtful whether, previously to his reign, they could either hire houses of their own, or deal except through the medium of some Englishman. But this intelligent prince saw the advantage that would result to the trade and industry of his subjects from the residence and intercourse of Germans, Flemings, Italians, and other foreigners, who, at that time, were very superior to the English in most branches of manufactures and commerce. He, therefore, exerted himself to procure a repeal of some of the more oppressive restrictions on aliens, and gave them a charter which conveyed considerable privileges.* Down, however, to the reign of Edward III., it continued to be customary to arrest one stranger for the debt, and even to punish him for the crimes

* This charter was confirmed by Edward III. in 1326. Among other clauses, it has the following, viz: 1st, That on any trial between foreigners and Englishmen, the jury shall be half foreigners; 2d, That a proper person shall be appointed in London to be justiciary for foreign merchants; and 3d, That there shall be but one weight and measure throughout the kingdom.—(*Anderson*, anno 1302.)

and mind-means of others! It may appear extraordinary that the gross injustice of this barbarous regulation ever permitted it to be adopted; and yet it was probably, at one period, the common law of most European states. As soon, however, as the foundations of good order and civilisation began to be laid, its operation was seen to be most pernicious. In 1335, Edward II. entered into a convention with the Venetians, in which it was expressly stipulated that they should have full liberty to come to England to buy and sell commodities, without being liable for the debts or crimes of others. Conventions to the same effect were entered into with other foreigners. At length, in 1353, this disgraceful practice was put an end to by 27 Edward 3. stat. ii. cap. 17.; it being provided in this statute, not only that no stranger shall be impeached for the trespass or debt of another, but that, in the event of a war breaking out with any foreign power, its subjects, residing amongst us, shall be warned thereof by proclamation, and be allowed forty days to arrange their affairs, and to depart out of the kingdom; and that, under special circumstances, this term may be extended. There are few acts in the statute-book that reflect more credit on their proposers, or that have been more advantageous than this.

In consequence of the encouragement given by Edward III. to such of the woollen manufacturers of Flanders as chose to immigrate to England, a good many came over; and it is from their immigration that we may date the improvement and importance of the woollen manufacture in this country.—(See WOOLLEN MANUFACTURE.) But this policy, however wise and judicious, was exceedingly unpopular. The foreigners were openly insulted, and their lives endangered, in London and other large towns; and a few of them in consequence returned to Flanders. Edward, however, was not to be driven from his purpose by an unfounded clamour of this sort. A proclamation was issued, in which every person accused of disturbing or attacking the foreign weavers was ordered to be committed to Newgate, and threatened with the utmost severity of punishment. In a parliament held at York, in 1335, an act was passed for the better protection and security of foreign merchants and others, by which penalties were inflicted on all who gave them any disturbance. This seems to have had the effect, for a while, at least, of preventing any outrages.

The corporations of London, Bristol, and other great towns, have been at all times the principal enemies to the immigration of foreigners. Perhaps, indeed, they were not more hostile to them than to such of their own countrymen, belonging to another part of the kingdom, as should have attempted to settle amongst them without being free of their corporation. But in denouncing foreigners they had the national prejudice on their side; and their attempts to confirm and extend their monopolies by their exclusion were regarded as the noblest efforts of patriotism! Edward III. was fully aware of the real motives by which they were actuated, and steadily resisted their pretensions. But in the reigns of his successors they succeeded better: some of these were feeble and unfortunate, whilst others enjoyed the crown only by a disputed title, and in defiance of powerful competitors. The support of the great towns was of the utmost consequence to such princes, who, whatever might be their own opinion as to its policy, could hardly venture to resist the solicitations of such powerful bodies to exclude strangers, and to impose restrictions on commerce. From the death of Edward III. to the reign of Elizabeth, the progress made by the country was not inconsiderable, but it was little promoted by legislative enactments. Throughout the whole of this period, the influence of corporations seems to have predominated in all matters relating to trade and the treatment of foreigners; and our legislation partook of the selfish, monopolizing character of the source whence it was principally derived. Were the acts and proceedings as to aliens the only memorials of our policy from 1377 to 1560, we should certainly seem to have retrograded materially during the interval. Some of these acts were passed with so little consideration, and were so very absurd, that they had to be immediately repealed. Of this sort was the statute of the 8 Henry 6. cap. 24., to the effect "that no Englishman shall within this realm sell, or cause to be sold, hereafter, to any merchant alien, any manner of merchandises, but only for ready payment in hand, or else in merchandises for merchandises, to be paid and contented in hand, upon pain of forfeiture of the same." But as an enactment of this sort was very speedily found to be more injurious to ourselves than to the foreigner, it was repealed in the following sessions.

The more tyrannical their conduct in other respects, the more were our princes disposed to humour the national prejudice against foreigners. If not a cheap, it was, at least, an easy method of acquiring popularity. In the very first parliament after the accession of Richard III., a statute was passed full of the most ridiculous, contradictory, and unfounded allegations as to the injury sustained by the influx of foreigners, and laying them under the most oppressive restraints. Considering, indeed, the sort of treatment to which aliens were then exposed, it may excite surprise that they should ever have thought of visiting the country; and, in point of fact, it appears that the resort of foreign merchants to our ports was materially impaired by the statutes referred to, and others of the same description. This is evident from the act 19 Henry 7. cap. 6., where it is stated that "woollen cloth is not sold or uttered as it hath been in divers parts," and that "foreign commodities and merchandises are at so dear and exceeding high price, that the buyer cannot live thereon." But in despite of this authority

tive exposition of the mischiefs arising from the restraints on aliens, and on trade, they were both increased in the reign of Henry VIII. And it was not till the reign of Elizabeth that the pretensions of the corporations seem to have been disregarded, and an attempt made to act, not by starts, but consistently, on the policy of Edward III.

The influx of foreigners during the reign of Elizabeth was occasioned chiefly by the persecutions of the Duke of Alva and the Spaniards in the Low Countries. The friends of the reformed religion, which, at the time, was far from being firmly established, and the government, were glad to receive such an accession of strength; and from the superiority of the Flemings in commerce and manufactures, the immigrants contributed materially to the improvement of the arts in England. It would seem, however, that the ministers of Elizabeth contented themselves, perhaps that they might not excite the public prejudice, with declining to enforce the laws against aliens, without taking any very active steps in their favour.

In the reign of James I. the corporation of London renewed with increased earnestness their complaints of aliens. In 1622, a proclamation was issued, evidently written by James himself, in which, under pretence of keeping "a due temperament" between the interests of the complainants and those of the foreigners, he subjects the latter to fresh disabilities.

Since the revolution, more enlarged and liberal views as to conduct to be followed with respect to aliens have continued to gain ground: several of the restraining statutes have fallen into disuse, while others have been so much modified by the interference of the courts, which have generally been inclined to soften their severity, that their more offensive provisions are become inoperative. In 1708, an act was passed, notwithstanding the strenuous opposition of the corporations, for the general naturalisation of all foreign protestants; but the prejudice against them was still so powerful that it was repealed within about three years. Some unsuccessful attempts have since been made to carry a similar measure. One of these, about the middle of last century, occasioned the publication by Dr. Tucker of two excellent pamphlets, in which the policy of the naturalisation act is most ably vindicated, and the arguments against it successfully exposed.* But no such statute has hitherto been passed, and aliens still continue subject to various disabilities.

Disabilities of Aliens.—The principal of these regards the possession of fixed property. It is ruled that lands purchased by an alien for his own use, may be seized by the king. "If," says Blackstone, "he could acquire a permanent property in lands, he must owe an allegiance, equally permanent with that property, to the king of England; which would probably be inconsistent with that which he owes to his own natural liege lord; besides that, thereby the nation might in him be subject to foreign influence, and feel many other inconveniences. Wherefore by the civil law such contracts were made void, but the prince had no such advantage of forfeiture thereby as with us in England."—(*Commentaries*, book 1. cap. 10.)

An alien cannot take a benefice without the king's consent, nor can he enjoy a place of trust, or take a grant of lands from the crown. Aliens may, however, acquire property in money, goods, or other personal estate, and may have houses for the purpose of their habitation, and for carrying on their business. They may bring actions as to their personal effects, and may dispose of them by will. The *droit d'aubaine* (*jus albinatus*, i. e. *alibi natus*), or the right of the crown to succeed to the effects of an alien at his death, so long the custom in France, never obtained in England. If an alien abroad die intestate, his whole property here is distributed according to the law of the country where he resided; but such residence must have been stationary, and not occasional, otherwise the foreign municipal regulations will not apply to the property.

Aliens may trade as freely as natives; and for these many years past, the duties of *package* and *carriage* in the port of London, repealed in 1833, were the only peculiar duties with which they were burdened. The statutes of Henry VIII. restraining alien artificers from working for themselves, are understood to have been repealed by the Stat. 5 Eliz. cap. 7.; and they are quite at liberty to employ themselves as they please.

Aliens indicted for felony or misdemeanor are tried by a jury of which half are foreigners; a privilege they have enjoyed, as already seen, with some partial interruptions, from the reign of Edward I.

Conditions of Residence.—During the late war, aliens were placed under the surveillance of the police; they were obliged to send frequent reports of their residence, and of the mode in which they were employed; and were liable to be sent out of the kingdom at any moment by an order from the secretary of state. The conditions under which they now reside amongst us are embodied in the 7 Geo. 4. cap. 54.

This act requires every master of a vessel arriving from foreign parts to declare in writing the names, rank, occupations, &c. of all aliens on board such vessel, or who have been landed from it any where within the realm. Such declaration to be made immediately on arrival: neglecting or refusing to make it, or making a false one, is punished by the forfeiture of 20*l.*, and a further sum of 10*l.* for each alien in such vessel, or landed from it within the realm. Aliens *bona fide* employed in the navigation of the vessel are excepted.—1.

The act then goes on to lay down the conditions of residence, which are merely that every alien is required to make a declaration and registry, renewed half yearly, or oftener if required by the secretary of state, of his name, abode, and occupation. Aliens neglecting to make such declaration, or making a false one, are, for every such offence, to forfeit any sum not exceeding 50*l.*, or be imprisoned any time not exceeding six months, at the discretion of two justices.

Policy of the Laws as to Aliens.—The reasons assigned by Mr. Justice Blackstone and others for preventing aliens from acquiring fixed property seem to be very unsatisfactory. In small states there might be grounds, perhaps, for fearing lest the easy admission of aliens to the rights of citizenship should give them an improper bias; but in a country like England, such apprehensions would be quite futile. In this respect the example of Holland seems

* Historical remarks on the late Naturalization Bill, 1751; Queries occasioned by the late Naturalization Bill, 1752.

quite decisive. Notwithstanding the comparatively limited population of that country, it was "the constant policy of the republic to make Holland a perpetual, safe, and secure asylum for all persecuted and oppressed strangers; no alliance, no treaty, no regard for, nor solicitation of any potentate whatever, has at any time been able to weaken or destroy, or make the state recede from protecting those who have fled to it for their own security and self-preservation."—(*Proposals for amending the Trade of Holland*, printed by authority. Lond. 1761.)

A short residence in the country, and a small payment to the state, was all that was required in Holland to entitle a foreigner to every privilege enjoyed by a native. And it is of importance to remark, that it has not been so much as insinuated that this liberal conduct was in any instance productive of a mischievous result. On the contrary, all the highest authorities consider it as one of the main causes of the extraordinary progress made by the republic in wealth and commerce. It is said in the official paper just quoted, that "Throughout the whole course of all the persecutions and oppressions that have occurred in other countries, the steady adherence of the republic to this fundamental law has been the cause that many people have not only fled hither for refuge, with their whole stock in ready cash, and their most valuable effects, but have also settled and established many trades, fabrics, manufactures, arts, and sciences, in this country; notwithstanding the first materials for the said fabrics and manufactures were almost wholly wanting in it, and not to be procured but at a great expense from foreign parts." (*Ibid.*)

With such an example to appeal to, we are warranted in affirming that nothing can be more ridiculous than to suppose that any number of foreigners which it is at all likely should ever come to England under the most liberal system, could occasion any political inconvenience; and in all other respects their immigration would be advantageous. A general naturalisation act would, therefore, as it appears to us, be a wise and politic measure. It might be enacted, that those only who had resided three or four years in the country, and given proofs of their peaceable conduct, should be entitled to participate in its advantages.

(Some parts of this article have been borrowed from the *Treatise on Commerce* written for the Society for the Diffusion of Useful Knowledge, by the author of this Work.)

(The act 7 Geo. 4 cap. 54. referred to in the *Dictionary* (p. 26.), has been repealed by the act 6 Will. 4. cap. 11., which enacts in its stead some new regulations of which the principal are, that—

Every master of a ship arriving from foreign parts shall, to the best of his knowledge and belief, immediately declare, in writing, to the chief officer of customs, the name or names, rank, occupation, &c. of any alien or aliens on board his ship, or who may have landed therefrom at any place within the realm, under a penalty of 20*l.* for omission or false declaration; and of 10*l.* for every alien omitted in the declaration: this regulation does not, however, extend to foreign mariners navigating the vessel.—§ 2.

On arrival in this country, the alien is to declare his name, description, &c. and to produce his passport; which declaration is to be registered by the officer of customs, who is to deliver a certificate to the alien. A copy of this declaration is to be transmitted, within two days, to the secretary of state, or (if the alien land in Ireland) to the chief secretary of the Lord Lieutenant. The original certificate given to the alien is to be transmitted to the secretary of state on his leaving the country. New certificates to be granted in lieu of such as may be lost, without fee, under a penalty of 30*l.* Forging certificates, or falsely personating aliens, punishable by imprisonment, not exceeding three months, or by fine, not exceeding 100*l.*—§ 3, 4, 5, &c.—*Sup.*)

[There are no denizens in the United States. Every inhabitant of the country is either a citizen or an alien.

Citizens are either natives, or such persons as have become citizens in accordance with the laws which have been enacted by Congress on the subject of naturalization.

Native citizens again are, first, all persons who have been born within the jurisdiction of the United States since the declaration of American Independence, on the 4th of July, 1776; and secondly, every person who was a native of the territory of the United States previous to that date, provided he remained in the country afterwards.

Naturalized citizens are, in the first place, all persons who fulfil or comply with the conditions prescribed in the acts of Congress, concerning naturalization, of the years 1802, 1804, 1813, 1816, 1824, and 1828. These conditions are, first, that the person applying to be naturalized be a free white person, of the age of 21 years or more. Secondly, he must, on oath or affirmation, before some federal or state court, or its clerk, two years at least previous to his application to become a citizen, have declared his intention to take this step; unless he has been a resident in the United States before and ever since the 18th day of June, 1812, the date of the declaration of war against Great Britain; or unless he has resided here during the last three years of his minority, with the intention, during the last three years of his residence, of becoming a citizen. Thirdly, he must have resided within the United States five years at least, and within the state or territory, where the court to which he applies is at the time held, one year at least; but the oath of the applicant shall, in no case, be allowed to prove his residence. Fourthly, he must cause it to appear to the satisfaction of the court that, during the time of his residence, he has behaved as a man of a good moral character, attached to the principles of the constitution of the United States, and well disposed to the good order and happiness of the same. Fifthly, he must renounce every title or

order of nobility which he may have held in the kingdom or state from which he came. Sixthly, he must make oath or affirmation that he will support the constitution of the United States, and renounce and abjure all allegiance to any foreign sovereign or state. No alien, however, who shall be a native citizen, denizen, or subject, of any sovereign or state, with whom the United States shall be at war, at the time of his application, shall be then admitted to be a citizen of the United States.

Besides the persons who may have complied with or fulfilled the conditions above enumerated, their children, as also the children of such persons as, previous to the passing of any law on the subject by the government of the United States, may have become citizens of any one of the said states, under the laws thereof, being under the age of 21 years, at the time of their parents being so naturalized or admitted to the rights of citizenship, shall, if dwelling in the United States, be considered as citizens of the United States; and the children of persons who, on or before the 14th day of April 1802, were citizens of the United States, shall, though born out of the limits and jurisdiction of the United States, be considered as citizens of the United States.

And again, it is enacted that if any person, who shall have made the preliminary declaration of intention to become a citizen as required by law, shall die before he is actually naturalized, his widow and children shall be considered as citizens of the United States; and they shall be entitled to all rights and privileges as such, upon taking the oaths which the law prescribes.

Every citizen of the United States enjoys the same rights and privileges; excepting only that a naturalized citizen must have been such for seven years to be eligible as a member of the House of Representatives, and for a period of nine years to be eligible as a member of the Senate of the Union, and that none but a natural born citizen, or a citizen at the time of the adoption of the federal constitution, can be elected to the office of President of the United States, or of Governor in some of the states.

Aliens cannot act as jurors; they have not the right of voting at elections; and they are disabled from holding any office, either in the states, or under the government of the United States. In many of the states (chiefly the older ones) they are incapable of acquiring and holding any real estate. If an alien purchase land, or take it by devise, it is at once liable to be forfeited to the state. His rights to and power over personal or moveable property are the same precisely as those of citizens. (See *Kent's Commentaries*, Lecture 25.) The general reader may also, for an abstract of the law relating to aliens, as it regards their right of holding and conveying property in the different states of the Union, consult the "*American Almanac*," for 1838.—*Am. Ed.*]

ALKALIES. The distinguishing characters of these bodies are, a strong acrid and powerfully caustic taste; a corrosive action upon all animal matter, destroying its texture with considerable rapidity; exposed to the atmosphere, when in their caustic state, they absorb carbonic acid with great rapidity, and become carbonated (or mild). Their action upon vegetable colours also affords us means by which the presence of an uncombined or carbonated alkali may be detected; the yellow colour of turmeric is changed to a red-brown tint when immersed into solutions containing them; the blue colour of the litmus, after being reddened by an acid, is again restored; the infusions of the red cabbage, the violet, and many other purple vegetable colours, are converted to green. Litmus paper reddened by carbonic acid is, however, the most delicate test of the presence of an alkali. With the various acids they also combine, forming the very important and extensive class of compounds generally called salts; a salt being any compound formed by the union of an acid with an alkali or a metallic oxide.

Alkalimetry.—The method by which the value of the alkalies, or carbonated alkalies, is determined, being of considerable importance in a commercial point of view, we shall here treat it somewhat in detail. It is an established fact, that 46 parts by weight of oil of vitriol of the specific gravity 1.8485, are exactly equivalent to the neutralization of 70 parts by weight of pure carbonate of potash, or 46 of pure potash, or 54 of carbonate of soda, or 39 of soda; and that 70 parts of oil of vitriol will therefore be necessary to neutralise 100 parts of carbonate of potash; hence, by employing a glass tube of about two ounces' capacity, and accurately divided into 100 equal parts, taking 70 grains of oil of vitriol, and diluting it with water, to make the 100 measures complete, every measure of this dilute acid must be equal to a grain of pure carbonate of potash. The per centage of real carbonate of potash existing in any sample of pearl ash may be at once ascertained by taking 100 grains of the sample, dissolving it in hot water, straining, and adding by degrees 100 measures of the test acid above mentioned; the point of neutralisation (when it ceases to affect litmus paper or reddened litmus) being accurately ascertained, the residual acid will give the per centage of impurities: for instance, say that 75 measures of the dilute acid have been employed to render 100 grains of a sample of pearl ash perfectly neutral, then we have ascertained that it contains 25 per cent. impurities. The same process of course must be followed in examining samples of barilla or kelp, except that the alkali contained in them, being carbonate of soda, 90.75 of oil of vitriol must be employed instead of 70. The process recommended by Mr. Paraday, and in which he uses only one test acid, is as follows:—Into a tube about three-quarters of an inch in diameter, and nine and a half long, and as cylindrical as possible throughout its whole length, 1,000 grains of water are to be weighed, and the space occupied marked on the tube by a fine file; this space is then divided from above downwards into 100 equal parts. At 23.44, or 76.56 parts from the bottom, an extra line should be made, and soda marked opposite to it; at 48.50 potash should be marked in the same way; at 54.43, carbonate of soda; and at 65, carbonate of potash. A diluted acid is now to be prepared, which shall have a specific gravity 1.127; and this is made by mixing intimately together 19 parts by weight of oil of vitriol, and 81 of

water. The method to be followed in the employment of this acid is as follows:—The dilute acid is to be measured in the tube up to the line opposite to which the alkali sought for is marked; if barilla, which contains carbonate of soda, 54·63 measures are to be taken. The 100 measures are then made up by the addition of water, and is then ready for use, following the method before stated.

The alkalies are four in number, namely, ammonia (or volatile alkali), potash (or vegetable alkali), soda (or mineral alkali), and lithia; which last is of so little importance that we shall not treat of it here.

The combinations of these alkalies with the various acids, whenever they form compounds of any importance, will be noticed.

Ammonia, or Spirit of Hartshorn, or Volatile Alkali.—In its uncombined form, is an elastic gaseous body, having a very pungent and suffocating odour, destroys animal life, converts the yellow of turmeric paper to a brown, which, from the volatility of the alkali, is again restored by a gentle heat to its original colour. This gas is rapidly absorbed by water, which takes into solution about 780 times its volume, forming the liquid ammonia, or what is commonly called hartshorn. Ammonia is liberated whenever any of the compounds of this alkali are acted upon by potash, soda, lime, and many other alkaline earths. Lime, from its being the most economical, is generally employed: the best proportions for its preparations are equal weights of sal ammoniac (muriate of ammonia), and fresh slaked lime. When these are introduced into a retort, and heat applied, ammonia is liberated in the gaseous form, and is conducted by a Welter's safety tube into a vessel of water, by which the gas is instantly absorbed. Muriate of lime remains in the retort: sometimes water is added to the mixture, and then distilled. As thus obtained, it has a specific gravity of ·930 or ·940, water being equal to 1·000. The most concentrated solution of ammonia has the specific gravity ·875.

Carbonate of Ammonia, or Volatile Salt, or Subcarbonate of Ammonia.—This salt, which is very much employed in various processes of the arts, was formerly obtained by the action of chalk (carbonate of lime) upon muriatic acid of ammonia; a double decomposition takes place. Carbonic acid and ammonia are sublimed in vapour, and muriate of lime remains in the vessel. A much less expensive process is, however, now followed, namely, from the waste gas liquors obtained in the purification of coal gas; these are evaporated, and the black impure sulphuric acid added. By this means a sulphate of ammonia is formed, and the carbonate procured from it by the action of powdered chalk, as in the former process.

Its uses are principally in forming other compounds of ammonia, as smelling salts; and it is likewise employed rather extensively by pastry-cooks for making light pastry, which is caused by the volatile carbonate of ammonia escaping and raising up the pastry by the heat of the oven. It is entirely dissipated during the baking, so that no ill effect can arise from its use.

Both this compound and the preceding act as violent stimulants on the animal system.

Muriate of Ammonia, or Sal Ammoniac.—was formerly brought to this country from Egypt, where it was procured by submitting the soot of camels' dung (there employed for fuel) to sublimation in closed vessels; it is, however, at present manufactured in very large quantities in this country in a variety of ways. The most economical processes are either submitting sulphate of ammonia mixed intimately with muriate of soda (sea salt) to sublimation, or by substituting the bittern of sea water, which consists chiefly of muriate of magnesia, for the sea salt. In the first process a sulphate of soda is formed, and the muriate of ammonia, which, being volatile, rises in the vaporous form, and is condensed in the cool parts of the apparatus: in the latter process, a sulphate of magnesia (Epsom salt) results. It is generally from this salt (muriate of ammonia) that the liquid ammonia is manufactured: it is also employed in tinning and soldering, to preserve the metals from oxidation. It is a semi-transparent, tough salt, having an acrid and cool taste, and is usually met with in the form of hemispherical masses. Sal ammoniac is made at Calcutta, and is thence exported to Great Britain, the United States, and the Arabian and Persian gulfs. In 1824-25, the exports amounted to 114 tons.

Sulphate of Ammonia.—The preparation of the sulphate has been already given under the head of ammonia; it is employed in the manufacture both of the carbonate and muriate.

Acetate of Ammonia.—The spirit of Mindererus is obtained by acting upon the carbonate of ammonia by acetic acid; the carbonic acid escapes with effervescence, and an acetate of ammonia is formed: it is employed in medicine as a febrifuge.

All these salts of ammonia have the following properties:—they are volatile at a low red heat; the fixed alkalies decompose them, combining with their acid, and the ammonia is liberated.

When combined with a fixed acid, such as the boracic or phosphoric, they are decomposed, the ammonia alone being volatilized, and the acid remaining pure. *This process was described for obtaining pure phosphoric acid.*

Potash, or Vegetable Alkali.—The original source of this alkali is in the vegetable kingdom, whence is derived its name of vegetable alkali. When wood is burnt, and the ashes lixiviated with water, boiled, strained, and evaporated to dryness, an intensely alkaline mass is obtained, which is known by the name of potash, from this process being conducted in iron pots. It is then removed to a reverberatory furnace, and submitted to heat, and a current of air. This burns out extractive matter and other impurities, and the salt assumes a pearly white colour, and is hence called pearlashes. Care should be taken, during this process, that the potashes do not enter into fusion, as this would destroy the full effect of the operation.

Pearlashes.—Pearlashes generally contain about 60 to 83 or 84 per cent. of pure carbonate of potash. Its uses in manufactures are numerous and important. It is employed in making flint-glass, of which it constitutes about one-sixth of the materials employed; in soap-making, especially for the softer kinds of soap: for this purpose, however, it is first rendered caustic by means of lime. In the rectification of spirits, large quantities are employed to combine with the water previously in union with the spirit.

Subcarbonate of Potash, or Salt of Tartar.—is used in preparing the subcarbonate of potash of the Pharmacopœia (carbonate of potash of the chemical nomenclature), and likewise in rendering hard spring waters soft, and in cleansing substances from grease; it is sometimes called salt of worm-wood. When made by the deflagration of two parts of tartar of argol and one of nitre, it is called black flux, and is used extensively in metallurgical operations.

From the subcarbonate of potash the pure and uncombined potash is obtained, by adding an equal weight of fresh burnt lime, previously slaked, and boiling them with half their weight of water. By this process the lime combines with the carbonic acid, and the potash remains in solution in its caustic state; by boiling the clear solution rapidly in iron vessels, and submitting it to fusion, we obtain the fused potash.

If it be required perfectly pure for chemical purposes, it is necessary to evaporate in silver vessels, and dissolve in strong alcohol. This takes up the pure potash, and leaves any portion of the subcarbonate that may not have been acted upon by the lime; then the alcohol is to be distilled off, and the potash fused at a red heat, and poured out in its liquid state on a cold slab. As thus procured, it is a white, brittle mass, highly deliquescent, absorbing moisture and carbonic acid rapidly from the atmosphere. When evaporated in iron vessels it has a dirty colour, and lets fall a quantity of oxide of iron, when dissolved in water, from its having acted upon the iron boilers.

Potass acts with great rapidity upon animal substances, destroying their texture, and is on this account employed as a caustic, and was formerly called *lapis infernalis*.

Carbonate (or, in the chemical nomenclature, **Bicarbonate**) of Potass—is prepared by passing carbonic acid gas through a solution of the subcarbonate; and evaporating at a temperature below 212° , and crystallising. It is used in making effervescing draughts. It loses one proportion of its carbonic acid when heated, and is converted into the subcarbonate.

Sulphate of Potass, or Sal Polychrest, or Vitriolated Tartar—is obtained by submitting the salt, which remains after the manufacture of nitric acid from nitre and sulphuric acid, to a red heat, or by neutralising the excess of acid contained in that salt by subcarbonate of potass.

Bisulphate of Potass, or Sal Exizum.—This is the salt mentioned above, as the residue from the process for obtaining nitric acid. It is employed, in very large quantities, in the manufacture of alum; also in tinning iron, for pickling, as it is termed; it is sometimes also used as a flux.

Nitre of Potash, Nitre, or Saltpetre.—This salt, which is of so much importance in every branch of the arts, is found native in many parts of the world, especially in the East Indies. It is obtained from soils composed of decomposing granite, the felspar of which gives rise, as is supposed, to the potass. The nitric acid is not so easily accounted for, except it is by a union of the nitrogen and oxygen gases in the atmosphere taking place in those hot climates; for, from authenticated accounts, no decaying animal or vegetable matter exists in the nitre districts of India. By lixiviation with water the nitre is dissolved from the soil, which is again thrown out into the air, to be washed the following year; so that it is formed continually. These lixiviations are then evaporated, and when of a certain strength, a quantity of common salt separates, which is removed as it falls; and the nitre is then crystallised and imported to this country, always containing a certain quantity of impurities, which are deducted in the purchase of large quantities of the article, being termed its refraction. It is generally used for the manufacture of gunpowder and pure nitric acid, refined or recrystallised.

Nitre may be also made artificially, in beds of decaying vegetable or animal substances, mixed with old mortar, or other refuse calcareous earth; these are watered occasionally, too much moisture being hurtful; after a certain period, depending on the rapidity with which the process has gone on, the whole is submitted to lixiviation together with wood-ashes, which contain subcarbonate of potass, and which decomposes any nitrate of lime formed, of which there is generally a considerable quantity. After the lixiviation is complete, which takes some time, the solution is separated and boiled down; the salt separates as in the other process, and the nitre is then crystallised. It was from this source that the whole of the nitre, nearly, employed by the French during the long protracted war with the continental powers, was obtained.

Nitre has a cold, penetrating, and nauseous taste; enters into igneous fusion at a gentle heat, and is then moulded into round cakes called sal prunella. It is employed in the manufacture of nitric acid; of gunpowder, which is composed of 75 parts by weight of nitre, 10 of charcoal, and 9 of sulphur (the nitre for this purpose should be of great purity); and in the manufacture of oil of vitriol, as a flux it is one of the most powerful we possess; it is also used for the preservation of animal food, and in making frigorific mixtures: 1 oz. of nitre dissolved in 5 oz. of water lowers its temperature 15 degrees of Fahrenheit's thermometer.—(See SALTPETRE.)

Oxalate and Bin oxalate of Potass.—The bin oxalate of potass, or salt of lemon, or sorrel, by both which last names it is very commonly known, is procured from the juice of the common sorrel (*Rumex Acetosus*), or the wood sorrel (*Oxalis Acetosella*), by crystallisation, after the feculent matter has been separated by standing a few days. Its chief uses are, in removing ink spots or iron moulds; and also as a refreshing beverage when mixed with sugar and water.

The neutral oxalate is obtained from the salt by combining the excess of acid which it contains with a solution of subcarbonate of potass. Is very much used in chemistry, as the best test of the presence of lime.

Tartrate and Bitartrate of Potass.—Bitartrate of potass, or cream of tartar, is, when in its crude and impure state, called argol, and is deposited in the interior of wine casks during fermentation, and from this source the whole of the cream of tartar is obtained. It is generally of a very dark brown colour, but may be purified and rendered perfectly white by solution and crystallisation. It is employed very extensively in dyeing, hat-making, and in the preparation of tartaric acid, and many of the compounds of tartaric acid, as tartar emetic, soluble tartar (tartrate of potass): when heated to redness it is converted into carbonate of potass and charcoal; mixed with half its weight of nitre and thrown into a red hot crucible it forms the black flux, and with its own weight of nitre the white flux, both of which are very much employed in metallurgical operations. The tartrate is made by the addition of subcarbonate of potass to a solution of the bitartrate until perfectly neutral: it is used in medicine as a mild purgative.

Ferrocyanate or Prussiate of Potass.—This salt is obtained by the action of subcarbonate of potass, at a low red heat, upon refuse animal matter, such as hoofs, horns, skin, &c., in the proportion of two of subcarbonate, to four or five of the animal matter. But the process recommended by M. Gauthier is preferable; he finds, that when animal matter is heated with nitre, it yields a much larger quantity of the ferrocyanate than when either potass or subcarbonate of potass are employed; the proportions he finds most economical are, 1 part by weight of nitre, 3 parts of dry blood, and iron scales or filings equal to a fiftieth of the blood employed.

The coagulum of blood is mixed intimately with the nitre and iron filings, and dried by exposure to the air; they are then submitted to a very low red heat, in deep iron cylinders, as long as vapours continue to be liberated; when cold, the contents are dissolved in 13 or 15 times their weight and strained. On evaporation, till of the specific gravity 1.284, and allowing it to cool, a large quantity of bicarbonate of potass crystallises, and by further evaporation till of the specific gravity 1.306, the ferrocyanate of potass crystallises on cooling. This is to be recrystallised. It is a beautiful yellow salt, very tough, having a tenacity similar to spermaceti, and is decomposed at a red heat. It is employed very extensively in dyeing blues, and in calico printing; also in the manufacture of Prussian blue, which is a compound of the ferrocyanic acid and oxide of iron, prepared by adding 1 part of the ferrocyanate of potass dissolved in water, to one part of copperas, and 4 parts of alum in solution.

Chromate of Potass.—This salt is obtained from the native chromate of iron by the action of nitre at a full red heat in equal proportions. By solution, filtration, and evaporation, a beautiful lemon yellow coloured salt results. It is very much employed in dyeing, calico printing, and calico marking, from its producing bright yellow precipitates with solutions of lead.

Bichromate of Potass—is prepared from the above-mentioned salt, by the addition of nitric acid to the yellow solution obtained from the heated mass by the action of water; on evaporating this, a dark red coloured salt crystallises, which is the bichromate. This is also very largely employed by the calico printers, and when mixed in solution with nitric acid, possesses the property of destroying vegetable colours; on this account it is of great importance, as it at the same time removes a vegetable colour, and forms a base for a yellow dye.

Chlorate or Hyperoxymuriate of Potass.—The preparation of this salt is attended with some little difficulty, and requires a great deal of nicety. It is obtained by passing a current of chlorine gas

through a solution of caustic potass; then boiling and evaporating; the first salt that separates is the chlorate of potass; and by further evaporation, muriate of potass is obtained. It is used in making matches for instantaneous light boxes, which are prepared by first dipping the wood in melted sulphur, and then into a thin paste, formed of 3 parts chlorate of potass, 2 parts starch, and a little vermilion; with sulphur it forms a very explosive compound, generally employed for filling the percussion caps of fowling-pieces.

Soda, or Mineral Alkali.—The sources of this alkali in nature are various. It is obtained in combination with carbonic acid, when plants which grow by the sea-side are burnt. The ashes thus obtained are called barilla and kelp; and also in some countries it is found as an efflorescence upon the surface of the earth, and is called nitrum or natron; this occurs particularly in Egypt and South America. Trona is also another native carbonate of soda, and is exported from Tripoli. In combination with muriatic acid it is also found in immense abundance, forming the rock salt, and sea salt, or muriate of soda. It is obtained from the carbonate exactly in the same way as potass is obtained from its carbonate, namely, by boiling it with fresh burnt lime previously slaked, decanting the clear solution, and evaporating and fusing. It is a white brittle substance, and by exposure to the air becomes converted into a dry carbonate. Its uses in the arts and manufactures are of considerable importance. In soap-making it is employed in very large quantities, and for this purpose is generally procured from barilla or kelp, by mixing them with lime, and by the infusion of water procuring a caustic soda ley; this is mixed with oil and fatty matters in various proportions, and boiled; the saponification of the fatty matter takes place, and the soap formed rises to the surface; the ley is then drawn from beneath, and fresh leys added, until the soap is completely free from oil; it is then allowed to dry. Soda is also employed in the manufacture of plate, crown, and bottle glass, though for this purpose it is generally in the form of carbonate or sulphate.

Subcarbonate of Soda. (In the chemical nomenclature it is called carbonate.)—This is generally prepared from barilla, which contains about from 16 to 24 per cent. Barilla is procured by incinerating the *salsola soda*, and other sea-side plants; it is made in large quantities on the coast of Spain. Kelp is another impure carbonate of soda, but does not contain more than 4 or 5 per cent.; it is the ashes obtained from sea weeds by incineration, and is made on the northern shores of Scotland. From these, the crystallised carbonate (or subcarbonate, as it is more frequently called) is made by the addition of a small quantity of water, boiling, straining, evaporating, and skimming off the common salt as it forms on the surface; on cooling, the subcarbonate of soda crystallises. Another method is by heating the sulphate of soda with carbonate of lime and charcoal, and then dissolving out the soluble carbonate; also, by the action of carbonate of potass (pearlash) upon solutions of sea salt.—(See *BARILLA* and *KELP*.)

Bicarbonate of Soda—is procured by driving a current of carbonic acid gas through solutions of the carbonate, and then evaporating at a temperature below 212° Fahrenheit; it is chiefly employed in making soda water powders. This is the carbonate of soda of the Pharmacopœia. By the application of a red heat it loses carbonic acid, and is converted into the subcarbonate.

Sulphate of Soda, or Glauber Salt.—This salt, which has received the name of Glauber, from its discoverer, is the residue of a great many chemical processes; for instance, when muriate of soda is acted upon by oil of vitriol, muriatic acid and sulphate of soda result; in making chlorine gas for the manufacture of the chloride of lime, or bleaching powder, sulphate of soda and sulphate of manganese result; the materials employed being sea salt, sulphuric acid (oil of vitriol), and black oxide of manganese; also, in the preparation of acetic acid from the acetate of soda, and in the preparation of muriate of ammonia from sea salt and sulphate of ammonia. Sulphate of soda is a colourless, transparent salt, effloresces readily when exposed to the air, and becomes converted into a dry powder; it has a cold, bitter taste. It is used for the preparation of carbonate of soda, and as a medicine. It is found native in some countries, particularly in Persia and South America—frequently as an efflorescence upon new walls.

Nitrate of Soda.—This salt is found native in some parts of the East Indies, and is called from its square form, cubic nitre; it is, however, very little used.

Muriate of Soda, or Sea Salt.—This compound is found in immense quantities in the earth, and is called from this circumstance rock salt, or sal gem. The mines of Cheshire and Droitwich, in this country, and those in Poland, Hungary, and Spain, and many others, afford immense quantities of this compound. It is also obtained by the evaporation of sea water, both spontaneously in pits formed for the purpose, and in large iron boilers; the uncrystallisable fluid is called the bitter; basket salt is made by placing the salt after evaporation in conical baskets, and passing through it a saturated solution of salt, which dissolves and carries off the muriate of magnesia or lime. Pure salt should not become moist by exposure to the air; it decrepitates when heated; it is employed for the preparation of muriatic acid, carbonate of soda, muriate of ammonia, and many other operations; also in glazing stone-ware, pottery, &c.; and from its great antiseptic properties, is used largely for the preservation of animal food; as a flux also in metallurgy.

Borate of Soda, or Borax.—This salt is found in Thibet and Persia, deposited from saline lakes; it is called tincal, and is imported into this country, where it is purified by solution; the fatty matter with which the tincal is always coated being removed; and the solution evaporated and crystallised: its principal uses are as a flux, from its acting very powerfully upon earthy substances.

ALKANET, or ANCHUSA (Ger. *Orkanet*; Du. *Osseleng*; Fr. *Orcanette*; It. *Ancusa*; Sp. *Arcancla*), a species of bugloss (*Anchusa tinctoria* Lin.). It has been cultivated in England; but is found of the finest quality in Siberia, Spain, and more particularly in the south of France, in the vicinity of Montpellier. The roots of the plant are the only parts that are made use of. When in perfection, they are about the thickness of the finger, having a thick bark of a deep purplish red colour. This, when separated from the whitish woody pith, imparts a fine deep red to alcohol, oils, wax, and all unctuous substances. To water it gives only a dull brownish hue. It is principally employed to tint pomatums and unguents, wax used in the making of fancy candles, oils employed in the dressing of mahogany, rose-wood, &c. The alkanet brought from Constantinople yields a more beautiful but less permanent dye than that of France.—(*Lewis's Mat. Med.*; *Magnien, Dictionnaire des Productions*.)

The duty, which was previously very oppressive, was reduced in 1832 to 2s. a cwt. In that year it produced 1,767l. 4s. 8d. This, supposing it to have been all charged with the 2s. duty, shows a consumption of 17,572 cwt. The price varies from 21s. to 32s. a cwt.

ALLOWANCES, TARES, &c. In selling goods, or in paying duties upon them, certain deductions are made from their weights, depending on the nature of the packages in which they are enclosed, and which are regulated in most instances by the custom of mer-

chants, and the rules laid down by public offices. These allowances, as they are termed, are distinguished by the epithets *Draft*, *Tare*, *Trett*, and *Claff*.

Draft is a deduction from the original or gross weight of goods, and is subtracted before the tare is taken off.

Tare is an allowance for the weight of the bag, box, cask, or other package, in which goods are weighed.

Real or open tare is the actual weight of the package.

Customary tare is, as its name implies, an established allowance for the weight of the package.

Computed tare is an estimated allowance agreed upon at the time.

Average tare is when a few packages only among several are weighed, their mean or average taken, and the rest tared accordingly.

Super-tare is an additional allowance, or tare, where the commodity or package exceeds a certain weight.

When tare is allowed, the remainder is called the nett weight; but if trett be allowed, it is called the *suttle weight*.

Trett is a deduction of 4 lbs. from every 104 lbs. of *suttle weight*.

This allowance, which is said to be for dust or sand, or for the waste or wear of the commodity, was formerly made on most foreign articles sold by the pound a *voirdupois*; but it is now nearly discontinued by merchants, or else allowed in the price. It is wholly abolished at the East India warehouses in London; and neither trett nor draft is allowed at the Custom-house.

Claff, or *clough*, is another allowance that is nearly obsolete. It is stated in arithmetical books to be a deduction of 2 lbs. from every cwt. of the *seconduttle*; that is, the remainder after trett is subtracted; but merchants, at present, know *claff* only as a small deduction, like *draft*, from the original weight, and this only from two or three articles.—(See *Kelly's Cambist*, art. "London.")

For an account of the tares and allowances at London, see *TARE*; for the tares and allowances at the great foreign trading towns, see their names.

ALMONDS (Ger. *Mandeln*; Du. *Amandelen*; Fr. *Amandes*; It. *Mandorli*; Sp. *Almendra*; Port. *Amendo*; Rus. *Mindal*; Lat. *Amygdalus amara, dulces*), a kind of medicinal fruit, contained in a hard shell, that is enclosed in a tough sort of cotton skin. The tree (*Amygdalus communis*) which produces this fruit nearly resembles the peach both in leaves and blossoms; it grows spontaneously only in warm countries, as Spain, and particularly Barbary. It flowers early in the spring, and produces fruit in August. Almonds are of two sorts, sweet and bitter. They are not distinguishable from each other but by the taste of the kernel or fruit. "The Valentia almond is sweet, large, and flat-pointed at one extremity, and compressed in the middle. The Italian almonds are not so sweet, smaller, and less depressed in the middle. The Jordan almonds come from Malaga, and are the best sweet almonds brought to England. They are longer, flatter, less pointed at one end and less round at the other, and have a paler cuticle than those we have described. The sweet almonds are imported in mats, casks, and boxes; the bitter, which come chiefly from Mogadore, arrive in boxes."—(*Thomson's Dispensatory*.)

An Account of the different Descriptions of Almonds imported into the United Kingdom in the Years 1831 and 1832, the Rates of Duty thereon, the Produce of the Duties, with the countries from whence the Almonds were brought, and specifying the Quantities brought from each.—(Obtained from the Custom-house for this Work.)

Duties on Almonds.—Previously to 1832, almonds were among the most grossly overtaxed articles in the British tariff; but the subjoined statement shows that the duties were then materially reduced. It further appears from it, that though the duty on bitter almonds in 1832 amounted to only about one-eighth part of its amount in 1831, the revenue derived from them did not fall off more than about half, showing that the consumption had increased in a *fourfold* proportion! The revenue from Jordan almonds in 1831 was 7,830*l.*; and in 1832, 5,092*l.*; though the duty in the latter year was less than half what it had been in the former. The results of the reduction of the duty on other sorts of almonds are exactly similar. This, therefore, is a striking instance of the beneficial influence of reasonable duties. The fair presumption is, that in a few years the revenue from almonds, under the present moderate duties, will be much greater than it has ever been under the high duties.

Almonds were worth, in bond, in the London market, in August 1833, Jordan, 76*s.* to 100*s.* per cwt.; Barbary (bitter), 3*l.* per ditto; Valencia (sweet), 7*l.* to 7*l.* 5*s.* per ditto.

[Almonds are chiefly imported into the United States from the Mediterranean ports of France and Spain; and only an inconsiderable amount is re-exported, for the most part to Mexico.—*Am. Ed.*]

ALOES (Du. *Aloe*; Fr. *Alôès*; Ger. and Lat. *Aloe*; Rus. *Sabir*; Sp. *Aloé*; Arab. *Mudbar*), a bitter, gummy, resinous, inspissated juice, obtained from the leaves of the plant of the same name. There are four sorts of aloes met with in commerce; viz. *Socotrine*, *Hepatic*, *Caballine*, and *Cape*.

1. *Socotrine*—so called from the island of Socotra, in the Indian Ocean, not very distant from Cape Guardafui, where the plant (*Aloe-spicata*), of which this species is the produce, grows abundantly. It is in pieces of a reddish brown colour, glossy as if varnished, and in some degree pellucid. When reduced to powder, it is of a bright golden colour. Its taste is extremely bitter; and it has a peculiar aromatic odour, not unlike that of the russet apple decaying. It softens in the hand, and is adhesive; yet is sufficiently pulverulent. It is imported by way of Smyrna and Alexandria, in chests and casks, but is very scarce in England.

2. *Hepatic*.—The real hepatic aloes, so called from its liver colour, is believed to be the produce of the *Aloe perfoliata*, which grows in Yemen in Arabia, from which it is exported to Bombay, whence it finds its way to Europe. It is duller in the colour, bitterer, and has a less pleasant aroma than the Socotrine aloes, for which, however, it is sometimes substituted. Barbadoes aloes, which is often passed off for the hepatic, is the produce of the *Aloe vulgaris*. It is brought home in calabashes, or large gourd shells, containing from 60 to 70 lbs. It is dusker in its hue than the Bombay, or real hepatic aloes, and the taste is more nauseous, and intensely bitter. The colour of the powder is a dull olive yellow.

3. *Caballine*, or *Horse*, *Aloes* seems to be merely the coarsest species or refuse of the Barbadoes aloes. It is used only in veterinary medicine; and is easily distinguished by its rank foetid smell.

4. *Cape Aloes* is the produce of the *Aloe spicata*, which is found in great abundance in the interior of the Cape colony, and in Melinda. The latter furnishes the greater part of the extract sold in Europe under the name of Socotrine aloes. The odour of the Cape aloes is stronger and more disagreeable than that of the Socotrine; they have, also, a yellower hue on the outside; are less glossy, softer, and more pliable; the colour of the powder is more like that of gamboge than that of the true Socotrine aloes.—(*Mat. Med. Indiae*; *Thomson's Dispensatory* and *Mat. Medica*.)

Last year the duty on aloes was reduced to 2*d.* per lb. on those from a British possession, and to 6*d.* on those from a foreign country. The duty produced 1,810*l.* 5*s.* 2*d.* of nett revenue; but as the old rates of duty existed during a part of the year, it does not afford the means of determining the consumption.

ALOES-WOOD (Ger. *Alscholk*; Du. *Alshout*, *Paradyshout*; Fr. *Bois d'Alôès*; It. *Legno di Aloe*; Sp. *Alôe chino*; Lat. *Lignum Aloes*; Sans. *Aguru*; Malay, *Agila*; Siam. *Kiana*), the produce of a large forest tree, to be found in most of the countries between China and India, from the 24th degree of north latitude to the equator.

It seems to be the result of a diseased action confined to a small part of a free tree, of which the rest of the wood is wholly valueless. It appears to be more or less frequent according to soil and climate, and from the same causes to differ materially in quality. It is produced both in the greatest quantity and perfection in the countries and islands on the east coast of the gulf of Siam. This article is in high repute for fumigations, and as incense, in all Hindu, Mohammedan, and Catholic countries. It formerly brought a very high price, being at one time reckoned nearly as valuable as gold. It is now comparatively cheap, though the finest specimens are still very dear. The accounts of this article in most books, even of good authority, are singularly contradictory and inaccurate. This is more surprising, as La Loubère has distinctly stated, that it consisted only of "*certaines endroites corrompues dans des arbres d'une certaine espèce. Tout arbre de cette espèce n'en a pas; et ceux qui en ont, ne les ont pas tous en même endroit.*"—(*Royaume de Siam*, t. i. p. 45. 12mo ed.) The difficulty of finding the trees which happen to be diseased, and of getting at the diseased portion, has given rise to the fables that have been current as to its origin. The late Dr. Roxburgh introduced the tree which yields this production into the Botanical Garden at Calcutta, from the hills to the eastward of Sylhet, and described it under the name of *Aquilaria Agallocha*.

ALUM (Ger. *Alun*; Du. *Aluin*; Fr. *Alun*; It. *Alume*; Sp. *Alumbre*; Rus. *Kwaczal*; Lat. *Alumen*; Arab. *Sâb*), a salt of great importance in the arts, consisting of a ternary compound of *aluminium*, or pure argillaceous earth, potash, and sulphuric acid. Alum is sometimes found native; but by far the greater part of that which is met with in commerce is artificially prepared. The best alum is the Roman, or that which is manufactured near Civita Vecchia, in the Papal territory. It is in irregular, octahedral, crystalline masses, about the size of a walnut, and is opaque, being covered on the surface with a farinaceous efflorescence. The Levant, or Roch alum is in fragments, about the size of the former, but in which the crystalline form is more obscure; it is externally of a dirty rose-colour, and internally exhibits the same tinge, but clearer. It is usually shipped for Europe from Smyrna; but it was anciently made at Roesha, or Edessa, in Syria; and hence its name, Roch alum. English alum is in large, irregular, semi-transparent, colourless masses, having a glassy fracture; not efflorescent, and considerably harder than the others. It is very

inferior to either the Roman or Roch alum. The principal use of alum is in the art of dyeing, as a mordant for fixing and giving permanency to colours which otherwise would not adhere at all, or but for a very short time; but it is also used for a great variety of other purposes.

Beckmann has shown (*History of Inventions*, vol. i. art. "Alum") that the ancients were unacquainted with alum, and that the substance which they designated as such was merely vitriolic earth. It was first discovered by the Orientals, who established alum works in Syria in the thirteenth or fourteenth century. The oldest alum works in Europe were erected about the middle of the fifteenth century. Towards the conclusion of the reign of Queen Elizabeth, Sir Thomas Chaloner established the first alum work in England, near Whitby, where the principal works of the sort in this country are still carried on. There is a large alum work at Hurllett, near Paisley. Alum is largely manufactured in China, and is thence exported to all the western Asiatic countries. In 1831, 11,779 piculs (795 tons) were exported from Canton.

AMBER (Ger. *Bernstein*; Du. *Barnsteen*; Da. *Bernsteen*, *Rav.*; Fr. *Ambre jaune*; It. *Ambra gialla*; Sp. *Ambra*; Rus. *Jantar*; Pol. *Buraztyn*; Lat. *Succinum, Electrum*), a brittle, light, hard substance, usually nearly transparent, sometimes nearly colourless, but commonly yellow, or even deep brown. It has considerable lustre. Specific gravity 1.065. It is found in nodules or rounded masses, varying from the size of coarse sand to that of a man's hand. It is tasteless, without smell, except when pounded or heated, when it emits a fragrant odour. It is highly electric. Most authors assert that amber is bituminous; but Dr. Thomson states, that "it is undoubtedly of a vegetable origin; and though it differs from resins in some of its properties, yet it agrees with them in so many others, that it may without impropriety be referred to them."—(*Chemistry*, vol. iv. p. 147. 5th ed.)

Pieces of amber occasionally enclose parts of toads and insects in their substance, which are beautifully preserved. It is principally found on the shores of Pomerania and Polish Prussia; but it is sometimes dug out of the earth in Ducal Prussia. It is also met with on the banks of the river Giaretta, in Sicily. Sometimes it is found on the east coast of Britain, and in gravel pits round London. The largest mass of amber ever found was got near the surface of the ground in Lithuania, it weighs 18 lbs., and is preserved in the royal cabinet at Berlin. Most of the amber imported into this country comes from the Baltic, but a small quantity comes from Sicily. Amber was in very high estimation among the ancients, but is now comparatively neglected.

AMBER-GRIS, or AMBER-GREASE (Ger. *Amber*; Du. *Amber*; Fr. *Ambergris*; It. *Ambra-grigia*; Sp. *Ambra-gris*; Lat. *Ambra, Ambra grisea*), a solid, opaque, generally ash-coloured, fatty, inflammable substance, variegated like marble, remarkably light, rugged and uneven in its surface, and has a fragrant odour when heated; it does not effervesce with acids, melts freely over the fire into a kind of yellow resin, and is hardly soluble in spirit of wine. It is found on the sea-coast, or floating on the sea, near the coasts of India, Africa, and Brazil, usually in small pieces, but sometimes in masses of 50 or 100 lbs. weight. "Various opinions have been entertained respecting its origin. Some affirmed that it was the concrete juice of a tree, others thought it a bitumen; but it is now considered as pretty well established that it is a concretion formed in the stomach or intestines of the *Physeter macrocephalus*, or spermaceti whale.—(*Thomson's Chemistry*.) Ambergris ought to be chosen in large pieces, of an agreeable odour, entirely grey on the outside, and grey with little black spots within. The purchaser should be very cautious, as this article is easily counterfeited with gums and other drugs.

AMETHYST (Ger. *Amethyst*; Fr. *Amethyste*; It. *Amatista*; Sp. *Ametisto*; Lat. *Amethystus*), a precious stone, of which there are two species differing widely in quality and value.

The *Oriental amethyst* is a gem of the most perfect violet colour, and of extraordinary brilliancy and beauty. It is said to be as hard as the sapphire or ruby, with which it also corresponds in its form and specific gravity—(See *SAPPHIRE*), differing in colour merely. It has been met with in India, Persia, Siam, and other countries; but it is exceedingly scarce. That found in India is said by Pliny to be the best. (*Principatum amethysti Indice tenent*.—Nat. Hist. lib. xxxvii. cap. 9.) Mr. Mawe, says he had rarely seen an oriental amethyst offered for sale, unless small and inferior in colour. Mr. Hope, the author of *Anastasis*, had in his cabinet the finest gem of this sort in Europe. This exquisite specimen exceeds an inch in its greatest diameter; in daylight it exhibits the most beautiful violet colour, while by candle-light it is a decided blue.

The *Occidental amethyst* is merely coloured crystal or quartz.—"When perfect, its colour resembles that of the violet, or purple grape; but it not unfrequently happens that the tinge is confined to one part of the stone only, while the other is left almost colourless. When it possesses a richness, clearness, and uniformity of hue, it is considered a gem of exquisite beauty; and as it occurs of considerable size, it is suited to all ornamental purposes. In specific gravity and hardness it bears no comparison with the oriental amethyst; it is also inferior in beauty and lustre; though I have often seen the common amethyst offered for sale as oriental. Brazil, Siberia, and Ceylon produce very fine amethysts: they are found in rolled pieces in the alluvial soil, and finely crystallised in fissures of rock. From the first of these localities, they have lately been imported in such quantities, as considerably to diminish their value: but as they are the only coloured stones, except garnets, that are worn with mourning, they still retain, when perfect, a distinguished rank among the precious gems. The present price of inferior light-coloured stones, in the rough state, is about 20s. per pound, while those of good quality sell at 10s. or 12s. per ounce. Amethysts calculated for brooches or seals may be purchased at from 15s. to two or three guineas each, for which, ten years ago, treble that sum would have been given."—(*Mawe on Diamonds*, 3d ed. pp. 115—117.)

AMIANTHUS, ASBESTOS or MOUNTAIN FLAX, a mineral of which there are several varieties, all more or less fibrous, flexible, and elastic. It is inconsumable by a high degree of heat; and in antiquity the art was discovered of drawing the fibres into threads,

and then weaving them into cloth. Pliny says that he had seen napkins made of this substance, which, when soiled, were thrown into the fire, and that they were better cleaned by this means than they could have been by washing! Hence it obtained from the Greeks the name of *Amurcus* (undefiled). Its principal use, as stated by Pliny, was to wrap the bodies of the dead previously to their being exposed on the funeral pile, that the ashes of the corpse might not be mixed with those of the wood. And in corroboration of this statement we may mention, that in 1702, a skull, some calcined bones, and a quantity of ashes, were found at Rome, in a cloth of amianthus nine Roman palms in length by seven in width. Its employment in this way was, however, confined to a few of the very richest families, incombustible cloth being very scarce, and bringing an enormously high price. *Rarum inventu, difficile textu propter brevitatem. Cum inventum est equat pretia excellentium margaritarum.*—(Plin. Hist. Nat. lib. xix. cap. 1.) The disuse of the practice of cremation, or of burning the dead, caused the manufacture of amianthine cloth to be neglected. Several moderns have, however, succeeded in making it; but, if it be not lost, the art is now rarely practised.—(For further particulars, see *Rees's Cyclopædia*.)

AMMONIACUM (Fr. *Gomme Ammoniaque*; It. *Gomma Ammoniaco*; Sp. *Goma Ammoniaco*; Lat. *Ammoniacum*; Arab. *Feshook*), a concrete resinous juice obtained from a plant resembling fennel, found in the north of Africa, Arabia, Persia, the East Indies, &c. Pliny says that it derived its name from its being produced in the vicinity of the temple of Jupiter Ammon in Africa.—(Hist. Nat. lib. xii. cap. 23.) It has a faint but not ungrateful smell; and a bitter, nauseous, sweet taste. The fragments are yellow on the outside and white within, brittle, and break with a vitreous fracture; their specific gravity is 1.207. The best ammoniacum is brought from Persia by Bombay and Calcutta, packed in cases and chests. It is in large masses, composed of small round fragments or tears, or in separate dry tears, which is generally considered a sign of its goodness. The tears should be white internally and externally, and free from seeds or other foreign substances. Reject that which is soft, dark-coloured, and foul. It is used principally in the materia medica, and the quantity imported is but small.—(*Rees's Cyclopædia*; *Thomson's Dispensatory*; *Milburn's Orient. Com.* &c.)

AMMONIAC (SAL). See **ALKALIES** (*Muriate of Ammonia*).

AMMUNITION, a term expressive of the various implements used in war.

No ammunition can be imported into the United Kingdom by way of merchandise, except by licence from his Majesty, and such licence is to be granted for furnishing his Majesty's stores only, under penalty of forfeiture.—(6 Geo. 4. c. 107.) His Majesty may forbid, by order in council, the exportation of any saltpetre, gunpowder, or any sort of ammunition. Any master of a vessel exporting ammunition when so forbidden, shall for every such offence forfeit 100*l*.—(29 Geo. 2. c. 16.)

AMSTERDAM, the principal city of Holland, situated on the Y, an arm of the Zuyder Zee, in lat. 52° 25' N., and long. 4° 40' E. From 1580 to 1750, Amsterdam was, perhaps, the first commercial city of Europe; and though her trade has experienced a great falling off since the last-mentioned epoch, it is still very considerable. In 1785, the population is said to have amounted to 235,000; in 1814, it had declined to 180,000, but at present it exceeds 200,000. The harbour is spacious and the water deep; but on account of a bank (the Pampus) where the Y joins the Zuyder Zee, large vessels going or coming by that sea, are obliged to load and unload a part of their cargoes in the roads. The navigation of the Zuyder Zee is also, by reason of its numerous shallows, very intricate and difficult; and as there were no hopes of remedying this defect, it became necessary to resort to other means for improving the access to the port. Of the various plans suggested for this purpose, the preference was given to the scheme for cutting a canal capable of admitting the largest class of merchantmen, from the north side of the port of Amsterdam to Newdiep, opposite to the Texel, and a little to the east of the Helder. This canal has fully answered the views of the projectors, and has proved of signal service to Amsterdam, by enabling ships to avoid the Pampus, as well as the difficult navigation of the Zuyder Zee, where they were frequently detained for three weeks, and to get to Newdiep without any sort of risk in less than 24 hours. The canal was begun in 1819, and completed in 1825. The ground between its extremities being nearly level, it has only a lock at each end; and the dues and charges on account of towing, &c. are very moderate. At Newdiep the water is deeper than in any other port on the coast of Holland, and ships are there in the most favourable position for getting expeditiously to sea.—(See **CANALS**.) The imports principally consist of sugar, coffee, spices, tobacco, cotton, tea, indigo, cochineal, wine and brandy, wool, grain of all sorts, timber, pitch and tar, hemp and flax, iron, hides, linen, cotton and woollen stuffs, hardware, rock salt, tin plates, coal, dried fish, &c. The exports consist partly of the produce of Holland, partly of the produce of her possessions in the East and West Indies and other tropical countries, and partly of commodities brought to Amsterdam, as to a convenient *entrepôt*, from different parts of Europe. Of the first class are cheese and butter (very important articles), madder, clover, rape, hemp, and linseeds, rape and linseed oils, Dutch linen, &c. Geneva is principally exported from Schiedam and Rotterdam; oak bark

principally from the latter. Of the second class are spices, Mocha and Java coffee; sugar of Java, Brazil, and Cuba; cochineal, indigo, cotton, tea, tobacco, and all sorts of Eastern and colonial products. And of the third class, all kinds of grain, linens from Germany, timber, and all sorts of Baltic produce; Spanish, German, and English wools; French, Rhenish, and Hungarian wines, brandy, &c. The trade of Amsterdam may, indeed, be said to comprise every article that enters into the commerce of Europe. Her merchants were formerly the most extensive dealers in bills of exchange. And though London be now, in this respect, far superior to Amsterdam, the latter still enjoys a respectable share of this business.

The Bank of the Netherlands was established at Amsterdam in 1814. It is not, like the old Bank of Amsterdam, which ceased in 1796, merely a bank of deposit, but a bank of deposit and circulation formed on the model of the Bank of England.—(See BANKS, FOREIGN.)

For an account of the Dutch fisheries, see the articles HERRING FISHERY and WHALE FISHERY.

Ships entering the port of Amsterdam during the three Years ending with 1831, specifying the Countries whence they came.

Countries.	1829.	1830.	1831.
	Ships.	Ships.	Ships.
Ports of Norway and North Sea	406	788	601
Baltic and Archangel	1,134	801	585
Mediterranean, France, Spain, and Portugal	113	105	99
South America	7	10	10
North America	46	57	40
West Indies	79	95	77
Great Britain	58	114	200
East Indies and China	18	26	23
Total	1,975	1,996	1,624

There are no means of ascertaining the tonnage and the crews of these vessels. About 320 or 330 large ships belong to Amsterdam; they are employed in the East and West India trades, and in trading to the Baltic, the Mediterranean, &c. There is comparatively little coasting trade at Amsterdam, the communication with most other ports in the vicinity being principally kept up by canals, and that with Friesland by regular packets. The total number of ships of all sorts annually entering the port amounts, at an average, to about 2,300.

Account of some of the principal Articles, specifying their Quantities and Values, imported into Amsterdam by Sea during the Years 1829, 1830, and 1831.

Denomination of Merchandise.	Description of Packages.	1829.			1830.			1831.

During the year 1831, there were shipped from France for Holland, according to the official accounts given by the French Custom-house, 1,400,072 litres, or 1,379,189 wine gallons of wine. The total imports of Amsterdam in 1831 are estimated in the *Statistique des Commerce* (tom. 1. p. 226.), at 85,100,700 francs (3,400,000 sterling), and the exports at 73,700,000 francs (3,010,000 sterling). During 1831, 22,394 lbs. (English) of cheese, 350 tons of oil cake, 2,193 tons of oak bark, and 32,100 quarters of wheat, were exported from Amsterdam for Great Britain. The exports for England of butter, fish

and tow, cloves and nutmegs (of which articles the Dutch have a monopoly), emalts, linsens, hides, &c. were very considerable.

Expenses of Ships in Amsterdam.—The expenses of a ship of 300 English tons, or 158 Dutch lasts, with a mixed cargo on board, inwards and outwards, coming and departing by the canal, were, in 1832, as follows:—

	Arriving from Great Britain.	Arriving from the Mediterranean
	£ s. d.	£ s. d.
Lock dues in the canal, and charges—inwards -	4 10 0	6 10 0
Ditto - - - - - ou'wards -	2 10 0	5 10 0
Measuring the ship - - - - -	1 10 0	1 10 0
Tonnage dues, inwards and outwards - -	25 12 0	25 12 0
A charge called Port money - - - - -	1 18 0	2 0 0
Haven money - - - - -	0 13 0	0 13 6
Quay or key money - - - - -	1 2 0	1 2 0
Permit to consume provisions free of excise dues -	0 8 0	0 8 0
Clearance - - - - -	0 5 0	0 12 6
Expenses of clearing, fees, &c. - - - - -	2 18 0	2 18 0
Total -	£41 0 6	£48 16 0

There is besides, the merchants' and brokers' commission on recovering and procuring freights, generally settled by agreement.

The *tonnage duty* is 45 cents (9d.) the Netherlands ton (nearly equal to the British) inwards, and the same outwards, with the addition of the Syndicate tax of 12 per cent. It is payable only once a year by ships bearing the following flags, viz. Netherlands, British, North American, Danish, Hanoverian, Hamburg, Bremen, Lubeck, Mecklenburg, Oldenburg, Russian, Portuguese, Austrian, Syrian, Salonica, Swedish, Norwegian, Prussian, Turkish, Rio de la Plata. Others pay 57½ cents (11½d.) per ton inwards, and the same outwards every voyage.

The charge called Port money is payable half on entry, and half on departure; and that called haven money the same. The hire of a horse for towing along the whole line of the canal amounts to 12 flor. 40 cents, or about 11. 1s.

Quarantine.—The quarantine station is at the island of Wierengen, near the Helder.

Commission.—The usual rate of commission or factorage on the purchase or sale of goods is 2 per cent., and on bill transactions 1 and ½ per cent. according to their nature.

Provisions of all sorts are abundant at Amsterdam, and reasonably cheap. The wages of ships' carpenters vary from 1 flor. 20 cents to 1 flor. 80 cents; that is from about 2s. to 3s. a day.

For an account of the prices of corn at Amsterdam, see CORN TRADE AND CORN LAWS.

Custom-house Regulations.—Captains of ships are bound to make, within 24 hours of their arrival at Amsterdam, or any Dutch port, a declaration in writing of the goods of which their cargo consists. If the captains be not acquainted with the goods of which the cargo consists, they must make their declaration under the general term of *merchandise*, and exhibit the bills of lading along with the declaration. The Custom-house officers are instructed to inform the captains of all formalities required by law.

All goods, whether for home consumption or transit, may be deposited in bonded warehouses. If re-exported by sea, they pay no duty; but if re-exported by canals or otherwise for the interior, they are subject to a transit duty. The warehouse rent chargeable per month on a quarter of wheat (Imp. meas.) is, on an upper loft, 1-2-5th d., on an under do. 1½d.; on a ton (Eng.) of sugar in casks, the charge is 8d.; in chests or mats, 6d.

The business of insurance is extensively practised at Amsterdam; the premiums are moderate, and the security unexceptionable. The high duty imposed in this country on policies of insurance has contributed to the increase of this business in Holland.

Credit, Discount, &c.—Holland is, and has always been, a country of short credit. A discount is usually given for prompt payment, at the rate of 1 per cent. for six weeks, and of two per cent. for two months; but the terms of credit on most articles, and the discount allowed for ready money, have been fixed by usage, and are regarded as essential conditions in every bargain. Some of the more important of these terms and discounts are specified in the following table. In consequence of the preference given in Holland to ready money transactions, it is not a country in which adventurers without capital have much chance of speedily making a fortune. "Rien, en effet, de plus facile que de s'établir à Amsterdam; mais rien de plus difficile que de s'y soutenir sans ses grandes ressources. Dans cette ville, où l'argent abonde, où on le prête contre des sûretés à si bon marché, il est pourtant impossible de s'en procurer à crédit; et sans argent il n'y a plus de possibilité d'y travailler, que de trouver quelqu'un qui veuille de se charger d'un papier nouveau qui ne seroit pas appuyé d'un crédit que l'opinion, la protection, ou des effets réels seroient valoir à la bourse. Les Hollandais suivent là-dessus des maximes très austères, même à l'égard des maisons d'une certaine considération." — (*Encyclopédie Méthodique, Commerce*, t. ii. p. 650.) But this austerity is not a disadvantage, but the reverse. It prevents commerce from degenerating, as it has too often done in other places, into gambling adventures, and places it on a comparatively solid foundation. And it should be mentioned to the honour of the Dutch, and as a proof of the excellence of this system, that, notwithstanding the distress and loss of trade occasioned by the invasion and occupation of their country by the French, the bankruptcies in 1793 and subsequent years were not, comparatively, so numerous as in England in ordinary seasons! The regulations in the Code Napoleon as to bankruptcy are enforced in Holland.

It has long been the practice in Holland to make, on selling articles, considerable deductions from their weight, particularly from those of large bulk, as compared with their value. These tares and drafts, as they are termed, are now fixed by ancient usage: and the most important amongst them are here specified.

Tares and Allowances on the principal Articles sold at Amsterdam.

	Tares.	Allowances.
		(Draft and Discount.)
Wheat	42 lbs. per cwt.	{ 16 months discount, and 1 per cent.
Rye	per cent.	{ 2 per cent. and 2 per cent.

Cocoa, Caracas	42 lbs.	1 per cent.
Marabum	ditto	
Cayenne	ditto	
Martinique	ditto	
Sarasin	6 per cent.	
East and West India in ground	bags 5 per cent. casks real tare	2 per cent. and 2 per cent.
Bourbon	10 lbs. per original mat	
Java	14 lbs. per punny	
Mocha	24 lbs. per sale	

Cotton, Surat and Bengal all other kinds	8 per cent.	2 per cent.
Cotton yarn twist	6 per cent.	1 per cent.
Indigo, Bengal	real tare	1 per cent. 2 per cent. and 1 per cent.
Cochineal	8 1/4 lbs.	4 per cent. and 2 per cent.
Galls	6 lbs. or 30 lbs.	1 per cent. deduct.
Gums, Senegal	6 lbs. 14 lbs. or 21 lbs.	2 per cent. and 2 per cent.
Barbery	14 lbs. or 30 lbs.	2 per cent.
Arabic	2 and 3 per cent.	2 per cent.
Lowwood	2 per cent.	2 per cent.
Fustic	2 lbs. per hide	2 per cent. and 1 per cent.
Hides, Buenos Ayres, &c.	2 lbs. per hide	2 per cent. and 1 per cent.
L'oeas, Flemish	—	2 per cent. and 1 per cent.
all other kinds	—	1 per cent.
Ofs, Carolina	real tare	2 per cent. and 2 per cent.
East India	6 lbs.	1 per cent.
Saltpetre	8 1/4 lbs.	2 per cent. and 1 per cent.
Liquorice	real tare and 4 lbs.	2 per cent. and 1 per cent.
Spices, pepper	25 lbs. or 13 lbs.	1 per cent.
cinnamon	—	1 per cent.
cloves and mace	—	1 per cent.
pimento	42 lbs. and above	1 per cent.
sautage	100	1 per cent.
ginger	8 lbs. 14 lbs.	2 per cent.
Sugars, Martinique	—	2 per cent.
St. Domingo	18 per cent.	2 per cent.
St. Croix	—	2 per cent.
Surinam	20 per cent.	2 per cent.
English colonies	—	2 per cent.
Demerara	—	2 per cent.
Berbice	—	2 per cent.
Essequibo	18 per cent.	2 per cent.
Brazil, white	—	2 per cent.
Ditto, Muscovado	—	18 months' discount, 2 per cent. and 2 per cent.
Havannah	80 lbs.	2 per cent. and 2 per cent.
Java	48 lbs.	1 per cent.
Salt, bobon	—	1 per cent.
conco	—	1 per cent.
souchong	21 lbs. 8 1/4 lbs.	1 per cent.
campol	—	1 per cent.
byron	18 lbs.	1 per cent.
pekos	—	1 per cent.
toquin	18 lbs. 14 lbs.	1 per cent.
Tobacco, Maryland	—	2 per cent. and 1 per cent. and 1 per cent.
Virginia	2 and 3 per cent.	1 per cent.
Tin plates	—	21 months' discount, and 1 per cent.
Wool, Spanish	bags tared, and 94 lbs. per 176 lbs.	1 per cent.
Wines	—	10 lbs. per cask, and 2 per cent.
Madder	—	1 per cent. 2 per cent. and 2 per cent.
Herrings	8 or 5 per cent.	2 per cent.
Smelts	—	1 per cent.
Flax, hams, seeds, Geneva	—	1 per cent.
grain	—	none.
Butter	—	2 and 1 per cent.
Hides	—	2 per cent.
Cheese, Edam	—	1 per cent.
Gouda	—	1 per cent.

The above are the customary rates and other allowance made by the merchants in their transactions with each other. But in paying the import duties at the Custom-house, the tare upon goods paying duty by weight is, with the exceptions undermentioned, fixed at 15 per cent. for such as are in casks or barrels, and at 8 per cent. for such as are in packages, casks, chests, keels, &c. Merchants dissatisfied with these allowances may pay the duty according to the real weight, ascertained by the customs officers at their expense.

Exceptions.—The tare upon grain imported in sacks is fixed at 2 per cent.
 Potatoes, 15 per cent.
 Indigo } in chests, 25 per cent.
 } in sacks, 15 per cent.
 } chests from Havannah, 18 per cent., other places 20 per cent.
 Sugar } casks and packages, 15 and 8 per cent. The tare upon
 } sugar refined in the interior and exported, is 12 per cent. per barrel, 8 per cent. per package.

Magnitude of the Commerce of Holland in the seventeenth Century.—*Causes of its Prosperity and Decline.*—We believe we need make no apology for embracing this opportunity to lay before our readers the following details with respect to the commerce and commercial policy of Holland. It forms one of the most instructive topics of investigation; and it is to be regretted that so little attention should have been paid to it in this country.

Previously to the commencement of the long-continued and glorious struggle made by the Dutch to emancipate themselves from the blind and brutal despotism of Old Spain, they had a considerable marine, and had attained to distinction by their fisheries and commerce; and the war, instead of being injurious to the trade of the republic, contributed powerfully

Allowances for leakage are made upon all liquors, including brandy and honey, as follows, viz.
 Coming from England, the northern ports of Europe, and France, by inland navigation, 6 per cent.
 From France by sea, and from other countries by the rivers Rhine and Waal, 12 per cent.

From any other port or place, 14 per cent.
 Finally, from whatever place the same may come, upon train oil, 12 per cent.; blubber, 6 per cent.

In case liquors shall have experienced, upon the voyage, such leakage as shall cause the importer to be dissatisfied with the allowance before specified, he is permitted to pay the duty upon the actual quantity, to be ascertained by the officers at the importer's expense.

Money.—Accounts used to be kept at Amsterdam by the pound Flemish—*forins*—20 schillings=120 stivers=240 groats=1280 pennings. But in 1520, the decimal system was introduced. In order, however, to cause as little inconvenience as possible, the *forin* was divided into 100 equal parts or cents; and the other silver coins are equal multiples or sub-multiples of it. The new gold coin is called the *forin piece*, and is worth 16s. 6d. very nearly. But accounts are still sometimes kept in the old way or by the pound Flemish. Par of exchange between Amsterdam and London is 11 *for.* 68 cents per pound sterling.

Weights and Measures.—In 1520, the French system of weights and measures was introduced into the Netherlands, the names only being changed.
 The *pound* is the unit of weight, and answers to the French *kilogramme*. Its divisions are the *once*, *loot*, *wierje*, and *korrel*.
 The *elis*, which is the unit or element of long measure, equals the French *mètre*. Its decimal divisions are the *palm*, *duim*, and *strop*; and its decimal multiples, the *roede* and *mijl*.

The *vierkante elis*, or square ell, is the unit of superficial measure; and answers to the *centiare* or *mètre carré* of France. Its divisions are the *vierkante duim*, *vierkante duim*, and the *vierkante strop*; and its multiples, the *vierkante roede* and *vierkante bunder*.
 The *kubieke elis* is the unit of measure of capacity; and equals the French *stère*. Its divisions are the *kubieke palm*, *kubieke duim*, and *kubieke strop*.

The term *voet* is given to a *kubieke elis* of *stroom*.
 The *kop* is the unit of measure for dry ware, and is the cube of the *voet*; answering to the French *hectolitre*. Its division is the *mattje*; and its multiples the *schepel* and *mudde*; the latter is also called the *zak*, and equals the French *hectolitre*. 30 *mudde* make 1 *last*.
 The *hert* is the unit for liquid measure, and is the cube of the *palm*; it corresponds to the French *litre*. Its divisions are the *maatje* and *voerboude*; and 100 *maatje* make a *vat* or *cask*, which equals the French *hectolitre*.

The apothecary's new pound is 75 ounces, 96 drachms, 288 scruples, or 5,760 grains; and answers to 375 grammes, or 6,737 English grains.

By the old method of calculating, which is not yet entirely superseded, the pound of Amsterdam was = to 1.06 *libra*. *avoidsupois*, or 100 *libra*. Amsterdam = 106.923 *libra*. *avoidsupois*.

The *last* or measure for corn = 87 *mudde* = 10 *quers*. 5 1/2 bushels Winchester measure. The *corn liquid measure* = 4 *akkers* = 8 *steken* = 21 *vierkante* = 64 *stropen* or *stiepen* = 128 *mangles* = 256 *pints* = 41 English wine gallons.

The *strop* contains 5 1/8 pints English wine measure.
 100 *mangles* are equal to 32 English wine gallons, or 36 1/2 5th English beer gallons, or 36 2/3 1/2 Imperial gallons.

French *voet* is sold per *hooft* of . . . 180 *mangles*.
 Spanish and Portuguese wine, per *pipa* of . . . 345 *duits*.
 French brandy, per *hooft* of . . . 30 *viertels*.

Beer, per barrel (equal to the *saam*) of . . . 125 *mangles*.
 Vegetable oil, per *saam*, of . . . 120 *duits*.
 White oil, per *ditto* . . . 16 *duits*.

Rum is sold per *emker* of 2 *steken* = 102 English wine gallons.
 The foot of Amsterdam = 11 1/7 English inches.
 The Rhineland foot = 12 *duits*.

The *el*, cloth measure = 27 1/2 *duits*.
 Rock salt is sold per *hooft* of 404 *maaten*, making 30 tons, or 4,000 *libra*. Dutch.

Pit coal is sold per *hooft* of 38 *maaten*; nine *hooft* are five *chaldrons* of Newcastle, or six *hooft* are five *chaldrons* of London.
 Butter is sold per barrel; the barrel of Leyden is 320 *libra*. nett.—that of Friesland 28 *libra*. nett.—and the common Dutch barrel 354 *libra*. gross.

A *last* of *herrings* is reckoned at 12, 13, or 14 barrels.
 A *last* of *pick* is 12 barrels.
 A *last* of *tar* is 13 barrels.
 A bag of seed = 2 1/2 Winchester quarters.
 A *last* for freight is reckoned 4,000 *libra*. equal to two English tons.
 Eight *hooft* (or *oxhoofd*) of wine }
 Twelve barrels of pitch } are reckoned
 Thirteen barrels of tar } as one last
 Twenty chests of lemons, &c. } in settling
 4,000 *libra* of iron, copper, and colonial produce } the freight
 4,000 *libra* of almonds } of ships.
 5,000 *libra* of wool or feathers }

A *last* of wheat is considered 10 per cent. higher than one of rye, and the latter 30 1/3 per cent. higher than oats, and 10 per cent. higher than seed. A *last* of ballast is only 2,000 *libra*.—These details have been derived from the answers by the British consul to the circular queries of the *Dictionnaire du Commerce*. (Lyon, 1844.) *Ann. II.* pp. 554—560. *Edly's Combi.* private en/formation, &c.

to its extension. After the capture of Antwerp by the Spaniards, in 1585, the extensive commerce of which it had been the centre was removed to the ports of Holland, and principally to Amsterdam, which then attained to the distinction she long enjoyed, of the first commercial city of Europe.

In 1602, the Dutch East India Company was formed; and notwithstanding the pernicious influence of that association, the Indian trade increased rapidly in magnitude and importance. Ships fitted either for commercial or warlike purposes, and having a considerable number of soldiers on board, were sent out within a few years of the establishment of the company. Amboyna and the Moluccas were first wrested from the Portuguese, and with them the Dutch obtained the monopoly of the spice trade. Factories and fortifications were in no long time established, from Bussorah, near the mouth of the Tigris, in the Persian Gulf, along the coasts and islands of India as far as Japan. Alliances were formed with several of the Indian princes; and in many parts, particularly on the coasts of Ceylon, and in various districts of Malabar and Coromandel, they were themselves the sovereigns. Batavia, in the large and fertile island of Java, the greater part of which had been conquered by the Dutch, formed the centre of their Indian commerce; and though unhealthy, its port was excellent, and it was admirably situated for commanding the trade of the Eastern Archipelago. In 1651, they planted a colony at the Cape of Good Hope, which had been strangely neglected by the Portuguese.

Every branch of commerce was vigorously prosecuted by the Dutch. Their trade with the Baltic was, however, by far the most extensive and lucrative of which they were in possession. Guicciardini mentions that the trade with Poland, Denmark, Prussia, &c., even before their revolt, was so very great, that fleets of 300 ships arrived twice a year at Amsterdam from Dantzic and Livonia only; but it increased prodigiously during the latter part of the sixteenth and the beginning of the seventeenth centuries. The great population of Holland, and the limited extent and unfruitful nature of the soil, render the inhabitants dependent on foreigners for the greater part of their supplies of corn. The countries round the Baltic have always furnished them with the principal part of those supplies; and it is from them that they have been in the habit of bringing timber, iron, hemp and flax, pitch and tar, tallow, ashes, and other bulky articles required in the building of their houses and ships, and in various manufactures. Nothing, however, redounds so much to the credit of the Dutch, as the policy they have invariably followed with respect to the trade in corn. They have, at all times, had a large capital embarked in this business. The variations which are perpetually occurring in the harvests, early led them to engage very extensively in a sort of speculative corn trade. When the crops happened to be unusually productive, and prices low, they bought and stored up large quantities of grain, in the expectation of profiting by the advance that was sure to take place on the occurrence of an unfavourable year. Repeated efforts were made, in periods when prices were rising, to prevail on the government to prohibit exportation; but they steadily refused to interfere. In consequence of this enlightened policy, Holland has long been the most important European *entrepôt* for corn; and her markets have on all occasions been furnished with the most abundant supplies. These scarcities which are so very disastrous in countries without commerce, or where the trade in corn is subjected to fetters and restraints, have not only been totally unknown in Holland, but become a copious source of wealth to her merchants, who then obtained a ready and advantageous vent for the supplies accumulated in their warehouses. "Amsterdam," says Sir Walter Raleigh, "is never without 700,000 quarters of corn, none of it of the growth of Holland; and a dearth of only one year in any other part of Europe enriches Holland for seven years. In the course of a year and a half, during a scarcity in England, there were carried away from the ports of Southampton, Bristol, and Exeter alone, nearly 200,000*l.*; and if London and the rest of England be included, there must have been 2,000,000*l.* more."—(*Observations touching Trade and Commerce with the Hollander*, Miscel. Works, vol. ii.)

The very well informed author of the *Richesse de la Hollande*, published in 1778, observes, in allusion to these circumstances, "Que la disette de grains regno dans les quatre parties du monde; vous trouverez du froment, du seigle, et d'autres grains à Amsterdam; ils n'y manquent jamais."—(Tome i. p. 376.)

The Bank of Amsterdam was founded in 1609. The principal object of this establishment was to obviate the inconvenience and uncertainty arising from the circulation of the coins imported into Amsterdam from all parts of the world. The merchants who carried coin or bullion to the bank obtained credit for an equal value in its books: this was called bank-money; and all considerable payments were effected by writing it off from the account of one individual to that of another. This establishment continued to flourish till the invasion of the French in 1795.

Between the years 1661 and 1672, when the territories of the republic were invaded by the French, the commerce of Holland seems to have reached its greatest height. De Witt estimates its increase from the treaty with Spain, concluded at Munster in 1643, to 1669, at fully a half. He adds, that during the war with Holland, Spain lost the greater part of her

naval power; that since the peace, the Dutch had obtained most of the trade to that country, which had been previously carried on by the Hanseatic merchants and the English; that almost all the coasting trade of Spain was carried on by Dutch shipping; that Spain had even been forced to hire Dutch ships to sail to her American possessions; and that so great was the exportation of goods from Holland to Spain, that all the merchandise brought from the Spanish West Indies was not sufficient to make returns for them.

At this period, indeed, the Dutch engrossed, not by means of any artificial monopoly, but by the greater number of their ships, and their superior skill and economy in all that regarded navigation, almost the whole carrying trade of Europe. The value of the goods exported from France in Dutch bottoms, towards the middle of the fourteenth century exceeded 40,000,000 livres; and the commerce of England with the Low Countries was, for a very long period, almost entirely carried on in them.

The business of marine insurance was largely and successfully prosecuted at Amsterdam; and the ordinances published in 1561, 1563, and 1570, contain the most judicious regulations for the settlement of such disputes as might arise in conducting this difficult but highly useful business. It is singular, however, notwithstanding the sagacity of the Dutch, and their desire to strengthen industrious habits, that they should have prohibited insurance upon lives. It was reserved for England to show the advantages that might be derived from this beautiful application of the science of probabilities.

In 1690, Sir William Petty estimated the shipping of Europe at about 2,000,000 tons, which he supposed to be distributed as follows:—viz. England, 500,000; France, 100,000; Hamburgh, Denmark, Sweden, and Dantzic, 250,000; Spain, Portugal, and Italy, 250,000; that of the Seven United Provinces amounting, according to him, to 900,000 tons, or to nearly one half of the whole tonnage of Europe! No great dependence can, of course, be placed upon these estimates; but the probability is, that, had they been more accurate, the preponderance in favour of Holland would have been greater than it appears to be; for the official returns to the circulars addressed in 1701 by the commissioners of customs to the officers at the different ports, show that the whole mercantile navy of England amounted at that period to only 361,222 tons, carrying 37,196 men.—(*Marpherson's Annals of Commerce, anno 1701.*)

It may, therefore, be fairly concluded, that, during the seventeenth century the foreign commerce and navigation of Holland was greater than that of all Europe besides; and yet the country which was the seat of this vast commerce had no native produce to export, nor even a piece of timber fit for ship-building. All had been the fruit of industry, economy, and a fortunate combination of circumstances.

Holland owed this vast commerce to a variety of causes: partly to her peculiar situation, the industry and economy of her inhabitants, the comparatively liberal and enlightened system of civil as well as of commercial policy adopted by the republic; and partly also to the wars and disturbances that prevailed in most European countries in the sixteenth and seventeenth centuries, and prevented them from emulating the successful career of the Dutch.

The ascendancy of Holland as a commercial state began to decline from about the commencement of last century. After the war terminated by the treaty of Aix-la-Chapelle, the attention of the government of Holland was forcibly attracted to the state of the shipping and foreign commerce of the republic. The discovery of means by which their decline might be arrested, and the trade of the republic, if possible, restored to its ancient flourishing condition, became a prominent object in the speculations of every one who felt interested in the public welfare. In order to procure the most correct information on the subject, the Stadtholder, William IV., addressed the following queries to all the most extensive and intelligent merchants, desiring them to favour him with their answers:—

“1. What is the actual state of trade? and if the same should be found to be diminished and fallen to decay, then, 2. To inquire by what methods the same may be supported and advanced, or, if possible, restored to its former lustre, repute, and dignity?”

In discussing these questions, the merchants were obliged to enter into an examination, as well of the causes which had raised the commerce of Holland to the high pitch of prosperity to which it had once attained, as of those which had occasioned its subsequent decline. It is stated, that, though not of the same opinion upon all points, they, speaking generally, concurred as to those that were most important. When their answers had been obtained, and compared with each other, the Stadtholder had a dissertation prepared from them, and other authentic sources, on the commerce of the republic, to which proposals were subjoined for its amendment. Some of the principles advanced in this dissertation apply to the case of Holland only; but most of them are of universal application, and are not more comprehensive than sound. We doubt, indeed, whether the benefits resulting from religious toleration, political liberty, the security of property, and the freedom of industry, have ever been more clearly set forth than in this dissertation. It begins by an enumeration of the causes which contributed to advance the commerce of the republic to its former unexampled prosperity; these the authors divide into three classes, embracing under

the first those that were natural and physical; under the second, those they denominated moral; and under the third, those which they considered adventitious and external; remarking on them in succession as follows:—

"I. The natural and physical causes are the advantages of the situation of the country, on the sea, and at the mouth of considerable rivers; its situation between the northern and southern parts, which, by being in a manner the centre of all Europe, made the republic become the general market, where the merchants on both sides used to bring their superfluous commodities, in order to barter and exchange the same for other goods they wanted.

"Nor have the barrenness of the country, and the necessities of the natives arising from that cause, less contributed to set them upon exerting all their application, industry, and utmost stretch of genius, to fetch from foreign countries what they stand in need of in their own, and to support themselves by trade.

"The abundance of fish in the neighbouring seas put them in a condition not only to supply their own occasions, but with the overplus to carry on a trade with foreigners, and out of the produce of the fishery to find an equivalent for what they wanted, through the sterility and narrow boundaries and extent of their own country.

"II. Among the moral and political causes are to be placed, The unalterable maxim and fundamental law relating to the free exercise of different religions: and always to consider this toleration and connivance as the most effectual means to draw foreigners from adjacent countries to settle and reside here, and so become instrumental to the peopling of these provinces.

"The constant policy of the republic to make this country a perpetual, safe, and secure asylum for all persecuted and oppressed strangers. No alliance, no treaty, no regard for or solicitation of any potentate whatever, has at any time been able to weaken or destroy this law, or make the state recede from protecting those who have fled to it for their own security and self-preservation.

"Throughout the whole course of all the persecutions and oppressions that have occurred in other countries, the steady adherence of the republic to this fundamental law has been the cause that many people have not only fled hither for refuge, with their whole stock in ready cash, and their most valuable effects, but have also settled, and established many trades, fabrics, manufactories, arts, and sciences, in this country, notwithstanding the first materials for the said fabrics and manufactories were almost wholly wanting in it, and not to be procured but at a great expense from foreign parts.

"The constitution of our form of government, and the liberty thus accruing to the citizen, are further reasons to which the growth of trade, and its establishment in the republic, may fairly be ascribed; and all her policy and laws are put upon such an equitable footing, that neither life, estates, nor dignities, depend on the caprice or arbitrary power of any single individual; nor is there any room for any person, who, by care, frugality, and diligence, has once acquired an affluent fortune or estate, to fear a deprivation of them by any act of violence, oppression, or injustice.

"The administration of justice in the country has, in like manner, always been clear and impartial, and without distinction of superior or inferior rank,—whether the parties have been rich or poor, or were this a foreigner and that a native; and it were greatly to be wished we could at this day boast of such impartial quickness and despatch in all our legal processes, considering how great an influence it has on trade.

"To sum up all, amongst the moral and political causes of the former flourishing state of trade, may be likewise placed the wisdom and prudence of the administration; the intrepid firmness of the councils; the faithfulness with which treaties and engagements were wont to be fulfilled and ratified; and particularly the care and caution practised to preserve tranquillity and peace, and to decline, instead of entering on a scene of war, merely to gratify the ambitious views of gaining fruitless or imaginary conquests.

"By these moral and political maxims was the glory and reputation of the republic so far spread, and foreigners animated to place so great a confidence in the steady determinations of a state so wisely and prudently conducted, that a concourse of them stocked this country with an augmentation of inhabitants and useful hands, whereby its trade and opulence were from time to time increased.

"III. Amongst the adventitious and external causes of the rise and flourishing state of our trade may be reckoned—

"That at the time when the best and wisest maxims were adopted in the republic as the means of making trade flourish, they were neglected in almost all other countries; and any one, reading the history of those times, may easily discover, that the persecutions on account of religion throughout Spain, Brabant, Flanders, and many other states and kingdoms, have powerfully promoted the establishment of commerce in the republic.

"To this happy result, and the settling of manufacturers in our country, the long continuance of the civil wars in France, which were afterwards carried on in Germany, England, and divers other parts, have also very much contributed.

"It must be added, in the last place, that during our most burthenome and heavy wars with Spain and Portugal (however ruinous that period was for commerce otherwise), these powers had both neglected their navy; whilst the navy of the republic, by a conduct directly the reverse, was at the same time formidable, and in a capacity not only to protect the trade of its own subjects, but to annoy and crush that of their enemies in all quarters."

We believe our readers will agree with us in thinking that these statements reflect the greatest credit on the merchants and government of Holland. Nothing, as it appears to us, could be conceived more judicious than the account they give of the causes which principally contributed to render Holland a great commercial commonwealth. The central situation of the country, its command of some of the principal inlets to the continent, and the necessity under which the inhabitants have been placed, in consequence of the barrenness of the soil and its liability to be overflowed, to exert all their industry and enterprise, are circumstances that seem to be in a great degree peculiar to Holland. But though there can be no doubt that their influence has been very considerable, no one will pretend to say that it is to be compared for a moment with the influence of those free institutions, which, fortunately, are not the exclusive attributes of any particular country, but have flourished in Phœnicia, Greece, England, and America, as well as in Holland.

* The Dissertation was translated into English, and published at London in 1751. We have quoted from the translation.

Many dissertations have been written to account for the decline of the commerce of Holland. But, if we mistake not, its leading causes may be classed under two prominent heads, viz. first, the natural growth of commerce and navigation in other countries; and second, the weight of taxation at home. During the period when the republic rose to great eminence as a commercial state, England, France, and Spain, distracted by civil and religious dissensions, or engrossed wholly by schemes of foreign conquest, were unable to apply their energies to the cultivation of commerce, or to withstand the competition of so industrious a people as the Dutch. They, therefore, were under the necessity of allowing the greater part of their foreign, and even of their coasting trade, to be carried on in Dutch bottoms, and under the superintendence of Dutch factors. But after the accession of Louis XIV. and the ascendancy of Cromwell had put an end to internal commotions in France and England, the energies of these two great nations began to be directed to pursuits of which the Dutch had hitherto enjoyed almost a monopoly. It was not to be supposed, that when tranquillity and a regular system of government had been established in France and England, their active and enterprising inhabitants would submit to see one of their most valuable branches of industry in the hands of foreigners. The Dutch ceased to be the carriers of Europe, without any fault of their own. Their performance of that function necessarily terminated as soon as other nations became possessed of a mercantile marine, and were able to do for themselves what had previously been done for them by their neighbours.

Whatever, therefore, might have been the condition of Holland in other respects, the natural advance of rival nations must inevitably have stripped her of a large portion of the commerce she once possessed. But the progress of decline seems to have been considerably accelerated, or rather, perhaps, the efforts to arrest it were rendered ineffectual, by the extremely heavy taxation to which she was subjected, occasioned by the unavoidable expenses incurred in the revolutionary struggle with Spain, and the subsequent wars with France and England. The necessities of the state led to the imposition of taxes on corn, on flour when it was ground at the mill, and on bread when it came from the oven; on butter, and fish, and fruit; on income and legacies; the sale of houses; and, in short, almost every article either of necessity or convenience. Sir William Temple mentions that in his time—and taxes were greatly increased afterwards—one fish sauce was in common use, which directly paid no fewer than *thirty* different duties of excise; and it was a common saying at Amsterdam, that every dish of fish brought to table was paid for *once* to the fisherman, and *six* times to the state.

The pernicious influence of this heavy taxation has been ably set forth by the author of the *Richesse de la Hollande*, and other well-informed writers; and it has also been very forcibly pointed out in the Dissertation already referred to, drawn up from the communications of the Dutch merchants. "Oppressive taxes," it is there stated, "must be placed at the head of all the causes that have co-operated to the prejudice and discouragement of trade; and it may be justly said, that it can only be attributed to them that the trade of this country has been diverted out of its channel, and transferred to our neighbours, and must daily be still more and more alienated and shut out from us, unless the progress thereof be stopped by some quick and effectual remedy: nor is it difficult to see, from these contemplations on the state of our trade, that the same will be effected by no other means than a *diminution of all duties*."

"In former times this was reckoned the only trading state in Europe; and foreigners were content to pay the taxes, as well on the goods they brought hither, as on those they came here to buy; without examining whether they could evade or save them, by fetching the goods from the places where they were produced, and carrying others to the places where they were consumed: in short, they paid us our taxes with pleasure, without any farther inquiry."

"But, since the last century, the system of trade is altered all over Europe: foreign nations, seeing the wonderful effect of our trade, and to what an eminence we had risen only by means thereof, they did likewise apply themselves to it; and, to save our duties, sent their superfluous products beside our country, to the places where they are most consumed; and in return for the same, furnished themselves from the first hands with what they wanted."

But, notwithstanding this authoritative exposition of the pernicious effects resulting from the excess of taxation, the necessary expenses of the state were so great as to render it impossible to make any sufficient reductions. And, with the exception of the transit trade carried on through the Rhine and the Meuse, which is in a great measure independent of foreign competition, and the American trade, most of the other branches of the foreign trade of Holland, though still very considerable, continue in a comparatively depressed state.

In consequence principally of the oppressiveness of taxation, but partly too, of the excessive accumulation of capital that had taken place while the Dutch engrossed the carrying trade of Europe, profits in Holland were reduced towards the middle of the seventeenth century, and have ever since continued extremely low. This circumstance would of itself have sapped the foundations of her commercial greatness. Her capitalists, who could hardly

expect to clear more than two or three per cent. of nett profit by any sort of undertaking carried on at home, were tempted to vest their capital in other countries, and to speculate in loans to foreign governments. There are the best reasons for thinking that the Dutch were, until very lately, the largest creditors of any nation in Europe. It is impossible, indeed, to form any accurate estimate of what the sums owing them by foreigners previously to the late French war, or at present, may amount to; but there can be no doubt that at the former period the amount was immense, and that it is still very considerable. M. Demeunier (*Dictionnaire de l'Economie Politique*, tome iii. p. 720.) states the amount of capital lent by the Dutch to foreign governments, exclusive of the large sums lent to France during the American war, at *seventy-three* millions sterling. According to the author of the *Richesse de la Hollande* (ii. p. 292.), the sums lent to France and England only, previously to 1778, amounted to 1,500,000 livres tournois, or sixty millions sterling. And besides these, vast sums were lent to private individuals in foreign countries, both regularly as loans at interest, and in the shape of goods advanced at long credits. So great was the difficulty of finding an advantageous investment for money in Holland, that Sir William Temple mentions, that the payment of any part of the national debt was looked upon by the creditors as an evil of the first magnitude. "They receive it," says he, "with tears, not knowing how to dispose of it to interest with such safety and ease."

Among the subordinate causes which contributed to the decline of Dutch commerce, or which have, at all events, prevented its growth, we may reckon the circumstance of the commerce with India having been subjected to the trammels of monopoly. De Witt expresses his firm conviction, that the abolition of the East India Company would have added very greatly to the trade with the East; and no doubt can now remain in the mind of any one, that such would have been the case.* The interference of the administration in regulating the mode in which some of the most important branches of industry should be carried on, seems also to have been exceedingly injurious. Every proceeding with respect to the herring fishery, for example, was regulated by the orders of government, carried into effect under the inspection of officers appointed for that purpose. Some of these regulations were exceedingly vexatious. The period when the fishery might begin was fixed at five minutes past twelve o'clock of the night of the 24th of June! and the master and pilot of every vessel leaving Holland for the fishery, were obliged to make oath that they would respect the regulation. The species of salt to be made use of in curing different sorts of herrings, was also fixed by law; and there were endless regulations with respect to the size of the barrels, the number and thickness of the staves of which they were to be made; the gutting and packing of the herrings; the branding of the barrels, &c. &c.—(*Histoire des Pêches, &c. dans les Mers du Nord*, tom. i. chap. 24.) These regulations were intended to secure to the Hollanders that superiority which they had early attained in the fishery, and to prevent the reputation of their herrings from being injured by the bad faith of individuals. But their real effect was precisely the reverse of this. By tying up the fishers to a system of routine, they prevented them from making any improvements; while the facility of counterfeiting the public marks opened a much wider door to fraud, than would have been opened had government wisely declined interfering in the matter.

In despite, however, of the East India monopoly, and the regulations now described, the commercial policy of Holland has been more liberal than that of any other nation. And in consequence, a country not more extensive than Wales, and naturally not more fertile, conquered, indeed, in a great measure from the sea, has accumulated a population of upwards of two millions; has maintained wars of unexampled duration with the most powerful monarchies; and, besides laying out immense sums in works of utility and ornament at home, has been enabled to lend hundreds of millions to foreigners.

During the occupation of Holland by the French, first as a dependent state, and subsequently as an integral part of the French empire, her foreign trade was almost entirely destroyed. Her colonies were successively conquered by England, and in addition to the loss of her trade, she was burdened with fresh taxes. But such was the vast accumulated wealth of the Dutch, their prudence, and energy, that the influence of these adverse circumstances was far less injurious than could have been imagined; and, notwithstanding all the losses she had sustained, and the long interruption of her commercial pursuits, Holland continued, at her emancipation from the yoke of the French in 1814, to be the richest country in Europe! Java, the Moluccas, and most of her other colonies were then restored, and she is now in the enjoyment of a large foreign trade. Her connection with Belgium was an unfortunate one for both countries. The union was not agreeable to either party, and has been injurious to Holland. Belgium was an agricultural and manufacturing country; and was inclined, in imitation of the French, to lay restrictions on the importations of most sorts of raw and manufactured produce. A policy of this sort was directly opposed to the interests and the ancient practice of the Dutch. But though their deputies prevented the restrictive system from being carried to the extent proposed by the Belgians, they were una-

* For proofs of this, see the article on the Commerce of Holland in the *Edinburgh Review*, No. 102, from which most part of these statements have been taken.

able to prevent it from being carried to an extent that materially affected the trade of Holland. Whatever, therefore, may be the consequences as to Belgium, there can be little doubt that the late separation between the two divisions of the kingdom of the Netherlands will redound to the advantage of Holland. It must ever be for the interest of England, America, and all trading nations, to maintain the independence of a state by whose means their productions find a ready access to the great continental markets. It is to be hoped that the Dutch, profiting by past experience, will adopt such a liberal and conciliatory system towards the natives of Java, as may enable them to avail themselves to the full of the various resources of that noble island. And if they do this, and freely open their ports, with as few restrictions as possible, to the ships and commodities of all countries, Holland may still be the centre of a very extensive commerce, and may continue to preserve a respectable place among mercantile nations. Even at this moment, after all the vicissitudes they have undergone, the Dutch are, beyond all question, the most opulent and industrious of European nations. And their present, no less than their former state, shows that a free system of government, security, and the absence of restrictions on industry, can overcome almost every obstacle; "can convert the standing pool and lake into fat meadows, cover the barren rock with verdure, and make the desert smile with flowers."

Sup.)

[The principal imports from Amsterdam, as also from Rotterdam, into the United States, are gin, madder, linseed oil, nutmegs, Rhenish and Moselle wines, and sailcloth or duck. This last article has a decided superiority to the corresponding article of any other country. We may make the same remark concerning the bolting cloths which are manufactured in Holland. Our millers give them a preference to all others. The herrings of the Dutch fisheries have long been accounted superior to those caught elsewhere. They are of small size, but very fat; and the Dutch surpass all other nations in the art of curing them. They are well known to epicures, but are, nevertheless, imported into the United States only in small quantities. The cheese of Holland is another article in much repute; yet, like the herring of that country, it is imported by us only to a very limited extent.

It may be here added that, while we export a certain amount of coffee to Holland, we also import thence a quantity of old Java, commonly called "government coffee." The wealthier portion of the inhabitants of our large cities are its principal consumers.

Our exports to Holland, which very much exceed in value our imports from that country, are, in the order nearly of their relative importance, tobacco, cotton, whale and other fish oils, rice, brown sugar, tea, coffee, pot and pearlash, raw hides, &c.—*Am. Ed.*]

ANCHOR (Fr. *Ancre*; Lat. *Anchora*; Gr. *Ἀγκυρά*), a well-known maritime instrument used in the mooring or fastening of ships. It consists of a shank having two hooked arms at one end, and at the other end a bar, or stock, at right angles to the arms, with a ring to which the cable is fastened. The arms, shank, and ring should be made of the very best and toughest iron; the stock is for the most part of oak, but it is frequently also, especially in the smaller anchors, made of iron. On being let go, or cast into the water, the anchor sinks rapidly to the bottom, and is thrown by the stock into such a position that the *fluke*, or point of one of the arms, is sure to strike the ground perpendicularly, and being kept in that direction, unless the bottom be particularly hard or rocky, sinks into it, and cannot be dislodged, where the ground is not soft or oozy, without a violent effort. When the anchor is dislodged, it is said, by the sailors, to *come home*.

Seeing that the safety and preservation of ships and crews are very frequently dependent on their anchors and cables, it is needless to say that it is of the utmost importance that these should be of the most approved quality and construction.

Every ship has, or ought to have, three principal anchors; viz. 1st, the *sheet anchor*, the largest of all, and only let down in cases of danger, or when the vessel is riding in a gale of wind; 2d, the *best bower anchor*; and 3d, the *small bower anchor*. There are, besides,

smaller anchors for mooring in rivers, ports, &c. The largest class of men-of-war have six or seven anchors. The weight of an anchor is determined principally by the tonnage; it being usual to allow, for every 20 tons of a ship's burthen, 1 cwt. for the weight of her best bower anchor; so that this anchor in a ship of 400 tons should weigh about 20 cwt., or a ton.

To cast, or let go, the anchor, is to let the anchor fall from the ship's bows into the water, so that it may take hold of the ground.

To drag the anchor, is to make it come home; that is, to dislodge it from its bed, and to drag it over or through the ground. This may be occasioned by the anchor being too light, by the violent straining of the cable in a storm or a current, by the too great hardness or softness of the ground, &c.

To weigh the anchor, is to dislodge it from its hold, and heave it up by means of the capstan, &c.

Law as to Anchors left, parted from, &c.—By the 1 & 2 Geo. 4. c. 75., pilots and other persons taking possession of anchors, cables, and other ship materials, parted with, cut from, or left by any vessel, whether in distress or otherwise, shall give notice of the same to a deputy vice-admiral, or his agent, within forty-eight hours, on pain of being considered as receivers of stolen goods; and if any person shall knowingly and wilfully purchase any such anchor, &c. that shall have been so obtained, without its being so reported, he shall be held to be a receiver of stolen goods, and suffer the like punishment as for a misdemeanour at common law, or be liable to be transported for seven years, at the discretion of the court. Any master of a ship or vessel outward-bound finding or taking on board any anchor, &c. shall make a true entry of the circumstance in the log-book of such ship or vessel, reporting the same by the first possible opportunity to the Trinity House, and on his return shall deliver the article to the deputy vice-admiral, or his agent, nearest to the port where he shall arrive, under a penalty of not more than 100l. nor less than 50l., on conviction before a magistrate on the oath of one witness; one half to go to the informer, the other half to the Merchant Seaman's Society, established by 20 Geo. 3. c. 38.: he shall also forfeit double the value of the article to the owner. And every pilot, hoveiler, boatman, &c. who shall convey any anchor, &c. to any foreign harbour, port, creek, or bay, and sell and dispose of the same, shall be guilty of felony, and be transported for any term not exceeding seven years.—(See SALVAGE.)

Invention of the Anchor.—This instrument, admirable alike for its simplicity and effect, is of very considerable antiquity. It was not, however, known in the earliest ages. The President de Goguet has shown that it was not used by the Greeks till after the Trojan war; and that they were then accustomed to moor their ships by means of large stones cast into the sea, a practice which still subsists in some rude nations.—(*Origin of Laws*, vol. ii. p. 330. Eng. trans.) Pliny ascribes the invention of the anchor to the Tyrrhenians.—(*Hist. Nat.* lib. vii. cap. 56.) At first it had only one arm, the other being added at a subsequent period; some authors say, by Anacharis the Scythian.—(*Origin of Laws*, vol. i. p. 293.) Since this remote epoch, the form and construction of the instrument seem to have undergone very little change.

ANCHORAGE, or ANCHORING GROUND. Good anchoring ground should neither be too hard nor too soft; for, in the first case the anchor is apt not to take a sufficient hold, and in the other to drag. The best bottom is a stiff clay, and next to it a firm sand. In a rocky bottom the flukes of the anchor are sometimes torn away, and heempen cables are liable to chafe and be cut through. It is also essential to a good anchorage that the water be neither too deep nor too shallow. When too deep, the pull of the cable, being nearly perpendicular, is apt to jerk the anchor out of the ground; and when too shallow, the ship is exposed to the danger, when riding in a storm, of striking the bottom. Where a ship is in water that is land-locked, and out of the tide, the nature of the ground is of comparatively little importance.

The anchorage of ships, especially ships of war, being a subject of great importance to the naval and commercial interests of the kingdom, several statutes have been enacted with respect to it. The first which it is necessary to notice here is 10 Geo. 3. c. 22. It prohibits masters of ships from casting out ballast, or rubbish of any kind, into any harbour or channel, except on the land where the tide never comes, on pain of forfeiting not more than 5l. nor less than 50s. on conviction before a justice on view, or on the oath of one witness, or of being committed to prison for two months; which penalty is increased to 10l., over and above the expense of removing the same, by 54 Geo. 3. c. 159. In pursuance of the same object, 54 Geo. 3. c. 159. enables the Lords of the Admiralty to establish regulations for the preservation of the king's moorage or anchorage, as well as for those of merchant ships, in all the ports, harbours, channels, &c. &c. of the United Kingdom, as far as the tide flows, where or near to which his Majesty has, or may hereafter have, any docks, dock-yards, arsenals, wharfs or moorings. It prohibits all descriptions of private ships from being moored, or anchored, or placed in any of his Majesty's moorings, &c. without special licence obtained from the Admiralty, or other persons appointed to grant such licenses, on pain of forfeiting not exceeding 10l., one moiety to his Majesty, the other to the informer, on conviction before any justice of the peace or commissioners of the Navy.

It further prohibits the breaming of private vessels in such places, otherwise than appointed by the said authority of the Admiralty; and the receiving or having gunpowder, beyond a certain limited quantity, under a penalty of 5l. for every five pounds' weight of such powder beyond the quantity allowed. It prohibits, likewise, all such private vessels, in any such places, having any guns on board shotted or loaded with ball, as well as firing and discharging any such before sun-rising and after sun-setting, under a penalty of 5l. for every gun so shotted, and 10l. for every gun so fired. It further gives to every officer of vessels of war, to harbour-masters, and others in their aid, a right of search in all private vessels so moored in such places, and inflicts a penalty of 10l. on resistance.

ANCHORAGE also means a duty laid on ships for the use of the port or harbour.

ANCHOVY (Fr. *Anchois*; It. *Acciughe*; Lat. *Engraulis*), a small fish (*Ophius* *desereteolus* Lin.), common in the Mediterranean, resembling the sprat. Those brought from Gorynia in the Tuscan Sea are esteemed the best. They should be chosen small, fresh pickled, white outside and red within. Their backs should be round. The sardine, a

fish which is flatter and larger than the anchovy, is frequently substituted for it. About 120,000 lbs. are annually entered for home consumption.

ANGELICA, a large umbelliferous plant with hollow jointed stalks, of which there are several varieties. It grows wild, and is cultivated in moist places near London, and in most European countries from Lapland to Spain. Its roots are thick, fleshy, and resinous; have a fragrant agreeable smell, and a bitterish pungent taste, mixed with a pleasant sweetness glowing on the lips and palate for a long time after they have been chewed. To preserve them, they must be thoroughly dried, and kept in a well-aired place. The other parts of the plant have the same taste and flavour as the roots, but in an inferior degree. The leaves and seeds do not retain their virtue when kept. The London confectioners make a sweet-meat of the tender stems. The faculty used to direct that none but the roots of Spanish angelica should be kept by the druggists. In Norway the roots are sometimes used as bread, and in Iceland the stalks are eaten with butter. Here the plant is used only in confectionary and the materia medica.—(*Lewis's Mat. Med.*; *Rees's Cyclopædia*, &c.)

The duty of 4s. per cwt. on Angelica produced, in 1832, 275*l.* 2s. 10*d.*, showing that 1,375 cwt. had been entered for home consumption.

ANISE, or **ANISUM** (Fr. *Anis*; It. *Anice*; Lat. *Anisum*), a small seed of an oblong shape. It is cultivated in Germany, but the best comes from Spain. It is also a product of China, whence it is exported. It should be chosen fresh, large, plump, newly dried, of a good smell, and a sweetish aromatic taste.

ANKER, a liquid measure at Amsterdam. It contains about 10½ gallons English wine measure.

ANNOTTO, or **ARNOTTO** (Fr. *Rocou*; Ger. *Orlean*; It. *Orianu*), a species of red dye formed of the pulp enveloping the seeds of the *Bixa orellana*, a plant common in South America, and the East and West Indies; but dye is made, at least to any extent, only in the first. It is prepared by macerating the pods in boiling water, extracting the seeds, and leaving the pulp to subside; the fluid being subsequently drawn off, the residuum, with which oil is sometimes mixed up, is placed in shallow vessels and gradually dried in the shade. It is of two sorts, viz. *flag* or *cake*, and *roll* annotto. The first, which is by far the most important article in a commercial point of view, is furnished almost wholly by Cayenne, and comes to us principally by way of the United States. It is imported in square cakes, weighing 2 or 3 lbs. each, wrapped in banana leaves. When well made, it ought to be of a bright yellow colour, soft to the touch, and of a good consistence. It imparts a deep but not durable orange colour to silk and cotton, and is used for that purpose by the dyers. Roll annotto is principally brought from Brazil. The rolls are small, not exceeding 2 or 3 oz. in weight; it is hard, dry, and compact, brownish on the outside, and of a beautiful red colour within. The latter is the best of all ingredients for the colouring of cheese and butter; and is now exclusively used for that purpose in all the British and in some of the continental dairies. In Gloucestershire it is the practice to allow an ounce of annotto to a cwt. of cheese; in Cheshire, 8 dwts. are reckoned sufficient for a cheese of 60 lbs. When genuine, it neither affects the taste nor the smell of cheese or butter. The Spanish Americans mix annotto with their chocolate, to which it gives a beautiful tint.—(*Gray's Supplement to the Pharmacopæias*; *Loudon's Encyc. of Agriculture*, and *private information*.)

At an average of the three years ending with 1831, the annotto entered for home consumption amounted to 128,528 lbs. a year. Previously to 1832, the duty on flag annotto was 18s. 8*d.* a cwt., and on other sorts 5*l.* 12*s.*; but the duty is now reduced to 1*s.* a cwt. on the former, and to 4*s.* on the latter. This judicious and liberal reduction will, we have no doubt, be followed by a considerable increase of consumption. The price of flag annotto varies in the market from 6*d.* to 1*s.* per lb., and of roll from 1*s.* to 1*s.* 6*d.*

ANNUITIES. See **INTEREST** AND **ANNUITIES**.

ANTIMONY (Ger. and Du. *Spiegelas*; Fr. *Antimoine*; It. *Antimonio*; Rus. *Antimonia*; Lat. *Antimonium*), a metal which, when pure, is of a greyish white colour, and has a good deal of brilliancy, showing a radiated fracture when broken; it is converted by exposure to heat and air into a white oxide, which sublimates in vapours. It is found in Saxony and the Hartz, also in Cornwall, Spain, France, Mexico, Siberia, the Eastern Islands, and Martaban in Pegu. We are at present wholly supplied with this metal from Singapore, which receives it from Borneo; it is imported in the shape of ore, and commonly as ballast. It is about as hard as gold; its specific gravity is about 6·7; it is easily reduced to a very fine powder; its tenacity is such that a rod of $\frac{1}{8}$ th of an inch diameter is capable of supporting 10 lbs. weight. Antimony is used in medicine, and in the composition of metal types for printing. The ores of antimony are soft, and vary in colour from light lead to dark lead grey; their specific gravity varies from 4·4 to 6·8; they possess a metallic lustre, are brittle, and occur in the crystallised massive forms.—(*Thomson's Chemistry*, and *private information*.)

ANTWERP, the principal sea-port of Belgium, long. 4° 22' E., lat. 51° 14' N. A large, well built, and strongly fortified city, situated on the Scheldt. It has about 65,000 inhabitants. Previously to its capture by the Spaniards, under Farnese, in 1585, Antwerp was one

of the greatest commercial cities of Europe; but it suffered much by that event. In 1648, at the treaty of Westphalia, it was stipulated by Spain and Holland, that the navigation of the Scheldt should be shut up; a stipulation which was observed till the occupation of Belgium by the French, when it was abolished. In 1803, the improvement of the harbour was begun, and extensive new docks and warehouses have since been constructed. Ships of the largest burden come up to the town, and goods destined for the interior are forwarded with the greatest facility by means of canals. Almost all the foreign trade of Belgium is at present centred in Antwerp, which has again become a place of great commercial importance. By a decree issued in 1814, all goods are allowed to be warehoused in Antwerp *en entrepôt*, and may be exported on paying a charge of $\frac{1}{2}$ per cent. *ad valorem*. The exports chiefly consist of corn, seeds, linen, lace, carpets, flax, tallow, hops, &c. The imports principally consist of cotton, wine, hardware, sugar, tobacco, coffee, and all sorts of colonial produce.

Money.—Accounts are now commonly kept in *florins* of 1816, worth 1s. 8½d. sterling. The florin is divided into 20 sous, and the sou into 5 cents. Formerly accounts were kept in the pound Flemish = 24 rijs dollars = 6 florins = 90 schillings = 120 stivers = 240 groats = 1,920 pennings.—(See TABLE of Coins.) The par of exchange between Antwerp and London is 11 florins 58 cents per pound sterling.

Weights and Measures.—By a law of 1816, the French system of weights and measures was adopted in the Netherlands on the 1st of January, 1830; but the old denominations are retained. The *poud* is the unit of weight, and answers to the French kilogramme.—(See AMSTERDAM.)

Of the old weights, which are still occasionally referred to, the *quintal* of 100 lbs. is equal to 103½ lbs. *avoirdupois*, 100 lbs. *avoirdupois* being consequently equal to 96½ lbs. of Antwerp. A *schippound* is equal to 3 quintals, or 300 lbs.; a stone is equal to 8 lbs.

Of the old measures, a *viertel* of corn = 4 macken; 37½ *viertels* = last; and 40 *viertels* = 10½ Imperial quarters very nearly. The *sam* of wine contains 50 stoepen, or 36½ English wine gallons.

Of the weights and measures now current, 50½ lbs. = 112 lbs. English; 100 lbs. = 100 kilogrammes of France, or 21½ Antwerp old weight. One barrel = 26½ gallons English = 100 litres French.

Custom-house Regulations.—Captains of ships arriving at Antwerp, or any of the Belgian ports, must make, within 24 hours, a declaration in writing, of the goods of which their cargo consists; specifying the marks and numbers of the bales, parcels, &c.; their value, according to the current price at the time when the declaration is made; the name of the ship or vessel, as well as that of the captain, and of the country to which she belongs, &c.

Shipping.—The ships entering the port of Antwerp, during the five years ending with 1836, have been as follows:—

Years.	Ships.	Years.	Ships.
1824 - - - - -	681	1827 - - - - -	824
1825 - - - - -	800	1828 - - - - -	955
1826 - - - - -	928		

Of the 800 ships entering Antwerp in 1835, 114 were from Liverpool, 119 from London, 44 from Hull, 48 from Havre, 41 from Bordeaux, 24 from Petersburg, 24 from New York, 25 from Cuba, 26 from Rio Janeiro, 11 from Batavia, &c.—(*Bulletin des Sciences Geographiques*, for January, 1829, and February 1826.)

The commerce of Antwerp suffered much, in 1831 and 1832, from the hostilities between the Belgians and Dutch. In 1831, there were only 338 arrivals of foreign ships.

Comparative statement of the Imports of the undermentioned Goods, at Antwerp, since 1827, and of the Stocks at the Close of each year.

Conditions under which Goods are sold.—On goods generally 3 per cent. is allowed for payment in 30 days, and 1½ per cent. on credit of 6 weeks or 3 months. On cottons, at 30 days' credit, 3 per cent. are allowed, and 1½ per cent. on a credit of 3 or 3 months. On ashes, hides, and sugar, 3 per cent. for 30 days, and 1½ per cent. for 3 months' credit.

Tariffs.—West India, Brazil, and Java coffee, in single bags, 3 per cent., and Havannah in jones, ½ lb. per bag extra. Bourbon, in whole bags, ½ lb., and in ½ do. 2½ lbs. Pimento, pepper, and ginger in bags, 3 per cent.; on these articles, as also coffee, in casks and barrels, real tare. Cassia lignea, and cinnamon in bales, 10 per cent.; and in chests, 6 to 6½ lb. per chest. Ashes, 15 per cent. Quercitron bark, 10 per cent. Cotton in bales, 4 per cent., exclusive of ropes; and in serons, 6 lbs. per seron. Horse hair, real tare. Indigo, in chests or barrels, real tare; and in serons, 6½ to 7 lbs. per seron. Rice, in casks, 13 per cent.; and in bags, 3 per cent. Manocovado sugars, in casks and barrels, and Havannah clayed, in boxes, 14 per cent.; Brazil, in chests, 16 per cent.; Java in canisters and baskets, 9 per cent.; Siam and Manila, in bags, 3 per cent.; Bengal, in triple bags, 5 lbs. each: Bourbon, in mats, 6 per cent. Bohea tea, exclusive of wrappers, 60 lbs. per chest, 34 lbs. per ½ ditto, and 13 lbs. per ¼ ditto, 14½ lbs. per ½ ditto; fine black and green tea, 18 to 13 lbs. per ½ chest, 9 lbs. per 1-6th ditto, 7 lbs. per ½ ditto, 5 lbs. per 1-12th ditto, 3 lbs. per 1-16th ditto, and 3 per cent. in boxes. Tobacco, real tare: no draft or other deduction allowed.—(From the *Circular of Jollie, Chambers, and Co.*)

[Our imports from Belgium, although they have been steadily on the increase, are not of much moment. Their annual value, taking the average of five years, amounts to no more than about 330,000 dollars; which is only a fourth part of the value of the exports from the United States to that country. Few of the products of Belgium can compete in our markets with the similar products of England, France, or Germany.]

The principal article imported by us from Antwerp is firearms, and these chiefly, if not exclusively, fowling pieces and pistols, manufactured at Liege. Zinc, for roofing, is another article which may deserve to be mentioned. Although dearer than that imported from Hamburg, and which is brought to that place from Silesia, it is preferred to the latter, on account of its superior pliability. To these articles may be added linseed oil, window glass, and cloths and kerimeres, the finest descriptions of which are manufactured at Vervina. Brussels and Mechlin laces come to us also from Antwerp, but only to an inconsiderable amount.

We export to Belgium cotton, pot and pearl ash, coffee, tobacco, whale and other fish oil, raw hides, &c.—*Am. Ed.*]

APPLES, the fruit of the *Pyrus Malus*, or apple tree. It is very extensively cultivated in most temperate climates. An immense variety and quantity of excellent apples are raised in England, partly for the table, and partly for manufacturing into cider. Those employed for the latter purpose are comparatively harsh and austere. The principal cider counties are Hereford, Monmouth, Gloucester, Worcester, Somerset, and Devon. Mr. Marshall calculates the produce of the first four at 30,000 hhds. a year, of which Worcester is supposed to supply 10,000. Half a hoghead of cider may be expected, in ordinary favourable seasons, from each tree in an orchard in full bearing. The number of trees on an acre varies from 10 to 40, so that the quantity of cider must vary in the same proportion, that is, from 5 to 20 hhds. The produce is, however, very fluctuating; and a good crop seldom occurs above once in three years.—(*Loudon's Encyc. of Agriculture, &c.*)

Besides the immense consumption of native apples, we import, for the table, considerable supplies of French and American apples, especially the former; the entries of foreign apples for home consumption having amounted, at an average of the three years ending with 1831, to 35,013 bushels a year. Were it not for the oppressive duty of 4s. a bushel, there can be little doubt that the imports would be decidedly larger. The apples produced in the vicinity of New York are universally admitted to be the best of any; but unless selected and packed with care, they are very apt to spoil before reaching England. The exports of apples from the United States during the year ended the 30th of September, 1833, amounted to 6,926 barrels, valued at 15,314 dollars. Of these, 1,370 barrels were shipped for England.—(*Papers published by the Board of Trade, p. 128; Papers laid before Congress, 15th of February, 1833.*)

(Duty on apples reduced from 4s. to 2s. a bushel.—(4 & 5 WEL 4. c. 99. § 15.)—*Sup.*)

[The apples in most esteem are the various sorts of pippins; and the best of these are produced in New York and New Jersey. From an average of four years, ending in 1837, the annual export of apples from the United States may be stated to amount to 19,463 barrels, valued at 35,866 dollars. Of this quantity, 2,237 barrels were shipped for England; 6,798 were sent to British North American Colonies; and 4,390 to the island of Cuba.—*Am. Ed.*]

APPRENTICE, a young person of either sex, bound by indenture to serve some particular individual or company of individuals, for a specified time, in order to be instructed in some art, science, or trade.

According to the common law of England, every one has a right to employ himself at

pleasure in every lawful trade. But this sound principle was almost entirely subverted by a statute passed in the fifth year of the reign of Queen Elizabeth, commonly called the Statute of Apprenticeship. It enacted that no person should, for the future, exercise any trade, craft, or mystery, at that time exercised in England and Wales, unless he had previously served to it an apprenticeship of seven years at least; so that what had before been a bye-law of a few corporations, became the general and statute law of the kingdom. Luckily, however, the courts of law were always singularly disinclined to give effect to the provisions of this statute; and the rules which they established for its interpretation served materially to mitigate its injurious operation. But though its impolicy had been long apparent, it was continued till 1814, when it was repealed by the 54 Geo. 3. c. 96. This act did not interfere with any of the existing rights, privileges, or bye-laws of the different corporations; but wherever these do not interpose, the formation of apprenticeships, and their duration, is left to be adjusted by the parties themselves.

The regulations with respect to the taking of apprentices on board ships, the only part of this subject that properly comes within the scope of this work, are embodied in the 4 Geo. 4. c. 25. They are as follows:—

From the 1st of January, 1834, every master of a merchant ship exceeding the burden of 80 tons shall have on board his ship, at the time of such ship clearing out from any port of the United Kingdom, one apprentice or apprentices, in the following proportion to the number of tons of her admeasurement, according to the certificate of registry; viz:

For every vessel exceeding 80 tons, and under 200 tons, 1 apprentice at least,				
—	300	—	400	— 2
—	400	—	500	— 3
—	500	—	700	— 4
—	700 and upwards	—	—	— 5

who shall, at the period of being indentured, respectively be under the age of 17 years; provided that every apprentice so to be employed on board any vessel, as above described, shall be duly indentured for at least four years; and the indentures of every such apprentice shall be enrolled with the collector and comptroller at the Custom-house of the port whence such vessel shall first clear out after the execution of such indentures.—§ 2.

Every apprentice so enrolled is hereby exempted from serving in his Majesty's navy until he shall have attained the age of 21 years; provided he is regularly serving his time either with his first master or ship-owner, or some other master or ship-owner to whom his indentures shall have been regularly transferred; and every owner or master neglecting to enrol such indentures, or who shall suffer any such apprentice to leave his service, except in case of death or desertion, sickness, or other unavoidable cause, to be certified in the log book, after the vessel shall have cleared outwards on the voyage upon which such vessel may be bound, shall for every such offence forfeit 10*l.* to be paid in manner following; that is to say, one moiety by the owners of such vessel, and the other moiety by the master thereof, to be levied, recovered, and applied, in manner hereinafter mentioned.—§ 4.

Every person to whom such apprentice shall have been bound may employ him, at any time, in any vessel of which such person may be the master or owner; and may also, with the consent of such apprentice, if above 17, and if under that age, with the consent of his parents or guardians, transfer the indentures of such apprentice, by endorsement thereon, to any other person who may be the master or owner of any registered vessel.—§ 5.

No stamp duty shall be charged on any such transfer by endorsement.—§ 6.

And by 6 Geo. 4. c. 107. § 128. it is enacted, that no person shall be deemed to be an apprentice for the purposes of the preceding act (4 Geo. 4. c. 35.), unless the indenture of such apprentice shall have been enrolled with the collector and comptroller of the port from which any such apprentice shall first go to sea after the date of such indenture; or in default of such enrolment, until the same shall have been enrolled at some port from which the ship in which such apprentice shall afterwards go to sea shall be cleared.

By stat. 7 & 8 Geo. 4. c. 56. § 7. it is enacted that no higher duty than 2*s.* shall be charged upon the indenture of any apprentice bound to serve at sea in the merchant service.

[It may be stated, as a general rule, that apprentices in the United States may be bound to serve some master or mistress, if a male, till the age of twenty-one years, and if a female, till the age of eighteen. Every person, however, has the right, in accordance with the principles of natural equity, as well as of the common law of England, to employ himself at pleasure in every lawful occupation, even though he should not have served an apprenticeship to it. This is, at least, the case in all but a very few occupations, such as that of an auctioneer, and the professions of law and medicine, the door of the admission into which is guarded, either by requiring a previous apprenticeship, or by restrictions and regulations of a different description, and is thus guarded on the ground of securing to the public, in the most effectual manner, the due performance of the services to be rendered.—*Am. Ed.*]

AQUA FORTIS. See *ACID (Nitric)*.

AQUAMARINE. See *BERYL*.

AQUA VITÆ. (Ger. *Aquavit*; Fr. *Eau de vie*; It. *Acqua vite*; Sp. *Agua de vida*; Rus. *Wodka*; Lat. *Aqua vitæ*), a name familiarly applied to all native distilled spirits; equivalent to the *eau de vie*, or brandy, of the French, the *whiskey* of the Scotch and Irish, the *geness* of the Dutch, &c. In this way it is used in the excise law relating to the distilleries.

ARANGOES, a species of beads made of rough cornelian. They are of various forms, as barrel, bell, round, &c., and all drilled. The barrel-shaped kind, cut from the best stones, are from two to three inches long, and should be chosen as clear as possible, whether red or white, having a good polish, and free from flaws. The bell-shaped are from one to two inches long, being in all respects inferior. Considerable quantities were formerly imported from

Bombay, for re-exportation to Africa; but since the abolition of the slave trade, the imports and exports of arranges have been comparatively trifling.—(*Milburn's Orient. Com.*)

ARCHANGEL, the principal commercial city of the north of Russia, in lat. 64° 34' N., long. 38° 59' E. It is situated on the right bank of the Dwina, about 80 English miles above where it falls into the White Sea. Population, 7,000 or 8,000. The harbour is at the island of Sollenbole, about a mile from the town. The bar at the mouth of the Dwina has generally 14½ feet water; so that ships drawing more than this depth must be partially loaded outside the bar from lighters. The Dwina being a navigable river, traversing a great extent of country, renders Archangel a considerable *entrepôt*. It was discovered in 1554, by the famous Richard Chancellor, the companion of Sir Hugh Willoughby in his voyage of discovery; and from that period, down to the foundation of Petersburg, was the only port in the Russian empire accessible to foreigners. Though it has lost its ancient importance, it still enjoys a pretty extensive commerce. The principal articles of export are grain, tallow, flax, hemp, timber, linseed, iron, potash, mats, tar, &c. Deals from Archangel, and Onega in the vicinity of Archangel, are considered superior to those from the Baltic. Hemp not so good as at Riga, but proportionally cheaper. Tallow is also inferior. Iron same as at Petersburg, sometimes cheaper and sometimes dearer. The quality of the wheat exported from Archangel is about equal to that from Petersburg. The imports are not very extensive. They consist principally of sugar, coffee, spices, salt, woollens, hardware, &c. The merchants of Archangel are said by Mr. Coxe to be distinguished for honesty and intelligence. (*Travels in the North of Europe*, vol. iii. p. 150.)

Account of the Quantities of the principal Articles exported from Archangel during each of the six Years ending with 1832.

Articles.	1827.	1828.	1829.	1830.	1831.	1832.
Flax - - pounds	49,855	54,877	131,160	162,383	266,485	120,719
Grain, Barley cheets.	3,670	350	11,705	1,897	8,057	323
Oats - do.	308,810	47,137	352,792	64,639	236,109	27,779
Rye - do.	44,108	39,106	96,460	157,615	174,103	189,466
Wheat do.	2,017	11,777	113,738	63,400	104,037	37,728
Hemp - - pounds	46,979	45,693	57,317	63,057	53,555	51,142
Iron - - do.	64,319	65,013	117,361	116,372	89,675	47,360
Linseed - - cheets.	78,612	131,804	136,968	149,158	95,039	103,494
Mats - - pieces	1,363,334	530,353	651,438	674,481	424,119	841,460
Pitch - - barrels	13,460	9,973	8,407	17,917	6,327	13,434
Potashes - pounds	10,166	3,967	2,309	10,065	12,823	9,905
Tallow - - do.	100,631	186,196	156,778	125,157	119,264	100,363
Tallow candles do.	2,815	3,428	3,773	4,756	3,491	2,937
Tar - - barrels	91,236	70,995	37,761	92,548	52,467	58,014
Train oil - pounds	21,217	17,001	16,534	10,169	4,129	8,980
Wood, Deals pieces	382,245	246,526	260,771	415,989	236,660	234,313
Battens do.	81,745	73,133	75,335	191,426	63,175	43,354
Deal ends do.	74,644	56,620	64,160	101,285	53,368	44,535

The total value of the exports in 1831 was estimated at 14,750,756 rubles, while that of the imports was estimated at only 1,155,872 rubles. During the same year there arrived at Archangel 443 ships; of which 319 were British, 13 Dutch, 14 Prussian, 12 Mecklenburg, &c.

Account of the Number of Ships that sailed from Archangel during each of the Six Years ending with 1832.

Years - -	1827.	1828.	1829.	1830.	1831.	1832.
Ships - -	366	390	450	505	445	364

The trade of Archangel is very much influenced by the demand from the more southerly parts of Europe, and especially from England, for corn. When a brisk demand is anticipated, oats are brought in large quantities from the interior, sometimes even from the distance of 1,500 miles, in covered barks capable of holding several hundred quarters. But as there are few extensive mercantile establishments here, the supplies are scanty, except when a large demand has been expected for some time previously to the season for bringing them down.—(*Odly's European Commerce, and private information.*)

Monies, Weights, and Measures, same as at Petersburg; which see.

ARGOL, ARGAL, or TARTAR, (Ger. *Weinstein*; Du. *Wyndeet*; Fr. *Tartre*; It. *Sp.* and Port. *Tartaro*; Rus. *Winnui kamen*; Lat. *Tartarus*), a hard crust formed on the sides of the vessels in which wine has been kept; it is red or white according to the colour of the wine, and is otherwise impure. On being purified, it is termed *cream* or *crystals of tartar*. It consists principally of bitartrate of potash. White argol is preferable to red, as containing less drossy or earthy matter. The marks of good argol of either kind are, its being thick, brittle, hard, brilliant, and little earthy. That brought from Bologna is reckoned the best, and fetches the highest price. Argol is of considerable use among dyers, as serving to dispose the stuffs to take their colours the better. Pure argol, or cream of tartar, is extensively used in medicine. It has an acid and rather unpleasant taste. It is very brittle, and easily reduced to powder: specific gravity 1.95.

The duty on argol, which was judiciously reduced in 1822, from 2s. a cwt. to 6d. produced in that year 678. 3s. 7d. of nett revenue. This, supposing the whole to have been charged with the low duty,

would show an importation of 27,127 cwt. The price of argol in the London market, in August, 1833, varied, Bologna from 52s. to 56s. per cwt., Leghorn 48s. to 50s. per ditto, Naples 42s. to 48s., Rhenish 46s. to 50s.

ARISTOLOCHIA (Fr. *Serpentaire*; Ger. *Schlangeuwurzel*; It. *Serpentaria*; Lat. *Aristolochia serpentaria*), the dried root of Virginia snake-root, or birthwort; it is small, light, and bushy, consisting of a number of fibres matted together, sprung from one common head, of a brownish colour on the outside, and pale or yellow within. It has an aromatic smell something like that of valerian, but more agreeable; and a warm, bitterish, pungent taste, very much resembling camphor.—(*Ency. Metrop.*)

ARMS. See FIRE-ARMS.

ARQUIFOUX (Ger. *Bleyglanz*; Fr. *Argisfou*; It. *Archifoglio*; Lat. *Galena*), a sort of lead ore, very heavy, easily reduced to powder, and hard to melt; when it is broken, it parts into shining scales of a whitish colour. The potters use it to give their works a green varnish; and in England it is commonly called *potters' ore*. *Arquifoux* is exported from England in large lumps; it should be chosen heavy, the scales bright and resembling tin-glass.

ARRACK, or RACK (Fr. *Arac*; Ger. *Arrack, Rack*; Du. *Arak, Rak*; It. *Araco*; Sp. *Arak*; Port. *Araca*; Rus. *Arak*), a spirituous liquor manufactured at different places in the East.

Arrack is a term applied in most parts of India, and the Indian islands, to designate every sort of spirituous liquor; a circumstance which accounts for the discrepancy in the statements as to the materials used in making it, and the mode of its manufacture. The arrack of Goa and Batavia is in high estimation; that of Columbo or Ceylon has been said to be inferior to the former; but this is doubtful. Goa and Columbo arrack is invariably made from the vegetable juice, *toddy*, which flows by incision from the coco nut tree (*Cocos nucifera*). After the juice is fermented, it is distilled and rectified. It usually yields about an eighth part of pure spirit. Batavia or Java arrack is obtained by distillation from molasses and rice, with only a small admixture of toddy. When well prepared, arrack is clear and transparent; generally, however, it is slightly straw-coloured. Its flavour is peculiar; but it differs considerably, no doubt in consequence of the various articles of which it is prepared, and the unequal care taken in its manufacture. In England, arrack is seldom used except to give flavour to punch: formerly the imports were quite inconsiderable; but they have recently increased so as to amount, at an average of the years 1829 and 1830, to above 30,000 gallons a year. In the East its consumption is immense. It is issued to the soldiers in India as part of the established rations; and it is supplied, instead of rum, to the seamen of the royal navy employed in the Indian seas. It is one of the principal products of Ceylon. Its prime cost in that island varies from 8d. to 10d. a gallon; and from 600,000 to 700,000 gallons are annually exported, principally to the presidencies of Bengal, Madras, and Bombay. It is sold in Ceylon by the legger of 150, and in Java by the legger of 160 gallons. In 1829, the first quality of Java arrack sold in Batavia at 160 florins the legger, or 1s. 8½d. per gallon. The second quality fetched 125 florins.

Pariah-arrack is a phrase used to designate a spirit distilled in the peninsula of India, which is said to be often rendered unwholesome by an admixture of *ganga* (*Cannabis sativa*), and a species of *Datura*, in the view of increasing its intoxicating power. But it is not clear whether the term *pariah-arrack* be meant to imply that it is an inferior spirit, or an adulterated compound. This liquor is sometimes distilled from coco nut toddy, and sometimes from a mixture of jagerry, water, and the barks of various trees.—(See *Milburn's Orient. Com.*; and *Mr. Marshall's valuable Essay on the Coco Nut Tree*, p. 18.)

ARROW-ROOT, the pith or starch of the root *Maranta arundinacea*. It has received its common name from its being supposed to be an antidote to the poisoned arrows of the Indians. The powder is prepared from roots of a year old. It is reckoned a very wholesome nutritious food; it is often adulterated, when in the shops, with the starch or flour of potatoes. It is a native of South America; but has been long introduced into the West Indies, where it forms a pretty important article of cultivation. An excellent kind of arrow-root, if it may so be called, is now prepared in India from the root of the *Curcuma angustifolia*. The plant is abundant on the Malabar coast, where the powder is made in such quantities as to be a considerable object of trade. Some of it has been brought to England. The *Maranta arundinacea* has been carried from the West Indies to Ceylon, where it thrives extremely well, and where arrow-root of the finest quality has been manufactured from it. (*Ainslie's Mat. Indica*.)

At an average of the three years ending with 1831, the arrow-root entered for home consumption amounted to 441,556 lbs. a year. Previously to last year (1832), the duty on arrow-root from a British possession was 9s. 4d. a cwt.; but as it is now reduced to 1s. a cwt., a considerable increase of consumption may be expected. It was quoted in the London market, in August, 1833, at from 9d. to 1s. 10d. per lb.

ARSENIC (Ger. *Arsenik*; Fr. *Arsenic*; It. and Sp. *Arsenico*; Rus. *Mischukh*; Lat. *Arsenicum*). This metal has a bluish white colour not unlike that of steel, and a good deal of brilliancy. It has no sensible smell while cold, but when heated it emits a strong odour of garlic, which is very characteristic. It is the softest of all the metallic bodies, and so brittle

that it may easily be reduced to a very fine powder by trituration in a mortar. Its specific gravity is 5.76.—(*Thomson's Chemistry*.)

Metallic arsenic is not used in the arts, and is not, therefore, extracted from the ore, except for the purposes of experiment or curiosity. The arsenic of commerce is the white oxide, or *arsenious acid*, of chemists. It is a white, brittle, compact substance, of a glassy appearance; is inodorous; has an acrid taste, leaving on the tongue a sweetish impression; and is highly corrosive. In its metallic state, arsenic exerts no action on the animal system; but when oxidized, it is a most virulent poison. The arsenic of the shops is sometimes adulterated with white sand, chalk, or gypsum: the fraud may be detected by heating a small portion of the suspected powder; when the arsenic is dissipated, leaving the impurities, if there be any, behind. Though the most violent of all the mineral poisons, the white oxide of arsenic, or the arsenic of the shops, is yet, when judiciously administered, a medicine of great efficacy. It is also used for various purposes in the arts. It is principally imported from Saxony and Bohemia.—(*Thomson's Chemistry*; *A. T. Thomson's Dispensatory*.)

ASAFCETIDA (Ger. *Teufelsdröck*; Du. *Duivelsdröck*; Fr. *Asa-fetida*; Sp. *Asa-fetida*; Lat. *Asa-fetida*; Per. *Ungoozeh*), a gum resin, consisting of the inspissated juice of a large umbelliferous plant, the *Ferula asa-fetida*. It is produced in the southern provinces of Persia, and in the territory of Sinde, or country lying at the mouth of the Indus.

It is exported from the Persian gulf to Bombay and Calcutta, whence it is sent to Europe. It has a nauseous, somewhat bitter, biting taste, and an excessively strong, ætid, alliacious smell: the newer it is, it possesses its smell and other peculiar properties in the greater perfection. It is imported, packed in irregular masses, in mats, casks and cases; the last being, in general, the best. It should be chosen clean, fresh, strong-scented, of a pale reddish colour, variegated with a number of fine, white tears: when broken, it should somewhat resemble marble in appearance; and, after being exposed to the air, should turn of a violet red colour. That which is soft, black and foul, should be rejected. The packages should be carefully examined, and ought to be tight, to prevent the smell from injuring any other article. In 1825, the imports of asafetida amounted to 106,770 lbs., but they have not been so large since; and in 1830, only 6,723 lbs. were imported. We have not learned the quantity cleared for consumption, but it must be trifling. In this country, it is used only in the materia medica. In France, it is used both in that way, and to some extent, also, as a condiment. It is worth in bond, in the London market, from 2l. to 6s. per cwt.—(*Milburn's Orient. Com.*; *Parl. Papers*; and *private information*.)

ASARUM (Fr. *Asaret*; Ger. *Hazekwurzel*; Sp. *Asaro de Europa*), the root or dried leaves of the asarabacca. The leaves are nearly inodorous; their taste slightly aromatic, bitter, acrid, and nauseous. The powder of the leaves is the basis of most cephalic snuffs. A good deal of their acrimony is lost in keeping: they should, consequently, be used in as recent a state as possible, and dried without the application of much heat. Asarabacca grows in several parts of England, particularly Lancashire and Westmoreland.

ASH (COMMON), the *Fraxinus excelsior* of botanists, a forest tree of which there are many varieties. It is abundant in England, and is of the greatest utility.

The ash is of very rapid growth; and, unlike most other trees, its value is rather increased than diminished by this circumstance. Like the chestnut, the wood of young trees is most esteemed. It grows on a great variety of soils, but is best where the growth has been most vigorous. It is inferior to the oak in stiffness, and is more easily split; but in toughness and elasticity it is far superior to the oak, or to any other species of timber. Hence its universal employment in all those parts of machinery which have to sustain sudden shocks, such as the circumference, teeth, and spokes of wheels, ship-blocks, &c. and in the manufacture of agricultural implements; in the latter, indeed, it is almost exclusively made use of. The want of prolonged durability is its greatest defect; and it is too flexible to be employed in building. The wood of old trees is of a dark brown colour, sometimes beautifully figured; the wood of young trees is brownish white, with a shade of green. The texture is alternately compact and porous; where the growth has been vigorous, the compact part of the several layers bears a greater proportion to the spongy, and the timber is comparatively tough, elastic, and durable. It has neither taste nor smell; and, when young, is difficult to work. The mountain ash (*Pyrus aucuparia*) is quite a different tree from the common ash, and its timber is far less valuable.—(*Tredgold's Principles of Carpentry*; *Timber Trees and Fruits*, in *Lib. of Entertaining Knowledge*, &c.)

ASHES (Fr. *Vedasse*; Ger. *Waidasche*; Du. *Weedas*; Da. *Veedaske*; It. *Feccia bruciata*; Sp. *Alumbre de hex*; Rus. *Weidasch*; Lat. *Cineres infectorii*), the residuum or earthy part, of any substance after it has been burned. In commerce, the term is applied to the ashes of vegetable substances; from which are extracted the alkaline salts called potash, pearl-ash, barilla, kelp, &c.; which see.

ASPHALTUM. See **BITUMEN**.

ASS (Fr. *Ane*; Ger. *Esel*; It. *Asino*; Lat. *Asinus*), the well-known quadruped of that name.

ASSETS, in commerce, a term used to designate the stock in trade, and the entire property of all sorts, belonging to a merchant or to a trading association. It is also applied to goods or property placed, for the discharge of some particular trust or obligation, in the hands of executors, assignees, &c.

ASSIENTO, a Spanish word signifying a contract. In commerce, it means the contract or agreement by which the Spanish government ceded first to a company of French, and afterwards (by the treaty of Utrecht) to a company of English merchants, the right to import slaves into the Spanish colonies.—(*Brougham's Colonial Policy*, vol. i. p. 439.)

ASSIGNEE, a person appointed by competent authority to do, act, or transact some business, or exercise some particular privilege or power, for or on account of some specified individual or individuals.

Assignees may be created by deed, or by law: by deed, where the lessee of a farm assigns the same to another; by law, where the law makes an assignee without any appointment of

the person entitled, as an executor is assignee in law to the testator, and an administrator to an intestate. The term is most commonly applied to the creditors of a bankrupt appointed to manage for the rest, and who consequently have the bankrupt's estate assigned over to them.—(See *BANKRUPT*.)

ASSIZE. See *BREAD*.

ASSURANCE. See *INSURANCE*.

AUCTION, a public sale of goods to the highest bidder. Auctions are generally notified by advertisement, and are held in some open place. The biddings may be made either by parties present, or by the auctioneer under authority given to him; the sale is usually terminated by the fall of a hammer.

AUCTIONEER, a person who conducts sales by auction. It is his duty to state the conditions of sale, to declare the respective biddings, and to terminate the sale by *knocking down* the thing sold to the highest bidder. An auctioneer is held to be lawfully authorised by the purchaser to sign a contract for him, whether it be for lands or goods. And his writing down the name of the highest bidder in his book is sufficient to bind any other person for whom the highest bidder purchased, even though such person be present, provided he do not object *before entry*.

Every auctioneer must take out a licence, renewable annually on the 5th of July, for which he is charged 5*l.*; and if he sell goods for the sale of which an excise licence is specially required, he must also take out such licence, unless the goods be the property of a licensed person, and sold for his behalf and on his *entered* premises, in which case such additional licence is not required.—(6 *Geo.* 4. c. 61.)

Auctioneers within the limits of the chief excise office in London are bound, when they receive their licence, to give security to the excise by bond, themselves in 1,000*l.* and two sureties in 300*l.* each, to deliver in within twenty-eight days of any sale a true and particular account of such sale, and to pay the duties on the same. Auctioneers refusing or delaying to pay the duties within the specified time, forfeit their bond and the bonds of their sureties, and double the amount of the duties.—(19 *Geo.* 3. c. 56.)

Auctioneers carrying on their trade without the limits of the head office give bond, themselves in 500*l.* and two sureties in 50*l.* each, to render an account of the duties accruing on sales, and to pay them within six weeks, under the penalties already mentioned.—(19 *Geo.* 3. c. 56, and 38 *Geo.* 3. c. 54.)

A licensed auctioneer going from town to town by a public stage coach, and sending goods by a public conveyance, and selling them on commission by retail or auction, is a *trading person* within the 50 *Geo.* 3. c. 41. § 6, and must take out a hawker's and pedlar's licence.

The following duties are payable on goods sold by auction:—

For every 20*s.* of the purchase money arising or payable by virtue of any sale at auction for the benefit of the growers or first purchasers respectively of any sheep's wool, the growth or produce of any part of the United Kingdom, 2*d.*

For every 20*s.* of the purchase money arising or payable by virtue of any sale at auction of any interest in possession or reversion in any freehold, customary, copyhold, or leasehold lands, tenements, houses, or hereditaments, and any share or shares in the capital or joint stock of any corporation or chartered company, and of any annuities or sums of money charged thereon, and of any ships and vessels, and of any reverential interest in the public funds, and of any plate or jewels, and so in proportion for any greater or less sum, 7*d.*

For every 20*s.* of the purchase money arising or payable by virtue of any sale at auction of furniture, fixtures, pictures, books, horses, and carriages, and all other goods and chattels whatsoever, and so in proportion for any greater or less sum, 1*s.*

The duties to be paid by the auctioneer, agent, factor, or seller by commission.

By stat. 20 *Geo.* 3. c. 63. § 1, 2, no duty shall be paid for piece goods sold by auction, woven or fabricated in this kingdom, which shall be sold entire in the piece or quantity as taken from the loom, and in lots of the price of 20*l.* or upwards, and so as the same be sold in no other than entered places, and openly shown and exposed at such sale.

And the auctioneer shall, besides the bond given on receiving his licence, give a further bond in 5,000*l.* with two sureties, that he will, within fourteen days after every such sale, deliver an account thereof at the next excise office, and will not sell by auction any goods woven out of this kingdom, or woven in this kingdom, which shall not be sold in the entire piece, without payment of the proper duty. § 6.

By stat. 41 *Geo.* 3. c. 91. § 8, all corn and grain of every sort, flour, and meal, and all beef, pork, hams, bacon, cheese, and butter, imported into Great Britain, shall be free of the duty on the first sale thereof by auction on account of the importer, so as the same be entered at some custom-house at the port of importation, and the sale thereof be within twelve months and by a licensed auctioneer.

By stat. 30 *Geo.* 3. c. 36, all goods imported by way of merchandise from *Yucatan*, and by 33 *Geo.* 3. c. 41, all whale-oil (and by 41 *Geo.* 3. c. 42, all elephant-oil, produced from sea-cows or sea-elephants, and commonly called "elephant's oil,") whalebone, ambergris, and head-matter, and all skins of seals and other animals living in the sea, and also elephant's teeth, palm-oil, dyeing-wood, drugs, and other articles for dyers' use, and all mahogany and other manufactured wood for the use of cabinet-makers and other manufacturers, imported in *British* ships from *Africa* and (by 42 *Geo.* 3. c. 93. § 3.) *America*, or any *British* settlement abroad, shall be free of the excise duty on the first sale thereof at auction by or for the account of the original importer to whom the same were consigned, and by whom they were entered at the Custom-house, so as such sale be made within twelve months after such goods are imported, and the same be sold by a licensed auctioneer.

By stat. 19 *Geo.* 2. c. 56. § 13, no duties shall be laid (1.) on any sale by auction of estates or chattels made by order of the Court of Chancery or Exchequer, or courts of great sessions in Wales: (2.) on any sale made by the *East India* or *Hudson's Bay* companies: (3.) by order of the commissioners of customs or excise: (4.) by order of the Board of ordnance: (5.) by order of the commissioners of the navy or victualling offices: (6.) on any such sales made by the sheriff, for the benefit of creditors, in execution of judgment: (7.) on sales of goods distrained for rent: (8.) on sales for non-payment of tithes: (9.) on sales of effects of bankrupts sold by assignees: (10.) on goods imported by way of merchandise from any *British* colony in *America*, the same being of the growth, produce, or manufacture of such colony, on the first sale thereof on account of the original importer to whom they were consigned, and by whom they were entered at the Custom-house, so as such sale be made within twelve months after importation (see 50 *Geo.* 3. c. 51. § 3.): (11.) on any ships or their cargoes

AUCTIONEER.

condemned as prize, and sold for the benefit of the captor: (12.) on any ships or goods wrecked or stranded, sold for the benefit of the insurers or proprietors: (13.) on the sale of any goods damaged by fire, and sold for the benefit of the insurers: (14.) on any auction to be held on the account of the lord or lady of the manor for granting any copyhold or customary messuages, lands, or tenements for the term of a life or lives, or any number of years: (15.) on any auction to be held for the letting or demise any messuages, lands, or tenements for the term of a life or lives, or any number of years to be created by the person on whose account such auction shall be held: (16.) on the sale of any wood, coppice, produce of mines or quarries, or materials for working the same; or on the sale of any cattle, and live or dead stock, or unmanufactured produce of land, so as such sale of woods, coppices, produce of mines or quarries, cattle, corn, stock or produce of land, may be made whilst they continue on the lands producing the same, and by the owner of such lands, or proprietor of or adventurer in such mines or quarries, or by their steward or agent.

By stat. 52 Geo. 3. c. 53. § 1., all coffee imported in any *British* ship from any *British* colony in *America* may be sold by auction, free of the auction duty, whilst the same shall remain in warehouses under the act 43 Geo. 3. c. 133. or any other act.

Certain articles from the United States, as regulated by the act 59 Geo. 3. c. 54. § 3., and goods from Portugal imported under stat. 51 Geo. 3. c. 47., may also be sold by auction free of duty, if on account of the original importer, and within twelve months of their importation.

By stat. 19 Geo. 3. c. 56. § 9., the auctioneer, if the sale be within the limits of the chief office of excise in *London*, shall give two days' notice at the said office, elsewhere three days' notice to the collector or at the next excise office. In writing, signed by him, specifying the particular day when such sale shall begin; and shall at the same time, or within twenty-four hours after, deliver a written or printed catalogue, attested and signed by such auctioneer or his known clerk, in which catalogue shall be particularly enumerated every article, lot, parcel, and thing intended to be sold at such auction. And if he shall presume to make such sale without delivering such notice and catalogue, or sell any estate or goods not enumerated therein, he shall forfeit 20*l*.

By stat. 32 Geo. 3. c. 11., every auctioneer who shall have delivered such notice or catalogue shall, within 28 days (if within the limits of the chief office of excise, elsewhere within six weeks) after the day specified in such notice for such sale, deliver at such chief office, or to the collector of excise in whose collection such sale has been or was intended to be, a declaration in writing, setting forth whether or not any such sale had been or was opened or begun under such notice, or any article, lot, parcel, or thing contained in such catalogue was bid for or sold at such auction; and such auctioneer, or person acting as his clerk as aforesaid, shall make oath to the truth of such declaration before the said commissioners or collector, on pain of forfeiting 50*l*. for every neglect or refusal of delivering such declaration, verified as aforesaid.

The real owner of any estate, goods, or effects put up to sale by way of auction, and bought in either by himself or by his steward or known agent employed in the management of the sale, or by any other person appointed in writing by the owner to bid for him, shall be allowed the duties, provided notice in writing be given to the auctioneer before such bidding, both by the owner and person intended to be the bidder, of such person being appointed by the owner; and provided such notice be verified by the oath of the auctioneer, as also the fairness of the transaction to the best of his knowledge and belief.—(19 Geo. 3. c. 56.; 28 Geo. 3. c. 37.) An auctioneer employed in a case of this sort, and neglecting to take the proper steps to prevent the duties from attaching, may be obliged to pay them himself. (19 Geo. 3. c. 56.)

If the sale of an estate be void through defect of title, the commissioners of excise, or justices of the peace in the county, may, on oath being made, grant relief for the duties paid. Claim must be made within twelve months after the sale, if rendered void within that time; or if not rendered void within that time, within three months after the discovery.

The auctioneer is by law liable to pay the auction duties, but he may recover the same from the vendor. The conditions of sale usually oblige the buyer to pay the whole, or a part of the duties; and upon his refusing or neglecting to pay them, the bidding is void.

An auctioneer who declines to disclose the name of his principal at the time of sale, makes himself responsible. But if he disclose the name of his principal, he ceases to be responsible, either for the soundness of or title to the thing sold, unless he have expressly warranted it on his *own* responsibility.

If an auctioneer pay over the produce of a sale to his employer, after receiving notice that the goods were not the property of such employer, the real owner of the goods may recover the amount from the auctioneer.

It has long been a common practice at certain auctions (called for that reason *mock* auctions) to employ *puffers*, or mock bidders, to raise the value of the articles sold by their apparent competition, and many questions have grown out of it. It was long ago decided, that if the owner of an *estate* put up to sale by auction employ puffers to bid for him, it is a fraud on the real bidder, and the highest bidder cannot be compelled to complete his contract.—(6. T. Rep. p. 642.) But it would seem as if the mere employment of puffers under any circumstances were now held to be illegal. "The inclination of the courts at the present time is, that a sale by auction should be conducted in the most open and public manner possible; that there should be no reserve on the part of the seller, and no collusion on the part of the buyers. Puffing is illegal, according to a late case, even though there be only one puffer; and it was then decided that the recognised practice at auctions of employing such persons to bid upon the sale of horses could not be sustained."—(*Woolrych on Commercial Law*, p. 262.)

A party bidding at an auction may retract his offer at any time before the hammer is down. Another clearly established principle is, that verbal declarations by an auctioneer are not to be suffered to control the printed conditions of sale; and these, when pasted up under the box of the auctioneer, are held to be sufficiently notified to purchasers.

Auctioneers, like all other agents, should carefully observe their instructions. Should those who employ them sustain any damage through their carelessness or inattention, they will be responsible. They must also answer for the consequences, if they sell the property

intrusted to their care for less than the price set upon it by the owners, or in a way contrary to order.

An auctioneer who has duly paid the licence duty is not liable, in the city of London, to the penalties for acting as a *broker* without being admitted agreeably to the 6 Anne, c. 16.

The establishment of mock auctions is said to be a common practice among swindlers in London. Persons are frequently placed at the doors of such auctions, denominated *barkers*, to invite strangers to come in; and puffers are in wait to bid up the article much beyond its value. A stranger making an offer at such an auction is almost sure to have the article knocked down to him. Plated goods are often disposed of at these auctions; but it is almost needless to add, that they are of very inferior quality. Attempts have sometimes been made to suppress mock auctions, but hitherto without much success.

We subjoin

An account of the Number of Auction Licenses granted from the 5th of January, 1819, with the Amount of Duty received on Sales by Auction; distinguishing each Year, and specifying those who have taken out such Licenses for Town, Country, and Town and Country, down to 1831.—(*Parl. Paper*, No. 138. Sess. 1831.)

Years ended 5th of January.	Number of Auction Licenses.	Amount of Duty received on Sales by Auction.	Number of Licenses taken out.

Excise Office, London, 5th of August, 1833.

[Sales at public auction, in the United States, are restricted in various ways. In some of the states, a limited number only of auctioneers is appointed by the government; while in others, every person who undertakes to act as an auctioneer is obliged to pay a certain sum into the public treasury for a license to entitle him to do so.—*Am. Ed.*]

AVERAGE, a term used in commerce and navigation to signify a contribution made by the individuals, when they happen to be more than one, to whom a ship, or the goods on board it, belong, or by whom it or they are insured; in order that no particular individual or individuals amongst them, who may have been forced to make a sacrifice for the preservation of the ship or cargo, or both, should lose more than others. "Thus," says Mr. Serjeant Marshall, "where the goods of a particular merchant are thrown overboard in a storm to save the ship from sinking; or where the masts, cables, anchors, or other furniture of the ship, are cut away or destroyed for the preservation of the whole; or money or goods are

given as a composition to pirates to save the rest; or an expense is incurred in reclaiming the ship, or defending a suit in a foreign court of admiralty, and obtaining her discharge from an unjust capture or detention; in these and the like cases, where any sacrifice is deliberately and voluntarily made, or any expense fairly and *bonâ fide* incurred, to prevent a total loss, such sacrifice or expense is the proper subject of a general contribution, and ought to be rateably borne by the owners of the ship, freight, and cargo, so that the loss may fall equally on all, according to the equitable maxim of the civil law—no one ought to be enriched by another's loss: *Nemo debet locupletari alienâ jacturâ.*"

Upon this fair principle is founded the doctrine of average contributions; regulations with respect to which having been embodied in the Rhodian law, were thence adopted into the Roman law; and form a prominent part of all modern systems of maritime jurisprudence. The rule of the Rhodian law is, that "if, for the sake of lightening a ship in danger at sea, goods be thrown overboard, the loss incurred for the sake of all, shall be made good by a general contribution."—(*Dig. lib. 14. tit. 2. § 1.; Schomburg on the Maritime Laws of Rhodes*, p. 60.)

Formerly it was a common practice to ransom British ships when captured by an enemy, the ransom being made good by general average. But this practice having been deemed disadvantageous, it was abolished by statute 22 Geo. 3. c. 25., which declares, "That all contracts and agreements which shall be entered into, and all bills, notes, and other securities, which shall be given by any person or persons, for ransom of any ship or vessel, merchandise, or goods, captured by the subjects of any state at war with his Majesty, or by any person committing hostilities against his Majesty's subjects, shall be absolutely void in law, and of no effect whatever;" and a penalty of 500*l.* is given to the informer, for every offence against this act.

Average is either *general or particular*; that is, it either affects all who have any interest in the ship and cargo, or only some of them. The contributions levied in the cases mentioned above, come under the first class. But when losses occur from ordinary wear and tear, or from the perils naturally incident to a voyage, without being *voluntarily* encountered, such as the accidental springing of masts, the loss of anchors, &c., or when any peculiar sacrifice is made for the sake of the *ship only*, or of the *cargo only*, these losses, or this sacrifice, must be borne by the parties not immediately interested, and are consequently defrayed by a *particular* average.

There are also some small charges called *petty or accustomed averages*; it is usual to charge one third of them to the ship and two thirds to the cargo.

No general average ever takes place, except it can be shown that the danger was imminent, and that the sacrifice made was *indispensable, or supposed to be indispensable, by the captain and officers, for the safety of the ship and cargo*. The captain, on coming on shore, should immediately make his protests; and he, with some of the crew, should make oath that the goods were thrown overboard, masts or anchors cut away, money paid, or other loss sustained, for the preservation of the ship and goods, and of the lives of those on board, and for no other purpose. The average, if not settled before, should then be adjusted, and it should be paid before the cargo is landed; for the owners of the ship have a *lien* on the goods on board, not only for the freight, but also *to answer all averages and contributions that may be due*. But though the captain should neglect his duty in this respect, the sufferer would not be without a remedy, but might bring an action either against him or the owners.

The laws of different states, and the opinions of the ablest jurists, vary as to whether the loss incurred in defending a ship against an enemy or pirate, and in the treatment of the wounded officers and men, should be made good by general or particular average. The Ordinance of the Hanse Towns (art. 35.), the Ordinance of 1681 (liv. iii. tit. 7. § 6.), and the *Code de Commerce* (art. 400. § 6.), explicitly declare that the charges on account of medicine, and for attendance upon the officers and seamen wounded in defending the ship, shall be general average. A regulation of this sort seems to be founded on reason. But other codes are silent on the subject; and though the contrary opinion had been advanced by Mr. Serjeant Marshall, and by Mr. Justice Park in the earlier editions of this work, the Court of Common Pleas has unanimously decided, that in England neither the damage done to a ship, nor the ammunition expended, nor the expense of healing sailors wounded in an action with an enemy or pirate, is a subject of general average.—(*Abbot on the Law of Shipping*, part iii. cap. 8.)

Much doubt has been entertained, whether expenses incurred by a ship in an intermediate port in which she has taken refuge, should be general average, or fall only on the ship. But on principle, at least, it is clear, that if the retreat of the ship to port be made in order to obviate the danger of foundering, or some other great and imminent calamity, the expenses incurred in entering it, and during the time she is forced by stress of weather, or adverse winds, to continue in it, ought to belong to general average. But if the retreat of the ship to port be made in order to repair an injury occasioned by the unskillfulness of the master, or in consequence of any defect in her outfit, such, for example, as deficiencies of

water, provisions, sails, &c., with which she ought to have been sufficiently supplied before setting out, the expenses should fall wholly on the owners.

When a ship (supposed to be *seaworthy*) is forced to take refuge in an intermediate port, because of a loss occasioned by a peril of the sea, as the springing of a mast, &c., then, as the accident is not ascribable to any fault of the master or owners, and the retreat to port is indispensable for the safety of the ship and cargo, it would seem that any *extraordinary expense* incurred in entering it should be made good by general average.

Supposing, however, that it could be shown, that the ship was not, at her outset, seaworthy, or in a condition to withstand the perils of the sea; that the mast, for example, which has sprung, had been previously damaged; or supposing that the mischief had been occasioned by the incapacity of the master; the whole blame would, in such a case, be ascribable to the owners, who besides defraying every expense, should be liable in damages to the freighters for the delay that would necessarily take place in completing the voyage, and for whatever damage might be done to the cargo.

These, however, are merely the conclusions to which, as it appears to us, those must come who look only to principles. The law with respect to the points referred to, differs in different countries, and has differed in this country at different periods. "A doubt," says Lord Tenterden, "was formerly entertained as to the expenses of a ship in a port in which she had taken refuge to repair the damage occasioned by a tempest; but this has been removed by late decisions. And it has been held, that the wages and provisions of the crew during such a period must fall upon the ship alone. But if a ship should necessarily go into an intermediate port for the purpose only of repairing such a damage as is in itself a proper object of general contribution, possibly the wages, &c. during the period of such detention, may also be held to be general average, on the ground that the accessory should follow the nature of its principal."—(*Law of Shipping*, part iii. cap. 8.)

Perhaps the reader who reflects on the vagueness of this passage will be disposed to concur with Lord Tenterden's remark in another part of the same chapter, "That the determinations of the English courts of justice furnish less of authority on this subject (average) than on any other branch of maritime law."

The question, whether the *repairs* which a ship undergoes that is forced to put into an intermediate port ought to be general or particular average, has occasioned a great diversity of opinion; but the principles that ought to regulate our decision with respect to it seem pretty obvious. Injuries voluntarily done to the ship, as cutting away masts, yards, &c. to avert some impending danger, are universally admitted to be general average. It seems, however, hardly less clear, and is, indeed, expressly laid down by all the great authorities, that injuries done to the ship by the violence of the winds or the waves should be particular average, or should fall wholly on the owners. The ship, to use the admirable illustration of this principle given in the civil law, is like the tool or instrument of a workman in his trade. If in doing his work he break his hammer, his anvil, or any other instrument, he can claim no satisfaction for this from his employer.—(*Dig. lib. xiv. tit. 2. § 3.*) The owners are bound, both by the usual conditions in all charterparties, and at common law, to carry the cargo to its destination; and they must consequently be bound, in the event of the ship sustaining any accidental or natural damage during the voyage, either to repair that damage at their own expense, or to provide another vessel to forward the goods. In point of fact, too, such subsidiary ships have often been provided; but it has never been pretended that their hire was a subject of general average, though it is plain it has quite as good a right to be so considered as the cost of repairing the damage done to the ship by a peril of the sea. Hence, when a ship puts into an intermediate port for the common safety, the charges incurred in entering the port, and *down to the earliest time that the wind and weather become favourable for leaving it*, ought to be general average; but the repair of any damage she may have sustained by wear and tear, or by the mere violence of the storm, or an accidental peril, and the wages of the crew, and other expences incurred after the weather has moderated, should fall wholly on the owners.

It has been, however, within these few years, decided, in the case of a British ship that had been obliged to put into port in consequence of an injury resulting from her accidentally coming into collision with another, that so much of the repair she then underwent as was *absolutely necessary to enable her to perform her voyage* should be general average. The Judges, however, spoke rather doubtfully on the subject; and it is exceedingly difficult to discover any good grounds for the judgment.—(Plummer and Another v. Wildman, 3 M. & S. 482.)—It seems directly opposed to all principle, as well as to the authority of the laws of Rhodes (*Dig. 14. tit. 2.*), of Oleron (art. 9.), of Wisby (art. 12.), and to the common law with respect to freight. Lord Tenterden has expressed himself as if he were hostile to the judgment. It is, indeed, at variance with all the doctrines he lays down; and the terms in which he alludes to it, "*yet in one case*," appear to hold it forth as an exception (which it certainly is) to the course of decisions on the subject.

It is now usual in this country, when a vessel puts into port on account of a damage belonging to particular average, which requires to be repaired before she can safely proceed

on her voyage, to allow in general average the expense of entering the port and unloading, to charge the owners of the goods, or their underwriters with the warehouse rent and expenses attending the cargo, and to throw the expense of reloading and departure on the freight.

According to the law of England, when a ship is injured by coming into collision with or *running foul* of another, if the misfortune has been accidental, and no blame can be ascribed to either party, the owners of the damaged ship have to bear the loss; but where blame can be fairly imputed to one of the parties, it, of course, falls upon him to make good the damage done to the other. The regulations in the *Code de Commerce* (art. 407.) harmonise, in this respect, with our own. According, however, to the laws of Oleron and Wisby, and the famous French ordinance of 1681, the damage occasioned by an accidental collision is to be defrayed equally by both parties.

The ship and freight, and every thing on board, even jewels, plate, and money, except wearing apparel, contribute to general average. But the wages of seamen do not contribute; because, had they been laid under this obligation, they might have been tempted to oppose a sacrifice necessary for the general safety.

Different states have adopted different modes of valuing the articles which are to contribute to an average. In this respect the law of England has varied considerably at different periods. At present, however, the ship is valued at the price she is worth on her arrival at the port of delivery. The value of the freight is held to be the clear sum which the ship has earned after seamen's wages, pilotage, and all such other charges as come under the name of petty averages, are deducted. It is now the settled practice to value the goods lost, as well as those saved, at the price they would have fetched in ready money, *at the port of delivery*, on the ship's arrival there, freight, duties, and other charges, being deducted. Each person's share of the loss will bear the same proportion to the value of his property, that the whole loss bears to the aggregate value of the ship, freight, and cargo. The necessity of taking the goods lost into this account is obvious; for otherwise their owner would be the only person who would not be a loser.

When the loss of masts, cables, and other furniture of the ship, is compensated by general average, it is usual, as the new articles will in all ordinary cases be of greater value than those that have been lost, to deduct *one third* from the value of the former, leaving two thirds only to be contributed.

But the mode of adjusting an average will be better understood by the following example, extracted from Chief Justice Tenterden's valuable work on the *Law of Shipping*, part iii. cap. 8.

"The reader will suppose that it became necessary, in the Downs, to cut the cable of a ship destined for Hull; that the ship afterwards struck upon the Goodwin, which compelled the master to cut away his mast, and cast overboard part of the cargo, in which operation another part was injured; and that the ship, being cleared from the sands, was forced to take refuge in Ramsgate harbour, to avoid the further effects of the storm.

AMOUNT OF LOSSES.	VALUE OF ARTICLES TO CONTRIBUTE.
Goods of A. cast overboard - - - £	Goods of A. cast overboard - - - £
Damage of the goods of B. by the jettison 200	Sound value of the goods of B., deduct-
Freight of the goods cast overboard - 100	ing freight and charges - - - 1,000
Price of a new cable, anchor, and } mast - - - £300 } 200	Goods of C. - - - - - 500
Deduct one third - - - 100 }	of D. - - - - - 2,000
Expense of bringing the ship off the sands 60	of E. - - - - - 5,000
Pilotage and port duties going into the } harbour and out, and commission to the } agent who made the disbursements - 100	Value of the ship - - - - - 2,000
Expenses there - - - - - 25	Clear freight, deducting wages, victuals, } &c. - - - - - 800
Adjusting this average - - - - - 4	
Postage - - - - - 1	
Total of losses - - - - - £1,180	Total of contributory values - - - £11,800

Then, 11,800*l.* : 1,180*l.* :: 100*l.* : 10*l.*

"That is, each person will lose 10 per cent. upon the value of his interest in the cargo, ship, or freight. Therefore, A. loses 50*l.*, B. 100*l.*, C. 50*l.*, D. 200*l.*, E. 500*l.*, the owners 280*l.*; in all, 1,180*l.* Upon this calculation, the owners are to lose 280*l.*; but they are to receive from the contribution 380*l.*, to make good their disbursements, and 100*l.* more for the freight of the goods thrown overboard; or 480*l.*, minus 250*l.*

They, therefore, are actually to receive - - - - -	£200
A. is to contribute 50 <i>l.</i> , but has lost 500 <i>l.</i> ; therefore A. is to receive - - - - -	450
B. is to contribute 100 <i>l.</i> , but has lost 200 <i>l.</i> ; therefore B. is to receive - - - - -	100
Total to be actually received - - - - -	£750

Or the other hand, C, D, and E. have lost nothing, and are to pay as before; viz. {	C. 50
{	D. 200
{	E. 500
Total to be actually paid - - - - -	£750

which is exactly equal to the total to be actually received, and must be paid by and to each person in rateable proportion.

"In the above estimate of losses, I have included the freight of the goods thrown overboard, which appears to be proper, as the freight of the goods is to be paid, and their supposed value is taken clear of freight, as well as other charges. In this country, where the practice of insurance is very general, it is usual for the broker, who has procured the policy of insurance, to draw up an adjustment of the average which is commonly paid in the first instance by the insurers without dispute. In case of dispute, the contribution may be recovered either *by a suit in equity*, or by an action at law, instituted by each individual entitled to receive, against each party that ought to pay, for the amount of his share. And in the case of a general ship, where there are many consignees, it is usual for the master, before he delivers the goods, to take a bond from the different merchants for payment of their portions of the average when the same shall be adjusted."

The subject of average does not necessarily make a part of the law of insurance; though as insurers, from the terms of most policies, are liable to indemnify the insured against those contributions which are properly denominated *general average*, its consideration very frequently occurs in questions as to partial losses. But in order to confine assurances to that which should be their only object, namely, an indemnity against real and important losses arising from a peril of the sea, as well as to obviate disputes respecting losses arising from the perishable quality of the goods insured, and all trivial subjects of difference and litigation, it seems to be the general law of all maritime states, and is expressly, indeed, provided by the famous Ordinance of 1681 (see liv. iii. tit. 6. § 47., and the elaborate commentary of M. Valin), that the insurer shall not be liable to any demand on account of average, unless it exceed *one per cent.* An article (No. 408.) to the same effect is inserted in the *Code de Commerce*; and, by stipulation, this limitation is frequently extended in French policies to *three or four per cent.* A similar practice was adopted in this country in 1749. It is now constantly stipulated in all policies, that upon certain enumerated articles of a quality peculiarly perishable, the insurer shall not be liable for any partial loss whatever; that upon certain others liable to partial injuries, but less difficult to be preserved at sea, he shall only be liable for partial losses above *five per cent.*; and that as to all other goods, and also the ship and freight, he shall only be liable for partial losses above *three per cent.* This stipulation is made by a memorandum inserted at the bottom of all policies done at Lloyd's of the following tenour:—"N. B. Corn, fish, salt, fruit, flour, and seeds, are warranted free from average, unless general, or the ship be stranded; sugar, tobacco, hemp, flax, hides, and skins, are warranted free from average under 5*l.* per cent.; and all other goods free from average under 3*l.* per cent., unless general, or the ship be stranded."

The form of this memorandum was universally used, as well by the Royal Exchange and London Assurance Companies as by private underwriters, till 1754, when it was decided that a ship having run aground, was a stranded ship within the meaning of the memorandum; and that although she got off again, the underwriters were liable to the average or partial loss upon damaged corn. This decision induced the two Companies to strike the words "*or the ship be stranded*," out of the memorandum; so that now they consider themselves liable to no losses which can happen to such commodities, except general averages and total losses. The old form is still retained by the private underwriters.—(See STRANDING.)

The reader is referred, for the further discussion of this important subject, to the article MARINE INSURANCE; and to Mr. Stevens's *Essay on Average*; Abbott on the *Law of Shipping*, part iii. cap. 8.; Marshall on *Insurance*, book i. cap. 12. a. 7.; Park on *Insurance*, cap. 7.; and Mr. Beneke's elaborate and able work on the *Principles of Indemnity in Marine Insurance*.

[On this very perplexed subject of average, see also *Ken's Commentary on American Law*, Lecture 47.—*Am. Ed.*]

AVOIRDUPOIS, a weight used in determining the gravity of bulky commodities.—See WEIGHTS AND MEASURES.

B.

BACON (Ger. *Speck*; Du. *Spek*; Fr. *Lard*; It. Span. and Port. *Lardo*; Rus. *Solo*; Lat. *Lardum*) is made from the sides and belly of the pig, which are first thoroughly impregnated with salt; then suffered to remain for a certain period in brine; and, lastly, dried and smoked. The counties of England most celebrated for bacon are York, Hants, Berks, and Wilts. Ireland produces great quantities of bacon; but it is neither so clean fed, nor so well cured as the English, and is much lower priced. Of the Scotch counties, Dumfries, Wigton, and Kirkcudbright are celebrated for the excellence of their bacon and hams, of which they now export large quantities, principally to the Liverpool and London markets.

The imports of bacon and hams from Ireland have increased rapidly of late years. The

average quantity imported during the three years ending the 25th of March, 1800, only amounted to 41,958 cwt.; whereas during the three years ending with 1820, the average imports amounted to 204,380 cwt.; and during the three years ending with 1825, they had increased to 338,218 cwt. In 1825, the trade between Ireland and Great Britain was placed on the footing of a coasting trade; and bacon and hams are imported and exported without any specific entry at the Custom-house. We believe, however, that the imports of these articles into Great Britain from Ireland amount, at present, to little less than 500,000 cwt. a year. The quantity of bacon and hams exported from Ireland to foreign countries is inconsiderable; not exceeding 1,500 or 2,000 cwt. a year.

The duty on bacon, being 28s. the cwt. is in effect prohibitory. The duty on hams is the same as on bacon. By the 7 Geo. 4 c. 48. bacon is not to be entered to be warehoused except for exportation only; and if it be so warehoused, it cannot be taken out for home use.

BAGGAGE, in commercial navigation, the wearing apparel and other articles destined for the sole use or accommodation of the crews and passengers of ships. The following are the Custom-house regulations with respect to baggage:—

Baggage and apparel accompanied by the proprietor, worn and in use (not made up for the purpose of being introduced into this country), exempted from all duty on importation.

Articles in baggage subject to duty or prohibited may be left in custody of the officers of customs for a period of six months, to give the party an opportunity of paying the duty or taking them back.—(*Customs Order*, August 6. 1822.)

If unaccompanied by proprietor, proof must be made by the party that it is as aforesaid, and not imported as merchandise, otherwise it is subject to a duty of 30 per cent.

If not cleared at the expiration of six months from the date of landing, it is liable to be sold for duty and charges, the residue (if any) to be paid to the right owner on proof being adduced to the satisfaction of the honourable Board.

One fowling-piece and one pair of pistols accompanying the party, *bona fide* in use, free per Customs Order, July 5. 1825.

Spirits, being the remains of passengers' stores may be admitted to entry.—(6 Geo. 4. c. 107. § 107.)

One pint of drinkable spirits of whatever strength, or half a pint of cordial or Cologne water, in baggage for private use—free.—(*Treasury Order*, October 26. 1830.)

Carriages of British manufacture, in use—free.—(*Treasury Order*, September 26. 1817.)

Glass, in dressing or medicine cases, of British manufacture, free upon proof that no drawback has been received.—(*Treasury Order*, December 5. 1831.)—(*Nyren's Tables*.)

English Books reprinted abroad.—Not more than a *single copy* of each work is allowed to be imported in a passenger's baggage, and for the private use of the party himself.—(*Customs Order*, 30th of June, 1830.)—Such works are absolutely prohibited to be imported as merchandise.—(See Books.)

Passengers denying having Foreign Goods in their Possession.—The following clause in the act 3 & 4 Will. 4. c. 53. has reference to this subject:—"If any passenger or other person, on board any vessel or boat, shall, upon being questioned by any customs officer, whether he or she has any foreign goods upon his or her person, or in his or her possession, deny the same, and any such goods shall, after such denial, be discovered upon his or her person, or in his or her possession, such goods shall be forfeited, and such person shall forfeit treble the value of such goods."—§ 37.

BAHIA, or ST. SALVADOR, a large city (formerly the capital) of Brazil, contiguous to Cape St. Antonio, which forms the right or eastern side of the entrance of the noble bay of Todos os Santos, or All-Saints. According to the observations of M. Roussin, the light-house on the Cape is in lat. 18° 0' 30" S., long. 38° 30' W. The opposite side of the entrance to the bay is formed by the island of Taporica, distant from Cape St. Antonio about 2½ leagues. But a bank along the shore of the island narrows the passage for large ships to about two thirds this distance. Another bank runs S. S. W. from Cape St. Antonio about 1½ league. Within, the bay expands into a capacious basin, having several islands and harbours, the depth of water varying from 8 and 10 to 40 fathoms, affording ample accommodation and secure anchorage for the largest fleets.

There is another entrance to the bay, partly exhibited in the following plan, on the west side of the island of Taporica; but it is narrow, intricate, and at its mouth has not more than 6 feet water. Several rivers have their embouchure in the bay, which generally occasions a current to set from the north end of the island by Cape St. Antonio; when the rivers are flooded, this current is sometimes very strong. The light-house at the extremity of the cape has no great elevation, and cannot be seen at a distance of more than 3 or 3½ leagues. The usual place of anchorage is abreast of the city, north and south of Fort do Mar.

The city is partly built on the beach, but principally on pretty high ground immediately contiguous. The public buildings, particularly the churches, are numerous, and some of them magnificent; but the streets are narrow, ill paved, and filthy. Population, 125,000. The city is defended by several forts, but none of them are of very great strength.

The trade of Bahia is very considerable; and will no doubt continue to increase. The average exports amount, at present, to about 45,000 chests (13 cwt. each) of sugar; 35,000 bags (170 lbs. each) of cotton; 4,000 tons of coffee, with hides, tobacco, rice, dye and fancy woods, bullion, &c. The imports are similar to those of Rio de Janeiro, to which the reader is referred for some account of the commerce of Brazil, with particulars as to duties, charges, &c. There are several private building yards at Tapagippe, in which ships of all dimensions are built; they are handsome, well modelled, and the timber very suitable for the purpose.

Measures, Weights, and Measures of Brazil same as those of Portugal; for which, see Lissow. The *alqueire*, or measure of corn, rice, &c. differs in different provinces, being in some 1-25 bushel Winchester measure, and in others 1 only. At Bahia it is estimated at 1. Wine and olive oil pay duty on being imported by the pipe, hogshead, or barrel: they are retailed by the frasco or case bottle = 4-5 pints English wine measure. In 1828, 123 British ships, carrying 25,166 tons, entered Bahia. — (*Annuaire des Commerce Maritimes* for 1833, p. 593.; and *private information*.)

Plan.—The subjoined wood-cut conveys a clearer and better idea of this celebrated bay than could be acquired from any description. It is copied, without any reduction, from a revised edition of a Portuguese chart, published by Mr. Laurie; and exhibits the banks, soundings, anchorage, &c.

References to the Plan.—A, Cape, light-house, and fort of St. Antonio; B, Fort do Mar; C, Fort St. Philip; D, Tapagippe; E, Isla do Mar; F, Isla dos Frades; G, Fort Beaumont. The figures in the plan are the soundings in fathoms.

BALACHONG, an article consisting of pounded or bruised fish. Small fish, with prawns and shrimps, are principally employed in making it. Though fetid and offensive to strangers, this substance, used as a condiment to rice, is largely consumed in all the countries to the east of Bengal, including the southern provinces of China, and the islands of the Eastern Archipelago. Its distribution gives rise to an extensive internal traffic.

BALANCE, in accounts, is the term used to express the difference between the debtor and creditor sides of an account.

BALANCE, in commerce, is the term commonly used to express the difference between the value of the exports from and imports into a country. The balance is said to be favourable when the value of the exports exceeds that of the imports, and unfavourable when the value of the imports exceeds that of the exports. According to the Custom-house returns, the official value of the exports from Great Britain, exclusive of foreign and commercial merchandize, during the year ending 5th of January, 1833, amounted to 64,582,087*l.*; and the

official value of the imports during the same year amounted to 43,237,416*l.*; leaving a favourable balance of 21,344,621*l.*

The attainment of a favourable balance was formerly regarded as an object of the greatest importance. The precious metals early acquired, in consequence of their being used as money, an artificial importance, and were long considered as the only real wealth either individuals or nations could possess. And as countries without mines could not obtain supplies of these metals except in exchange for exported products, it was concluded, that if the value of the commodities exported exceeded that of those imported, the balance would have to be paid by the importation of an equivalent amount of the precious metals; and conversely. A very large proportion of the restraints imposed on the freedom of commerce, during the last two centuries, grew out of this notion. The importance of having a favourable balance being universally admitted, every effort was made to attain it; and nothing seemed so effectual for this purpose as the devising of schemes to facilitate exportation, and hinder the importation of almost all products, except gold and silver, that were not intended for future exportation. But the gradual though slow growth of sounder opinions with respect to the nature and functions of money, showed the futility of a system of policy having such objects in view. It is now conceded on all hands that gold and silver are nothing but commodities; and that it is in no respect necessary to interfere either to encourage their importation, or to prevent their exportation. In Great Britain they may be freely exported and imported, whether in the shape of coin or bullion.—(See *Coin*.)

The truth is, however, that the theory of the balance of trade is not erroneous merely from the false notions which its advocates entertained with respect to money; it proceeds on radically mistaken views as to the nature of commerce. The mode in which the balance is usually estimated is, indeed, completely fallacious. Supposing, however, that it could be correctly ascertained, it would be found in opposition to the common opinion, that the imports into every commercial country generally exceed the exports; and that when a balance is formed, it is only in certain cases, and those of rare occurrence, that it is cancelled by a bullion payment.

1. The proper business of the wholesale merchant consists in carrying the various products of the different countries of the world, from the places where their value is least to those where it is greatest; or, which is the same thing, in distributing them according to the effective demand. It is clear, however, that there could be no motive to export any species of produce, unless that which it was intended to import in its stead were of greater value. When an English merchant commissions a quantity of Polish wheat, he calculates on its selling for so much more than its price in Poland, as will be sufficient to pay the expense of freight, insurance, &c., and to yield, besides, the common and ordinary rate of profit on the capital employed. If the wheat did not sell for this much, its importation would obviously be a loss to the importer. It is plain, then, that no merchant ever did or ever will export, but in the view of importing something more valuable in return. And so far from an excess of exports over imports being any criterion of an advantageous commerce, it is directly the reverse; and the truth is, notwithstanding all that has been said and written to the contrary, that unless the value of the imports exceeded that of the exports, foreign trade could not be carried on. Were this not the case—that is, were the value of the exports always greater than the value of the imports—merchants would lose on every transaction with foreigners, and the trade with them would be speedily abandoned.

In England, the rates at which all articles of export and import are officially valued were fixed so far back as 1696. But the very great alteration that has since taken place, not only in the value of money, but also in the cost of most part of the commodities produced in this and other countries, has rendered this official valuation, though valuable as a means of determining their quantity, of no use whatever as a criterion of the true value of the exports and imports. In order to remedy this defect, an account of the *real* or *declared* value of the exports is annually prepared, from the declarations of the merchants, and laid before parliament; there is, however, no such account of imports; and, owing to the difficulties which high duties throw in the way, it is, perhaps, impossible to frame one with any thing like accuracy. It has also been alleged, and apparently with some probability, that merchants have not unfrequently been in the habit of exaggerating the value of articles entitled to drawbacks on exportation; but the recent extension and improvement of the warehousing system, and the diminution of the number of drawbacks, must materially lessen whatever fraud or inaccuracy may have arisen from this source. Indeed, as most articles are charged with an *ad valorem* duty of 10*s.* per cent. on exportation, we should consider that, if any thing, their value would be rather under than over-rated. We believe, however, that their declared value comes very near the truth; at least, sufficiently so for all practical purposes.

Now the declared value of the exports in 1832 was only 36,046,027*l.*, being little more than half their official value, and upwards of 7,000,000*l.* under the official value of the imports. What the excess of the latter might be, had we the means of comparing their real value, with that of the exports, it is impossible to say: but there can be no manner of doubt, that, generally speaking, it would be very considerable. The value of an exported commodity is

estimated at the moment of its being sent abroad, and *before* its value is increased by the expense incurred in transporting it to the place of its destination; whereas the value of the commodity imported in its stead is estimated *after* it has arrived at its destination, and, consequently, after its value has been enhanced by the cost of freight, insurance, importer's profits, &c.

In the United States, the value of the imports, as ascertained by the Custom-house returns, always exceeds the value of the exports. And although our practical politicians have been in the habit of considering the excess of the former as a certain proof of a disadvantageous commerce, "it is nevertheless true," says Mr. Pitkin, "that the real gain of the United States has been nearly in proportion as their imports have exceeded their exports."—(*Commerce of the United States*, 2d ed. p. 280.) The great excess of American imports has in part been occasioned by the Americans generally exporting their own surplus produce, and consequently, receiving from foreigners not only an equivalent for their exports, but also for the cost of conveying them to the foreign market. "In 1811," says the author just quoted, "flour sold in America for nine dollars and a half per barrel, and in Spain for fifteen dollars. The value of the cargo of a vessel carrying 5,000 barrels of flour would, therefore, be estimated at the period of its exportation at 47,500 dollars; but as this flour would sell, when carried to Spain, for 75,000 dollars, the American merchant would be entitled to draw on his agent in Spain for 27,500 dollars more than the flour cost in America; or than the sum for which he could have drawn, had the flour been exported in a vessel belonging to a Spanish merchant. But the transaction would not end here. The 75,000 dollars would be vested in some species of Spanish or other European goods fit for the American market; and the freight, insurance, &c., on account of the return cargo, would probably increase its value to 100,000 dollars; so that, in all, the American merchant might have imported goods worth 52,500 dollars more than the flour originally sent to Spain." It is as impossible to deny that such a transaction as this is advantageous, as it is to deny that its advantage consists entirely in the excess of the value of the goods imported over the value of those exported. And it is equally clear that America might have had the real balance of payments in her favour, though such transactions as the above had been multiplied to any conceivable extent.

II. In the second place, when a balance is due by one country to another, it is but seldom that it is paid by remitting bullion from the debtor to the creditor country. If the sum due by the British merchants to those of Holland be greater than the sum due by the latter to them, the balance of payments will be against Britain; but this balance will not, and indeed cannot, be discharged by an exportation of bullion, *unless bullion be, at the time, the cheapest exportable commodity*; or, which is the same thing, *unless it may be more advantageously exported than any thing else*. To illustrate this principle, let us suppose that the balance of debt, or excess of the value of the bills drawn by the merchants of Amsterdam on London over those drawn by the merchants of London on Amsterdam, amounts to 100,000*l*: it is the business of the London merchants to find out the means of discharging this debt with the least expense; and it is plain, that if they find that any less sum, as 98,000*l*, 97,000*l*, or 99,000*l*, will purchase and send to Holland as much cloth, cotton, hardware, colonial produce, or any other commodity, as would sell in Amsterdam for 100,000*l*, no gold or silver would be exported. The laws which regulate the trade in bullion are not in any degree different from those which regulate the trade in other commodities. It is exported only when its exportation is advantageous, or when it is more valuable abroad than at home. It would, in fact, be quite as reasonable to expect that water should flow from a low to a high level, as it is to expect that bullion should leave a country where its value is great to go to one where it is low! It is never sent abroad to destroy, but always to find its level. The balance of payments might be ten or a hundred millions against a particular country, without causing the exportation of a single ounce of bullion. Common sense tells us that no merchant will remit 100*l* worth of bullion to discharge a debt in a foreign country, if it be possible to invest any smaller sum in any species of merchandise which would sell abroad for 100*l*. exclusive of expenses. The merchant who deals in the precious metals is as much under the influence of *self-interest*, as he who deals in coffee or indigo; but what merchant would attempt to extinguish a debt, by exporting coffee which cost 100*l*, if he could effect his object by sending abroad indigo which cost only 99*l*?

The argument about the balance of payment is one of those that contradict and confute themselves. Had the apparent excess of exports over imports, as indicated by the British Custom-house books for the last hundred years, been always paid in bullion, as the supporters of the old theory contend is the case, there ought at this moment to be about 450,000,000 or 500,000,000 of bullion in the country, instead of 50,000,000 or 60,000,000, which it is supposed to amount to! Nor is this all. If the theory of the balance be good for any thing—if it be not a mere idle delusion—it follows, as every country in the world, with the single exception of the United States, has its favourable balance, that they must be paid by an annual importation of bullion from the mines corresponding to their aggregate amount. But it is certain, that the entire produce of the mines, though it were increased in a *tenfold* proportion, would be insufficient for this purpose! This *reductio ad absurdum* is decisive.

of the degree of credit that ought to be attached to the conclusions respecting the flourishing state of the commerce of any country drawn from the excess of the exports over the imports!

Not only, therefore, is the common theory with respect to the balance of trade erroneous, but the very reverse of that theory is true. In the *first* place, the value of the commodities imported by every country which carries on an advantageous commerce (and no other will be prosecuted for any considerable period), invariably exceeds the value of those which she exports. Unless such were the case, there would plainly be no fund whence the merchants and others engaged in foreign trade could derive either a profit on their capital, or a return for their outlay and trouble; and in the *second* place, whether the balance of debts be for or against a country, that balance will neither be paid nor received in bullion, unless it be at the time the commodity by the exportation or importation of which the account may be most profitably settled. Whatever the partisans of the doctrine as to the balance may say about money being a preferable product, a *marchandise par excellence*, it is certain it will never appear in the list of exports and imports, while there is any thing else with which to carry on trade, or cancel debts, that will yield a larger profit, or occasion a less expense to the debtors.

It is difficult to estimate the mischief which the absurd notions relative to the balance of trade have occasioned in almost every commercial country;—here they have been particularly injurious. It is principally to the prevalence of prejudices to which they have given rise, that the restrictions on the trade between this country and France are to be ascribed. The great, or rather the only, argument insisted upon by those who prevailed on the legislature, in the reign of William and Mary, to declare the trade with France a *ruissance*, was founded on the statement that the value of the imports from that kingdom considerably exceeded the value of the commodities we exported to it. The balance was regarded as a *tribute* paid by England to France; and it was sagaciously asked, what had we done, that we should be obliged to pay so much money to our natural enemy! It never occurred to those who so loudly abused the French trade, that no merchant would import any commodity from France, unless it brought a higher price in this country than the commodity exported to pay it; and that the profit of the merchant, or the national gain, would be in exact proportion to this excess of price. The very reason assigned by these persons for prohibiting the trade affords the best attainable proof of its having been a lucrative one; nor can there be any doubt that an unrestricted freedom of intercourse between the two countries would still be of the greatest service to both.

[There are some circumstances which have had an influence in determining the relation of exports to imports in the United States, and which are in a great measure peculiar to this country. These it may not be uninteresting briefly to notice here. Our readers will bear in mind that we use the terms exports and imports in their ordinary and mercantile acceptance, as including all sorts of *commodities*, specie only being excepted.

1. While the exports have been valued at the exporting port, the imports, until the 3d day of March, 1833, were valued "by adding 20 per cent. to the actual cost thereof, if imported from the Cape of Good Hope, or from any place beyond the same: and 10 per cent. on the actual cost thereof, if imported from any other place or country, including all charges; commissions, outside packages, and insurance, only excepted."

2. The profits of capital being higher in the United States than in most other countries of the commercial world, it follows that capital must be continually flowing into them from abroad; thus swelling the imports beyond the amount they would otherwise be at.

3. The owner of the capital, imported into the country, in many cases does not come with his property, but continues to reside where he did. A certain amount of profits, or interest, on the foreign capital employed in the United States, is consequently remitted every year to other countries. It must hence be obvious that our exports will, on this account, be rendered more considerable in comparison to our imports.

4. The rapid advances of the country in population and wealth, since its separation from Great Britain, and the adoption of the present constitution, has required a supply of the precious metals, for the most part from abroad, much greater than was sufficient to replace the consumption of those metals, either as coin, or in the arts. Money was, therefore, to a certain extent, on this account, imported into the United States, in exchange for our exports, instead of those other commodities which are ordinarily designated by the term imports.

5. The substitution, in a degree continually greater and greater, of paper money for a gold and silver currency, which has been taking place during the same period, must of course have diminished the effect just stated.

If we now put these different circumstances together, two of them operating in one direction, and the other three in the opposite, and if we compare them also with those which are not peculiar to the United States, but belong equally to every country, there will be no cause for surprise why the general law of the excess of imports over exports should almost always have held good among ourselves.—*Am. Ed.*]

BALE, a pack, or certain quantity of goods or merchandise; as a *bale* of silk, cloth, &c

Bales are always marked and numbered, that the merchants to whom they belong may know them; and the marks and numbers correspond to those in the bills of lading, &c. Selling

under the *bale*, or under the *cords*, as a term used in France and other countries for selling goods wholesale, without sample or pattern, and unopened.

BALKS, large pieces of timber.

BALLAST (*Du. Ballast*; *Fr. Lest*; *Ger. Ballast*; *It. Savorra*; *Sp. Lastre*; *Sw. Ballast*) a quantity of iron, stones, sand, gravel, or any other heavy material, laid in a ship's hold in order to sink her deeper in the water, and to render her capable of carrying sail without being overset. All ships clearing outwards, having no goods on board other than the personal baggage of the passengers, are said to be in ballast.

The quantity of ballast required to fit ships of equal burden for a voyage, is often materially different: the proportion being always less or more, according to the sharpness or flatness of the ship's bottom, called by seamen, the *floor*.

The proper ballasting of a ship deserves peculiar attention, for, although it be known that ships in general will not carry sufficient sail, till they are laden so that the surface of the water nearly glances on the extreme breadth midships, more than this general knowledge is required. If the ship have a great weight of heavy ballast, as lead, iron, &c. in the bottom, the centre of gravity will be too low in the hold; this no doubt will enable her to carry a press of sail, but it will, at the same time, make her sail heavily, and roll so violently, as to run the risk of being dismasted.

The object in ballasting a ship is, therefore, so to dispose of the ballast or cargo, that she may be duly poised, and maintain a proper equilibrium on the water, so as neither to be too stiff, nor too crank, qualities equally pernicious. If too stiff, she may carry much sail, but her velocity will not be proportionably increased; whilst her masts are endangered by sudden jerks and excessive labouring. If too crank, she will be unfit to carry sail without the risk of oversetting.

Stiffness in ballasting is occasioned by disposing a too great quantity of heavy ballast, as lead, iron, &c. in the bottom, which throws the centre of gravity very near the keel; and this being the centre about which the vibrations are made, the lower it is placed, the more violent is the rolling.

Crankness, on the other hand, is occasioned by having too little ballast, or by disposing the ship's lading so as to raise the centre of gravity too high: this also endangers the masts when it blows hard; for when the masts cease to be perpendicular, they strain on the shrouds in the nature of a lever, which increases as the sine of their obliquity; and it is superfluous to add, that a ship that loses her masts is in great danger of being lost.

Hence the art of ballasting consists in placing the centre of gravity to correspond with the trim and shape of the vessel, so as to be neither too high nor too low; neither too far forward, nor too far aft; and to lade the ship so deep, that the surface of the water may nearly rise to the extreme breadth midships: she will then carry a good quantity of sail, incline but little, and ply well to windward.—(*See Falconer's Marine Dictionary.*)

The mischievous consequences of not attending to the circumstances now mentioned are often experienced by ships loading barkis, brimstone, and such heavy articles, on the coasts of Sicily and Spain. The habit there is to cut large quantities of brushwood and faggots, and to spread them in the hold, to hinder the cargo from sinking the centre of gravity too low, and causing the ship to labour violently; but it very frequently happens that the pressure of the cargo on this sort of dunnage is so great as to squeeze it into a much smaller space than could at first have been supposed; so that ships after getting to sea are sometimes obliged to return to port, to unload a part of their cargo, to prevent their foundering. In such cases, firm dunnage, such as oak staves, should, if possible, be always employed.—(*See Jackson's Commerce of Mediterranean*, pp. 126—128.)

Ships that have cargoes of light goods on board require a quantity of ballast; increasing, of course, according to the greater lightness of the goods. The following table shows the average quantity of ballast allowed to ships of war:

Ballast allowed to the following Ships.

Guns.	Tonnage.	Iron, Tons.	Shingles, Tons.	Guns.	Tonnage.	Iron, Tons.	Shingles, Tons.
110	2,200	180	370	20	670	65	165
100	2,000	160	370	25	700	65	165
95	2,110	180	350	20	600	60	160
90	1,870	160	350	24	500	50	60
80	1,680	140	300	28	450	50	70

36	800	70	170	Sloop -	—	15	—

The iron ballast is first stored fore and aft, from bulk-head to bulk-head; then the shingle ballast is spread and levelled over the iron.

The soil of the River Thames from London Bridge to the sea is vested in the Trinity House corporation, and a sum of 10*l.* is to be paid for every ton of ballast taken from the channel of the river without due authority from the said corporation. Ships may receive on board land ballast from the quarries, pits, &c. east of Woolwich, provided the quantity taken in a year do not exceed the number of tons notified to the Trinity corporation. Land ballast must be entered, and 1*d.* paid per ton on entering. No ballast is to be put on board before entry at the ballast office, under the penalty of 2*l.* a ton. The Trinity Corporation is authorised by the 3 Geo. 4. c. 111. to charge the following rates for all ballast demanded and entered at the ballast office, viz. —

For every ton (20 cwt.) of ballast, not being washed ballast, carried to any ship or vessel employed in the coal trade, the sum of 1*s.*

For every such ton carried to any other British ship or vessel, the sum of 1*s.* 3*d.*

For every such ton carried to any foreign ship or vessel, the sum of 1*s.* 7*d.*

For every ton of washed ballast carried to any ship or vessel employed in the coal trade, the sum of 2*s.*

For every ton of washed ditto carried to any other British ship or vessel, the sum of 2*s.* 6*d.*

For every ton of washed ditto carried to any foreign ship or vessel, the sum of 3*s.* 3*d.*

And for every ton of ballast delivered in or unladen from the Inward West India Dock, the further sum of 10*d.*; and for every ton of ballast delivered in or unladen from the Outward West India Dock, the further sum of 4*d.*; and for every ton of ballast delivered in or unladen from the London Docks, the further sum of 4*d.*; and for every ton of ballast delivered in or unladen from the Inward East India Dock, the further sum of 10*d.*; and for every ton of ballast delivered in or unladen from the Outward East India Dock, the further sum of 4*d.*; and for every ton of ballast delivered in or un-

laden from the Commercial Dock, the further sum of 4d.; and for every ton of ballast delivered in or unladen from the East Country Dock, the further sum of 4d.; and for every ton of ballast delivered in or unladen from the City Canal, the further sum of 4d.; and for every ton of ballast delivered in or unladen from the Surrey Canal, the further sum of 4d.; and for every ton of ballast delivered in or unladen from the Regent's Canal, the further sum of 4d.

Which further rates or prices shall be payable and paid over and above the respective rates first mentioned.

In 1832, the gross receipt of the sums paid on account of ballast to the ballast office, on the Thames, amounted to 25,220*l.* 18*s.* 4*d.* The expenses amounted, during the same year, to about 23,000*l.*

The ballast of all ships or vessels coming into the Thames is to be unladen into a lighter, at the charge of 6*d.* a ton. If any ballast be thrown or unladen from any ship or vessel into the Thames, the captain, master, &c. shall for every such offence forfeit 20*l.* No ballast is to be received on board otherwise than from a lighter. By the stat. 64 Geo. 2. c. 149. it is enacted, that no person shall, under a penalty of 10*l.* over and above all expenses, discharge any ballast, rubbish, &c. in any of the ports, harbours, roadsteads, navigable rivers, &c. of the United Kingdom; nor take ballast from any place prohibited by the Lords of the Admiralty.

The masters of all ships clearing out in ballast, are required to answer any questions that may be put to them by the collectors or comptrollers, touching the departure and destination of such ships.—(3 & 4 Will. 4. c. 52. § 80.)

If a foreign ship clear out in ballast, the master may take with him British manufactured goods of the value of 20*l.*, the mate of the value of 10*l.* and 5*l.* worth for each of the crew.—§ 87.

BALSAM (Ger. *Balsam*; Du. *Balsem*; Fr. *Baume*; It. and Sp. *Balsamo*; Lat. *Balsamum*). Balsams are vegetable juices, either liquid, or which spontaneously become concrete, consisting of a substance of a resinous nature, combined with benzoic acid, or which are capable of affording benzoic acid by being heated alone, or with water. The liquid balsams are copaiva, opobalsam, balsam of Peru, storax, and Tolu; the concrete are benzoin, dragon's blood, and red or concrete storax.—(Dr. Ure.)

1. *Copaiva* (Fr. *Baume de Copahu*; Ger. *Kopaiva Balsam*; Sp. *Copayoa*), obtained from a tree (*Copaifera*) growing in South America and the West India islands. The largest quantity is furnished by the province of Para in Brazil. It is imported in small casks containing from 1 to 1½ cwt. Genuine good copaiva or copaiba balsam has a peculiar but agreeable odour, and a bitterish, hot, nauseous taste. It is clear and transparent; its consistence is that of oil; but when exposed to the action of the air it becomes solid, dry, and brittle, like resin.—(Thomson's Dispensatory.)

2. *Opobalsam* (Fr. *Balsamier de la Mecque*; It. *Opobalsamo*; Pat. *Balsamum ceruum album*, *Egyptiacum*, Egypt. *Balezan*), the most precious of all the balsams, commonly called Balm of Gilead. It is the produce of a tree (*Amyris Gileadensis*) indigenous to Arabia and Abyssinia, and transplanted at an early period to Judea. It is obtained by cutting the bark with an axe at the time that the juice is in the strongest circulation. The true balsam is of a pale yellowish colour, clear and transparent, about the consistence of Venice turpentine, of a strong, penetrating, agreeable, aromatic smell, and a slightly bitterish pungent taste. By age it becomes yellower, browner, and thicker, losing by degrees, like volatile oils, some of its finer and more subtle parts. It is rarely if ever brought genuine into this country; dried Canada balsam being generally substituted for it. It was in high repute among the ancients; but it is now principally used as a cosmetic by the Turkish ladies.—(Drs. Ure and Thomson.)

The Canada balsam, now referred to, is merely *fine turpentine*. It is the produce of the *Pinus Balsamea*, and is imported in casks, each containing about 1 cwt. It has a strong, but not a disagreeable odour, and a bitterish taste; is transparent, whitish, and has the consistence of copaiva balsam.—(See TURPENTINE.)

"Szafra and Beder are the only places in the Hadjaz where the balsam of Mecha, or Balsezan, can be procured in a pure state. The tree from which it is collected grows in the neighbouring mountains, but principally upon Djebel Sobh, and is called, by the Arabs, Beshem. I was informed that it is from 10 to 15 feet high, with a smooth trunk, and thin bark. In the middle of summer small incisions are made in the bark; and the juice, which immediately issues, is taken off with the thumb nail, and put into a vessel: the gum appears to be of two kinds, one of a white, and the other of a yellowish white colour; the first is the most esteemed. I saw here some of the latter sort in a small sheep-skin, which the Bedouins use in bringing it to market: it had a strong turpentine smell, and its taste was bitter. The people of Szafra usually adulterate it with sesamum oil and tar. When they try its purity, they dip their finger into it and then set it on fire; if it burn without hurting or leaving a mark on the finger, they judge it to be of good quality, but if it burn the finger as soon as it is set on fire, they consider it to be adulterated. I remember to have read, in Bruce's Travels, an account of the mode of trying it, by letting a drop fall into a cup filled with water; the good balsam falling coagulated to the bottom, and the bad dissolving and swimming on the surface. I tried this experiment, which was unknown to the people here, and found the drop swim upon the water; I tried also their test by fire upon the finger of a Bedouin, who had to regret his temerity: I, therefore, regarded the balsam sold here as adulterated; it was of less density than honey. I wished to purchase some; but neither my own baggage, nor any of the shops of Szafra could furnish any thing like a bottle to hold it: the whole skin was too dear. The Bedouins, who bring it here, usually demand two or three dollars per pound for it when quite pure; and the Szafra Arabs resell it to the hadjeys of the great caravan at between 8 and 12 dollars per pound in an adulterated state. It is bought up principally by Persians."—(Burckhardt's Travels in Arabia, vol. ii. p. 123.)

3. *Balsam of Peru* (Fr. *Baume de Peru*; Ger. *Peruvianischer Balsam*; Sp. *Balsamo de Quinquina*; Lat. *Balsamum Peruvianum*), the produce of a tree (*Myroxylon Peruvianum*) growing in the warmest parts of South America. The balsam procured by incisions made in the tree is called *white liquid balsam*; that which is found in the shops is obtained by boiling the twigs in water; it is imported in jars, each containing from 20 to

40 lbs. weight. It has a fragrant aromatic odour, much resembling that of benzoin, with a warm bitterish taste. It is viscid, of a deep reddish brown colour, and of the consistence of honey.—(*Thomson's Dispensatory*.)

4. *Storax* (Fr. *Storax*; Ger. *Stryaxbroom*; It. *Storace*; Sp. *Azumbor*; Lat. *Styrax*; Arab. *Uteruk*), the produce of a tree (*Styrax officinale*) growing in the south of Europe and the Levant. Only two kinds are found in the shops: storax in tears, which is pure, and storax in the lump, or red storax, which is mixed with sawdust and other impurities. Both kinds are brought from the Levant in chests and boxes. Storax has a fragrant odour; and a pleasant, sub-acidulous, slightly pungent, and aromatic taste; it is of a reddish brown colour, and brittle.—(*Thomson's Dispensatory*.)

5. *Tolu Balsam* of (Fr. *Baume de Tolu*; Ger. *Tohutamischer Balsam*; Sp. *Balsamo de Tolu*). The tree which yields this balsam is the same as that which yields the balsam of Peru; it being merely the white balsam of Peru, hardened by exposure to the air.

6. *Benzoin*, or *Benjamin* (Fr. *Benzoin*; Ger. *Benzoe*; Sp. *Bengui*; It. *Belzuino*; Lat. *Benzoinum*; Arab. *Liban*; Hind. *Luban*; Jav. *Menian*; Malay, *Caminyan*), is an article of much greater commercial importance than any of those balsams previously mentioned. It is obtained from a tree (*Styrax Benzoin*) cultivated in Sumatra and Borneo, but particularly the former. The plants produce in the seventh year. The balsam is obtained by making incisions in the bark, when it exudes, and is scraped off. During the first three years, the balsam is of a clear white colour, after which it becomes brown. Having borne 10 or 12 years, the tree is cut down, a very inferior article being obtained by scraping the wood. The balsams procured in these different stages are distinguished in commerce, and differ widely in value. Benzoin has a very agreeable, fragrant odour, but hardly any taste. It is imported in large masses, packed in chests and casks. It should be chosen full of clear, light-coloured, and white spots, having the appearance of white marble when broken: it is rarely, however, to be met with in so pure a state, but the nearer the approach to it the better. The worst sort is blackish, and full of impurities.—(*Milburn's Orient. Com.*, and *private information*.)

Mr. Crawford has given the following interesting and authentic details with respect to this article:—Benzoin, or frankincense, called in commercial language Benjamin, is a more general article of commerce than camphor, though its production be confined to the same islands. Benzoin is divided in commerce, like camphor, into three sorts (head, belly, foot), according to quality, the comparative value of which may be expressed by the figures 105, 45, 18. Benzoin is valued in proportion to its whiteness, semi-transparency, and freedom from adventitious matters. According to its purity, the first sort may be bought at the *emporio* to which it is brought, at from 50 to 100 dollars per picul (133½ lbs.); the second from 25 to 45 dollars; and the worst from 8 to 20 dollars. According to Linschoten, benzoin, in his time, cost, in the market of Suada Calapa or Jacatra, from 19 $\frac{5}{8}$ to 25 $\frac{4}{8}$ Spanish dollars the picul. By Niebuhr's account, the worst benzoin of the Indian islands is more esteemed by the Arabs than their own best *olibanum*, or frankincense. In the London market, the best benzoin is fourteen times more valuable than *olibanum*, and even the worst 2½ times more valuable. Benzoin usually sells in England at 10s. per pound. The quantity generally imported into England, in the time of the monopoly, was 312 cwt. The principal use of this commodity is as incense, and it is equally in request in the religious ceremonies of Catholics, Mohammedans, Hindus, and Chinese. It is also used as a luxury, by the great in fumigations in their houses; and the Japanese chiefs are fond of smoking it with tobacco. Its general use among nations in such various states of civilisation, and the steady demand for it in all ages, declare that it is one of those commodities, the taste for which is inherent in our nature, and not the result of a particular caprice with any individual people, as in the case of Malay camphor with the Chinese.—(*Indian Archipelago*, vol. iii. p. 418.) The imports of benzoin, at an average of the three years ending with 1830, were 36,397 lbs. a year.

An inferior description of benzoin, the produce of a different tree from the *Styrax benzoin*, is produced in Siam. It is comparatively cheap and abundant.

7. *Dragon's Blood* (Fr. *Sang-Dragon*; Lat. *Sanguis Draconis*; Arab. *Damulâkhutain*; Hind. *Heraduky*), the produce of a large species of rattan (*Calamus Draco*) growing on the north and north-east coast of Sumatra, and in some parts of Borneo. It is largely exported to China, and also to India and Europe. It is either in oval drops, wrapped up in flag-leaves, or in large and generally more impure masses, composed of smaller tears. It is externally and internally of a deep dusky red colour, and when powdered it should become of a bright crimson; if it be black, it is worth little. When broken and held up against a strong light, it is somewhat transparent: it has little or no smell or taste; what it has of the latter is resinous and astringent. Dragon's blood in drops is much preferable to that in cakes; the latter being more friable, and less compact, resinous, and pure than the former. Being a very costly article, it is very apt to be adulterated. Most of its alloys dissolve like gums in water, or crackle in the fire without proving inflammable; whereas the genuine dragon's blood readily melts and catches flame, and is scarcely acted on by watery liquors.

It sells in the market of Singapore at from 15 to 35 dollars per picul, according to quality; but the Chinese have the art of purifying and refining it, when it sells at from 80 to 100 dollars per picul. The price of the best dragon's blood in the London market, varies from 21½ to 35½ per cwt.—(*Milburn's Orient. Com.*; *Crawford's East. Archip.*; and *private information.*)

The nett duty on balsams imported into Great Britain in 1832 amounted to 2,440l. 8s. 10d. BALTIMORE, a large and opulent city of the United States, in Maryland, situated on the north side of the Patapasco river, about 14 miles above its entrance into Chesapeake bay, in lat. 39° 17' N. long. 76° 36' W. Population in 1830, 81,000. The harbour is spacious, convenient, and the water deep. The exports principally consist of tobacco, wheat and wheat-flour, hemp and flax, flax-seed, Indian corn, and other agricultural products, timber, iron, &c. The imports principally consist of cottons and woollens, sugar, coffee, tea, wine, brandy, silk goods, spices, rum, &c. There were in 1830 ten banks in this city, with an aggregate capital of 6,888,691 dollars; the total dividends for the same year amounted to 362,118 dollars, being at the rate of 5½ per cent. There were also four marine insurance companies, with a capital of 1,200,000 dollars, producing a dividend of nearly 15 per cent. on the capital paid up; and two fire insurance companies, one of which is on the principle of mutual guarantee.—(*Statement by J. H. Goddard, New York Daily Advertiser*, 29th of January, 1831.) The registered, enrolled, and licensed tonnage belonging to Baltimore, in December, 1831, amounted to 43,263 tons, of which 17,575 tons were employed in the coasting trade. The total value of the articles imported into Maryland, in the year ending the 30th of September, 1832, was 4,629,303 dollars; the total value of the exports during the same year being 4,499,918 do. (*Papers laid before Congress*, 15th of February, 1833.) In Maryland the dollar is worth 7s. 6d. currency, 1l. sterling being—1l. 13s. 4d. currency. For an account of the currency of the different states of the Union, with a table of the value of the dollar in each, see NEW YORK; and to it also the reader is referred for an account of the foreign trade of the United States. Weights and measures same as those of England.

Exports of Flour.—Baltimore is one of the principal ports of the United States for the export of flour. None is allowed to be shipped from any port of the Union till it has been inspected by public officers appointed for the purpose, and its quality branded on the barrel.—(See NEW YORK.) It appears from the reports of these officers that the flour inspected at Baltimore during the five years ending with 1830, was as follows:—

Years.	Wheat Flour.		Rye Flour.		Indian Corn Meal.		
	Barrels.	Half barrels.	Barrels.	Half barrels.	Ecks.	Barrels.	Half barrels.
1836	583,671	25,255	1,698	4	30	2,099	20
1837	561,259	22,921	1,574	68		5,314	2
1838	537,010	18,698	4,480		415	2,798	11
1839	466,144	15,149	12,777	48	1,009	6,498	1
1830	587,575	19,868	4,436		550	5,456	

In 1832 there were inspected 518,674 barrels, and 17,544 half barrels of wheat flour. The inspections of tobacco during the same year amounted to 24,156 hhds.

[The banking capital of Baltimore had increased in the early part of 1837, to \$3,611,359. The registered, enrolled, and licensed tonnage belonging to it, on the last day of September, 1837, was 67,107 tons; of which 31,621 tons were employed in the coasting trade, and 6799 tons in steam navigation. The total value of the articles imported into Maryland during the year, ending on the day just mentioned, was \$7,857,033; and the total value of the exports for the same period was \$3,789,917.—*Am. Ed.*]

BAMBOO (Fr. *Bambou*, *Bamboché*; Ger. *Indianischer Rohr*; It. *Bambu*; Hind. *Rans*; Malay, *Báláh*; Jav. *Preng*), a species of cane, the *Bambos arundinacea* of botanists. It grows every where within the tropics, and is of the greatest utility: strictly speaking, it is a gigantic grass with a ligneous stem. It often rises to the height of 40 or 50 feet, and sometimes to even double those heights. Like most plants long and extensively cultivated, it diverges into many varieties. Some of these are dwarfish, while others, instead of being hollow canes, are solid. The bamboo is of rapid growth, and in four or five years is fit for many uses, but does not bear fruit or grain till it be 25 years old, after which it perishes. The grain makes tolerable bread. The young, but gigantic shoots, as they spring from the earth, make a tender and good esculent vegetable. The mature bamboo is employed in an immense variety of ways, in the construction of houses, bridges, boats, agricultural implements, &c. Some varieties grow to such a size as to be, in the largest part, near two feet in circumference, and single knees of these are used as palls or buckets. The Chinese are believed to fabricate their cheap and useful paper of macerated bamboo. The canes used in Europe as walking sticks are not bamboos, but rattans—a totally distinct class of plants. Bamboos are never used for that purpose.—(*Private information.*)

BANDANAS, silk handkerchiefs, generally red spotted with white. They were formerly manufactured only in the East Indies; but they are now manufactured of a very good quality at Glasgow and other places.

BANK—BANKING. Banks are establishments intended to serve for the safe custody of money; to facilitate its payment by one individual to another; and, sometimes, for the accommodation of the public with loans.

- I. BANKING (GENERAL PRINCIPLES OF).
- II. BANK OF ENGLAND (ACCOUNT OF).
- III. BANKS (ENGLISH PRIVATE AND PROVINCIAL).
- IV. BANKS (SCOTCH).
- V. BANKS (IRISH).
- VI. BANKS (FOREIGN).
- VII. BANKS (SAVINGS).

I. BANKING (GENERAL PRINCIPLES OF).

Banks are commonly divided into two great classes; banks of deposit, and banks of circulation. This division is not, however, a very distinct one; for there is no bank of deposit that is not, at the same time, a bank of circulation, and few or no banks of circulation that are not also banks of deposit. But the term banks of deposit is meant to designate those which keep the money of individuals and circulate it only; while the term banks of circulation is applied to those which do not thus confine their circulation, but issue notes of their own payable on demand. The Bank of England is the principal bank of circulation in the empire; but it, as well as the private banks of England and Scotland that issue notes, is also a bank of deposit. The private banking establishments in London do not issue notes, and there are many similar establishments in Lancashire, and other parts of the country.

(1.) *Utility of Banks. Private Banking Companies of London.*—The establishment of banks has contributed, in no ordinary degree, to give security and facility to all sorts of commercial transactions. They afford safe and convenient places of deposit for the money that would otherwise have to be kept, at a considerable risk, in private houses. They also prevent, in a great measure, the necessity of carrying money from place to place to make payments, and enable them to be made in the most convenient and least expensive manner. A merchant or tradesman in London, for example, who employs a banker, keeps but very little money in his own hands, making all his considerable payments by drafts or checks on his banker; and he also sends the various checks, bills, or drafts payable to himself in London, to his bankers before they become due. By this means he saves the trouble and inconvenience of counting sums of money, and avoids the losses he would otherwise be liable to, and would no doubt occasionally incur, from receiving coins or notes not genuine. Perhaps, however, the great advantage derived by the merchant or tradesman from the employment of a banker, consists in its relieving him from all trouble with respect to the presentation for payment of due bills and drafts. The moment these are transferred to the banker, they are at his risk. And if he either neglect to present them when due, or to have them properly noted in the event of their not being paid, he has to answer for the consequences.

"This circumstance alone must cause an immense saving of expense to a mercantile house in the course of a year. Let us suppose that a merchant has only two bills due each day. These bills may be payable in distant parts of the town, so that it may take a clerk half a day to present them; and in large mercantile establishments it would take up the whole time of one or two clerks to present the due bills and the drafts. The salary of these clerks is, therefore, saved by keeping an account at a banker's: besides the saving of expense, it is also reasonable to suppose that losses upon bills would sometimes occur from mistakes, or oversights, from miscalculation as to the time the bill would become due—from errors in marking it up—from forgetfulness to present it, or from presenting it at the wrong place. In these cases the indorsers and drawees are exonerated; and if the acceptor do not pay the bill, the amount is lost. In a banking house such mistakes occur sometimes, though more rarely; but when they do occur, the loss falls upon the banker, and not upon his customer."

—(*Gilbart's Practical Observations on Banking.*)

It is on other grounds particularly desirable for a merchant or tradesman to have an account with a banking house. He can refer to his bankers as vouchers for his respectability: and in the event of his wishing to acquire any information with respect to the circumstances, or credit, of any one with whom he is not acquainted, his bankers will render him all the assistance in their power. In this respect they have great facilities, it being the common practice amongst the bankers in London, and most other trading towns, to communicate information to each other as to the credit and solvency of their customers.

To provide for the public security, the statute 7 & 8 Geo. 4. c. 29. § 49. "for the punishment of embezzlement committed by agents intrusted with property," enacts, "That if any money, or security for the payment of money, shall be intrusted to any banker, merchant, broker, attorney, or other agent, with any direction ~~in writing~~ to apply such money, or any part thereof, or the proceeds, or any part of the proceeds of such security, for any purpose specified in such direction, and he shall, in vio-

lation of good faith, and contrary to the purpose so specified, in any wise convert to his own use or benefit such money, security, or proceeds, or any part thereof respectively, every such offender shall be guilty of a misdemeanor, and being convicted thereof, shall be liable, at the discretion of the court, to be transported beyond seas, for any term not exceeding fourteen years, nor less than seven years, or to suffer such punishment by fine or imprisonment, or by both, as the court shall award; and if any chattel or valuable security, or any power of attorney for the sale or transfer of any share or interest in any public stock or fund, whether of this kingdom, or of Great Britain, or of Ireland, or of any foreign state, or in any fund of any body corporate, company or society, shall be intrusted to any banker, merchant, broker, attorney, or other agent, for safe custody, or for any special purpose, *without any authority* to sell, negotiate, transfer, or pledge, and he shall, in violation of good faith, and contrary to the object or purpose which such chattel or security, or power of attorney, shall have been intrusted to him, sell, negotiate, transfer, pledge, or in any manner convert to his own use or benefit such chattel or security, or the proceeds of the same, or any part thereof, or the share or interest in stock or fund to which such power of attorney shall relate, or any part thereof, every such offender shall be guilty of a misdemeanor, and being convicted thereof, shall be liable, at the discretion of the court, to any of the punishments which the court may award as hereinbefore last mentioned."

This act is not to affect trustees and mortgagees, nor bankers receiving money due upon securities, nor securities upon which they have a lien, claim, or demand, entitling them by law to sell, transfer, or otherwise dispose of them, unless such sale, transfer, or other disposal shall extend to a greater number or part of such securities or effects than shall be requisite for satisfying such lien, claim, &c.—§ 50.

Nothing in this act is to prevent, impeach, or lessen any remedy at law or in equity, which any party aggrieved by any such offence might or would have had, had it not been passed. No banker, merchant, &c. shall be convicted as an offender against this act, in respect of any act done by him, if he shall at any time previously to his being indicted for such offence have disclosed such act on oath, in consequence of any compulsory process of any court of law or equity, in any action *bona fide* instituted by any party aggrieved, or if he shall have disclosed the same in any examination or deposition before any commissioner of bankrupt.—§ 52.

The Bank of England, and the private banking companies of London as well as some of the English provincial banks, charge no commission on the payments made and received on account of those who deal with them. But they allow no interest on the sums deposited in their hands; and it is either stipulated or distinctly understood that a person employing a banker shall, besides furnishing him with sufficient funds to pay his drafts, keep an average *balance* in the banker's hands, varying, of course, according to the amount of business done on his account; that is, according to the number of his checks or drafts to be paid, and the number of drafts and bills to be received for him. The bankers then calculate, as well as they can, the probable amount of cash that it will be necessary for them to keep in their coffers to meet the ordinary demands of their customers, and employ the balance in discounting mercantile bills, in the purchase of government securities, or in some other sort of profitable adventure; so that their profits result, in the case of their not issuing notes, from the difference between the various expenses attendant on the management of their establishments, and the profits derived from such part of the sums lodged in their hands as they can venture to employ in an advantageous way.

The directors of the Bank of England do not allow any individual to overdraw his account. They answer drafts to the full extent of the funds deposited in their hands; but they will not pay a draft if it exceed their amount. Private bankers are not generally so scrupulous; most of them allow respectable individuals, in whom they have confidence, to overdraw their accounts; those who do so paying interest at the rate of 5 per cent. or whatever sums they overdraw. The possession of this power of overdrawing is often a great convenience to merchants, while it is rarely productive of loss to the banker. The money which is overdrawn is usually replaced within a short period; sometimes, indeed, in the course of a day or two. The directors of the Bank of England decline granting this facility from a disinclination on their part to come into competition in a matter of this sort with private bankers, who transact this kind of business better, probably, than it could be done by a great establishment like the Bank.

The facility which banks afford to the public in the negotiation of bills of exchange, or in the making of payment at distant places, is very great. Many of the banking companies established in different districts have a direct intercourse with each other, and they have all correspondents in London. Hence an individual residing in any part of the country, who may wish to make a payment in any other part, however distant, may effect his object by applying to the bank nearest to him. Thus, suppose A. of Penzance has a payment to make to B. of Inverness: to send the money by post would be hazardous; and if there were fractional parts of a pound in the sum, it would hardly be practicable to make use of the post: how then will A. manage? He will pay the sum to a banker in Penzance, and his debtor in Inverness will receive it from a banker there. The transaction is extremely simple: the Penzance banker orders his correspondent in London to pay to the correspondent of the Inverness banker the sum in question on account of B.; and the Inverness banker, being advised in course of post of what has been done, pays B. A small commission charged by the Penzance banker, and the postage, constitute the whole expense. There is no risk whatever, and the whole affair is transacted in the most commodious and cheapest manner.

By far the largest proportion both of the inland bills in circulation in the country, and also of the foreign bills drawn upon Great Britain, are made payable in London, the grand focus

to which all the pecuniary transactions of the empire are ultimately brought to be adjusted. And in order still further to economise the use of money, the principal bankers of the metropolis are in the habit of sending a clerk each day to the *clearing house* in Lombard-street, who carries with him the various bills in the possession of his house that are drawn upon other bankers; and having exchanged them for the bills in possession of those others that are drawn upon his constituents, the balance on the one side or the other is paid in cash or Bank of England notes. By this contrivance the bankers of London are enabled to settle transactions to the extent of several millions a day, by the employment of not more, at an average, than from 200,000*l.* to 300,000*l.* of cash or Bank notes.—(See *CLEARING HOUSE*.)

In consequence of these and other facilities afforded by the intervention of bankers for the settlement of pecuniary transactions, the money required to conduct the business of an extensive country is reduced to a trifle only, compared with what it would otherwise be. It is not, indeed, possible to form any very accurate estimate of the total saving that is thus effected; but, supposing that 50 or 60 millions of gold and silver and bank notes are at present required, notwithstanding all the devices that have been resorted to for economising money, for the circulation of Great Britain, it may, one should think, be fairly concluded, that 200 millions would, at the very least, have been required to transact an equal extent of business but for those devices. If this statement be nearly accurate, and there are good grounds for thinking that it is rather under than over rated, it strikingly exhibits the vast importance of banking in a public point of view. By its means 50 or 60 millions are rendered capable of performing the same functions, and in an infinitely more commodious manner, that would otherwise have required four times that sum; and supposing that 20 or 30 millions are employed by the bankers as a capital in their establishments, no less than 120 or 130 millions will be altogether disengaged, or cease to be employed as an instrument of circulation, and made available for employment in agriculture, manufactures, and commerce.

(2.) *Substitution of Bank Notes for Coins.* Means by which the value of Bank Notes may be sustained.—Not only, however, does the formation of banking establishments enable the business of a country to be conducted with a far less amount of money, but it also enables a large portion of that less amount to be fabricated of *the least valuable materials*, or of paper instead of gold. It would, however, alike exceed the limits and be inconsistent with the objects of this article, to enter into lengthened details with respect to the mode in which this substitution originally took place. It is sufficient to observe, that it naturally grew out of the progress of society. When governments became sufficiently powerful and intelligent to enforce the observance of contracts, individuals possessed of written promises from others that they would pay certain sums at specified periods, began to assign them to those to whom they were indebted; and when those by whom such obligations are subscribed are persons of whose solvency no doubt can be entertained, they are readily accepted in payment of the debts due by one individual to another. But when the circulation of obligations or bills in this way has continued for a while, individuals begin to perceive that they may derive a profit by issuing them in such a form as to fit them for being readily used as a substitute for money in the ordinary transactions of life. Hence the origin of bank notes. An individual in whose wealth and discretion the public have confidence being applied to for a loan, say of 5,000*l.*, grants the applicant his bill or note payable on demand for that sum. Now, as this note passes, in consequence of the confidence placed in the issuer, currently from hand to hand as cash, it is quite as useful to the borrower as if he had obtained an equivalent amount of gold; and supposing that the rate of interest is 5 per cent., it will yield, so long as it continues to circulate, a revenue of 250*l.* a year to the issuer. A banker who issues notes, coins as it were his credit. He derives the same revenue from the loan of his written promise to pay a certain sum, that he would derive from the loan of the sum itself; and while he thus increases his own income, he at the same time contributes to increase the wealth of the society. Besides being incomparably cheaper, bank notes are also incomparably more commodious than a metal currency. A bank note for 1,000*l.* or 100,000*l.* may be carried about with as much facility as a single sovereign. It is of importance, too, to observe, that its loss or destruction, whether by fire, shipwreck, or otherwise, would be of no greater importance in a public point of view, than the loss or destruction of as much paper. No doubt it might be a serious calamity to the holder; but whatever the extent it injured him, it would proportionally benefit the issuer, whereas the loss of coin is an injury to the holder without being of service to any one else; it is, in fact, so much abstracted from the wealth of the community.

Promissory notes issued by private individuals or associations circulate only because those who accept them have full confidence in the credit and solvency of the issuers, or because they feel assured that they will be paid when they become due. If any circumstances transpired to excite suspicions as to their credit, it would be impossible for them to circulate any additional notes, and those that they had issued would be immediately returned for payment. Such, however, is not the case with paper money properly so called, or with notes that are declared *legal tender*. It is not necessary, in order to sustain the value of such notes, that

they should be payable at all; the only thing that is required for that purpose is, that they should be issued in *limited quantities*. Every country has a certain number of exchanges to make; and whether these are effected by the employment of a given number of coins of a particular denomination, or by the employment of the same number of notes of the same denomination, is, in this respect, of no importance whatever. Notes which have been made legal tender, and are not payable on demand, do not circulate because of any confidence placed in the capacity of the issuers to retire them; neither do they circulate because they are of the same real value as the commodities for which they are exchanged; but they circulate because, having been selected to perform the functions of *money*, they are, as such, readily received by all individuals in payment of their debts. Notes of this description may be regarded as a sort of tickets or counters to be used in computing the value of property, and in transferring it from one individual to another. And as they are no wise affected by fluctuations of credit, their value, it is obvious, must depend entirely on the quantity of them in circulation as compared with the payments to be made through their instrumentality, or the business they have to perform. By reducing the supply of notes below the supply of coins that would circulate in their place were they withdrawn, their value is raised above the value of gold; while, by increasing them to a greater extent, it is proportionally lowered.

Hence, supposing it were possible to obtain any security other than immediate convertibility into the precious metals, that notes declared to be legal tender would not be issued in excess, but that their number afloat would be so adjusted as to preserve their value as compared with gold nearly uniform, the obligation to pay them on demand might be done away. But it is needless to say that no such security can be obtained. Wherever the power to issue paper, not immediately convertible, has been conceded to any set of persons, it has been abused, or, which is the same thing, such paper has uniformly been over-issued, or its value depreciated from excess. It is now admitted on all hands to be indispensable, in order to prevent injurious fluctuations in the value of money, that all notes be made payable, at the pleasure of the holder, in an unvarying quantity of gold and silver. This renders it impossible for the issuers of paper to depreciate its value below that of the precious metals. They may, indeed, by over-issuing paper, depress the value of the whole currency, gold as well as paper, in the country in which the over-issue is made; but the moment that they do this, gold begins to be sent abroad; and paper being returned upon the issuers for payment, they are, in order to prevent the exhaustion of their coffers, compelled to lessen their issues; and thus, by raising the value of the currency, stop the drain for bullion.

It does, however, appear to us, that it is not only necessary, in order to prevent the over-issue of paper, to enact that all notes should be payable on demand, but that it is further necessary, in order to insure compliance with this enactment, to prohibit any one from issuing notes until he has satisfied the government of his ability to pay them. The circumstances that excite public confidence in the issuers of paper are often of the most deceitful description; and innumerable instances have occurred, of the population of extensive districts having suffered severely from the insolvency of bankers in whom they placed the utmost confidence. In 1793, in 1814, 1815, and 1816, and again in 1835, a very large proportion of the country banks were destroyed, and produced by their fall an extent of ruin that has hardly been equalled in any other country. And when such disasters have already happened, it is surely the bounden duty of government to hinder, by every means in its power, their recurrence. It is no exaggeration to affirm, that we have sustained ten times more injury from the circulation of worthless paper, or paper issued by persons without the means of retiring it, than from the issue of spurious coin. It is said, indeed, by those who are hostile to interference, that coins are legal tenders, whereas, notes being destitute of that privilege, those who suspect them are at liberty to refuse them; but, whatever notes may be in law, they are, in very many districts, *practically* and *in fact*, legal tenders, and could not be rejected without exposing the parties to much inconvenience. It should also be observed, that labourers, women, minors, and every sort of persons, however incapable of judging of the stability of banking establishments, are dealers in money, and consequently liable to be imposed upon. This, then, is clearly a case in which it is absolutely imperative upon government to interfere, to protect the interests of those who cannot protect themselves, either by compelling all individuals applying for stamps for notes, to give security for their payment, or by making sure, in some other way, that they have the means of paying them, and that the circulation of the notes will be a benefit and not an injury to the public.

A security of this sort has been enacted in the case of the Bank of England; and the whole 14,686,000*l.* lent by the Bank to government, must be sacrificed before the holders of her notes can sustain the smallest loss. Her stability has, therefore, been truly said, by Dr. Smith, to be equal to that of the British government. The system of taking securities having been found to answer so well in the case of the Bank of England, is a powerful argument in favour of its extension. Were securities taken from the country banks, their ultimate failure, in the capacity of banks of issue, would be rendered impossible; and a degree of solidity would be given to our money system, which it is idle to expect it can ever attain, so long as it continues on its present footing.

It is exceedingly difficult to prevent the issue of forged notes. Various schemes have been suggested for this purpose; and though it is hardly possible to suppose that an *inimitable* note will ever be produced, it is contended, that by judiciously combining different sorts of engraving, forgery may be rendered so difficult, as to be but rarely attempted. But however this may be, during the period from 1797 to 1819, when the Bank of England issued 1*l*. notes, their forgery was carried on to a great extent. And the desire to check this practice, and to lessen the frequency of capital punishments, appears to have been amongst the most prominent circumstances which led to the return to specie payments in 1821, and the suppression of 1*l*. notes.—(See Table I.)

(3.) *Bank of England Notes legal tender.*—According to the law as it stood previously to the present year (1834), all descriptions of notes were payable at the pleasure of the holder, in coin of the standard weight and purity. But the policy of such a regulation was very questionable; and we regard the enactment of the late stat. 3 & 4 Will. 4. c. 98., which makes Bank of England notes legal tender, every where except at the Bank and its branches, for all sums above 5*l*., as a very great improvement. So long as the notes of the Bank are themselves convertible, at the pleasure of the holder, into coin, an arrangement of this sort will, it is obvious, effectually prevent any over-issue of country paper, at the same time that it is free from many very serious disadvantages that attached to the former plan. The unjust liabilities imposed upon the Bank of England by the old system, placed her in a situation of great difficulty and hazard. They obliged her to provide a supply of coin and bullion, not for her own exigencies only, but for those of *all* the country banks; and, what is harder still, they exposed her to be deeply injured by any misconduct on the part of the latter, as well as by the distress in which they might accidentally be involved. In consequence her free action has been at all times in some degree impeded; and her power to render assistance to the banking and mercantile interests in periods of discredit materially diminished. The country banks kept but a small supply of coin in their coffers. They were all, however, holders, to a greater or less extent, of government securities; and whenever any circumstance occurred, to occasion a demand upon them for coin, they immediately sold or pledged the whole or a portion of their stock, carried the notes to the Bank to be exchanged, and then carried the specie to the country. Hence, when any suspicions were entertained of the credit of the country banks, or when a panic originated amongst the holders of their notes, as was the case in 1793 and 1825, the whole of them retreated upon the Bank of England, and 700 or 800 conduits were opened, to draw off the specie of that establishment, which was thus, it is evident, exposed to the risk of stoppage without having done any thing wrong. It was not the drain for gold from abroad, but the drain for gold from the country, that nearly exhausted the Bank's coffers in 1825, and forced her to issue about a million of 1*l*. and 2*l*. notes. The currency could not possibly be in a sound healthy state, while the Bank of England, and, through her, public credit, were placed in so perilous a situation. But the making of Bank of England notes legal tender at all places except the Bank, will tend materially to protect her from the injurious consequences of panics or runs among the holders of country bank paper; and while it does this, it will not, as it appears to us, in any wise impair the securities against over-issue or depreciation.

It was, no doubt, contended during the discussions on the late act, that the measure now referred to would lead to the depreciation of provincial paper; inasmuch as the expense of sending notes from a distance to London, to be exchanged for gold, would prevent any one from demanding Bank of England notes from country banks in good credit, till the value of the notes issued by them was so much depreciated below the value of gold, that the difference would more than pay the expense of sending men to London, and bringing gold back. But this notion proceeds on a radical misconception of the nature of the old as well as of the new system of currency. There cannot, in point of fact, be the least difference, as respects value, in the provinces, between Bank of England paper, now that it is legal tender, and gold. London being the place where the exchanges are adjusted, the value of money in every part of the empire must depend on its value in it; and *this*, it is plain, cannot be in any degree affected by the late measure. Formerly the provincial currency, gold as well as paper, might be, and, indeed, frequently was, depreciated. This was brought about either by an over-issue on the part of the country banks, generally in the first instance, the effect, but always, in the end, the cause of a rise of prices; or by the issues of the Bank of England, being, in consequence of an adverse exchange, narrowed sooner or more rapidly than those of the country banks. In either case the provincial currency being redundant as compared with that of the metropolis, there was a demand on its issuers for bills on London; but it is material to observe, that, unless their credit was suspected, there was not in such cases, any demand upon them for gold. It is, indeed, obvious that a redundancy of the currency is a defect that cannot be obviated by getting gold from the country banks, unless (as hoarding is out of the question) it be intended to send it abroad; and that may always be done *better and cheaper* by getting from them Bank of England notes, or bills on London. A local redundancy of the currency may take place in future as it has done formerly, and its occurrence cannot be prevented, even though paper were wholly banished from circulation, as

Which notes may be reissued after payment, as often as shall be thought fit, provided they be issued by a banker or person who has taken out a licence, renewable annually, and costing 30*l.*, to issue notes payable to bearer on demand. Any banker or other person issuing such re-issuable notes, without being duly licensed, shall forfeit 100*l.* for every offence.—(56 Geo. 3. c. 184. § 27.)

These conditions do not apply to the Bank of England, the stamp duties on the notes of that establishment being compounded for at the rate of 3,500*l.* per million of its notes in circulation.

Notes or bills *not* payable to bearer on demand, are not re-issuable, under a penalty of 50*l.*—(For the stamp duties affecting them, see EXCHANGE.)

By the 9 Geo. 4. c. 23., English bankers not in the City of London, or within three miles thereof, are authorised to issue promissory notes, and to draw and issue bills of exchange, on unstamped paper, for any sum of 5*l.* or upwards, expressed to be payable to the bearer on demand, or to order at any period not exceeding 7 days after sight (*bills* may also be drawn at any period not exceeding 21 days after date), upon obtaining licences, costing 30*l.*, to that effect, provided such bills of exchange be drawn upon bankers in London, Westminster, or Southwark; or provided such bills be drawn by any banker or bankers at the place where he or they shall be licensed to issue unstamped notes and bills, upon himself or themselves, or his or their copartner or copartners, payable at any other place where such banker or bankers shall be licensed to issue such notes and bills. Bankers having such licences, are to give security by bond, that they will keep a true account of all promissory notes and bills so issued, and account for the duties on them at the rate of 3*s.* 6*d.* for every 100*l.*, and also for the fractional parts of 100*l.* of the average value of such notes and bills in circulation. Persons post-dating unstamped notes or bills shall, for every such offence, forfeit 100*l.*

(5.) *Legal Effect of the Payment of Bank Notes.*—Notes of the Bank of England were not, previously to the act 3 & 4 Will. 4. c. 98., like bills of exchange, mere securities, or documents of debt, but were treated as money or cash in the ordinary course or transactions of business; the receipts given upon their payment being always given as for money.

Now, however, they are legal tender, every where except at the Bank, for all sums above 5*l.* All notes payable to bearer are assignable by delivery. The holder of a bank note is *prima facie* entitled to prompt payment of it, and cannot be affected by the previous fraud of any former holder in obtaining it, unless evidence be given to show that he was privy to such fraud. Such privity may, however, be inferred from the circumstances of the case. To use the words of Lord Tenterden, "If a person take a bill, note, or any other kind of security, under circumstances which *ought to excite suspicion* in the mind of any reasonable man acquainted with the ordinary affairs of life, and which ought to put him on his guard to make the necessary inquiries, and he do not, then he loses the right of maintaining possession of the instrument against the lawful owner."—(*Guildhall*, 25th October, 1826.)

Country bank notes are usually received as cash. But though taken as such, if they be presented *in due time* and not paid, they do not amount to a payment, and the deliverer of the notes is still liable to the holder. It is not easy to determine what is a due or reasonable time, inasmuch as it must depend in a great measure on the circumstances of each particular case. On the whole, the safest rule seems to be to present all notes or drafts payable on demand, if received in the place where they are payable, on the day on which they are received, or as soon after as possible. When they have to be transmitted by post for payment, no unnecessary delay should be allowed to intervene.—(*Chitty's Commercial Law*, vol. iii. p. 590., and the art. "CHECK" in this Dictionary.)

II. BANK OF ENGLAND (ACCOUNT OF).

(1.) *Historical Sketch of the Bank.*—This great establishment, which has long been the principal bank of deposit and circulation, not in this country only, but in Europe, was founded in 1694. Its principal projector was Mr. William Paterson, an enterprising and intelligent Scotch gentleman, who was afterwards engaged in the ill-fated colony at Darien. Government being at the time much distressed for want of money, partly from the defects and abuses in the system of taxation, and partly from the difficulty of borrowing, because of the supposed instability of the revolutionary establishment, the Bank grew out of a loan of 1,200,000*l.* for the public service. The subscribers, besides receiving eight per cent. on the sum advanced as interest, and 4,000*l.* a year as the expense of management, in all 100,000*l.* a year, were incorporated into a society denominated the *Governor and Company of the Bank of England*. The charter is dated the 27th of July, 1694. It declares, amongst other things, that they shall "be capable in law, to purchase, enjoy, and retain to them and their successors, any manors, lands, rents, tenements, and possessions whatsoever; and to purchase and acquire all sorts of goods and chattels whatsoever, wherein they are not restrained by act of parliament; and also to grant, demise, and dispose of the same.

"That the management and government of the corporation be committed to the governor, deputy governor, and twenty-four directors, who shall be elected between the 25th

day of March and 25th day of April, each year, from among the members of the Company duly qualified.

"That no dividend shall at any time be made by the said Governor and Company, save only out of the interest, profit, or produce arising by or out of the said capital stock or fund, or by such dealing as is allowed by act of parliament.

"They must be natural born subjects of England, or naturalised subjects; they shall have in their own name and for their own use, severally, viz.—the governor, at least 4,000*l.*, the deputy governor 3,000*l.*, and each director 2,000*l.* of the capital stock of the said corporation.

"That thirteen or more of the said governors and directors (of which the governor or deputy governor must be always one) shall constitute a court of directors, for the management of the affairs of the Company, and for the appointment of all agents and servants, which may be necessary, paying them such salaries as they may consider reasonable.

"Every elector must have, in his own name and for his own use, 500*l.* or more capital stock, and can only give one vote. He must, if required by any member present, take the oath of stock; or the declaration of stock, in case he be one of the people called Quakers.

"Four general courts to be held in every year; in the months of September, December, April, and July. A general court may be summoned at any time, upon the requisition of nine proprietors, duly qualified as electors.

"The majority of electors in general courts have the power to make and constitute by-laws and ordinances for the government of the corporation, provided that such by-laws and ordinances be not repugnant to the laws of the kingdom, and be confirmed and approved, according to the statutes in such case made and provided."

The corporation is prohibited from engaging in any sort of commercial undertaking other than dealing in bills of exchange, and in gold and silver. It is authorised to advance money upon the security of goods or merchandise pledged to it; and to sell, by public auction, such goods as are not redeemed within a specified time.

It was also enacted, in the same year in which the Bank was established, by statute 6 William and Mary, c. 20., that the Bank "shall not deal in any goods, wares, or merchandise (except bullion), or purchase any lands or revenues belonging to the crown, or advance or lend to their Majesties, their heirs or successors, any sum or sums of money by way of loan or anticipation, or any part or parts, branch or branches, fund or funds of the revenue, now granted or belonging, or hereafter to be granted to their Majesties, their heirs and successors, other than such fund or funds, part or parts, branch or branches of the said revenue only, on which a credit of loan is or shall be granted by parliament." And in 1697 it was enacted, that the "common capital and principal stock, and also the real fund of the Governor and Company, or any profit or produce to be made thereof, or arising thereby, shall be exempted from any rates, taxes, assessments, or impositions whatsoever, during the continuance of the Bank; and that all the profit, benefit, and advantage, from time to time arising out of the management of the said corporation, shall be applied to the uses of all the members of the said corporation of the Governor and Company of the Bank of England, rateably, and in proportion to each member's part, share, and interest in the common capital and principal stock of the said Governor and Company hereby established."

It was further enacted, in 1697, that the forgery of the Company's seal, or of any sealed bill or Bank note, should be felony without benefit of clergy, and that the making of any alteration or erasure in any bill or note should also be felony.

In 1696, during the great recoinage, the Bank was involved in considerable difficulties, and was even compelled to suspend payment of her notes, which were at a heavy discount. Owing, however, to the judicious conduct of the directors, and the assistance of government, the Bank got over the crisis. But it was at the same time judged expedient, in order to place her in a situation the better to withstand any adverse circumstances that might afterwards occur, to increase her capital from 1,200,000*l.* to 2,201,171*l.* In 1708, the directors undertook to pay off and cancel one million and a half of Exchequer bills they had circulated two years before, at 4½ per cent, with the interest on them, amounting in all to 1,775,028*l.*; which increased the permanent debt due by the public to the Bank, including 400,000*l.* then advanced in consideration of the renewal of the charter, to 3,375,028*l.*, for which they were allowed 6 per cent. The Bank capital, was then also doubled or increased to 4,402,343*l.* But the year 1708 is chiefly memorable, in the history of the Bank, for the act that was then passed, which declared, that during the continuance of the corporation of the Bank of England, "it should not be lawful for any body politic, erected or to be erected, other than the said Governor and Company of the Bank of England, or for any other persons whatsoever, united or to be united in covenants or partnership, exceeding the number of 6 persons, in that part of Great Britain called England, to borrow, owe, or take up any sum or sums of money on their bills or notes payable on demand, or in any less time than 6 months from the borrowing thereof."—This proviso, which has had so powerful an operation on banking in England, is said to have been elicited by the Mine-adventure Company having commenced banking business, and begun to issue notes.

It has been pretty generally imagined, from the private banking companies in the metropolis not issuing notes, that they were legally incapacitated from doing so. But the clause in the act of 1708, which has been the only restriction on the issue of notes, applied generally to all England, and had no peculiar reference to London. The fact that banks with 6 or fewer partners have not issued notes in the metropolis, as well as in the provinces, is, therefore, ascribable either to their being aware that their notes would obtain no considerable circulation concurrently with those of a great association like the bank of England, or from their believing that their issue would not be profitable.

The charter of the Bank of England, when first granted, was to continue for eleven years certain, or till a year's notice after the 1st of August, 1705. The charter was further prolonged in 1697. In 1708, the Bank having advanced 400,000*l.* for the public service, without interest, the exclusive privileges of the corporation were prolonged till 1733. And in consequence of various advances made at different times, the exclusive privileges of the Bank have been continued by successive renewals, till a year's notice, after the first of August, 1855, under the proviso that they may be cancelled on a year's notice to that effect being given on the 1st of August, 1845.

We subjoin

An account of the successive Renewals of the Charter, of the Conditions under which these Renewals were made, and of the Variations in the Amount and Interest of the Permanent Debt due by Government to the Bank, exclusive of the Dead Weight.

Date of Renewal.	Conditions under which Renewals were made, and Permanent Debt contracted.	Permanent Debt.
1694.	Charter granted under the act 5 & 6 Will. 3. c. 20., redeemable upon the expiration of 12 months' notice after the 1st of August, 1705, upon payment by the public to the Bank of the demands therein specified. Under this act the Bank advanced to the public 1,300,000 <i>l.</i> , in consideration of their receiving an annuity of 100,000 <i>l.</i> a year, viz: 8 per cent. interest, and 4,000 <i>l.</i> for management.	£ s. d. 1,200,000 0 0
1697.	Charter continued by the 8 & 9 Will. 3. c. 20. till 12 months' notice after 1st of August, 1710, on payment, &c. Under this act the Bank took up and added to their stock 1,001,171 <i>l.</i> Exchequer bills and tallies.	
1708.	Charter continued by 7 Anne, c. 7. till 12 months' notice after 1st of August, 1733, on payment, &c. Under this act the Bank advanced 400,000 <i>l.</i> to government without interest; and delivered up to be cancelled 1,775,027 <i>l.</i> 17s. 10d. Exchequer bills, in consideration of their receiving an annuity of 106,501 <i>l.</i> 12s., being at the rate of 6 per cent.	2,175,027 17 10
1712.	Charter continued by 12 Anne, stat. 1. c. 11. till 12 months' notice after 1st of August, 1745, on payment, &c. In 1716, by the 3 Geo. 1. c. 8., Bank advanced to government, at 5 per cent. And by the same act, the interest on the Exchequer bills cancelled in 1708 was reduced from 6 to 5 per cent. In 1731, by 6 Geo. 1. c. 21., the South Sea Company were authorised to sell 200,000 <i>l.</i> government annuities, and corporations purchasing the same at 26 years' purchase were authorised to add the amount to their capital stock. The Bank purchased the whole of these annuities at 20 years' purchase 5 per cent. interest was payable on this sum to Midsummer, 1737, and thereafter, 4 per cent. At different times between 1737 and 1738, both inclusive, the Bank received from the public, on account of permanent debt, 2,375,027 <i>l.</i> 17s. 10d., and advanced to it on account of ditto, 2,000,000 <i>l.</i> : Difference	2,000,000 0 0 4,000,000 0 0 2,375,027 17 10 275,027 17 10
1742.	Debt due by the public in 1738 Charter continued by 15 Geo. 2. c. 12. till 12 months' notice after 1st of August, 1764, on payment, &c. Under this act the Bank advanced 1,000,000 <i>l.</i> without interest, which being added to the original advance of 1,300,000 <i>l.</i> and the 400,000 <i>l.</i> advanced in 1710, bearing interest at 6 per cent., reduced the interest on the whole to 3 per cent. In 1745, under authority of 19 Geo. 2. c. 6., the Bank delivered up to be cancelled 968,600 <i>l.</i> of Exchequer bills, in consideration of an annuity of 26,472 <i>l.</i> , being at the rate of 3 per cent. In 1749, the 23 Geo. 2. c. 6. reduced the interest on the 4 per cent. annuities held by the Bank, to 3½ per cent. for 7 years from the 26th of December, 1750, and thereafter to 3 per cent.	9,100,000 0 0 1,000,000 0 0 968,600 0 6
1764.	Charter continued by 4 Geo. 3. c. 25. till 12 months' notice after 1st of August, 1786, on payment, &c. Under this act the Bank paid into the Exchequer 110,000 <i>l.</i> free of all charge.	
1781.	Charter continued by 21 Geo. 3. c. 60. till 12 months' notice after 1st of August, 1812, on payment, &c. Under this act the Bank advanced 2,000,000 <i>l.</i> for the public service for 3 years at 3 per cent.	
1820.	Charter continued by 40 Geo. 3. c. 28. till 12 months notice after 1st of August, 1832, on payment, &c.	
	Carried forward,	11,696,000 0 0

An Account of the successive Renewals of the Charter, &c.—continued.

Date of Renewal.	Conditions under which Renewals were made, and Permanent Debt contracted.	Permanent Debt.
	Brought forward	11,686,000 0 0
	Under this act the Bank advanced to government 2,000,000 <i>l.</i> for 6 years without interest; but in pursuance of the recommendation of the committee of 1807, the advance was continued without interest till 6 months after the signature of a definitive treaty of peace.	
	In 1816, the Bank, under authority of the act 56 Geo. 3. c. 96, advanced at 3 per cent., to be repaid on or before 1st of August 1832.	2,000,000 0 0
1833.	Charter continued by 2 & 4 Will. 4. c. 96. till 12 months' notice after 1st of August, 1855, with a proviso that it may be dissolved on 12 months' notice after 1st of August, 1845, on payment, &c.	14,686,500 0 0
	This act directs that in future the Bank shall deduct 120,000 <i>l.</i> a year from their charge on account of the management of the public debt; and that a fourth part of the debt due by the public to the Bank, or 3,638,250 <i>l.</i> , be paid off.	3,638,250 0 0
	Permanent advance by the Bank to the public, bearing interest at 3 per cent., independent of the advances on account of dead weight	11,048,550 0 0

For further details as to this subject, see the *Appendix No. 1. of the Report of 1832 on the Renewal of the Bank Charter*, and the acts of parliament referred to in it; see also *James Poillthwayt's History of the Revenue*, pp. 301—310.; and *Fairman on the Funds*, 7th ed. pp. 85—88. &c.

The capital of the Bank on which dividends are paid, has never exactly coincided with, though it has seldom differed very materially from, the permanent advance by the Bank to the public. We have already seen that it amounted, in 1708, to 4,402,343*l.* Between that year and 1727 it was increased to near 9,000,000*l.* In 1746, it amounted to 10,780,000*l.* From this period it underwent no change till 1782, when it was increased 8 per cent., or to 11,642,400*l.* It continued stationary at this sum down to 1816, when it was raised to 14,553,000*l.* by an addition of 25 per cent. from the profits of the Bank, under the provisions of the act 56 Geo. 3. c. 96. The late act for the renewal of the charter, 2 & 4 Will. 4. c. 98., directs that the sum of 3,638,250*l.* the portion of the debt due to the Bank to be repaid by the public, shall be deducted from the Bank's capital; which will, therefore, be in future 10,914,750*l.*—(*Report on Bank Charter, Appen. No. 33.*)

The Bank of England has been frequently affected by panics amongst the holders of its notes. In 1745, the alarm occasioned by the advance of the Highlanders under the Pretender as far as Derby, led to a run upon the Bank; and in order to gain time to concert measures for averting the run, the directors adopted the device of paying in shillings and sixpences! But they derived a more effectual relief from the retreat of the Highlanders, and from a resolution agreed to at a meeting of the principal merchants and traders of the city, and very numerously signed, declaring the willingness of the subscribers to receive Bank notes in payment of any sum that might be due to them, and pledging themselves to use their utmost endeavours to make all their payments in the same medium.

During the tremendous riots in June, 1780, the Bank incurred considerable danger. Had the mob attacked the establishment at the commencement of the riots, the consequences might have proved fatal. Luckily, however, they delayed their attack till time had been afforded for providing a force sufficient to insure its safety. Since that period a considerable military force is nightly placed in the interior of the Bank, as a protection in any emergency that may occur.

In the latter part of 1792 and beginning of 1793, there was, in consequence of a previous over-issue on their part, a general run on most of the private banks; and about one third of these establishments were forced to stop payment. This led to a considerable demand for coin from the Bank.

The year 1797 is, however, the most important epoch in the recent history of the Bank. Owing partly to events connected with the war in which we were then engaged—to loans to the Emperor of Germany—to bills drawn on the treasury at home by the British agents abroad—and partly, and chiefly, perhaps, to the advances most unwillingly made by the Bank to government, which prevented the directors from having a sufficient control over their issues,—the exchanges became unfavourable in 1795, and in that and the following year large sums in specie were drawn from the Bank.* In the latter end of 1796 and

* So early as December, 1794, the court of directors represented to government their uneasiness on account of the magnitude of the debt due by the government to the Bank, and anxiously requested a repayment of at least a considerable part of what had been advanced. In January, 1795, they resolved to limit their advances upon treasury bills to 500,000*l.*; and at the same time they informed Mr. Pitt that it was their wish that he would adjust his measures for the year in such a manner as not to depend on any further assistance from them. On the 11th of February, 1796, they resolved, "That it is the opinion of this court, founded upon the experience of the late Imperial loan, that if any further loan or advance of money to the emperor, or to any of the foreign states, should in the present state of affairs take place, it will, in all probability, prove fatal to the Bank of England. The court of directors do, therefore, most earnestly deprecate the adoption of any such measure, and they solemnly protest against any responsibility for the calamitous consequences that may follow thereupon." But

beginning of 1797, considerable apprehensions were entertained of invasion, and rumours were propagated of descents having been actually made on the coast. In consequence of the fears that were thus excited, runs were made on the provincial banks in different parts of the country; and some of them having failed, the panic became general, and extended itself to London. Demands for cash poured in upon the Bank from all quarters; and on Saturday, the 25th of February, 1797, she had only 1,272,000*l.* of cash and bullion in her coffers, with every prospect of a violent run taking place on the following Monday. In this emergency an order in council was issued on Sunday, the 26th, prohibiting the directors from paying their notes in cash until the sense of parliament had been taken on the subject. And after parliament met, and the measure had been much discussed, it was agreed to continue the restriction till six months after the signature of a definitive treaty of peace.

As soon as the order in council prohibiting payments in cash appeared, a meeting of the principal bankers, merchants, traders, &c. of the metropolis, was held at the Mansion-house, when a resolution was agreed to, and very numerous signed, pledging, as had been done in 1745, those present to accept, and to use every means in their power to cause Bank notes to be accepted as cash in all transactions. This resolution tended to allay the apprehensions that the restriction had excited.

Parliament being sitting at the time, a committee was immediately appointed to examine into the affairs of the Bank; and their report put to rest whatever doubts might have been entertained with respect to the solvency of the establishment, by showing that at the moment when the order in council appeared, the Bank was possessed of property to the amount of 15,513,690*l.*, after all claims upon it had been deducted.

Much difference of opinion has existed with respect to the policy of the restriction in 1797; but, considering the peculiar circumstances under which it took place, its expediency seems abundantly obvious. The run did not originate in any over-issue of Bank paper; but grew entirely out of political causes. So long as the alarms of invasion continued, it was clear that no Bank paper immediately convertible into gold would remain in circulation. And as the Bank, though possessed of ample funds, was without the means of instantly retiring her notes, she might, but for the interference of government, have been obliged to stop payment; an event which, had it occurred, must have produced consequences in the last degree fatal to the public interests.

It had been generally supposed, previously to the passing of the Restriction Act, that Bank notes would not circulate unless they were immediately convertible into cash: but the event showed, conformably to principles that have since been fully explained, that this was not really the case. Though the notes of the Bank of England were not, at the passing of the Restriction Act, publicly declared to be legal tender, they were rendered so in practice, by being received as cash in all transactions on account of government, and of the vast majority of individuals. For the first three years of the restriction, their issues were so moderate, that they not only kept on a par with gold, but actually bore a small premium. In the latter part of 1800, however, their quantity was so much increased that they fell to a discount of about 8 per cent. as compared with gold, but they soon after rose nearly to par; and it was not until 1808 that the decline of their value excited any considerable attention. Early in 1810, they were at a discount of about 13½ per cent.; and this extraordinary fall having attracted the attention of the legislature, the House of Commons appointed a committee to inquire into the circumstances by which it had been occasioned. The committee examined several witnesses; and in their report, which was drawn up with considerable ability, they justly ascribed the fall to the over-issue of Bank paper, and recommended that the Bank should be obliged to resume cash payments within two years. This recommendation was not, however, acted upon; and the value of Bank paper continued to decline, as compared with gold, till 1814.

At the period when the restriction on cash payments took place in 1797, it is supposed that there were about 280 country banks in existence; but so rapidly were these establishments multiplied, that they amounted to above 900 in 1813. The price of corn, influenced partly by the depreciation of the currency, and the facility with which discounts were obtained, but far more by deficient harvests, and the unprecedented difficulties which the war threw in the way of importation, had risen to an extraordinary height during the five years ending with 1813. But the harvest of that year being unusually productive, and the intercourse with the Continent being then also renewed, prices, influenced by both circumstances, sustained a very heavy fall in the latter part of 1813, and the beginning of 1814. And this

notwithstanding these, and many other similar remonstrances, fresh advances of money were made to our foreign allies, and fresh demands upon the Bank; the directors reluctantly abandoning their own better judgment to what they truly termed the "*pressing solicitations*" of the Chancellor of the Exchequer, and their desire to avert "the probable distress which a refusal (on their part) might occasion, in the then alarming situation of public affairs." But notwithstanding the difficulties of the Bank were greatly aggravated by that conduct on the part of government against which the directors had so strongly protested, she could hardly, in any state of her affairs, have got safely over the crisis of 1797. The run upon the Bank that then took place, was occasioned by alarms of invasion; and it is clear, as remarked in the text, that while they continued, no paper immediately convertible into gold could remain in circulation.

fall having proved ruinous to a considerable number of farmers, and produced a general want of confidence, such a destruction of provincial paper took place as has rarely been paralleled. In 1814, 1815, and 1816, no fewer than 240 country banks stopped payment; and *eighty-nine* commissions of bankruptcy were issued against these establishments, being at the rate of *one* commission against every *ten and a half* of the total number of banks existing in 1813.

The great reduction that had been thus suddenly and violently brought about in the quantity of country bank paper, by extending the field for the circulation of Bank of England paper, raised its value in 1817 nearly to a par with gold. The return to cash payments being thus facilitated, it was fixed, in 1819, by the act 59 Geo. 3. c. 78.; commonly called Mr. Peel's act, that they should take place in 1823. But to prevent any future over-issue, and at the same time to render the measure as little burdensome as possible, it was enacted, in pursuance of a plan suggested by the late Mr. Ricardo, that the Bank should be obliged, during the interval from the passing of the act till the return to specie payments, to pay her notes, if required, in bars of standard bullion of not less than sixty ounces weight. This plan was not, however, acted upon during the period allowed by law; for, a large amount of gold having been accumulated at the Bank, the directors preferred recommencing specie payments on the 1st of May, 1821.—(See Table IV. for an account of the price of bullion, the depreciation of paper, &c. from 1800 to 1821.)

A great diversity of opinion has been entertained with respect to the policy of the return to the old standard, in 1819. By one party it has been represented as a wise and politic measure: they contend that Mr. Peel's Act not only put an end to those fluctuations in the value of money, which had previously been productive of great mischief, and gave effect to the solemn engagements into which the public had entered with the national creditor, but that it did this without adding any thing material to the national burdens. But another, and, perhaps, a more numerous party, take a totally different view of this measure: they contend that the public was not really bound to return to cash payments at the old standard at the termination of the war; that the return has very greatly enhanced the value of the currency; and that this enhancement, by adding proportionally to the fixed burdens laid on the industrious classes, has been most injurious to their interests. It will, however, be found in this, as in most cases of the sort, that the statements of both parties are exaggerated; and that if, on the one hand, the measure has not been so advantageous as its apologists represent, neither, on the other, has it been nearly so injurious as its enemies would have us believe.

In discussing this question, it is material to observe that the value of paper, which had been in 1815 and 1816 about $1\frac{1}{2}$ per cent. below that of gold, rose in 1817 and 1818, from the causes already mentioned, without any interference whatever on the part of government, to within little more than $2\frac{1}{4}$ per cent. of the value of gold; and that in 1819 the depreciation only amounted to $4\frac{1}{2}$ per cent.—(See Table IV.) It is, therefore, quite ludicrous to ascribe to the act of 1819, as is often done, the whole rise that has taken place in the value of the currency since the peace, seeing that the currency had been for *three years previously to its enactment* from $1\frac{1}{2}$ to $1\frac{1}{4}$ per cent. above its value in 1815, and from $2\frac{1}{4}$ to 23 per cent. above its value in 1814! The main object which the promoters of the act of 1819 had in view, was to sustain the value of the currency at the point to which it had recovered itself, without legislative interference. This, however, could not be done without recurring to specie payments; and the difference of $4\frac{1}{2}$ per cent. that obtained in 1819 between the value of gold and paper, was not deemed sufficiently considerable to warrant a departure from the old standard, and from the acts engaging to restore it.

But it is alleged, that those who suppose that the act of 1819 added only $4\frac{1}{2}$ per cent. to the value of the currency, mistake altogether the effect of the measure. It is admitted, indeed, that paper was then only $4\frac{1}{2}$ per cent. less valuable than gold; but by reverting to specie payments, we made an unexpected purchase of *thirty millions* of gold; and it is affirmed, that this novel and large demand, concurring simultaneously with the contraction of paper in several of the continental states, and with a falling off in the supply of bullion from the mines, had the effect of adding very greatly to the value of gold itself, and consequently to that of the currency. It is very difficult, or rather, perhaps, impossible, to determine the precise degree of credit that ought to be attached to this statement; but while we incline to think that it is well founded to a certain extent, we see no grounds for believing that it is so to any thing like the extent that has been stated. The gold imported into Great Britain, to enable the Bank to resume specie payments, was not taken from any particular country or district, but was drawn from the market of the world; and considering the vast extent of the supply whence it was derived, it is against all reason to suppose that its value could be materially influenced by our purchases. We doubt, too, whether the contraction of the paper currency of some of the continental states, and the substitution of specie in its stead, was not more than balanced by the cessation of the demand for specie for the military chests of the different armies, by the stoppage of the practice of hoarding, and the greater security consequent to the return of peace. And with respect to the falling off

in the supplies from the mines, it is not a circumstance, supposing it to have had a considerable influence, that parliament could take into account. It could neither determine the extent to which bullion had been raised, nor at what point the rise would stop, nor how soon it might again begin to decline. The diminution in the supply of bullion had then continued for too short a period, and its influence on the value of gold was much too uncertain, to make it a ground for interfering in any degree with the standard.

The decline in the price of most articles that has taken place since the peace, has been often referred to, as a conclusive proof of the great enhancement in the value of bullion. But the inference is by no means so certain as has been represented. The prices of commodities are as much affected by changes in the cost of their production, as by changes in the quantity of money afloat. Now, there is hardly one of the great articles of commerce, the cost of which has not been considerably reduced, or which has not been supplied from new sources, within the last few years. The growth of corn, for example, has been vastly extended in France, Prussia, and generally throughout the Continent, by the splitting of large estates, and the complete subversion of the feudal system; and the reduction of its price in this country is, at least, as much owing to the extraordinary increase of imports from Ireland, as to any other cause. The fall in the price of wool is most satisfactorily accounted for by the introduction and rapid multiplication of Merino sheep in Germany, where they seem to succeed even better than in Spain; and by the growing imports from New Holland and elsewhere. And a very large portion, if not the whole, of the fall in the price of colonial products, is admitted, on all hands, to be owing to the destruction of the monopoly system, and the vast extension of cultivation in Cuba, Brazil, Louisiana, Demerara, &c. Although, therefore, we do not deny that the falling off in the supply of bullion from the mines must have had some influence on prices, we hold it to be the greatest imaginable error to ascribe to it the entire fall that has taken place since the peace. Were its effect rated at 10 per cent. we believe it would be very considerably overrated.—(See art. *PANICUS MIRABILIS*.)

On the whole, therefore, we are disposed to approve of the conduct of those who framed the act of 1819. That it added to the burdens of the industrious classes, and has been in so far hostile to the public interests, it seems impossible to doubt; but it has not done this in any thing like the degree which its enemies represent. The period, too, when it was passed, is now so distant, that the existing engagements amongst individuals have almost all been formed with reference to the altered value of the currency; so that whatever injury it may have occasioned in the first instance, must be nearly gone by. To modify or change the standard at this late period, would not be to repair injustice, but to commit it afresh. At the end of the war, the circumstances were considerably different. The standard had been really abandoned for the previous 18 years; and, perhaps, we may now say, that it would have been better, all things considered, had the mint price of bullion been raised, in 1815, to the market price. But having surmounted all the difficulties attendant upon the restoration of the old standard, and maintained it since 1821, it would be in the last degree impolitic to subject it to new alterations. Should the country become, at any future period, unable to make good its engagements, it will better consult its honour and its interest, by fairly compounding with its creditors, than by endeavouring to slip from its engagements by resorting to the dishonest expedient of enfeebling the standard.

The price of corn, which had been very much depressed in 1821 and 1822, rallied in 1823; and this circumstance contributed, along with others peculiar to that period, to promote an extraordinary rage for speculation. The issues of the country banks being in consequence far too much extended, the currency became redundant in the autumn of 1824; and the exchanges having been depressed, a drain for gold began to operate upon the Bank of England. But the directors of the Bank having entered, in the early part of that year, into an engagement with government to pay off such holders of 4 per cent. stock as might dissent from its conversion into a 3½ per cent. stock, they were obliged to advance a considerable sum on this account after the depression of the exchange. This tended to counteract the effect of the drain on the Bank for gold; and, in consequence, the London currency was not very materially diminished till September, 1825. When, however, the continued demand of the public on the Bank for gold had rendered money scarce in the metropolis, the pressure speedily extended to the country. Such of the provincial banks—and they were a numerous class—as had been originally established without sufficient capital, or had conducted their business upon erroneous principles, began to give way the moment they experienced an increased difficulty of obtaining pecuniary accommodations in London. The alarm, once excited, soon became general; and confidence and credit were, for a while, almost wholly suspended. In the short space of 6 weeks, above 70 banking establishments were destroyed, notwithstanding the very large advances made to them by the Bank of England; and the run upon the Bank for cash to supply the exigencies of the country banks, was so heavy, that she was wellnigh drained of all the coin in her coffers, and obliged, as already remarked, to issue about a million of 1*l*. and 2*l*. notes.

In order to guard against a recurrence of the wide-spread mischief and ruin, produced by

this and the previous bankruptcies of the country banks, it was resolved, in 1826, with consent of the Bank of England, to make a change in the law of 1708, limiting the number of partners in banking establishments to 6 only. And it was accordingly enacted, that thenceforth any number of partners might form themselves into associations, to carry on the business of banking, including the issue of notes, any where not within *sixty-five miles* of London. The directors of the Bank of England came, at the same time, to the resolution of establishing branches in some of the principal towns; and, at this moment, branch banks are established in Gloucester, Manchester, Birmingham, Leeds, Liverpool, Bristol, Exeter, Newcastle-upon-Tyne, Hull, Norwich, &c.

The branch bank cannot fail of being highly useful; but we believe that the benefit resulting from the formation of joint stock banks will not be nearly so great as has been anticipated.—(See *post*, BANKS (ENGLISH PROVINCIAL).) So long as every one is allowed to issue notes without any sort of check or control, a thousand devices may be fallen upon to insure a certain circulation to those that are most worthless. At best, this measure is but a feeble palliative of inveterate disorders. It is quite illusory to expect to make any real improvement upon the system of country banking in England, by the mere introduction of a plan for *allowing* banking establishments with large capitals to be set on foot. There have always been, and are at this moment, a great number of such establishments in England. What is really wanted, is the adoption of a system that will exclude the possibility of notes being discredited, by *preventing* all individuals or associations from issuing such as have not been previously guaranteed.

Besides attempting to lessen the frequency of bankruptcy among the country banks, by repealing the law limiting the number of partners, it was further resolved in 1826, to prohibit the future issue of 1*l.* notes. The policy and effects of this measure have given rise to much dispute. It seems clear, that it has gone far to shut up one of the most convenient channels by which the inferior class of country bankers contrived to get their notes into circulation, and must, in so far, do good. But there are many other channels still open to them; and to imagine that this measure will place the provincial currency on that solid basis on which it ought to be placed, is quite visionary. There were no notes under 5*l.* in circulation in 1792; and yet fully *one third* of the country banks then in existence became bankrupt! The truth is, as already stated, that it is not possible to guard against loss and fraud, from the proceedings of the country bankers, otherwise than by compelling them to give security for their issues; and, as security may as easily be given for 1*l.* notes as for those of 5*l.*, the suppression of the former does not appear to have been at all essential. No doubt can, however, be entertained, that the representations as to the extreme injury occasioned by the withdrawal of the 1*l.* notes have been very greatly exaggerated;—though it is at the same time obvious, that the means of the bankers to make advances, as well as the profit derived from making them, must both have been diminished by the suppression of the small notes; and it would be foolish to deny that this circumstance must have occasioned some loss and inconvenience to many individuals.

These remarks are meant to apply only to the case of the country banks. The extraordinary extent to which the forgery of the 1*l.* notes of the Bank of England was carried, affords, perhaps, a sufficient vindication of the policy of their suppression. But the comparatively limited circulation of the country banks, and, perhaps we may add, the greater attention paid to the manner in which their notes were engraved, hindered their forgery from becoming injuriously prevalent.

(2.) *Cash kept by the Bank. Regulation of her Issues.*—Of late, the Bank directors have endeavoured, as a general rule, to have *as much coin and bullion in their coffers as may together amount, when the exchange is at par, to a third part of the Bank's liabilities, including deposits as well as issues*; so that, in the event of the notes afloat, and the public and private deposits in the coffers of the Bank, amounting to 27,000,000*l.* or 30,000,000*l.*, they would not consider the establishment in a perfectly satisfactory state, unless she was, generally speaking, possessed of about 9,000,000*l.* or 10,000,000*l.* of coin and bullion. Such a supply seems to afford every requisite security; and now that the notes of the Bank are made legal tender, and that she must be less exposed than formerly to drains during panics, it may, probably, be found to be unnecessarily large.

The issues of the Bank are wholly governed, at least in all ordinary cases, by what Mr. Horsley Palmer expressively calls "*the action of the public*:"—that is, they are increased during a favourable exchange, or when bullion is sent to the Bank to be exchanged for notes, and diminished during an unfavourable exchange, or when notes are sent to the Bank to be paid. If the exchange were so favourable that the Bank was accumulating considerably more bullion than was equivalent to the third part of her liabilities, the directors would seem to be justified in adding to the currency by buying a larger amount of government securities, or by increasing their discounts, &c.; and conversely, if the exchange were so unfavourable as to depress the supply of coin and bullion considerably below the average proportion. But the most intelligent directors seem to think that this would be an undue

interference; and, in all but extraordinary cases, the rule of the Bank is, to *allow the public to regulate the currency for itself through the action of the exchange.**

It is frequently said that the value of money, and, consequently, that the price of all sorts of property, depends on the fiat of the Bank; by which it is capriciously elevated at one time and depressed at another. But the account now given of the mode in which the issues of the Bank are regulated completely disproves such statements; and independently of this, every one who knows that the Bank must pay her notes in coin when presented, and that coin may be at all times obtained from the Mint, without any charge, in exchange for bullion, must know that the very supposition of their being true involves a contradiction.

(3.) *Bank of England in its Connection with Government and the Public.*—The Bank of England conducts the whole banking business of the British government. "It acts not only," says Dr. Smith, "as an ordinary bank, but as a great engine of state. It receives and pays the greater part of the annuities, which are due to the creditors of the public; it circulates Exchequer bills; and it advances to government the annual amount of the land and malt taxes, which are frequently not paid till some years thereafter."

(4.) *Advances by the Bank in Discounts, &c.*—The greater part of the paper of the Bank has generally been issued in the way of advances or loans to government, upon security of certain branches of the revenue, and in the purchase of Exchequer bills and bullion; but her issues through the medium of discounts to individuals have, notwithstanding, been at all times considerable, while, during war and in periods of distress, they have been occasionally very great. Generally speaking, however, the directors do not think it advisable to enter into competition with private bankers in the transacting of ordinary banking business, or in the discounting of mercantile paper. Mr. Horsley Palmer is decidedly of opinion, that all banking business, apart from the issue of notes, is better transacted by private bankers than by public bodies.—(*Min. of Evidence*, p. 37.) He also thinks, that were the bank to come fairly into competition, at all times, with the private bankers and other individuals in discounting, it would be very apt to lead, every now and then, to an excess of the currency, and a fall of the exchange, producing fluctuations that could not fail to be most injurious. At present, therefore, and generally since the peace, the rate of interest charged by the Bank for loans has been somewhat above the market rate. The consequence is, that, in ordinary periods, very few applications are made to her for discounts. But, at the same time, every one who has any reasonable security to offer, knows where they may always be had; while the rate of interest charged by the Bank necessarily forms a *maximum* rate which no other establishment can exceed. When, however, any circumstances occur to occasion a pressure in the money market, or a difficulty of obtaining recommendations in the usual channels, the market rate of interest immediately rises to the rate fixed by the Bank; and on such occasions, the private bankers, and the public generally, resort to the Bank for aid. She then becomes, as it were, a *bank of support*; and has, as such, on many trying occasions, particularly in 1793, 1815 and 1816, and 1825-26, rendered the most essential service to public credit, and to the commercial interests of the country. The usual limited amount of the Bank's discounts does not, therefore, proceed, as has been absurdly enough stated, from any indisposition on the part of the directors to render every assistance in their power to the commercial classes, but is, in fact, the effect of such disposition. They consider, and we believe justly, that, except under peculiar circumstances, the business of discounting and banking is best conducted by private parties; and that, by abstaining from coming into competition with them, they are better able to act as a bank of support—that is, to sustain public and private credit by making extraordinary advances in seasons of distress and difficulty. This is not to neglect the interests of the mercantile classes, but to promote them in the best and most efficient manner, even though it should be at the expense of the Bank.

No. XIV. of the accounts subjoined to this article shows the average annual amount of commercial paper discounted by the Bank in London, from 1795 down to 1831. But the subjoined account will probably be deemed still more interesting, from its exhibiting in detail the variations in the discounts by the Bank during the 17 years ending with 1831. The sudden increase and immense amount of the discounts, in the last quarter of 1825 and the first quarter of 1826, show the vast importance of the assistance then rendered by the Bank to the trading interests. Had this assistance been withheld, or the Bank not been in a situation to render it, it is not easy to estimate the consequences.

The annual average loss by bad debts on the discounts of the Bank of England in London, from 1791 to 1831; both inclusive, has been 31,698*l.*—(*Appen. to Rep. on Bank Charter*, No. 60.)

* Mr. Horsley Palmer's evidence before the late committee of the House of Commons on the Bank charter contains by far the best exposition ever given to the public, of the mode in which the business of the Bank of England is conducted. It is also highly deserving of attention, from its general ability, and the strong and steady light which it throws on the principles of banking and currency.

Account of the Average Amount of Bills and Notes discounted by the Bank of England, in each Quarter of each of the Seventeen Years ending with 1831.—(*Appen. to Rep. on Bank Charter, No. 56.*)

Years.	1st Quarter, ending 31st of March.	2d Quarter, ending 30th of June.	3d Quarter, ending 30th of September.	4th Quarter, ending 31st of December.
1815	£ 13,611,500	£ 13,846,500	£ 15,613,500	£ 15,717,300
1816	14,315,900	13,330,400	10,569,400	7,299,800
1817	5,893,500	4,143,300	3,330,300	2,541,300
1818	2,976,900	2,847,800	4,510,400	6,565,700
1819	2,363,700	6,632,300	5,031,600	5,443,300
1820	4,610,700	2,605,500	2,837,600	3,130,700
1821	2,338,300	2,715,100	2,304,100	2,459,300
1822	3,137,000	2,310,500	2,565,700	2,734,600
1823	4,107,300	2,252,300	2,501,400	2,334,300
1824	2,386,500	2,553,500	2,449,800	2,343,300
1825	2,456,800	3,973,700	5,696,000	7,639,500
1826	9,586,700	5,037,400	2,920,500	3,164,800
1827	3,198,600	1,226,400	1,107,500	1,336,800
1828	1,298,400	1,165,000	1,170,800	2,157,300
1829	2,953,900	2,953,700	2,611,800	2,158,700
1830	1,300,500	1,414,000	1,275,000	1,590,700
1831	2,549,300	3,240,300	3,422,500	3,771,500

(5.) *Advances by the Bank to Government.*—These are made on account of the produce of taxes not yet received, and on the security of Exchequer bills, &c. They varied, from 1793 down to 1810, from about 10,000,000*l.* to about 16,000,000*l.* During the remainder of the war, and down to 1820, they were a good deal larger; they were, at an average of each of the 7 years ending with that last mentioned, as follows:—

1814	-	-	-	-	£ 30,149,000	1816	-	-	-	-	£ 26,001,000
1815	-	-	-	-	26,494,000	1819	-	-	-	-	24,636,975
1816	-	-	-	-	23,544,000	1820	-	-	-	-	24,916,885
1817	-	-	-	-	27,347,000						

But in these are included about 1,000,000*l.* a year paid to government out of the sums issued on account of the dividends, but not claimed. This can hardly be regarded as an advance by the Bank.

In 1819, provision was made for reducing the amount of these advances; and they do not at present, excluding the permanent advance on account of the dead weight, exceed a third of their amount in 1820. They are represented by the Exchequer bills and deficiency bills in the hands of the Bank; and the average amount of these in her possession during the 4 years ending with 1831, was as follows:—

1826	-	-	-	-	£ 9,367,630	1830	-	-	-	-	£ 6,763,730
1829	-	-	-	-	8,664,030	1831	-	-	-	-	6,733,300

(*Appen. to Rep. on Bank Charter, No. 61.*)

(6.) *Balances of Public Money.*—In point of fact, however, a very large part of these advances has been nominal only, or has been virtually cancelled by the balances of public money in the hands of the Bank. Thus, from 1806 to 1810, both inclusive, the average advances to government amounted to 14,492,970*l.* But the average balance of public money in possession of the Bank during the same period amounted to about 11,000,000*l.*; so that the real advance was equal only to the difference between these two sums, or to about 3,500,000*l.* This statement completely negatives, as Mr. Tooke has justly stated, the supposition so commonly entertained and reasoned upon as a point beyond doubt, that the Bank was rendered, by the restriction, a mere engine in the hands of government for facilitating its financial operations.—(*First Letter to Lord Grenville, p. 64.*)

The Bank being enabled to employ the greater part of the balances of public money in her hands as capital, they have formed one of the main sources of the profit she has derived from her transactions with the public. This subject was brought very prominently forward in the Second Report of the Committee of the House of Commons on Public Expenditure in 1807. And it was agreed in the same year, that the Bank should, in consideration of the advantages derived from the public balances, continue the loan of 3,000,000*l.* made to government in 1800 for 6 years, without interest, on the same terms, till 6 months after the signature of a definitive treaty of peace. In 1816, this sum was finally incorporated with the debt due by government to the Bank, at an interest of 3 per cent. In 1818, the public balances had fallen to about 7,000,000*l.*; and they have been still further reduced, in consequence of measures that were then adopted. They amounted, at an average of the 3 years ending with 1831, to 4,157,570*l.*—(See Table XII.)

A part of the public balances is formed of the dividends payable at the Bank, but unclaimed. The balance arising from this source has sometimes amounted to above 1,000,000*l.*;

* These are the averages of the total advances on the 30th of February, and the 30th of August, each year.

but in 1808 and 1811, arrangements were made by which the balances growing out of this fund have been much reduced.

(7.) *Management of Public Debt.*—Previously to 1786, the Bank received an allowance on this account—that is, for trouble in paying the dividends, superintending the transfer of stock, &c.—of 562*l.* 10*s.* a million. In 1786, this allowance was reduced to 450*l.* a million, the Bank, being, at the same time, entitled to a considerable allowance for her trouble in receiving contributions on loans, lotteries, &c. This, however, though long regarded as a very improvident arrangement on the part of the public, was acquiesced in till 1808, when the allowance on account of management was reduced to 340*l.* a million on 600,000,000*l.* of the public debt; and to 300*l.* a million on all that it exceeded that sum, exclusive of some separate allowances for annuities, &c. The impression, however, was still entertained, that the allowances for management should be further reduced; and the act 3 & 4 Will. 4. c. 98., for the renewal of the charter, has directed that 120,000*l.* a year shall be deducted from their amount. During the year ended the 5th of April, 1832, the Bank received 251,461*l.* for the management of the public debt, and annuities. This item may therefore, be taken for the future at about 130,000*l.* a year.*—(*Report on Bank Charter, Appen. p. 35.*)

It should be observed, that the responsibility and expense incurred by the Bank in managing the public debt are very great. The temptation to the commission of fraud in transferring stock from one individual to another, and in the payment of the dividends, is well known; and notwithstanding the skilfully devised system of checks adopted by the Bank for its prevention, she has frequently sustained very great losses by forgery and otherwise. In 1803, the Bank lost, through a fraud committed by one of her principal cashiers, Mr. Aslett, no less than 340,000*l.*; and the forgeries of Faunderoy the banker cost her a still larger sum! At an average of the 10 years ending with 1831, the Bank lost, through forgeries on the public funds, 40,204*l.* a year.†—(*Report on Bank Charter, Appen. p. 165.*)

The total sum paid by the public to the Bank on account of the loans raised, Exchequer bills funded, transfer of 3*½* per cent. stock, &c. from 1793 to 1820, both included, amounted to 426,795*l.* 1*s.* 11*d.*—(*Parl. Paper, No. 81. Sess. 1822.*)

(8.) *Dead Weight.*—Besides the transactions alluded to, the Bank entered, on the 20th of March, 1823, into an engagement with government with respect to the public pensions and annuities, or, as they have been more commonly termed, the *dead weight*. At the end of the war, the naval and military pensions, superannuated allowances, &c. amounted to above 5,000,000*l.* a year. They would, of course, have been gradually lessened and ultimately extinguished by the death of the parties. But it was resolved, in 1823, to attempt to spread the burden equally over the whole period of *forty-five* years, during which it was calculated the annuities would continue to decrease. To effect this purpose, it was supposed that, upon government offering to pay 2,800,000*l.* a year for 45 years, capitalists would be found who would undertake to pay the entire annuities, according to a graduated scale previously determined upon, making the first year a payment of 4,900,000*l.* and gradually decreasing the payments until the forty-fifth and last year, when they were to amount to only 300,000*l.* This supposition was not, however, realised. No capitalists were found willing to enter into such distant engagements. But in 1823 the Bank agreed, on condition of receiving an annuity of 585,740*l.* for *forty-four* years, commencing on the 5th of April 1823, to pay, on account of the pensions, &c., at different specified periods, between the years 1823 and 1828, both inclusive, the sum of 13,089,419*l.*—(4 *Geo. 4. c. 22.*)

* See Table VI. for an account of the sums paid by the public to the Bank, for the management of the public debt during the year 1829.

† We subjoin an abstract of the principal provisions in the late statute with respect to the forgery of bank notes, powers of attorney, &c.

It is enacted, 1 Will. 4. c. 66., that if any person shall forge or alter, or shall offer, utter, dispose of, or put off, knowing the same to be forged or altered, any Exchequer bill or Exchequer debenture, or any endorsement on or assignment of any such bill or debenture, or any East India bond, or indorsement upon or assignment of the same, or any note or bill of the Bank of England, or a bank post bill, or any indorsement on or assignment of any bank note, bank bill of exchange, or bank post bill, with intent to defraud any person whatsoever, he shall be guilty of felony, and shall upon conviction suffer death as a felon.—§ 2.

Persons making false entries in the books of the Bank of England, or other books in which accounts of public stocks or funds are kept, with intent to defraud, shall suffer death as felons.—§ 5.

By the same act, the forging of any transfer of any share of, or interest in, or dividend upon, any public stock, or of a power of attorney to transfer the same, or to receive dividends thereon, is made capital. If any person, falsely personating the owner of any share, interest, or dividend of any of the public funds, thereby transfer such share, &c., and receive the money due to the lawful owner, he shall upon conviction suffer death as a felon.—§ 6.

And any person *endorsing* by such false personation to procure the transfer of any share, interest, &c. in the public funds, may, upon conviction, be transported beyond seas for life, or for any term not less than seven years, or be imprisoned for any term not more than four, nor less than two years.—§ 7.

The forgery of the attestation to any power of attorney for the transfer of stock is to be punished by transportation for seven years, or by imprisonment for not more than two and not less than one year.—§ 8.

Clerks or servants of the Bank of England knowingly making out or delivering any dividend warrant for a greater or less amount than the party in whose behalf such warrant is made out is entitled to, may, upon conviction, be transported beyond seas for the term of seven years, or imprisoned for not more than two nor less than one year.—§ 9.

(9.) *Rate of Discount.*—The Bank discounted private bills at 5 per cent. during nearly the whole period from her establishment till 1824, when the rate was reduced to 4 per cent. In 1825, it was raised to 5 per cent.; but was again reduced to 4 per cent. in 1827, at which it continues. It may well be doubted, however, whether the rate of discount ought not to be more frequently varied, as occasion may require. When the currency happens, from any cause, to become redundant, its contraction, always a matter of some difficulty, is to be effected only by the sale of bullion or public securities by the Bank, or by a diminution of the usual discounts, or all. But were the Bank to throw any considerable amount of public securities upon the market, the circumstance would be apt to excite alarm; and even though it did not, it would be difficult to dispose of them without a heavy loss. Hence, when a reduction is determined upon, it is most commonly effected partly by a contraction of discounts; and it is plain, that such contraction cannot be made except by rejecting altogether some of the bills sent in for discount, or, which is in effect the same thing, by shortening their dates, or by raising the rate of interest, so that fewer may be sent in. Of these methods, the last seems to be in every respect the most expedient. When bills are rejected for no other reason than that the currency may be contracted, the greatest injury is done to individuals, who entertaining no doubt of getting their usual accommodations from the Bank, may have entered into transactions which they are thus deprived of the means of completing. Were the reduction made by raising the rate of interest, it would principally affect those who are *best able to bear it*; at the same time that its operation, instead of being, like the rejection of bills, arbitrary and capricious, would be uniform and impartial. It does, therefore, seem that the Bank should never throw out good bills that she may contract her issues; but that when she has resolved upon such a measure, she should, provided the contraction cannot be made by the sale of bullion and public securities, raise the rate of discount. The Bank could not, however, act in the way now suggested, until the usury laws were modified; but the act 3 & 4 Will. 4. cap. 98. has exempted all bills not having more than 3 months to run from their operation; and it is to be hoped that this serious inroad on these antiquated, unjust, and impolitic laws may be followed by their total repeal.

The dividends on Bank stock, from the establishment of the Company to the present time, have been as follows:—

Years.	Dividend.	Years.	Dividend.
1694	8 per cent.	Michaelmas - 1733	5½ per cent.
1697	9 —	Lady-day - - - 1747	5 —
1708 }	Varied from 9 to 5½ per cent.	Ditto - - - - 1753	4½ —
1729 }		Michaelmas - - 1764	5 —
Lady-day - - 1730	6 —	Ditto - - - - 1767	5½ —
Michaelmas - 1730	5½ —	Ditto - - - - 1781	6 —
Lady-day - - 1731	6 —	Lady-day - - - 1788	7 —
Michaelmas - 1731	5½ —	Ditto - - - - 1807	10 —
Lady-day - - 1733	6 —	Ditto - - - - 1823	8 —

Previously to 1759, the Bank of England issued no notes for less than 20*l*. She began to issue 10*l*. notes in 1759; 5*l*. notes in 1793; and 1*l*. and 2*l*. notes in March, 1797. The issue of the latter ceased in 1821.

(10.) *Interest on Deposits.*—The Bank of England does not allow, either in London, or at her branches, any interest on deposits; but it would be exceedingly desirable if she could safely make some alteration in this respect. The want of the power readily to invest small sums productively, and, at the same time, with perfect security, tends to weaken the motives to save and accumulate. Nothing has contributed more to diffuse a spirit of economy, and a desire to save, amongst all classes of the population of Scotland, than the readiness with which deposits of small sums are received by banks of undoubted solidity in that part of the country, and the allowance of interest upon them.—(See BANKS (SCOTLAND).) This advantage is in some degree, indeed, secured in England by the institution of savings banks. These, however, are but a very inadequate substitute. They are not open to all classes of depositors; and of those to whom they are open, no one can deposit more than 30*l*. in a year, and 150*l*. in all.—(See BANKS (SAVINGS).) But it is desirable that every facility should be given to safe and profitable investments. “Were the English banks, like the Scotch banks, to receive deposits of 10*l*. and upwards, and allow interest upon them at about 1 per cent. less than the market rate, they would confer an immense advantage upon the community, and open a source of profit to themselves. This is, in fact, a part of the proper business of a bank. A banker is a dealer in capital, an intermediate party between the borrower and the lender. He borrows of one party, and lends to another; and the difference between the terms at which he borrows and those at which he lends is the source of his profit. By this means, he draws into active operation those small sums of money which were previously unproductive in the hands of private individuals, and at the same time furnishes accommodation to another class, who have occasion for additional capital to carry on their commercial transactions.”—(See *Gilbart's Practical Observations on Banking*, p. 52.)

In further corroboration of what has now been stated, it may be mentioned that it was estimated by a very well-informed witness (Sir J. G. Craig), before the Lords' Committee on Scotch and Irish Banking, in 1826, that the deposits in the Scotch banks, at that period, amounted to about 24,000,000*l.*, of which more than a half consisted of sums from 10*l.* to 200*l.*! This is a most satisfactory proof of the vast importance of the system. Perhaps it is not going too far to affirm, that but for the receiving of deposits by the banks, and the allowing of interest upon them, not one third of the sums under 200*l.*, and not one half of those above it, would ever have been accumulated.—(See BANKS (SCOTCH).)

We are not, however, able to say whether the Bank of England could offer interest on deposits without having so large a sum forced upon her as might endanger her stability. And it were better that the system should continue as at present, than that any risk of this sort should be incurred.

Since 1826, the private deposits in the hands of the Bank have nearly doubled. Their increase is mainly ascribable to the preceding panic, and the loss that was then occasioned by the failure of private banks.

The composition paid by the Bank at the rate of 3,500*l.* per million, as an equivalent for the stamp duty on her notes, amounts, at an average, to about 70,000*l.* a year.

(11.) *Method of conducting Business at the Bank.*—All accounts kept at the Bank with individuals are termed *drawing accounts*; those with whom they are opened being entitled to draw checks upon them, and to send the bills and drafts in their favour to be presented by the Bank, exactly as if they dealt with private bankers. There is no fixed sum with which an individual must open a drawing account; nor is there any fixed sum which the Bank requires him to keep at his credit to indemnify them for their trouble in answering his drafts, &c. Mr. Horsley Palmer gave in his evidence the following statement as to the facilities granted by the Bank in drawing accounts since 1825:—

1. The Bank receive dividends by power of attorney for all persons having drawing accounts at the Bank.
2. Dividend warrants are received at the Drawing-office for ditto.
3. Exchange bills and other securities are received for ditto; the bills exchanged, the interest received, and the amount carried to their respective accounts.
4. Checks may be drawn for 5*l.* and upwards, instead of 10*l.* as heretofore.
5. Cash boxes taken in, contents unknown, for such parties as keep accounts at the Bank.
6. Bank notes are paid at the counter, instead of drawing tickets for them on the pay clerks as heretofore.
7. Checks on city bankers paid in by three o'clock may be drawn for between four and five; and those paid in before four will be received and passed to account the same evening.
8. Checks paid in after four are sent out at nine o'clock the following morning, received and passed to account, and may be drawn for as soon as received.
9. Dividend warrants taken in at the Drawing-office until five in the afternoon, instead of three as heretofore.
10. Credits paid into account are received without the Bank book, and are afterwards entered therein without the party claiming them.
11. Bills of exchange accepted payable at the Bank are paid with or without advice; heretofore with advice only.
12. Notes of country bankers payable in London are sent out the same day for payment.
12. Checks are given out in books, and not in sheets as heretofore.

A person having a drawing account may have a *discount account*; but no person can have the latter without, at the same time, having the former. When a discount account is opened, the signatures of the parties are entered in a book kept for the purpose, and powers of attorney are granted, empowering the persons named in them to act for their principals. No bill of exchange drawn in the country is discounted by the Bank in London under 20*l.*, nor London note under 100*l.*, nor for a longer date, under existing regulations, than three months.

The number of holidays formerly kept at the Bank has recently been reduced about a half, in the view, as stated by the directors, of preventing the interruption of business. There are no holidays in the months of March, June, September, and December, excepting Christmas; Easter Monday and Tuesday are no longer kept.

We subjoin an account of the days for transferring stock, and when the dividends are due at the Bank, the South Sea House, and the East India House:—

<i>Transfer Days at the Bank.</i>	<i>Dividends due.</i>	<i>Dividends due.</i>
Bank Stock.—Tues. Thurs. and Frid.	Annuit. for Terms of Years, ending 10th of Oct. 1859, pursuant to 10 Geo. 4.—Tues. Thurs. and Sat.	{ April 5. Oct. 10.
3 per Cent. Red.—Tues. Wed. Thurs. and Frid.	Annuit. for Terms of Years, ending 5th of Jan. 1860, pursuant to 10 Geo. 4.—Tues. Thurs. and Sat.	{ Jan. 5. July 5.
2½ per Cent. 1818.—Tues. Thurs. and Frid.	Life Annuit., if transferred between Jan. 5. and April 4., or between July 5. and Oct. 9.	{ Jan. 5. July 5.
2 per Cent. 1790.—Tues. and Thurs.	Life Annuit., if transferred between April 5. and July 4., or between Oct. 19. and Jan. 4.	{ April 5. Oct. 19.
3 per Cent. Cons.—Tues. Wed. Thurs. and Frid.		
2½ per Cent. Red.—Tues. Wed. Thurs. and Frid.		
Long Annuit. to Jan. 1860.—Mond. Wed. and Sat.		
4 per Cent. 1830.—Mond. Wed. and Frid.		
New 3½ per Cent. Annuit.—Tues. Wed. Thurs. and Frid.		
New 5 per Cent. Annuit.—Tues. Wed. and Frid.		
	<i>At the South Sea House.</i>	
	3½ per Cents.—Mond. Wed. and Frid.	{ Jan. 5. July 5.
	3 per Cent. Old Annuit.—Mond. Wed. and Frid.	{ April 5. Oct. 19.

<i>Transfer Days at the South Sea House.</i>	<i>Dividends due.</i>	<i>At the East India House.</i>	<i>Dividends due.</i>
3 per Cent. New Annuity.—Tues. Thurs. and Sat.	} Jan. 5. July 5.	India Stock.—Tues. Thurs. and Sat.	} Jan. July. Mar. 21. Sept. 30.
3 per Cent. 1751.—Tues. and Thurs.		Interest on India Bonds, due	

Tickets for preparing transfer of stock must be given in at each office before one o'clock: at the East India House before two o'clock. Private transfers may be made at other times than as above, the books not being shut, by paying, at the Bank and India House, 3s. 6d. extra for each transfer; at the South Sea House, 3s. 6d.

Transfer at the Bank must be made by half-past two o'clock: at the India House, by three: at the South Sea House by two: on Saturday, by one.

Expense of transfer in Bank Stock, for 25*l.* and under, 9s.; above that sum, 12s.

India Stock, for 10*l.* - 1*l.* 10s. - 1*l.* 14s.

South Sea Stock, if under 100*l.* - 9s. 6d. - 12s.

Powers of attorney for the sale or transfer of stock to be left at the Bank, &c. for examination, one day before they can be acted upon; if for receiving dividends, present them at the time the first dividend is payable.

The expense of a power of attorney is 1*l.* 1s. 6d. for each stock; but for Bank, India, and South Sea stock, 1*l.* 11s. 6d. If wanted for the same day, half past twelve o'clock is the latest time for receiving orders. The boxes for receiving powers of attorney for sale close at two.

Probates of wills, letters of administration, and other proofs of decease, must be left at the Bank, &c. for registration, from two or three clear days, exclusive of holidays.

Stock cannot be added to any account (whether single or joint) in which the decease of the individual, or one or more of a joint party, has taken place; and the decease to be proved as soon as practicable. Powers of attorney, in case of the death of a party or parties granting it, become void. The unaltered possession of 500*l.* or upwards Bank Stock, for six months clear, gives the proprietors a vote.

(12.) *Branch Banks of the Bank of England.*—The Bank of England, as already observed, has within these few years established branch banks at several of the most considerable towns throughout the country. The mode and terms of conducting business at these establishments have been described as follows:—

“The branch bank (of Swansea, and the same is true of those established in other places) is to be a secure place of deposit for persons having occasion to make use of a bank for that purpose; such persons are said to have *drawing accounts*: to facilitate to the mercantile and trading classes the obtaining discounts of good and unexceptionable bills, founded upon real transactions, two approved names being required upon every bill or note discounted; these are called *discount accounts*. The application of parties who desire to open discount accounts at the branch are forwarded every Saturday to the parent establishment for approval, and an answer is generally received in about ten days. When approved, good bills may be discounted at the branch without reference to London. Bills payable at Swansea, London, or any other place where a branch is established, are discounted under this regulation. The dividends on any of the public funds, which are payable at the Bank of England, may be received at the branch, by persons who have opened ‘drawing accounts,’ after signing powers of attorney for that purpose, which the branch will procure from London. No charge is made in this case, except the expense of the power of attorney and the postage. Purchases and sales of every description of government securities are effected by the branch at a charge of $\frac{1}{2}$ per cent., which includes brokerage in London, and all expenses of postage, &c. A charge of $\frac{1}{2}$ per cent. is also made on paying at the Bank of England, bills accepted by persons having drawing accounts at Swansea, such bills to be advised by the branch; also for granting letters of credit on London, or on the other branches. The branch grants bills on London, payable at 21 days’ date, without acceptance, for sums of 10*l.* and upwards. Persons having drawing accounts at Swansea may order money to be paid at the Bank in London to their credit at this place, and *vice versa*, without expense. The branch may be called upon to change any notes issued and dated at Swansea; but they do not change the notes of the Bank in London, nor receive them in payment, unless as a matter of courtesy where the parties are known. Bank post bills, which are accepted and due, are received at the branch from parties having drawing accounts, and taken to account without any charge for postage; but unaccepted Bank post bills, which must be sent to London, are subject to the charge of postage, and taken to account when due. No interest is allowed on deposits. No advance is made by the branch upon any description of landed or other property, nor is any account allowed to be overdrawn. The notes are the same as those issued by the parent establishment, except being dated Swansea, and made payable there and in London. No note issued exceeds the sum of 500*l.* and none are for a less amount than 5*l.*”

(13.) *Act for the Renewal of the Charter.*—We subjoin a full abstract of the act 3 & 4 Will. 4. c. 98, continuing the charter, and regulating the exclusive privileges of the Bank of England.

The first section, after referring to the acts 29 & 40 Geo. 3. c. 28., and the 7 Geo. 4. c. 48., goes on to declare that it is expedient that certain exclusive privileges of banking be continued to the Governor and Company of the Bank of England, for the period, and upon the terms and conditions hereinafter mentioned.—2*l.*

No Banking Company of more than 6 Persons to issue Notes payable on Demand within London, or 65 Miles thereof.—That during the continuance of the said privilege, no body politic or corporate, and no society or company, or persons united or to be united in covenants or partnerships, exceeding 6 persons shall make or issue in London, or within 65 miles thereof, any bill of exchange or promissory

note, or engagement for the payment of money on demand, or upon which any person holding the same may obtain payment on demand: provided always, that nothing herein or in the said act of the 7 Geo. 4. c. 46. contained shall be construed to prevent any body politic or corporate, or any society or company, or incorporated company or corporation, or co-partnership, carrying on and transacting banking business at any greater distance than 65 miles from London, and not having any house of business or establishment as bankers in London, or within 65 miles thereof, (except as hereinafter mentioned,) to make and issue their bills and notes, payable on demand or otherwise, at the place at which the same shall be issued, being more than 65 miles from London, and also in London, and to have an agent or agents in London, or at any other place at which such bills or notes shall be made payable, for the purpose of payment only, but no such bill or note shall be for any sum less than 5*l*., or be re-issued in London, or within 65 miles thereof.—*→ 3.*

Companies or Partnerships may carry on Banking in London, or within 65 Miles thereof.—And whereas the intention of this act is, that the Bank of England should, during the period stated in this act (subject nevertheless to such redemption as is described in this act), continue to hold and enjoy all the exclusive privileges of banking given by the act 39 & 40 Geo. 3. c. 23. as regulated by the act 7 Geo. 4. c. 46. or any prior or subsequent act or acts of parliament, but no other or further exclusive privilege of banking: and whereas doubts have arisen as to the construction of the said acts, and as to the extent of such exclusive privilege; and it is expedient that all such doubts should be removed, be it therefore declared and enacted, that any body politic or corporate, or society, or company, or partnership, although consisting of more than 6 persons, may carry on the trade or business of banking in London, or within 65 miles thereof, provided that such body politic or corporate, or society, or company, or partnership, do not borrow, owe, or take up in England any sum or sums of money on their bills or notes payable on demand, or at any less time than 6 months from the borrowing thereof, during the continuance of the privileges granted by this act to the said Governor and Company of the Bank of England.—*→ 3.*

All Bank of England Notes payable on Demand issued out of London payable at the Place where issued.—From and after the 1st of August, 1834, all promissory notes payable on demand of the Governor and Company of the Bank of England issued at any place in England out of London, where the trade and business of banking shall be carried on for and on behalf of the said Governor and Company, shall be made payable at the place where such promissory notes shall be issued; and it shall not be lawful for the said Governor and Company, or any committee, agent, cashier, officer, or servant of the same, to issue at any place out of London, any promissory note payable on demand not made payable at the place where the same shall be issued, any thing in the said act 7 Geo. 4. c. 46. to the contrary notwithstanding.—*→ 4.*

Exclusive Privileges to end upon One Year's Notice at the end of 10 Years after August, 1834.—Upon one year's notice given within 6 months after the expiration of 10 years from the 1st of August, 1834, and upon repayment by parliament to the said Governor and Company, or their successors, of all principal money, interest, or annuities which may be due from the public to the said Governor and Company at the time of the expiration of such notice, as is hereinafter stipulated and provided in the event of such notice being deferred until after the 1st of August, 1854, the exclusive privileges of banking granted by this act shall cease and determine at the expiration of such year's notice; and any vote or resolution of the House of Commons, signified by the Speaker of the said house in writing, and delivered at the public office of the said Governor and Company, or their successors, shall be deemed and adjudged to be a sufficient notice.—*→ 5.*

Bank Notes to be a legal Tender, except at the Bank and Branch Banks.—From and after the 1st of August, 1834, unless and until parliament shall otherwise direct, a tender of a note or notes of the Governor and Company of the Bank of England, expressed to be payable to bearer on demand, shall be a legal tender, to the amount expressed in such note or notes, and shall be taken to be valid as a tender to such amount for all sums above 5*l*. on all occasions on which any tender of money may be legally made, so long as the Bank of England shall continue to pay on demand their said notes in legal coin; provided always, that no such note or notes shall be deemed a legal tender of payment by the Governor and Company of the Bank of England, or any branch bank of the said Governor and Company; but the said Governor and Company are not to become liable or be required to pay and satisfy at any branch bank of the said Governor and Company, any note or notes of the said Governor and Company, not made specially payable at such branch bank; but the said Governor and Company shall be liable to pay and satisfy at the Bank of England in London all notes of the said Governor and Company, or of any branch thereof.—*→ 6.*

Bills not having more than 3 Months to run, not subject to Usury Laws.—No bill of exchange or promissory note made payable at or within 3 months after the date thereof, or not having more than 3 months to run, shall, by reason of any interest taken thereon or secured thereby, or any agreement to pay or receive or allow interest in discounting, negotiating or transferring the same, be void, nor shall the liability of any party to any bill of exchange or promissory note be affected by reason of any statute or law in force for the prevention of usury; nor shall any person or persons drawing, accepting, indorsing, or signing any such bill or note, or lending or advancing any money, or taking more than the present rate of legal interest in Great Britain and Ireland respectively for the loan of money on any such bill or note, be subject to any penalties under any statute or law relating to usury, or any other penalty or forfeiture; any thing in any law or statute relating to usury in any part of the United Kingdom to the contrary notwithstanding.—*→ 7.*

Accounts of Bullion and of Notes in Circulation to be sent weekly to the Chancellor of the Exchequer.—An account of the amount of bullion and securities in the Bank of England belonging to the said Governor and Company, and of notes in circulation, and of deposits in the said bank, shall be transmitted weekly to the Chancellor of the Exchequer for the time being, and such accounts shall be consolidated at the end of every month, and an average state of the Bank accounts of the preceding 3 months, made from such consolidated accounts as aforesaid, shall be published every month in the next succeeding London Gazette.—*→ 8.*

*Public to pay the Bank 1/4 Part of 14,686,800*l*.*—One fourth part of the debt of 14,686,800*l*., now due from the public to the Governor and Company of the Bank of England, shall, and may be repaid to the said Governor and Company.—*→ 9.*

Capital Stock of the Bank may be reduced.—A general court of proprietors of the said Governor and Company of the Bank of England shall be held some time between the passing of this act and the 5th of October, 1834, to determine upon the propriety of dividing and appropriating the sum of 3,638,250*l*. out of or by means of the sum to be repaid to the said Governor and Company as before mentioned, or out of or by means of the fund to be provided for that purpose amongst the several persons, bodies politic or corporate, who may be proprietors of the capital stock of the said Governor and Company on the said 5th of October, 1834, and upon the manner and the time for making such division and appropriation, not inconsistent with the provisions for that purpose herein contained; and in case such general court, or any adjourned general court, shall determine that it will be proper to make such division, then, but not otherwise, the capital stock of the said Governor and Company shall be, and the same is hereby declared to be reduced from the sum of 14,539,000*l*., of which the same now consists, to the sum of 10,914,750*l*., making a reduction of difference of 3,624,250*l*. capital stock, and such reduction shall take place from and after the 5th of October, 1834; and thereupon, out of or by means

of the sum to be repaid to the said Governor and Company as herein-before mentioned, or out of or by means of the fund to be provided for that purpose, the sum of 2,638,250*l.* sterling, or such proportion of the said fund as shall represent the same, shall be appropriated and divided amongst the several persons, bodies politic or corporate, who may be proprietors of the said sum of 1,553,000*l.* Bank stock on the said 5th of October, 1834, at the rate of 2*½* *sterling* for every 100*l.* of Bank stock which such persons, bodies politic and corporate, may then be proprietors of, or shall have standing in their respective names in the books kept by the said Governor and Company for the entry and transfer of such stock, and so in proportion for a greater or lesser sum.—*§* 10.

Governor, Deputy, or Directors not to be disqualified by Reduction of their Share of the Capital Stock.—The reduction of the share of each proprietor in the capital stock of the said Governor and Company of the Bank of England, by the repayment of such $\frac{1}{4}$ part thereof, shall not disqualify the present governor, deputy governor, or directors, or any or either of them, or any governor, deputy governor, or director who may be chosen in the room of the present governor, deputy governor, or directors at any time before the general court of the said Governor and Company to be held between the 25th of March and the 25th of April, 1835: provided that at the said general court, and from and after the same, no governor, deputy governor, or director of the said corporation shall be capable of being chosen such governor, deputy governor, or director, or shall continue in his or their respective offices, unless he or they respectively shall at the time of such choice have, and during such his respective office continue to have, in his and their respective name, in his and their own right, and for his and their own use, the respective sums or shares of and in the capital stock of the said corporation in and by the charter of the said Governor and Company prescribed as the qualification of governor, deputy governor, and directors respectively.—*§* 11.

Proprietors not to be disqualified.—Provided also, and be it enacted, that no proprietor shall be disqualified from attending and voting at any general court of the said Governor and Company to be held between the said 5th of October, 1831, and the 25th of April, 1833, in consequence of the share of such proprietor of the capital stock of the said Governor and Company having been reduced by such repayment as aforesaid below the sum of 500*l.* of the said capital stock; provided such proprietor had in his own name the full sum of 500*l.* of the said capital stock on the said 5th of October, 1834; nor shall any proprietor be required, between the said 5th of October, 1834, and the 25th of April, 1835, to take the oath of qualification in the said charter.—*§* 12.

*Bank to deduct 120,000*l.* from Sum allowed for Management of National Debt.*—From and after the 1st of August, 1831, the said Governor and Company, in consideration of the privileges of exclusive banking given by this act, shall, during the continuance of such privileges, but no longer, deduct from the sums now payable to them, for the charges of management of the public unredeemed debt, the annual sum of 120,000*l.*, any thing in any act or acts of parliament or agreement to the contrary notwithstanding: provided always, that such deduction shall in no respect prejudice or affect the right of the said Governor and Company to be paid for the management of the public debt at the rate and according to the terms provided by the act 46 Geo. 3. c. 4, intitled "An act to authorise the advancing for the public Service, upon certain Conditions, a Proportion of the Balance remaining in the Bank of England for Payment of unclaimed Dividends, Annuities, and Lottery Prizes, and for regulating the Allowances to be made for the management of the National Debt."—*§* 13.

Provisions of Act of 39 & 40 Geo. 3. to remain in force, except as altered by this Act.—All the powers, authorities, franchises, privileges, and advantages given or recognised by the said recited act of the 39 & 40 Geo. 3. c. 28. aforesaid, as belonging to or enjoyed by the Governor and Company of the Bank of England, or by any subsequent act or acts of parliament, shall be and the same are hereby declared to be in full force, and continued by this act, except so far as the same are altered by this act, subject nevertheless to such redemption upon the terms and conditions following: (that is to say,) that at any time, upon 12 months' notice to be given after the 1st of August, 1835, and upon repayment by parliament to the said Governor and Company, or their successors, of the sum of 11,015,100*l.*, being the debt which will remain due from the public to the said Governor and Company after the payment of $\frac{1}{4}$ of the debt of 14,686,800*l.* as herein-before provided, without any deduction, discount, or abatement whatsoever, and upon payment to the said Governor and Company and their successors of all arrears of the sum of 100,000*l.* per annum in the said act of 39 & 40 Geo. 3. aforesaid mentioned, together with the interest of annuities payable upon the said debt or in respect thereof, and also upon repayment of all the principal and interest which shall be owing unto the said Governor and Company and their successors upon all such tallies, exchequer orders, exchequer bills, or parliamentary funds which the said Governor and Company, or their successors, shall have remaining in their hands or be entitled to at the time of such notice to be given as last aforesaid, then and in such case, and not till then, (unless under the proviso herein-before contained,) the said exclusive privileges of banking granted by this act shall cease and determine at the expiration of such notice of 12 months.—*§* 14.

Tables exhibiting a View of the Circulation, Deposits, Profits, &c. of the Bank of England.

No. I.—A return of the Number of Persons convicted of Forgery, or passing forged Notes and Post Bills of the Bank of England, in each Year, from 1791 to 1829, inclusive.

N. B.—No previously published table of the circulation of the Bank of England extends further back than 1777; we are indebted to the Court of Directors for being able to supply this striking defect, and to exhibit, for the first time, the circulation of the Bank, from within four years of its establishment down to the present day.

* The increased amount of deposits in this and the following years, arose from the increase of accounts.

No. XVI.—An Account of the Amount of Bank Notes in Circulation on the undermentioned Days: distinguishing the Bank Post Bills, and the Amount of Notes under Five Pounds, with the Aggregate of the whole.

	Notes of 5l. and upwards.	Bank Post Bills.	Bank Notes under 5l.	Total.

1828 February	585,890	1831 February	2,373,260	1833 February	3,068,070
August	619,740	August	2,433,860	August	3,313,850
1829 February	807,430				
August	1,166,390				

III. BANKS (ENGLISH PRIVATE AND PROVINCIAL.)

Besides charging the usual rate of interest on bills discounted, the provincial bankers are mostly in the habit of charging 5s. or 6s. per cent. as commission. They also charge a commission on all payments; and derive a profit from charges for the transmission of money, &c. They usually allow from 2 to 3 per cent. on money deposited; but the numerous failures that have taken place amongst them have, by generating a feeling of insecurity in the minds of the depositors, confined this branch of their business within comparatively narrow limits. When their customers overdraw their accounts, they are charged with interest at the rate of 5 per cent.

Country banks established by individuals possessed of adequate funds, and managed with due discretion, are productive of the greatest service. They form commodious reservoirs, where the floating and unemployed capital of the surrounding districts is collected, and from which it is again distributed, by way of loan, to those who will employ it to the best advantage. It is, therefore, of the utmost importance, in a public point of view, that these establishments should be based upon solid foundations. But in England, unfortunately, this has been but little attended to; and the destruction of country banks has, upon three different occasions,—in 1792, in 1814, 1815, and 1816, and in 1825 and 1826,—produced an extent of bankruptcy and misery that has never, perhaps, been equalled, except by the breaking up of the Mississippi scheme in France. Government is bound to interfere to hinder the recurrence of such disastrous results. The repeal of the act of 1708, preventing the association of more than six persons for carrying on the trade of banking, has already led to the formation of joint stock banking companies in a few of the large towns; but it remains to be seen in how far this should be regarded as an improvement. It is, indeed, quite visionary to suppose that the power to establish such banks is *all* that is required to establish the provincial currency on a secure foundation. What is really wanted, is not a regulation to *allow* banks with large capitals to be set on foot, (for there have, at all times, been many such banks in England,) but a regulation to *prevent* any bank, be its partners few or many, from issuing notes without previously giving security for their payment. This would render the bankruptcy of such banks impossible, and would give a degree of security to the money system of the country that it can never otherwise attain.—(The reader is referred, for a full discussion of this important question, to the *Note on Money*, in my edition of the *Wealth of Nations*, vol. iv. pp. 280—292.)

The following is an account of the number of commissions of bankruptcy issued against country bankers in England, from 1809 to 1830, both inclusive:—

Years.	Commissions.	Years.	Commissions.	Years.	Commissions.	Years.	Commissions.
1809	4	1815	25	1821	10	1826	43
1810	20	1816	37	1822	8	1827	8
1811	4	1817	2	1823	9	1828	3
1812	17	1818	2	1824	10	1829	2
1813	6	1819	13	1825	37	1830	14
1814	37	1820	4				

(Append. to Report on Bank Charter, p. 116.)

Exclusive of the above, many banks stopped payments, to the great injury of their creditors and the public, that afterwards resumed them; at the same time that the affairs of some bankrupt concerns were arranged without a commission. During the whole of this period, not a single Scotch bank gave way.

The stamp duties on country bank notes have been already specified (p. 69.).

Besides the stamp duties payable on Notes, each individual or company issuing them must take out a licence, renewable annually, which costs 30*l*. This licence specifies the names and places of abode of the body corporate, person, or persons, in the firm to whom it is granted, the name of such firm, the place where the business is carried on, &c.; and a separate licence is to be taken out for every town or place where any notes shall be issued by or on account of any banker, &c. Unless the licence granted to persons in partnership set forth the names and places of abode of all persons concerned in the partnership, whether their names appear on the notes issued by them or not, such licence shall be absolutely void.—(55 *Geo. 3. c. 184. s. 24.*) For the regulations as to the issue of unstamped notes see *ante*, p. 69.

The issue of notes for less than 5*l*. was prohibited in England, as previously shown, from 1777 to 1797; but they continued to be issued from the latter period down to the 5th. of April 1829, when their further issue ceased in consequence of an act passed in 1826. This act did not extend to Scotland or Ireland, and was intended to give greater stability to the system of country banking in England, by shutting up one of the principal channels through which the inferior class of bankers had been in the habit of getting their notes into circulation. But notwithstanding it will certainly have this effect, the policy of the measure seems very doubtful. It is idle, indeed, to imagine that it can give that stability to the banking system which is so desirable; and in proof of this, it is sufficient to state, that though none of the country banks existing in 1793 had any notes for less than 5*l*. in circulation, upwards of one third of their entire number stopped payment during the revulsion that then took place. The truth is, that nothing but the exacting of security for payment of notes can ever place the country issue of notes on that solid foundation on which it ought to stand; and as security may be taken for 1*l*. notes as easily as for those of 5*l*., there would, were such a system adopted, be no ground for suppressing the former.

Metropolitan Joint Stock Banks.—It was for a lengthened period generally understood, that the act of 1708, and the other acts conveying exclusive privileges to the Bank of England, not only prevented any company with more than 6 partners from issuing notes payable on demand; but that they also prevented such companies from undertaking ordinary banking business,—that is, from receiving the money of individuals and paying their drafts, &c. Recently, however, strong doubts began to be entertained whether companies with numerous bodies of partners, established for the mere business of banking, and without issuing notes, were really prohibited by the acts in question. During the discussions on the late renewal of the charter of the Bank of England, the point was submitted for the consideration of the Attorney and Solicitor Generals, who gave it as their decided opinion, that such banks might be legally established within the limits to which the exclusive privileges of the Bank of England were restricted by the act 7 & 8 Geo. 4. c. 46. But as the opinion of other eminent lawyers differed from theirs, a clause has been inserted in the act 3 & 4 Will. 4. c. 98., which removes all doubts on the subject, by expressly authorising the establishment of banks not issuing notes, with any number of partners, any where within the district to which the exclusive privileges of the Bank of England, as a bank of issue, are now restricted.—(See *anté*, p. 84.)

Down to this period (September, 1833), no advantage has been taken of this declaratory enactment, by the formation of a joint stock bank in the metropolis; but several projects of the kind have been made public, and it seems most likely that some of them will be matured. It is not easy to form beforehand any certain conclusions as to the probable working of such establishments. Provided, however, that they possess large paid up capitals, and numerous bodies of partners, individually liable, as at present, for the debts of the company, it may, one should think, be fairly concluded, that they will afford comparatively safe places for the deposit of money; and in so far their institution will be advantageous. But it is not easy to discover in what other respects they will have any superiority over the present banks. There is great weight in the following statement made by Mr. Jones Loyd before the Committee on the Bank of England charter:—"I think that joint stock banks are deficient in every thing requisite for the conduct of banking business, except extended responsibility; the banking business requires peculiarly persons attentive to all its details, constantly, daily, and hourly watchful of every transaction, much more than mercantile or trading businesses. It also requires immediate, prompt decisions upon circumstances when they arise,—in many cases a decision that does not admit of delay for consultation; it also requires a discretion to be exercised with reference to the special circumstances of each case. Joint stock banks being, of course, obliged to act through agents, and not by a principal, and, therefore, under the restraint of general rules, cannot be guided by so nice a reference to degrees of difference in the character or responsibility of parties; nor can they undertake to regulate the assistance to be granted to concerns under temporary embarrassment by so accurate a reference to the circumstances, favourable or unfavourable, of each case."—(*Min. of Evid.* p. 236.)

We confess, too, that we have great doubts whether the competition of such banks with each other, and with the private banks, may not be productive of much inconvenience. It will be very apt, at times, to occasion an artificial reduction of the rate of interest, and a redundancy of the currency, which must, of course, be followed by a fall of the exchange, and a period of more or less difficulty. It is stated, that the metropolitan joint stock banks are to give interest on deposits; and if they can do so without endangering their stability, it will be an important advantage. But we have yet to learn how it is possible that a joint stock bank should be able to do what would seem to exceed the power of the wealthiest and best managed private establishments.

As already remarked, the only circumstance in which joint stock banks seem to have any decided superiority over private companies, consists in their greater responsibility. But this is not a necessary attribute of *all* joint stock companies. Associations of this sort may, and indeed do, exist, that are in all respects inferior to respectable private companies. And it

seems indispensable, in order to the prevention of fraud, that such regulations should be adopted as may make the public fully aware of the real nature of all joint stock associations, and of their claims to credit and confidence.

Proposed Measures as to Joint Stock Banks.—The future intentions of government as to the regulation of private banking companies in England were supposed to be partially developed by the Chancellor of the Exchequer in his speech introducing the bill for the renewal of the charter of the Bank of England. According to the statement then made it appears to have been intended that half the subscribed capital of all banks for the issue of notes should be paid up and vested in such securities as parliament should direct; that the responsibility of the partners in such banks should be unlimited; and that their accounts should be periodically published. In the case of banks not issuing notes, only a fourth part of their subscribed capital was to be paid up, and the responsibility of their shareholders was to be limited.

But with the exception of that part of the above plan which relates to the publication of the accounts of banks of issue, the consideration of the remainder was deferred to a more convenient opportunity; and notwithstanding our respect for the quarter whence it proceeded, we hope it may never be revived. The adoption of the proposed regulations would not have amended any one of the principal defects in the present system of English country banking, while there are not a few which it would have materially aggravated. There is not so much as the shadow of a ground for interfering with the concerns of such banks as do not issue notes, further than to let the public know with whom they are dealing, and the real amount of their *paid up* capital; and the proposed interference in the case of banks that do issue notes, could have been productive of nothing but mischief. On this point we shall take leave to quote a conclusive paragraph from a memorial drawn up by the directors of the Manchester and Liverpool District Banking Company:—"We contend, first, that, except in so far as the issue of notes is concerned, banking is essentially a *private business*, with which the state has no more title to interfere than it has to interfere with any other description of mercantile agency. If A. choose to deposit money in the hands of B., who lends it to others, why is the interference of government more necessary than if A. had deposited it in the hands of C., who employs it in manufactures or agriculture? It is the duty of parliament to take care that coins, and the paper notes issued as substitutes for them, be always of their professed value; but assuredly it is no part of its duty to inquire into the solvency of those into whose hands coins or paper may come. We contend, secondly, that, admitting it to be right to exact security from banks of issue, that should not be done by the compulsory investment of a portion of their capital. The issues of one bank may be more than twice or three times the amount of its capital; while those of another, placed in a different situation, or conducted in a different way, may be under a third or a fourth part of its capital. What, then, could be more unequal as respects the banks, and more illusory as respects the public, than to oblige both these establishments to give security for their issues by vesting *half their capital* in government stock? Were the first bank to stop payment, the security in the hands of government would not afford the holders of its notes more than from 3s. 4d. to 5s. in the pound; while, were the latter in the same predicament, the holders of its notes would be paid in full out of the government securities, and there would be a large surplus over. It is clear, therefore, that the security to be given by a bank of issue ought to be *proportioned to its issues*, and not to its capital. The former mode will effectually protect the public from loss; the latter gives little, or rather no protection whatever." It is, in fact, quite ludicrous to tamper with a subject of this sort. Nothing short of the obligation to give security for their issues can ever give the public that effectual guarantee for the integrity of the currency that is so essential; nor is there any other plan at once fair and equal as respects different banks.

Distinction between subscribed and paid up Capital. Expediency of suppressing all Reference to the former. An immediate stop ought, we think, to be put to the practice now so prevalent among joint stock banking companies, of representing their capitals as consisting, not of what has been *actually paid up by the shareholders*, but of what they have subscribed for. Not a few institutions have recently been set on foot in England, professing to have capitals of 1,000,000*l.*, 2,000,000*l.* or more, when, in point of fact, their capital does not really consist of a tenth part of that sum. The practice is to organise a company with some 5,000 or 10,000 shares of 100*l.* each; but it is perfectly understood that not more than 5 or at most 10 per cent. of each share is to be called up; and if more were demanded, it is most probable it could not be paid, at least without much difficulty. This practice is pregnant with mischief. In the first place, it tends to deceive the public, who imagine there can be no risk in dealing with a bank professing to possess 1,000,000*l.* of capital, who yet might hesitate about having any thing to do with it, were they aware that the capital paid into its coffers, and on which it carries on business, does not really exceed 50,000*l.* or 100,000*l.* In the second place, this system tends to deceive the mass of the partners. These are tempted to embark in such hazardous concerns, imagining that they are to be large shareholders with but little outlay, and that they will derive a consider

104 BANKS (ENGLISH PRIVATE AND PROVINCIAL).

able dividend upon the nominal amount of their shares! We mistake if a good many such persons be not in the end grievously disappointed. Banking, in an ordinary state of things, is not a business in which large profits can be expected. It is true that many banking houses made immense sums during the war, but they did this more as dealers in the funds, and particularly by their rise on the return of peace, than as bankers. But it is needless to say that no prudently conducted banking establishment will now count much upon this source of emolument. At present, the dividend on the stock of the best established Scotch banks varies, we believe, from about 5 to 6 per cent.; and as they might invest their capital at 3½ or 4 per cent., it appears that the real profits of banking, even in the best managed concerns, can hardly be estimated at more than from 1½ to 2½ per cent.

It is, besides, a radical mistake to suppose that any banking concern can ever be established on a solid foundation, that is not possessed of a pretty large amount of paid up and available capital. We believe, however, that several of the joint stock companies recently established in England take a different view of this matter; and that they trust more to deposits and credit, than to their command of capital of their own. There can be no objection to these, or, indeed, to any associations whatever, being allowed to issue notes, provided they give full security for their payment; but government and parliament will be alike neglectful of their duty to the public if they do not take immediate steps to compel this being done; and to secure the currency of the country from being disturbed by the fraud, mismanagement, or insufficient capital of its issuers. The system of advertising subscribed instead of paid up capitals ought also to be put an end to; nor ought any association to be allowed to say that its capital exceeds what has actually been paid into its coffers.

Responsibility ought not, in any case, to be limited.—We protest against the proposal for allowing the partners in banks not issuing notes to limit their responsibility. Such a measure would be good for nothing, except to serve as a premium on every species of fraud. What check would there be, under such a system, to hinder the partners of a bank going on for a series of years dividing large profits, when, perhaps, they were really incurring a loss, until every farthing of its capital and deposits was absorbed? To talk of subjecting such persons to punishment as fraudulent bankrupts, on evidence derived from their books, is absurd; for, supposing that it was the intention of the parties to defraud, they might easily keep their books so that they could afford no information that was not false or misleading. The annexed list of joint stock banking companies shows that there is no disinclination on the part of individuals to engage in such concerns even with the present unlimited responsibility. And the way in which some of them are conducted, proves sufficiently, if any such proof were wanted, that the serious liabilities incurred by the partners are not more than enough for the protection of the public. To lessen them would be an act of gratuitous folly. If we are to interfere, let them be increased, not diminished. But in the case of banks not issuing notes, enough is done if measures be taken to prevent deception, by letting the public know the partners in them, and making sure that they shall have no means of evading the responsibility attaching to their engagements. The first object may be secured by compelling all banking associations whatever to publish annually a list of the names and addresses of their partners, with the amount of their paid up capital; and to accomplish the latter object, we have merely to abstain from interference, and to let the law take its natural course.

Accounts of Issues.—The act 3 & 4 Will. 4. c. 83. directs that all persons or associations carrying on banking business, and issuing promissory notes payable on demand, shall keep weekly accounts of their issues; and shall, within a month of each of the quarters ending with the 1st of April, 1st of July, 1st of October, and 1st of January, make up, from the weekly accounts, an average account, verified on oath, of their issues during the preceding quarter, which shall be transmitted to the Stamp-office in London. Penalty for neglecting or refusing to make and transmit such account, 500*l.* on the corporation, company, persons, &c. issuing the notes, and 100*l.* on the secretary so offending. The wilful sending a false return to be punished as perjury.

Drawing on London.—The act 3 & 4 Will. 4. c. 83. repeals the regulation in the 7 Geo. 4. c. 48., prohibiting banks with more than 6 partners from drawing on London on demand, or otherwise, for sums of less than 50*l.*—§ 2.

Stamps and Taxes, Somerset Place, 4th of July, 1833.

It is not possible to obtain any accurate account of the number of country notes in circulation at different periods. But the following table, drawn up by the late Mr. Mushet, of the Mint, founded partly on official returns, and partly on the estimates of Mr. Sedgwick, late chairman of the Board of Stamps, is, so far as it goes, the most complete and comprehensive hitherto published.

* This department is not in possession of any information which enables a statement to be made as to the nominal capital of each such Bank, and the amount of capital paid up.

106 BANKS (ENGLISH PRIVATE AND PROVINCIAL).

No. III.—An Account of the Number of Country Bank Notes, of all Denominations, stamped in each Year, ending Oct. 10, from 1804 to 1825 inclusive, with the Percentage of Increase and Decrease, comparing each Year with the Year preceding; together with an Estimate of the Total Amount in Circulation, according to Mr. Sedgwick's Tables, in each Year, from 1804 to 1825 inclusive; with the Percentage of Increase and Decrease, comparing each Year with the Year preceding.

Years.	The Amount of Country Bank Notes of all Denominations stamped in each year, ending Oct. 10, from 1804 to 1825.	The Percentage of Increase, comparing each year with the year preceding.	The Percentage of Decrease, comparing each year with the year preceding.	The Amount of Country Bank Notes in Circulation, according to Mr. Sedgwick's Tables, in each year, ending Oct. 10, from 1804 to 1825 inclusive.	The Percentage of Increase, comparing each year with the year preceding.	The Percentage of Decrease, comparing each year with the year preceding.

1829	2,403,700		

(Parl. Paper, No. 456. Sess. 1833.)

N. B.—No 11. and 24. notes were stamped after the 3d of February, 1826.

(Since the publication of the 2d edition of the *Dictionary*, in 1834, an extraordinary increase has taken place in the number of joint stock banks, both in Great Britain and in Ireland. It appears from the official return, dated the 4th of July, 1833 (*Dict.*, p. 99.), that there were then 34 joint stock banks established in England and Wales; but it appears from the subjoined account, dated the 26th of November, 1836, that the number of joint stock banks had, in the interval, been very nearly trebled, or had increased to 101; and it is deserving of notice, that a very large proportion of this rapid increase had taken place during the previous part of the year 1836. The progress of the system has been as follows:—

In 1826, there were	In 1830, there were	In 1834, there were
registered - - 3	registered - - 1	registered - - 10
1827 - - - 4	1831 - - - 9	1835 - - - 9
1828 - - - 0	1832 - - - 7	To 26 Nov. 1836 - - 42
1829 - - - 7	1833 - - - 9	Total - - - 101

We should, however, form a very inadequate idea of the extension of the joint stock banking system, if we measured it merely by the increase in the number of banks, as stated above. Many of the older banks, and even of those established within the present year (1836), have from 30 to 40 or more branches, or subordinate establishments; and, as these carry on all sorts of banking business, and are frequently very far removed from the head office, and from each other, they should really be regarded as so many separate banks, so that the number of the latter is incomparably greater than, at first sight, it may appear to be.

Proceedings of Joint Stock Banks.—We regret, however, to have to state that the solidity of the system seems by no means to correspond with its power of extension. Though the joint stock banks universally almost profess to have immense nominal capitals, their actually paid up and really available capitals are, in many instances, very limited indeed; and it is by no means clear, did any thing occur to render it necessary that they should call for any considerable additional proportion of their nominal capital, that the call could be responded to by the proprietary of some of them without great difficulty, if at all. They seem, also, speaking generally, to have been infinitely more anxious to increase their busi-

* In 1809, the duty on 11. notes was increased from 2d. to 4d., and may account for the great increase in this year, the notes bearing a 2d. stamp being no longer issuable.

ness, than to provide for that security which ought to be the paramount consideration. Hence, the inordinate multiplication of their branches, and hence, also, the extent to which many of them have carried the abusive and dangerous practice of *rediscounting*. Nearly four fifths of the joint stock banks issue notes; and the subjoined account shows that their issues, which amounted to 1,783,689*l.* on the 27th of September, 1834, amounted to 8,969,121*l.* on the 24th of September, 1836. This, no doubt, is an extraordinary increase, more especially when contrasted with the issues of the Bank of England, which were reduced more than a million during the same interval; and must have had a powerful effect in producing that redundancy of the currency, and drain upon the Bank for gold, that has recently taken place. We should, however, fall into the greatest imaginable error, if we measured the influence of the joint stock banks upon the currency by the mere amount of their notes in circulation. These really constitute but a very small portion of their obligations. Most of them have been in the habit of trading, not on their own capital, or on the deposits made with them; but on credit obtained in the metropolis and elsewhere. Instead of retaining the bills, and other securities they have discounted, in their coffers till they are paid, many banks have been in the habit of immediately forwarding them to London to be rediscounted at a lower rate of interest. This practice has been carried to an extent that would not readily be imagined by any one not pretty well acquainted with the circumstances. But, though recourse may properly enough be had to assistance of this sort on extraordinary occasions, no bank can be justly said to be established on sound, or to be conducted on safe, principles, that trusts habitually to such accommodation. It is always at the mercy of circumstances over which it has no control, and is not really more secure than a house of cards. While pecuniary accommodation may be had readily in the metropolis, the system goes on smoothly; but should prices begin to give way, or credit sustain any sort of shock, distrust takes the place of confidence, and the usual supplies are no longer to be had. The provincial banks being in consequence disabled from making their ordinary advances to their customers, the latter are necessarily involved in difficulties that are frequently as injurious to the banks as to themselves. Such has hitherto been the invariable result of the abuse of banking, or of the granting of undue facilities for the obtaining of credit; and, instead of being lessened by the formation of joint stock banks, they seem to have materially increased the chances of such disasters in future. The circumstances connected with the difficulties in which the Northern and Central Bank of England, and some of the other joint stock banks, have recently been involved, sufficiently illustrate what has now been stated; but they are too well known to our readers to require to be recapitulated here.

But there are other and, if possible, still more suspicious circumstances connected with the existing joint stock banking system. The shares in the greater number of the recently formed and projected banks are very small, few being above 50*l.*, while others are only 25*l.*, and some not more than 10*l.*, and even 5*l.*! Generally, too, it is understood, or rather it is distinctly set forth in the prospectus, that not more than 5, 10, or 20 per cent. of these shares is to be called for; so that an individual who has 10*s.* or 20*s.* to spare, may become a shareholder in a bank. And, owing to a practice, or rather a flagrant abuse, introduced into the management of various banks, by which they make large advances or discounts on the credit of the stock held by the shareholders, not a few individuals in doubtful, or even desperate, circumstances take shares in them in the view of obtaining loans and bolstering up their credit! The great danger arising from such banks is obvious; and where one of them to stop payment, it is plain, even though the claims on it should be ultimately made good, that they could be so only at the cost, and, perhaps, ruin of such of its proprietors as had abstained from the abusive practices resorted to by others. It may well, indeed, excite astonishment, that any one who can really afford to make a *bonâ fide* purchase of shares in a bank should be foolhardy enough to embark in such concerns.

Report of Committee of 1836.—A knowledge of the circumstances now stated, and of the sort of agency by which certain joint stock banks had been established*, having been pretty generally diffused, a secret committee was appointed by the House of Commons, in 1836, to inquire into the operation of the act 7 Geo. 4. cap. 46., permitting the establishment of joint stock banks; and whether it was expedient to make any alteration in its provisions. The report of this committee, and portions of the evidence taken before it, have since been published, and confirm all the conclusions of those who had contended that the existing system required material amendment. The committee state that,—

“Subject to the local restrictions imposed for the protection of the privilege of the Bank of England, it is open to any number of persons to form a company for joint stock banking, whether for the purpose of deposit, or of issue, or of both.

“1. The law imposes on the joint stock banks no preliminary obligation beyond the payment of a licence duty, and the registration of the names of shareholders at the Stamp Office.

“2. The law does not require that the deed of settlement shall be considered or revised by any competent authority whatever; and no precaution is taken to enforce the insertion in such deeds of clauses the most obvious and necessary.

* For instances of this, see *Edinburg Review*, No. 128. art. 6., and the account of the *Norwich Bank* in the evidence taken by the Secret Committee.

108 BANKS (ENGLISH PRIVATE AND PROVINCIAL).

"3. The law does not impose any restrictions upon the amount of nominal capital. This will be found to vary from 5,000,000*l.* to 100,000*l.*; and in one instance an unlimited power is reserved of issuing shares to any extent.

"4. The law does not impose any obligation that the whole or any certain amount of shares shall be subscribed for before banking operations commence. In many instances banks commence their business before one half of the shares are subscribed for, and 10,000, 20,000, and 30,000 shares are reserved to be issued at the discretion of the directors.

"5. The law does not enforce any rule with respect to the nominal amount of shares. These will be found to vary from 1,000*l.* to 5*l.* The effects of this variation are strongly stated in the evidence.

"6. The law does not enforce any rule with respect to the amount of capital paid up before the commencement of business. This will be found to vary from 100*l.* to 5*l.*

"7. The law does not provide for any publication of the liabilities and assets of these banks, nor does it enforce the communication of any balance-sheet to the proprietors at large.

"8. The law does not impose any restrictions by which care shall be taken that dividends are paid out of banking profits only, and that bad or doubtful debts are first written off.

"9. The law does not prohibit purchases, sales, and speculative traffic on the part of these companies in their own stock, nor advances to be made on the credit of their own shares.

"10. The law does not provide that the guarantee fund shall be kept apart and invested in government or other securities.

"11. The law does not limit the number of branches or the distance of such branches from the central bank.

"12. The law is not sufficiently stringent to insure to the public that the names registered at the Stamp Office are the names of persons *bona fide* proprietors, who have signed the deed of settlement, and who are responsible to the public.

"13. The provisions of the law appear inadequate, or, at least, are disregarded, so far as they impose upon banks the obligation of making their notes payable at the places of issue.

"All these separate questions appear to your committee deserving of the most serious consideration, with a view to the future stability of the banks throughout the United Kingdom, the maintenance of commercial credit, and the preservation of the currency in a sound state."

Remedial Measures that should be adopted.—We do not, however, think that it would be at all necessary, in providing for a secure system of joint stock banking, to make any regulations with respect to many of the points noticed by the committee as to which the law is silent. At present, every partner in a joint stock bank is liable to the public for the whole debts of the firm; and this may be truly said to be the cardinal principle of the system, and without which, it would be an unmixed evil. No individual should, however, by merely withdrawing from a joint stock concern, get rid of his liabilities in connection with it. To prevent fraud, and to insure due caution, these ought to continue for a period of three years at least after he has publicly withdrawn his name. The public, too, are clearly entitled to know the partners in joint stock associations, that is, to be informed who the individuals are with whom they are dealing, and who are responsible to them. But, unluckily, no effective means are taken for supplying the public with this necessary information, or, consequently, of properly discriminating between one establishment and another. The act of 1833 (3 & 4 Will. 4. c. 83.) directed that an account of the places where they carry on business, and of the names and residences of the partners, should be quarterly transmitted to the Stamp Office. But doubts have been entertained as to the correctness of these returns, and comparatively little use has been, or, indeed, can be, made of them. The accounts of the names and residences of the proprietors are not published; but are carefully secluded from the public eye in the repositories of Somerset House! It is true that these lists may be seen by those who choose to apply at the office, for a small fee, and that certified copies may be procured at no great expense. But few know that such returns exist; and fewer still have the opportunity, or think of availing themselves of them as sources of information. To render them of any real utility, they should be brought under the public eye, by being hung up in the offices of the banks to which they refer, and periodically published in the newspapers of the places where they carry on business. By this means the public would know exactly to whom they had to look, and would act accordingly. They would not be deceived, as they are liable to be at present, by supposing that, because a bank has a number of partners, some of them must be opulent and trustworthy. They would know the precise state of the fact; and if it were seen, from the quarterly returns, that opulent and intelligent individuals were withdrawing from any bank, every one would be put on his guard, and would naturally conclude that the parties had very sufficient reasons for quitting the concern. Thus far publicity may be made effectual, and would be of the very greatest importance. Neither is it possible to allege a single plausible objection to this proposal. It interferes in no degree, nor in any way, with the proceedings of the parties: all that it does is to declare who and what they are; and to this degree of publicity no honest man will ever object.

But we have great doubts whether it be possible to carry publicity farther than this. The committee state that "the law does not provide for any publication of the liabilities and assets of these banks, nor does it enforce the publication of any balance-sheet to the proprietors at large;" and it has been proposed to compel the periodical publication of a statement of this sort but it is very questionable whether any such publication would not be a great deal worse than useless. It is not proposed that commissioners should be appointed to inspect the accounts of the different banks, and to see that the returns are accurate: this would be too inquisitorial, too cumbrous, and too costly a plan to be thought of for a moment. There would be nothing for it, in fact, but to trust entirely to the *honour* of the parties! Hence, in all cases in which a disclosure would be really useful, the publication of an account of

assets and liabilities would afford the means of deceiving the public, and of representing a bankrupt concern as being in a prosperous condition. Supposing, however, that the parties were, in all instances, perfectly honest, still the publication of a balance-sheet would be good for nothing. Every one knows how sanguine people are in relation to their own affairs; and that debts and obligations that other parties would hardly reckon worth any thing, are estimated by them as if they were so much bullion. But, independently of this, the futility of the thing is obvious. A bank with a capital of 100,000*l.* discounts bills and other obligations to the extent, perhaps, of 300,000*l.* or 400,000*l.*; the fact that it has discounted them shows that it believes these bills and obligations to be good; and they will, consequently, be reckoned among its assets. But should a revulsion take place, or any circumstance occur to shake credit, these bills may not be worth 100,000*l.*; and those who have dealt with the bank, on the hypothesis of its having capital and assets more than enough to meet all its obligations, will find, to their cost, that it is not possessed of a single shilling, but is, on the contrary, some 300,000*l.* or 300,000*l.* worse than nothing!

The committee seem to think that some regulation should be enacted, providing that a certain portion of its capital should be paid up before a bank begins business. But we incline to think that the better way would be to prohibit all advertising of *nominal* capitals; and to enact that the capital actually paid up, whatever its amount, shall always be represented as, and held to be, the capital of the bank. But though such a regulation were made, there would be no security that the capital said to have been paid up had really been paid into the coffers of the bank, or that, if received, it had not again been lent out, in one way or another, to the partners. Perhaps it might be good policy to enact that no shares should be issued under a certain sum, as 50*l.*; and that no loans should be made to the partners on the credit of their stock. But we should not be inclined to lay much stress on the first regulation, and the latter might, and no doubt would, be defeated in a thousand ways.

We are decidedly hostile to a proposition we have heard mooted, and which seems to be countenanced by the committee, for obliging all banks to establish a guarantee fund; that is, for obliging them to accumulate a *portion of their profits* as a reserve stock. But where is the security that such reserve would be always deducted from profits? The truth is, that bankrupt and fraudulent concerns, and none else, would gain by such a regulation; inasmuch as it would enable them, by appearing to be prosperous, the better to deceive the public, and to blind them as to the real state of their affairs. It is, plainly, worse than absurd to depend on guarantees that cannot be enforced, and which, consequently, must be good for nothing. The knowledge of who the partners are in a bank, and their unlimited responsibility, are the only securities that, speaking generally, are good for any thing. If these cannot protect the public from fraud and loss, nothing else will; and the question will come to be, not whether the system should be reformed, but whether it ought to be entirely abolished.

We have already noticed the extraordinary multiplication of branch banks all over the country; and it is not very difficult to discover why banks of issue, at least, are so very anxious about the establishment of these outworks. They are bound, it seems, by the present law to pay their notes *only at the parent establishment*; so that, by issuing them at a branch bank, perhaps a hundred miles distant from the head bank, the chances are ten to one that they will continue for a much longer period in circulation, and that they will consequently be able to carry on business with a much less amount of capital, than if they were, as they ought to be, obliged to pay their notes at the branches as well as at the principal office. It is obvious, indeed, that the convertibility of the paper, even of first class banks, into either cash or Bank of England notes, is at present exceedingly imperfect; and that very great facilities are afforded for getting the worst class of notes into circulation, and for keeping them afloat, even after their quality may be suspected. This defect in the law ought, undoubtedly, to be amended, by obliging all banks that issue notes to pay them indifferently at any of their offices. But we incline to think that parliament might go further than this: and that it should enact that no branch be established, whether for the issue of notes, or otherwise, beyond a certain distance (say fifty miles) from the head office.

Several of the points recapitulated by the committee, as to which the law is silent, respect the rights and interests of the partners in joint stock banks, in relation to each other, and not as between them and the public. But it is always a very difficult matter to interfere to dictate the footing on which parties in any undertaking should stand among themselves. Much should, in such cases, be left to the judgment of the parties; and public regulations, if enforced at all, should only go to prevent obvious and acknowledged abuse; the parties may, in most cases, be safely left to take care of themselves. The protection of the public interest is the paramount consideration; and we do not well know what can be done to effect this, in the case, at least, of such banks as do not issue notes, other than the making known who their partners are.

Suppression of the Notes of Country Banks.—The Committee have, we are sorry to say, omitted all reference to what is by far the most prominent evil in our banking system—we

mean the power conceded to all private and joint stock banks and companies, whether with or without property or character, to issue paper money or notes payable on demand, without let or hindrance of any sort. We have elsewhere endeavoured to show (*Dictionary*, p. 72.) that parties issuing notes ought, in all cases, to be obliged to give security for their issues: but further experience and reflection have satisfied us that this, though a vast improvement on the existing system, would not be enough, and that nothing will suffice short of the abolition of all private notes. Till this be done, or till the sole power of issuing paper money be committed to the Bank of England, or to some one body, the country will necessarily be exposed to those perpetually recurring fluctuations in the quantity and value of money that are productive of the most pernicious consequences, and which go far, indeed, to impart to all industrious undertakings a sort of gambling character. At present, the currency is supplied by hundreds of individuals and bodies, all actuated by different and frequently conflicting views and interests. The issues of the Bank of England are wholly governed, as those of the empire ought to be, by the state of the exchange, or rather by the *influx and efflux of bullion*—increasing when it flows into, and decreasing when it flows out of the country. But the issues of the provincial banks are not regulated by any such standard, but exclusively by the state of credit and prices in the district in which they happen to be situated. If their managers suppose that these are good or improving, they rarely hesitate about making additional issues. Hence, when the state of the exchange, and the demand on the Bank of England for bullion, shows that the currency is redundant, and ought to be contracted, the efforts of the Bank to effect its diminution are often impeded, and met by a contrary action on the part of the country banks. This, in fact, has been very remarkably the case during the last few months. The excessive multiplication of joint stock banks, the great additions they made to the amount of notes afloat, and the still greater addition they made to the number of bills, checks, and other substitutes for money, occasioned a redundancy of the currency, a fall of the exchange, and a drain upon the Bank for gold. But while the Bank of England was narrowing her issues by supplying the exporters of bullion with gold in exchange for notes, the country banks went on increasing their issues! What the former did, by contracting, on the one hand, the latter more than undid, by letting out on the other. The vacuum created by the withdrawal of Bank of England paper was immediately filled up, and made to overflow, by the issue of a more than equal amount of provincial paper; so that had it not been for the rise in the rate of interest, and the other repressive measures adopted by the Bank, the probability is, that she might have gone on paying away bullion for notes, till she was drained of her last sixpence, without, in any degree, affecting the exchange! But this is not all. Not only do the country banks almost universally increase their issues when they ought to be diminished, but the moment they are compelled to set about their reduction they run headlong into the opposite extreme. The cry of *saute qui peut* then becomes all but universal; and, provided they succeed in securing themselves, little attention is usually paid to the interests of those they have taught to look to them for help.

Were the Bank of England the sole issuer of notes, she would be able to regulate the currency without the least difficulty, and without pressing more upon London than upon any other part of the country. If from any circumstances the currency became redundant, and there were a drain upon the Bank for gold, then, as there would be no other description of paper to come into the place of that brought to the Bank to be exchanged for gold, the currency would be in so far contracted, and the drain checked, without the reduction being carried beyond the required limit. But at present the efforts of the Bank, or rather of the public, who carry notes to her for payment, to effect a contraction of the currency, are, in the first instance, invariably counteracted by the country banks; and when the latter, in consequence of the increasing difficulty of obtaining pecuniary accommodation in London are, in the end, obliged to pull up, the chances are ten to one that the contraction is carried to an improper extent. A revulsion of this sort seldom occurs without destroying some of the provincial banks; and the alarm, or it may be, panic, that is in consequence apt to be produced, may be very injurious to the best established and best managed banks, and even to the Bank of England herself. In fact, we have no idea that it will be possible for the latter and the country banks to go on together on their present footing. As matters now stand, the Bank of England may be brought at any time into the greatest jeopardy by the proceedings of parties over whom she has no sort of control. The over issue of the provincial banks, by depressing the exchange, drains the Bank of gold; and then their discredit, and, perhaps, failure, may, by exciting a panic, bring her to a stand still! Provided banks of deposit be established on sound principles, there cannot be too many of them. But it is quite otherwise with banks of issue. The more they are multiplied the greater is the chance of fluctuation in their issues, and consequently in prices, credit, and so forth. Had the Bank of England been the sole issuer of paper, the crash of 1825-26, and the difficulties of the past year, never would have been heard of. They grew entirely out of the competition and proceedings of the provincial banks, and are in no degree whatever ascribable to any thing else, domestic or foreign.

BANKS (ENGLISH PRIVATE AND PROVINCIAL). 111

Private Banks.—It may be thought, perhaps, that the unprecedented increase in the number of joint stock banks will have been productive of a corresponding decline in the number of private banks, or of those having six partners or under; but such has not been the case. The latter, no doubt, have decreased, some having been abandoned, while others have been converted into joint stock banks, but not to the extent that might have been anticipated. In 1833, 598 licences were granted to private banks; in 1834, 590; in 1835, 579; and in the present year (1836), down to the 18th of June, 559 licences had been granted. The issues of the private banks are seen in the table below.

1 Official Return of all Places where United or Joint Stock Banks have been established under the Act 7 Geo. 4. c. 46.; with the Dates when such Banks respectively were established, and the Number of Partners therein, down to the 30th of November, 1836. Subjoined is the paid up Capital of certain Banks, according to the Returns rendered to the Secret Committee of 1836.

Sup.)

IV. BANKS (SCOTCH).

The act of 1708, preventing more than 6 individuals from entering into a partnership for carrying on the business of banking, did not extend to Scotland. In consequence of this exemption, several banking companies, with numerous bodies of partners, have always existed in that part of the empire.

Bank of Scotland.—This institution was projected by Mr. John Holland, merchant of London, and was established by act of the Scotch parliament (Will. 3. Parl. 1. § 5.) in 1695, by the name of the Governor and Company of the Bank of Scotland. Its original capital was 1,200,000*l.* Scotch, or 100,000*l.* sterling, distributed in shares of 1,000*l.* Scotch, or 83*l.* 6*s.* 8*d.* sterling, each. The act exempted the capital of the bank from all public burdens; and gave it the exclusive privilege of banking in Scotland for 21 years. The objects for which the bank was instituted, and its mode of management, were intended to be, and have been, in most respects, similar to those of the Bank of England. The responsibility of the shareholders is limited to the amount of their shares.

The capital of the bank was increased to 300,000*l.* in 1744; and was enlarged by subsequent acts of parliament, the last of which (44 Geo. 3. c. 23.) was passed in 1804, to 1,500,000*l.* its present amount. Of this sum, 1,000,000*l.* has been paid up. The last mentioned act directed that all sums relating to the affairs of the bank should henceforth be rated in sterling money, that the former mode of dividing bank stock by shares should be discontinued, and that, for the future, it should be transferred in any sums or parcels. On the union of the two kingdoms in 1707, the Bank of Scotland undertook the recoinage, and effected the exchange of the currency in Scotland: it was also the organ of government, in the issue of the new silver coinage in 1817.

* The Bank stopped payment in November, 1836.

The bank of Scotland is the only Scotch bank constituted by act of parliament. It began to establish branches in 1696; and issued notes for £1. so early as 1704. The bank also began, at a very early period, to receive deposits on interest, and to grant credit on cash accounts; a minute of the directors with respect to the mode of keeping the latter, being dated so far back as 1729. It is, therefore, entitled to the credit of having introduced and established the distinctive principles of the Scotch banking system, which, whatever may be its defects, is probably superior to every other system hitherto established. Generally speaking, the Bank of Scotland has always been conducted on sound and liberal principles; nor can there be a doubt that it has been productive, both directly and as an example to other banking establishments, of much public utility and advantage.

It may be worth mentioning, that the act of Will. 3., establishing the Bank of Scotland, declared that all foreigners who became partners in the bank, should, by doing so, become, to all intents and purposes, naturalised Scotchmen. After being for a long time forgotten, this clause was taken advantage of in 1818, when several aliens acquired property in the bank in order to secure the benefit of naturalisation. But after being suspended, the privilege was finally cancelled in 1822.

We subjoin an *official* abstract of the constitution and objects of the Bank of Scotland, printed for the use of the proprietors in 1816;—the terms and mode of transacting business are, of course, sometimes altered, according to circumstances.

I. The Bank of Scotland is a public national establishment; erected and regulated by the legislature alone; and expressly as a public Bank in this kingdom; for the benefit of the nation, and for the advancement of agriculture, commerce and manufactures; and for other objects of public policy.—(Will. Parl. 1. § 5; 14 Geo. 3. c. 32; 34 Geo. 3. c. 8; 32 Geo. 3. c. 25; 34 Geo. 3. c. 19; 44 Geo. 3. c. 23.)

II. The statutory capital is at present 1,500,000*l.* sterling. It is raised by voluntary subscription; and has been subscribed for. 1,000,000*l.* has been called for, and paid in.—(44 Geo. 3. c. 23.)

III. Subscribers, if not under obligation to the Bank, may, at pleasure, transfer their right. If under obligation to the Bank, the obligation must be previously liquidated; or, the proceeds of the sale, at a price to the satisfaction of the directors, must be applied towards such liquidation. Transfers are made by a short assignment and acceptance thereof, both in a register appointed for that purpose. The expense, beside the government stamp, is 1*l.*—(Will. Parl. 1. § 5.)

IV. Bank of Scotland stock may be acquired, in any portions, by any person, community, or other lawful party whatsoever; without selection, exclusion, or limitation of numbers.—(Will. Parl. 1. § 5; 44 Geo. 3. c. 23.)

V. Bank of Scotland stock may be conveyed by latter will, and, if specially mentioned, without expense of confirmation. It cannot be arrested: the holder's right may be adjudged. Dividends may be arrested.—(Will. Parl. 1. § 5.)

VI. The Bank of Scotland is a public corporation by act of parliament. The Bank's transactions are distinct from those of the stockholders; and theirs from those of the Bank.—(Will. Parl. 1. § 5.)

VII. The establishment is expressly debarred from any other business than that of banking.—(Will. Parl. 1. § 5.)

VIII. The management is vested, by statute, in a governor, deputy governor, twelve ordinary, and twelve extraordinary directors. They are chosen annually, on the last Tuesday of March, by the stockholders having 250*l.* of stock or upwards. Those above 250*l.* have a vote for every 250*l.*; to 5,000*l.* or 20 votes. No person can have more than 20 votes. The governor must hold, at least, 2,000*l.* of stock; the deputy governor 1,500*l.*; and each director 750*l.* They swear to be equal to all persons; and cannot hold any inferior office in the Bank.—(Will. Parl. 1. § 5; 14 Geo. 3. c. 32; 44 Geo. 3. c. 23.)

IX. The executive part is conducted by a treasurer, secretary, and other public officers, all sworn. Those having the official charge of cash find due security.—(Will. Parl. 1. § 5.)

X. The Board of directors sits for the general administration of the Bank, at the Bank's Public Head Office in Edinburgh. The local business of that district is also conducted at that office. For the local business in the other parts of the kingdom, the Bank has its regular public offices in the principal towns. At each of these offices there is the Bank agent or cashier, who gives due security, and conducts the Bank's business for that district, in the manner after mentioned. There is also the Bank's accountant for that office; who is appointed by the directors.—(Will. Parl. 1. § 5.)

XI. The Bank takes in money, at all its public offices, on deposit receipts or promissory notes, or on current deposit account.* At the Head Office, draughts on London, or on any of the agencies, are given; at each agency, draughts on London, or on the Head Office, are given. All these documents are on the Bank's check (and sealed with the Bank's seal†). They bear, in words, to be "For the Bank of Scotland;" or, "For the Governor and Company of the Bank of Scotland." These documents are signed, if at Edinburgh, by the treasurer, and countersigned by the principal accountant: if at an agency, they must be signed by the Bank's agent, as agent, and countersigned by the Bank's accountant for that agency; otherwise they infer no obligation on the Bank.—(Resolution of Court, 28th Feb. 1793.)

XII. Bills on London, Edinburgh, or any town where the Bank has its official correspondents, are discounted and purchased at all the Bank's public offices. The Bank's agents judge, in ordinary cases, of the bills presented; so that parties meet with no delay. The Bank does not sell, at any of its offices, the bills which it has discounted and purchased. Its agents cannot indorse its bills, unless officially to the treasurer.—(Resolution of Court, 23d Feb. 1799.)

XIII. Government stock and other public funds, transferable in London, may be purchased or sold, and dividends thereon may be received, through the Bank.

XIV. The Bank gives credit on cash accounts at any of its offices, on bond, with security. The security may be personal co-obligants, conjunctly and severally; or Bank of Scotland stock; or both; or such other security as may be specially agreed on. Applications for cash accounts are given in to the office where the cash account is wanted, and must specify the credit desired, and the security proposed; and the individual partners, where copartnerships are proposed. Cash accounts are granted by

* The Bank has always allowed interest on deposits. The rate allowed varies, of course, with the variations in the market rate. During the greater part of the late war it was as high as 4 per cent.; but at present it is only 3 per cent.

† The seal is now dispensed with, except on the Bank's notes.

the directors only; and are not recalled unless by their special authority. It is understood that these credits are not used as dead loans, to produce interest only. In the fair course of business, the advantage of the Bank is consulted by an active circulation of its notes, and by frequent repayments to it in a way least affecting that circulation.—(*Resolution of Court*, 6th Nov. 1729, and 23d Feb. 1789.)

XV. The Bank's dividend of profits has for some time been $9\frac{1}{2}$ per cent. per annum (at present, 1833, it is 6 per cent.) on that part of its capital stock, or 1,000,000*l.* sterling, paid in. The dividends are paid regularly twice a year, without expense. They may be drawn either at the Bank's Head Office, or at any of its other offices, as most agreeable to the stockholder.

By order of the Court of Directors.
6th Nov. 1818.

Most of the other Scotch banks are conducted on the same principles and in the same way as the Bank of Scotland, so that the details as to its management will nearly apply to them all.

The *Royal Bank of Scotland* was established in 1727. Its original capital was 151,000*l.* At present it amounts to 2,000,000*l.*

The *British Linen Company* was incorporated in 1746, for the purpose, as its name implies, of undertaking the manufacture of linen. But the views in which it originated were speedily abandoned; and it became a banking company only. Its capital amounts to 500,000*l.*

None of the other banking companies established in Scotland are chartered associations, with limited responsibility; the partners being jointly and individually liable, to the whole extent of their fortunes, for the debts of the firms. Some of them, such as the National Bank, the Commercial Banking Company, the Dundee Commercial Bank, the Perth Banking Company, &c., have very numerous bodies of partners. Their affairs are uniformly conducted by a Board of directors, annually chosen by the shareholders.

The Bank of Scotland began, as already stated, to issue *l.* notes so early as 1704; and their issue has since been continued without interruption. "In Scotland," to 'use the statement given in the Report of the Committee of the House of Commons of 1826, on the Promissory Notes of Scotland and Ireland, "the issue of promissory notes payable to the bearer on demand, for a sum not less than 20*s.* has been at all times permitted by law; nor has any act been passed, limiting the period for which such issue shall continue legal in that country. In England, the issue of promissory notes for a less sum than 5*l.* was prohibited by law from the year 1777 to the period of the Bank Restriction in 1797. It has been permitted since 1797; and the permission will cease, as the law at present stands, in April, 1829."

There have been comparatively few bankruptcies among the Scotch banks. In 1793 and 1825, when so many of the English provincial banks were swept off, there was not a single establishment in Scotland that gave way. This superior stability seems to be ascribable partly to the formation of so many banks with numerous bodies of partners, which tends to prevent any company with only a few partners, unless they are known to possess considerable fortunes, from getting paper into circulation; partly to the less risk attending the business of banking in Scotland; and partly to the facility afforded by the law of Scotland of attaching a debtor's property, whether it consists of land or moveables, and making it available to the payment of his debts.

In the Report already quoted, the last-mentioned topic is touched upon as follows:—"The general provisions of the law of Scotland bearing upon this subject are calculated to promote the solidity of banking establishments, by affording to the creditor great facilities of ascertaining the pecuniary circumstances of individual partners, and by making the private fortunes of those partners available for the discharge of the obligations of the bank with which they are connected. There is no limitation upon the number of partners of which a banking company in Scotland may consist; and, excepting in case of the Bank of Scotland and the two chartered banks, which have very considerable capitals, the partners of all banking companies are bound jointly and severally, so that each partner is liable, to the whole extent of his fortune, for the whole debts of the company. A creditor in Scotland is empowered to attach the real and heritable, as well as the personal estate of his debtor, for payment of personal debts, among which may be classed debts due by bills and promissory notes; and recourse may be had, for the purpose of procuring payment, to each description of property at the same time. Execution is not confined to the real property of a debtor merely during his life, but proceeds with equal effect upon that property after his decease.

"The law relating to the establishment of records gives ready means of procuring information with respect to the real and heritable estate of which any person in Scotland may be possessed. No purchase of an estate in that country is secure until the *seisine* (that is, the instrument certifying that actual delivery has been given) is put on record, nor is any mortgage effectual until the deed is in like manner recorded.

"In the case of conflicting pecuniary claims upon real property, the preference is not regulated by the date of the transaction, but by the date of its record. These records are accessible to all persons; and thus the public can with ease ascertain the effective means which a banking company possesses of discharging its obligations; and the partners in that company are enabled to determine, with tolerable accuracy, the degree of risk and responsibility to which the private property of each is exposed."

Deposits.—As was previously observed, all the Scotch banks receive deposits of so low a value as 10*l.*, and sometimes lower, and allow interest upon them.

"The interest," say the committee, "allowed by the Bank upon deposits varies from time to time according to the current rate of interest which money generally bears. At present (1826) the interest allowed upon deposits is 4 per cent." (At this moment (1833) the interest allowed on deposits is only 2 or 2½ per cent.) "It has been calculated that the aggregate amount of the sums deposited with the Scotch banks amounts to about 20,000,000*l.* or 21,000,000*l.*" (It is believed to be now, (1833,) little if any thing under 24,000,000*l.*) "The precise accuracy of such an estimate cannot of course be relied on. The witness by whom it was made thought that the amount of deposits could not be less than 16,000,000*l.*, nor exceed 25,000,000*l.*, and took an intermediate sum as the *probable amount*. Another witness, who had been connected for many years with different banks in Scotland, and has had experience of their concerns at Stirling, Edinburgh, Perth, Aberdeen, and Glasgow, stated that *more than one half of the deposits in the banks with which he had been connected were in sums from ten pounds to two hundred pounds*. Being asked what class of the community it is that makes the small deposits, he gave the following answer, from which it appears that the mode of conducting this branch of the banking business in Scotland has long given to that country many of the benefits derivable from the establishment of savings banks.

"*Question.* What class of the community is it that makes the smallest deposits?—*Answer.* They are generally the labouring classes, in towns like Glasgow: in country places, like Perth and Aberdeen, it is from servants and fishermen, and that class of the community, who save small sums from their earnings, till they come to be a bank deposit. There is now a facility for their placing money in the Provident Banks, which receive money till the deposit amounts to 10*l.* When it comes to 10*l.*, it is equal to the minimum of a bank deposit. The system of banking in Scotland is an extension of the Provident Bank system. Half-yearly or yearly those depositors come to the bank, and add the savings of their labour, with the interest that has accrued upon the deposits from the previous half year or year, to the principal; and in this way it goes on without being at all reduced, accumulating (at compound interest) till the depositor is able either to buy or build a house, when it comes to be 100*l.*, or 200*l.*, or 300*l.*, or till he is able to commence business as a master in the line in which he has hitherto been a servant. A great part of the depositors of the bank are of that description, and a great part of the most thriving of our farmers and manufacturers have arisen from such beginnings."

Cash Accounts or Credits.—The loans or advances made by the Scotch banks are either in the shape of discounts, or upon cash credits, or, as they are more commonly termed, *cash accounts*.

This species of account does not differ in principle from an over-drawing account at a private banker's in England. A cash credit is a credit given to an individual by a banking company for a limited sum, seldom under 100*l.* or 200*l.*, upon his own security, and that of two or three individuals approved by the bank, who become sureties for its payment. The individual who has obtained such a credit is enabled to draw the whole sum, or any part of it, when he pleases; replacing it, or portions of it, according as he finds it convenient; interest being charged upon such part only as he draws out. "If a man borrows 5,000*l.* from a private hand, besides that it is not always to be found when required, he pays interest for it whether he be using it or not. His bank credit costs him nothing, except during the moment it is of service to him; and this circumstance is of equal advantage as if he had borrowed money at a much lower rate of interest."—(*Hume's Essay on the Balance of Trade*.) This, then, is plainly one of the most commodious forms in which advances can be made. Cash credits are not, however, intended to be a *dead loan*; the main object of the banks in granting them is to get their notes circulated, and they do not grant them except to persons in business, or to those who are frequently drawing out and paying in money.

The system of cash credits has been very well described in the Report of the Lords' Committee of 1826, on Scotch and Irish Banking. "There is also," say their lordships, "one part of their system, which is stated by all the witnesses (and, in the opinion of the committee, very justly stated) to have had the best effects upon the people of Scotland, and particularly upon the middling and poorer classes of society, in producing and encouraging habits of frugality and industry. The practice referred to is that of cash credits. Any person who applies to a bank for a cash credit, is called upon to produce two or more competent sureties, who are jointly bound; and after a full inquiry into the character of the applicant, the nature of his business, and the sufficiency of his securities, he is allowed to open a credit, and to draw upon the bank for the whole of its amount, or for such part as his daily transactions may require. To the credit of the account he pays in such sums as he may not have occasion to use, and interest is charged or credited upon the daily balance, as the case may be. From the facility which these cash credits give to all the small transactions of the country, and from the opportunities which they afford to persons, who begin business with little or no capital but their character, to employ profitably the minutest products of their

industry, it cannot be doubted that the most important advantages are derived to the whole community. The advantage to the banks who give these cash credits arises from the call which they continually produce for the issue of their paper, and from the opportunity which they afford for the profitable employment of part of their deposits. The banks are indeed so sensible, that in order to make this part of their business advantageous and secure, it is necessary that their cash credits should (as they express it) be frequently operated upon, that they refuse to continue them unless this implied condition be fulfilled. The total amount of their cash credits is stated by one witness to be 5,000,000*l.* of which the average amount advanced by the banks may be one third."

The expense of a bond for a cash credit of 500*l.* is 4*l.* stamp duty, and a charge of from 5*s.* to 10*s.* 6*d.* per cent. for filling it up.

Circulation, &c.—According to a demi-official return given in the Commons' Report already referred to, the total number of notes in circulation in Scotland, in the early part of 1826, amounted to 3,309,063; of which 2,079,344 were under 5*l.* and 1,229,838, 5*l.* and upwards.

The Scotch banks draw on London at 20 days' date. This is denominated the par of exchange between London and Edinburgh.

Most of the great Scotch banks, such as the Bank of Scotland, the Royal Bank, &c., have established branches in other towns besides that where the head office is kept.

By the act 9 Geo. 4. c. 65, to restrain the negotiation in England of Scotch or Irish promissory notes and bills under 5*l.*, it is enacted, that if any body politic or corporate, or person, shall, after the 8th of April, 1829, publish, utter, negotiate, or transfer, in any part of England, any promissory or other note, draft, engagement, or undertaking, payable on demand to the bearer, for any sum less than 5*l.*, purporting to have been made or issued in Scotland or Ireland, every such body politic or corporate, or person, shall forfeit for every such offence not more than 30*l.* nor less than 5*l.*

Nothing contained in this act applies to any draft or order drawn by any person on his or her banker, or on any person acting as such banker, for the payment of money held by such banker or person for the use of the person by whom such draft or order shall be drawn.

No. 1.—The following Table contains an Account of the Number of Banks in Scotland; the Names of the Firms or Banks; Dates of their Establishment; Places of the Head Offices; Number of Branches; Number of Partners; and the Names of their London Agents.—(Extracted principally from the Appendix, p. 19, to the Commons' Report of 1826, on Scotch and Irish Banking.)

V BANKS (IRISH).

"In no country, perhaps," says Sir Henry Parnell, "has the issuing of paper money been carried to such an injurious excess as in Ireland. A national bank was established in 1783, with similar privileges to those of the Bank of England, in respect to the restriction of more than 6 partners in a bank; and the injury that Ireland has sustained from the repeated failure of banks may be mainly attributed to this defective regulation. Had the trade of banking been left as free in Ireland as it is in Scotland, the want of paper money that would have arisen with the progress of trade would, in all probability, have been supplied by joint stock companies, supported with large capitals, and governed by wise and effectual rules.

"In 1797, when the Bank of England suspended its payments, the same privilege was extended to Ireland; and after this period the issues of the Bank of Ireland were rapidly increased. In 1797, the amount of the notes of the Bank of Ireland in circulation was 621,917*l.*; in 1810, 2,266,471*l.*; and in 1814, 2,986,999*l.*

"These increased issues led to corresponding increased issues by the private banks, of which the number was 56 in the year 1804. The consequence of this increase of paper was a great depreciation of it; the price of bullion and guineas rose to 10 per cent. above the mint price; and the exchange with London became as high as 18 per cent., the par being 8*½*. This unfavourable exchange was afterwards corrected; not by any reduction in the issues of the Bank of Ireland, but by the depreciation of the British currency in the year 1810, when the exchange between London and Dublin settled again at about par.

"The loss that Ireland has sustained by the failure of banks may be described in a few words. It appears by the Report of the Committee on Irish Exchanges in 1804, that there were at that time in Ireland 50 registered banks. Since that year, a great many more have been established; but the *whole have failed*, one after the other, involving the country from time to time in immense distress, with the following exceptions:—first, a few that withdrew from business; secondly, four banks in Dublin; thirdly, three at Belfast; and lastly, one at Malinow. These eight banks, with the new Provincial Bank, and the Bank of Ireland, are the only banks now existing in Ireland.

"In 1821, in consequence of 11 banks having failed nearly at the same time in the preceding year, in the South of Ireland, government succeeded in making an arrangement with the Bank of Ireland, by which joint stock companies were allowed to be established at a distance of 50 miles (Irish) from Dublin, and the bank was permitted to increase its capital 500,000*l.* The act of 1 & 2 Geo. 4. c. 72. was founded on this agreement.

"But ministers having omitted to repeal in this act various restrictions on the trade of banking that had been imposed by 33 Geo. 2. c. 14., no new company was formed. In 1824, a party of merchants of Belfast, wishing to establish a joint stock company, petitioned parliament for the repeal of this act of Geo. 2.; and an act was accordingly passed in that session, repealing some of the most objectionable restrictions of it (the 5 Geo. 4. c. 73.).

"In consequence of this act, the Northern Bank of Belfast was converted into a joint stock company, with a capital of 500,000*l.*, and commenced business on the 1st of January, 1825. But the remaining restrictions of 33 Geo. 2., and certain provisions contained in the

new acts of 1 & 2 Geo. 3. and 5 Geo. 4., obstructed the progress of this company, and they found it necessary to apply to government to remove them; and a bill was accordingly introduced, which would have repealed all the obnoxious clauses of the 33 Geo. 2., had it not been so altered in the committee as to leave several of them in force. In 1825, the Provincial Bank of Ireland commenced business with a capital of 2,000,000*l.*; and the Bank of Ireland has of late established branches in all the principal towns in Ireland.

"The losses that have been sustained in Ireland by abusing the power of issuing paper have been so great, that much more is necessary to be done, by way of protecting the public from future loss, than the measure proposed last session (1826) by ministers, of abolishing small notes; and the measure already adopted, of allowing joint stock companies to be established in the interior of the country. As the main source of the evil consists in the interference of the law in creating a national bank with exclusive privileges, the first step that ought to be taken for introducing a good system into Ireland is the getting rid of such a bank, and opening the trade of banking in Dublin. The next measure should be the requiring of each bank to give security for the amount of paper that is issued; for after the experience of the ignorance with which the Irish banks have conducted their business, and the derangement of the natural course of the trade by the long existence of the bank of Ireland, it would be unwise to calculate upon a sound system of banking speedily supplanting that which has been established.

"Under the circumstances in which Ireland is placed, nothing would so much contribute to her rapid improvement in wealth, as the introducing of the Scotch plan of cash credits, and of paying interest on deposits. By cash credits, the capital which now exists would be rendered more efficient, and the paying of interest on small deposits would lead to habits of economy, and to the more rapid accumulation of new capital.

"The charter of the Bank of Ireland has still to run till the year 1838."—(*Observations on Paper Money, &c. by Sir Henry Parnell, pp. 171—177.*)

The capital of the Bank of Ireland at its establishment in 1783 amounted to 600,000*l.*; but it has been increased at various periods; and has, since 1831, amounted to 3,000,000*l.* At present, no bank having more than 6 partners can be established any where within 50 Irish miles of Dublin; nor is any such bank allowed to draw bills upon Dublin for less than 50*l.*, or at a shorter date than 6 months. This enactment seems to amount to a virtual prohibition of the drawing of such bills. The Bank of Ireland draws on London at 20 days' date. She neither grants cash credits, nor allows any interest on deposits. She discounts at the rate of 5*l.* per cent.

In 1828, the currency of Ireland was assimilated to that of Great Britain. Previously to that period, the currency of the former was 8½ per cent. less valuable than that of the latter.

(Commons Report of 1826, p. 28.)

There is no later account of the circulation of the Bank of Ireland, or of the other Irish banks. The entire paper circulation of Ireland may now, probably, amount to between 7,000,000*l.* and 8,000,000*l.* sterling.

(Return of the Amount of the Notes of the Bank of Ireland (including Bank Post Bills) in Circulation at the undermentioned Periods.—(*Parl. Paper*, No. 435. Sess. 1834.)

July 4. -	3,790,653	7	7				

(*Sup.*)

It appears from the statements given in the Report of the Commons' Committee of 1826, that the average value of the notes and post bills of the Bank of Ireland of 5*l.* and upwards in circulation, during the five years ending with 1825, amounted to 3,646,660*l.* Irish currency; and that the average value of the notes and post bills under 5*l.* in circulation during the same period amounted to 1,643,828*l.* Irish currency. The average value of the notes of all descriptions issued by the other banking establishments in Ireland, in 1825, amounted to 1,192,886*l.*

Provincial Bank of Ireland.—This important establishment was, as already stated, founded in 1825. Its subscribed capital consists of 2,000,000*l.* divided into 20,000 shares of 100*l.* each, of which 25 per cent, or 500,000*l.*, has been paid up. Its head office is in London; and at present it has subordinate offices in Cork, Limerick, Clonmel, Londonderry, Sligo, Wexford, Waterford, Belfast, Galway, Armagh, Athlone, Coleraine, Kilkenny, Ballina, Tralee, Youghall, Enniskillen, Monaghan, Banbridge, and Ballymena. The last 5 have been opened since 1831. The entire management of the establishment is vested in the court of directors in London. The business of the branch banks is conducted, under the control of the head office, by the managers, with the advice and assistance of 2 or more gentlemen of respectability in the district, each holding 10 shares in the bank. The business consists of discounting bills; granting cash credits, after the manner of the Scotch banks; receiving deposits, on which interests, varying according to circumstances, is allowed; in drawing and giving letters of credit on other places of Ireland, Great Britain, &c.; and of other details incident to banking. It has had several pretty severe runs to sustain. In the course of a single week, in October, 1828, about 1,000,000*l.* in gold was sent from England to Ireland on account of the Provincial Bank! This prompt and ample supply effectually maintained the credit of the establishment, and did much to restore confidence.

The notes of the Provincial Bank have always been payable at the places where they are issued. The Bank of Ireland began to establish branches in 1825; but the notes issued by her branches were not, at first, payable except at the head office in Dublin. This distinction, which tended to throw the principal pressure of runs in the country on the Provincial Bank, and other private companies, was abolished by the act 9 Geo. 4. c. 81., which made it obligatory on *all* banks to pay their notes at the place of issue. Notes of the Provincial Bank are received by the Treasury in payment of taxes, in the same way as those of the Bank of Ireland; and it is the bank of government for the excise, post-office, and stamp revenues for those parts of the country beyond the exclusive privileges of the Bank of Ireland. The dividends have been at the rate of 4, 5, and, since the 25th of December, 1832, of 6 per cent. per annum. Its stock is now at a high premium, the 25*l.* paid up shares fetching 35*l.* or 36*l.*

Northern Banking Company.—This establishment has its head office in Belfast, and its branches are distributed throughout Ulster. Its capital and operations are on a much less extensive scale than those of the Provincial Bank, but in other respects they are conducted nearly in the same way.

There are very few private banking establishments at present existing in Ireland, at least compared with those in this country.

VI. BANKS (FOREIGN).

To attempt giving any detailed account of the principal foreign banks would very far exceed our limits; we shall, therefore, only notice a few of the more celebrated.

The *Bank of Venice* seems to have been the first banking establishment in Europe. It was founded so early as 1171, and subsisted till the subversion of the republic in 1797. It was essentially a deposit bank; and its bills bore at all times a premium or *agio* over the current money of the city.

The *Bank of Amsterdam* was established in 1659. It was a deposit bank; and payments were made by writing off sums from the account of one individual to those of another. According to the principles on which the bank was established, it should have had at all times in its coffers bullion equal to the full amount of the claims upon it. But the directors privately lent about 10,500,000 florins to the states of Holland and Friesland. This circumstance transpired when the French invaded Holland, and caused the ruin of the bank.—(See my edition of the *Wealth of Nations*, vol. ii. p. 333.)

The *Bank of the Netherlands* was established in 1814. It is formed on the model of the Bank of England; and was to enjoy for 25 years the exclusive privilege of issuing notes. The original capital of 5,000,000 florins was doubled in 1819. The king holds *one tenth* of

the shares. The affairs of the bank are managed by a president, secretary, and 5 directors who are chosen every 6 months, but may be indefinitely re-elected. This bank discounts bills of exchange with three responsible signatures; it takes continuations on stock, and sometimes lends on bullion at such a rate of interest and to such an extent as may be agreed upon. It occasionally, also, makes loans on merchandise, but never at less than 5 per cent. Its notes vary from 1,000 florins to 25 florins, that is, from 83½ to 2½. The dividends have varied from 3 to 7 per cent. The shares are each 1,000 florins, and are at present worth 25 per cent. premium ex-dividend. The responsibility of the shareholders is limited to the amount of their stock.—(*Consul's Answer to Circular Queries.*)

The *Bank of Hamburg* is a deposit bank, and its affairs are managed according to a system that insures the fullest publicity. It receives no deposits in coin, but only in bullion of a certain degree of fineness. It charges itself with the bullion at the rate of 442 schillings the mark, and issues it at a rate of 444 schillings; being a charge of ½th, or nearly ½ per cent. for its retention. It advances money on jewels to ½th of their value. The city is answerable for all pledges deposited with the bank; they may be sold by auction, if they remain 1 year and 6 weeks without any interest being paid. If the value be not claimed within 3 years, it is forfeited to the poor. The Bank of Hamburg is universally admitted to be one of the best managed in Europe.

The *Bank of France* was founded in 1803. The exclusive privilege of issuing notes payable to bearer was granted to it for 40 years. The capital of the bank consisted at first of 45,000,000 fr., but it was subsequently increased to 90,000,000 fr., divided into 90,000 shares or *actions* of 1,000 fr. each. Of these shares, 67,000 are in the hands of the public; 23,100, being purchased up by the bank, form part of her capital. The notes issued by the bank are for 1,000 and 500 fr. The dividend varies from 4 to 5 per cent.; and there is, besides, a *reserve* retained from the profits, which is vested in the 5 per cents. A bonus of 200 fr. a share was paid out of this reserve to the shareholders in 1820. The reserve in possession of the bank in 1823, amounted to 6,623,000 fr. No bills are discounted that have more than 3 months to run. The customary rate of discount is 4 per cent., but it varies according to circumstances. The discounts in 1827 amounted to 621,000,000 fr. The bank is obliged to open a *compte courant* for every one who requires it; and performs services for those who have such accounts, similar to those rendered by the private banks of London to their customers. She is not allowed to charge any commission upon current accounts, so that her only remuneration arises out of the use of the money placed in her hands by the individuals whose payments she makes. This branch of the business is said not to be profitable. There are about 1,600 accounts current at the bank; and of the entire expenses of the establishment, amounting to about 900,000 fr. a year, *two thirds* are said to be incurred in this department. The bank advances money on pledges of different kinds, such as foreign coin or bullion, government or other securities, &c. It also undertakes the care of valuable articles, as plate, jewels, bills, title-deeds, &c. The charge is ½ per cent. of the value of each deposit for every period of 6 months or under.

The administration of the bank is vested in a council general of 30 members, viz. 17 regents, and 8 censors, who are nominated by 200 of the principal proprietors. The king appoints the governor and deputy governor. The first must be possessed of 150, and the latter of 50 shares. A *compte rendu* is annually published, and a report by the censors, which together give a very full exposition of the affairs of the bank. The institution is flourishing, and enjoys unlimited credit.—(For further details with respect to the Bank of France, see *Storch, Cours d'Economie Politique*. Paris, 1823, tom. iv. pp. 168—180., and the *Comptes Rendus* of the different years.)

Banks have also been established at Berlin, Copenhagen, Vienna, and Petersburg. Those who wish for detailed information with respect to these establishments, may consult the work of M. Storch, to which we have just referred. In the 4th volume, there is an admirable account of the paper money of the different continental states. The objects we have in view will be accomplished by laying before our readers the following details with respect to the *Commercial Bank of Russia*, established in 1818:—"This bank receives deposits in gold and silver, foreign as well as Russian coin, and in bars and ingots. It has a department for transferring the sums deposited with it, on the plan of the Hamburg Bank. It discounts bills, and lends money on deposits of merchandise of Russian produce or origin. Its capital consists of 30,000,000 of bank-note rubles. It is administered by a governor and 4 directors appointed by government, and 4 directors elected by the commercial body of Petersburg. The property in the bank is protected against all taxation, sequestration, or attachment; and it is enacted, that subjects of countries with which Russia may be at war shall be entitled at all times to receive back their deposits without any reservation. It is also declared, that at no time shall the bank be called upon for any part of its capital to assist the government. All deposits must be made for 6 months at least, and be repayable at or before that period, and not be less than 500 rubles: sums so deposited to pay ½ per cent. The deposits, if in bars, ingots, or foreign specie, are estimated in Russian silver coin, and so registered in the attestation; and if not demanded back within 15 days of the expiration of 6

months, or the necessary premium paid for the prolongation, the owner loses the right of claiming his original deposit, and must take its estimated value in Russian silver coin. No bills are discounted that have less than 8 days or more than 6 months to run. The rate of discount is 6 per cent. No interest is allowed on money deposited in the bank, unless notice be given that it will be allowed to lie for a year, and 3 months' notice be given of the intention to draw it out, when *six* per cent. interest is allowed."—(*Kelly's Cambist*, vol. i. p. 303.) This bank has branches at Archangel, Moscow, Odessa, Riga, &c.

The *Bank of the United States* was incorporated in 1816. Its capital is 35,000,000 dollars, divided into 350,000 shares of 100 dollars each. Seven millions were subscribed by the United States, and the remaining 28,000,000 by individuals, companies, corporations, &c. In 1832, 84,000 shares were held by foreigners. The bank issues no note for less than 5 dollars; all its notes are payable in specie on demand. It discounts bills and makes advances on bullion at the rate of 6 per cent. The management is under 25 directors: 5 of whom, being holders of stock, are annually appointed by the President of the United States. Seven directors, including the president, constitute a Board.

The principal office of the bank is in Philadelphia; but in January, 1830, it had *twenty-seven* subordinate offices, or branch banks, established in different parts of the Union. Subjoined is a statement of some of the items in the affairs of the Bank of the United States, on the 1st of April, 1830, and the 2d of November, 1832.

The total liabilities of the bank to the public on the 1st of November, 1832, including its notes in circulation, deposits, and debts to the holders of public funds, were 37,296,950-20 dollars; and its assets, including specie, cash in Europe, debts from individuals, banking companies, &c. were 79,593,870-97 dollars; leaving a surplus of 42,296,920-77 dollars, showing the stability of the bank to be equal to that of any institution of the sort in the world.—(*Report to Secretary of Treasury on Affairs of the Bank of the United States*, Dec. 4. 1833.) The charter of the bank expires in 1836. A Bill for its renewal passed both houses of Congress in 1832, but was rejected by the President. The probability, however, seems to be, that the measure will still pass. Of its expediency no reasonable doubt can be entertained.

(We stated in our last Supplement that the President had succeeded in his contest with this establishment, and that the probability was, that it would wind up its affairs in the course of the present year. But since then it has been rechartered, in so far at least as respects Pennsylvania, by the legislature of that state; and it seems to be expected that it will be rechartered by the legislature of some of the other states. Although, therefore, the United States Bank no longer exists, as a great national establishment, it maintains its place as the greatest banking company of the New World; and is, in this respect, second, indeed, to none anywhere to be met with, except the Bank of England.—*Sup.*)

The establishment of the Bank of the United States has been of material service, by affording a currency of undoubted solidity, readily accepted in all parts of the Union. At the period when it was organised, nothing could be in a less satisfactory condition than the paper currency of the United States; in fact, with the exception perhaps of England and Ireland, they have suffered more than any other country from the abuse of banking. In 1814, all the banks south and west of New England stopped payment; and it appears, from the official returns, that in all, no fewer than 165 banks were in this predicament between the 1st of January, 1811, and the 1st of January, 1830! It is of importance to observe, that most of these banks were joint stock companies. At present, indeed, there are no strictly private banking companies in the United States. They are all incorporated by law, with a fixed capital, the shareholders being only liable in most cases, though not uniformly, to the extent of their shares. They all issue notes of 5 dollars: but the issue of notes of a lower value has been forbidden in Pennsylvania, Maryland, and Virginia. A good deal has been said in this country of the flourishing state of the New England banks, particularly those of Massachusetts, and they have been held up as a model for our imitation. But, bad as our system of currency banking undoubtedly is, we should be exceedingly sorry to see any attempt made to improve it, by the adoption of even the best parts of the American system. Among other

regulations, an act of the legislature of Massachusetts provides that no bank for the issue of notes can go into operation in any way, until at least half its capital stock shall be paid in gold and silver into the bank, and be actually existing in its coffers; and the cashier of every bank is bound to make specific returns once a year of its debts and assets, on being required to do so by the secretary of state. But such regulations are found, in practice, to be nearly if not wholly worthless. Instances have occurred of banks having borrowed an amount of dollars equal to half their capital, *for a single day*, and of such dollars having been examined by the commissioners appointed for that purpose, and reported by them, and *sworn by a majority of the directors* to be the first instalment paid by the stockholders of the bank, and intended to remain in it!—(*Gouge's Paper Money and Banking in the United States*, part ii. p. 157.) We do not, of course, imagine that such disgraceful instances can be of common occurrence; but a system which permits of frauds of this sort being perpetrated under cover of authority, must be altogether vicious. The publicity, too, to which the banks are subject, is injurious rather than otherwise. They know when they are to be called upon to make their returns; and in order to render them as favourable as possible, they are in the habit, for a month or two previously, of narrowing their discounts, to the great inconvenience of those with whom they deal; and endeavour by every means in their power, through temporary loans, and all manner of devices, to swell the amount of bullion in their coffers on the day of examination. If the banks were obliged to make regular weekly or even monthly returns of their situation, they might afford some little useful information; but it is abundantly obvious, that that which is derived from the present returns must be, even when not so intended, misleading and deserving of very little attention. The truth cannot be too often repeated, that it is quite impossible ever to organize secure banks of issue,—and it is with such only that the legislature has any right to interfere,—except by obliging them to give security for their notes. Every other scheme, how carefully soever it may be devised, is sure in the end to prove nugatory and to be defeated. That part of the American system which limits the responsibility of the partners in a bank to the amount of their shares, seems to us to be in the last degree objectionable. It affords a strong temptation to the commission of fraud, and we have yet to learn that it possesses a single counter-vailing advantage. We have been assured by those well acquainted with the facts, that it has been productive of the most mischievous consequences. Six of the Massachusetts banks, having, or professing to have, a capital of 800,000 dollars, failed between the 1st of January, 1811, and the 1st of July, 1830.

We subjoin an official abstract of the state of the 84 banks existing in Massachusetts on the first Saturday of August, 1832.

Abstract Account of the Massachusetts Banks.

	Dollars.		Dollars.
Capital stock paid in - -	24,580,208-00	Bills of Banks in this State -	1,637,303-83
Bills in circulation - -	7,122,858-00	Bills of banks elsewhere -	174,568-23
Nett profits on hand - -	1,031,000-16	Balances due from other banks	2,307,784-26
Balances due to other banks -	1,993,904-15	Due to the banks, excepting balances - -	39,860,737-24
Cash deposited, &c., not bearing interest - -	2,938,070-33	Total resources of the banks -	44,042,066-54
Cash deposited, bearing interest	6,268,581-61	Amount of last dividend -	688,375-00
Due from the banks - -	43,996,900-00	— reserved profits -	436,708-74
Gold, silver, &c. in banks -	802,205-78	Debts secured by pledge of stock	944,761-73
Real estate - -	738,612-64	— due, and considered doubtful	311,914-78

Rate of dividend on amount of capital of the banks, as existing when dividend was made, 3-125 per cent.

Mr. Gallatin has given the following account of the number and capital of the banking establishments existing in the United States on the 1st of January, 1830:—

State.	Number of Banks.	Capital.	State.	Number of Banks.	Capital.
		Dollars.			Dollars.
Massachusetts - -	66	20,490,000	North Carolina - -	3	2,105,000

Delaware - -	4	630,000	Florida - -	1	75,000
Maryland - -	12	6,250,493	Delaware - -	2	
District of Columbia -	9	2,875,784			
Virginia - -	4	6,571,100	Total - -	230	110,101,868

For further information with respect to the banks of the United States, see the Report, 12th of February, 1820, of the Secretary of the Treasury (W. H. Crawford, Esq.) to Congress; the pamphlet of Albert Gallatin, Esq. on the Currency and Banking System of the United States, Philadelphia, 1831; *Gouge's Account of Paper Money and Banking in the United States, &c.* And for further details as to foreign banks, see BORDEAUX, CALCUTTA, CHRISTIANIA, COPENHAGEN, NAPLES, &c.

(*Private Banks of the United States.*)—The following table shows the extraordinary progress that the banking system has made in the United States. It has recently, however, sustained a considerable check by the suppression in New York and most other states of all bank notes for less than 5 dollars, and by the regulation enforced by government, that the price of all public lands shall be paid in specie. It appears, from the official accounts published by order of the legislature of the state of New York, that the notes for less than 5 dollars in circulation in that state on the 1st of December, 1834, amounted to 3,730,902 dollars; and these have since been either wholly, or almost wholly, suppressed. We do not know that any official account has been published of the issue of such notes in the other states; but there can be no doubt that, in the aggregate, it must have been many times greater than their issue in New York only. And as these notes are everywhere, we believe, in the course of being withdrawn from circulation, it is clear that a large additional amount of specie will be required to fill up the vacuum occasioned by their withdrawal. This circumstance seems sufficiently to account for the fact, that notwithstanding the alteration in the proportion of gold and silver in the American mint (See article COINS in this Supplement), very little silver has been exported from America to Europe. The alteration in question has made it profitable to use gold in preference to silver in all large payments where metallic money is employed; but the suppression of small notes has, at the same time, opened a new field for the employment of silver as a subsidiary currency, or as a means of effecting small payments; and it seems to be generally supposed, that the most part of the silver that would otherwise have found its way to foreign countries, in consequence of the new mint regulations, will be retained in this subordinate capacity.

Account of the Progress of Banking in the United States, from January, 1815, to January, 1835; specifying the Number of Banks in the different States, at different Epochs, with the Amount of their Capital. (Official Letter by the Secretary to the American Treasury, 5th January, 1836. p. 91.)

(Sup.)

VII. BANKS FOR SAVINGS.

Are banks established for the receipt of small sums deposited by the poorer class of persons, and for the accumulation of such sums at compound interest. They are managed by individuals, who derive no benefit whatever from the deposits. All monies paid into any Savings Bank established according to the provisions of the act 9 Geo. 4. c. 92. are ordered to be paid into the Banks of England and Ireland, and vested in Bank annuities or Exchequer bills. The interest payable to depositors is not to exceed 2½ per cent. *per diem*, or 3l. 8s. 5½d. per cent. *per annum*. No depositor can contribute more than 30l., exclusive of compound interest, to a Savings Bank in any one year; and the total deposits to be received from any one individual are not to exceed 150l.; and whenever the deposits, and compound interest accruing upon them, standing in the name of any one individual, shall amount to 200l., no interest shall be payable upon such deposit so long as it shall amount to 200l. Since the establishment of this system in 1817, down to January, 1831, the sums received from depositors, and the interest accruing upon them, amounted to 80,760,228l., of which the depositors had received, in principal and interest, 5,648,838l.; leaving at the period in question, a balance due to the depositors of 15,111,890l. The commissioners for the reduction of the national debt have the disposal of the sums vested in the public funds on account of Savings Banks.

The principle and object of these institutions cannot be too highly commended. In the metropolis, and many other parts of England; public banks do not receive small deposits, and upon none do they pay any interest. And even in Scotland, where the public banks allow interest upon deposits, they do not generally receive less than 10l. But few poor persons are able to save so large a sum, except by a lengthened course of economy. The truth, therefore, is, that until Savings Banks were established, the poor were every where without the means of securely, and profitably investing those small sums they are not unfrequently in a condition to save; and were consequently led, from the difficulty of disposing of them, to neglect opportunities for making savings, or if they did make them, were tempted, by the offer of high interest, to lend them to persons of doubtful characters and desperate fortunes, by whom they were, for the most part, squandered. Under such circumstances, it is plain that nothing could be more important, in the view of diffusing habits of forethought and economy amongst the labouring classes, than the establishment of Savings Banks, where the smallest sums are placed in perfect safety, are accumulated at compound interest, and are paid, with their accumulations, the moment they are demanded by the depositors. The system is yet only in its infancy; but the magnitude of the deposits already received, sets its powerful and salutary operation in a very striking point of view.

We subjoin a copy of the rules of the St. Pancras Savings Bank, which may be taken as a model for similar institutions, inasmuch as they have been drawn up with great care, and closely correspond with the provisions in the act 9 Geo. 4. c. 92.

1. *Management*.—This Bank is under the management of a president, vice-presidents, trustees, and not less than fifty managers, none of whom are permitted to derive any benefit whatsoever, directly or indirectly, from the deposits received, or the produce thereof. One or more of the managers attend when the Bank is open for business.

2. *Superintending Committee*.—A committee of not less than ten managers, three of whom form a quorum, is empowered to superintend, manage, and conduct the general business of this Bank; to add to their number from among the managers; to fill up vacancies in their own body, and to appoint a treasurer or treasurers, agent or agents, auditors, an actuary and clerks, and other officers and servants, and to withdraw any such appointments, and to appoint others, should it be considered necessary so to do. The proceedings of this committee are regularly laid before the general meetings of the Bank.

3. *Elections*.—The superintending committee is empowered to add to the number of managers, until they amount to one hundred and twenty, exclusively of the president, vice-presidents, and trustees. And any vacancies of president, vice-presidents, and trustees, are to be filled up at a general meeting.

4. *General Meetings*.—A general meeting of the president, vice-presidents, trustees, and managers of this Bank shall be held once a year, in the month of February. The superintending committee shall lay before every such meeting a report of the transactions of the Bank, and state of the accounts. The superintending committee for the succeeding year shall be elected at such general meeting; and failing such election, the former committee shall be considered as reappointed.

5. *Special Meetings*.—The superintending committee are authorised to call special general meetings when they think proper; and also, on the requisition of any ten managers, delivered in writing to the actuary, or to the manager in attendance at the Bank; and of such meeting seven days' notice shall be given.

6. *Liability of Trustees, Managers, Officers, &c.*—No trustee or manager shall be personally liable except for his own acts and deeds, nor for any thing done by him in virtue of his office, except where he shall be guilty of wilful neglect or default; but the treasurer or treasurers, the actuary, and every officer intrusted with the receipt or custody of any sum of money deposited for the purposes of this Institution, and every officer, or other person, receiving salary or allowance for their services from the funds thereof, shall give good and sufficient security, by bond or bonds, to the clerk of the peace of the county of Middlesex, for the just and faithful execution of such office of trust.

7. *Investment and Limitation of Deposits*.—Deposits of not less than *one shilling*, and not exceeding *thirty pounds* in the whole, exclusive of compound interest, from any one depositor, or trustee of a depositor, during each and every year ending on the 30th of November, will be received and invested, pursuant to 9 Geo. 4. c. 98. s. 11, until the same shall amount to *one hundred and fifty pounds* in the whole; and when the principal and interest together shall amount to *two hundred pounds*, then no interest will be payable on such deposit, so long as it shall continue to amount to that sum. But depositors whose accounts amounted to, or exceeded, *two hundred pounds*, at the passing of the said act, on the 25th of July, 1828, will continue to be entitled to interest and compound interest thereon.

8. *Interest to be allowed to Depositors*.—In conformity with the 24th clause of the 9 Geo. 4. c. 98, an interest at the rate of 2½d. per cent. per day, being *2s. 5½d.* per cent. per annum (*the full amount authorised by the said act*), will be allowed to depositors, and placed to their accounts as a cash deposit, in the month of November in each year. Depositors demanding payment of the whole amount of their deposits in this Bank, will be allowed the interest due on such deposits up to the day on which notice of withdrawing shall be given, but no interest will be allowed, in any case, on the fractional parts of a pound sterling.

9. *Description and Declaration*.—Every person desirous of making any deposit in this Bank, shall, at the time of making their first deposit, and at such other times as they shall be required so to do, declare their residence, occupation, profession, or calling, and sign (either by themselves, or, in case of infants under the age of seven years, by some person or persons to be approved of by the trustees or managers, or their officer) a declaration that they are not directly or indirectly entitled to any deposit in, or benefit from, the funds of any other Savings Bank in England or Ireland, nor to any sum or sums standing in the name or names of any other person or persons in the books of this Bank. And in case any such declaration shall not be true, every such person (or the person on whose behalf such declaration may have been signed) shall forfeit and lose all right and title to such deposits, and the trustees and managers shall cause the sum or sums so forfeited to be paid to the commissioners for the reduction of the national debt; but no depositor shall be subject or liable to any such forfeiture, on account of being a trustee on behalf of others, or of being interested in the funds of any Friendly Society legally established.

10. *Trustees on behalf of others*.—Persons may act as trustees for depositors, whether such persons are themselves depositors in any Savings Bank or not, provided that such trustee or trustees shall make such declaration on behalf of such depositor or depositors, and be subject to the like conditions in every respect, as are required in the case of persons making deposits on their own account, and the receipt and receipts of such trustee or trustees, or the survivor of them, or the executors or administrators of any sole trustee, or surviving trustee, with or without (as may be required by the managers) the receipt of the person on whose account such sum may have been deposited, shall be a good and valid discharge to the trustees and managers of the Institution.

11. *Minors*.—Deposits are received from, or for the benefit of, minors, and are subject to the same regulations as the deposits of persons of 21 years of age and upwards.

12. *Friendly and Charitable Societies*.—Friendly Societies, legally established previous to the 26th of July, 1828, may deposit their funds through their treasurer, steward, or other officer or officers, without any limitation as to the amount. But Friendly Societies formed and enrolled after that date, are not permitted to make deposits exceeding the sum of 300*l.*, principal and interest included; and no interest will be payable thereon, whenever the same shall amount to, or continue at, the said sum of 300*l.* or upwards.

Deposits are received from the trustees or treasurers of Charitable Societies, not exceeding 100*l.* per annum, provided the amount shall not at any time exceed the sum of 300*l.*, exclusive of interest.

13. *Deposits of Persons unable to attend*.—Forms are given at the office, enabling persons to become depositors who are unable to attend personally; and those who have previously made a deposit, may send additional sums, *together with their book*, by any other person.

14. *Depositors' Book*.—The deposits are entered in the books of the Bank at the time they are made, and the depositor receives a book with a corresponding entry therein; which book must be brought to the office every time that any further sum is deposited, also when notice is given for withdrawing money, and at the time the repayment is to be made, so that the transactions may be duly entered therein.

15. *Withdrawing Deposits*.—Depositors may receive the whole or any part of their deposits on any day appointed by the managers, not exceeding fourteen days after notice has been given for that purpose; but such deposits can only be repaid to the depositor personally, or to the bearer of an order under the hand of the depositor, signed in the presence of either the minister or a churchwarden of the parish in which the depositor resides, of a justice of the peace, or of a manager of this Bank.

15. *The Depositor's Book must always be produced when notice of withdrawing is given.*

16. *Money withdrawn may be re-deposited.*—Depositors may withdraw any sum or sums of money, and re-deposit the same at any time or times within any one year, reckoning from the 20th day of November, provided such sum or sums of money re-deposited, and any previous deposit or deposits which may have been made by such depositor in the course of the year, taken together, shall not exceed, at any time in such year, the sum of 20*l.* additional principal money bearing interest.

17. *Return or Refusal of Deposits.*—This Bank is at liberty to return the amount of the deposits to all or any of the depositors, and may refuse to receive deposits in any case, where it shall be deemed expedient so to do.

18. *Deposits of a deceased Depositor exceeding Fifty Pounds.*—In case of the death of any depositor in this Bank, whose deposits, and the interest thereon, shall exceed in the whole the sum of fifty pounds, the same shall only be paid to the executor or executors, administrator or administrators, on the production of the probate of the will, or letters of administration.

19. *Deposits of a deceased Depositor not exceeding Fifty Pounds.*—In case a depositor in this Bank shall die, whose deposits, including interest thereon, shall not exceed the sum of fifty pounds, and that the trustees or managers shall be satisfied that no will was made and left, and that no letters of administration will be taken out, they shall be at liberty to pay the same to the relatives or friends of the deceased, or any or either of them, or according to the statute of distribution, or require the production of letters of administration, at their discretion. And the Bank shall be indemnified by any such payments from all and every claim in respect thereof by any person whatsoever.

20. *Certificates.*—In all cases wherein certificates shall be required of the amount of deposits in this Bank belonging to depositors therein, for the purpose of obtaining, free of stamp duties, a probate of will, or letters of administration, such certificate shall be signed by a manager, and countersigned by the actuary for the time being, as a true extract from the Ledger of the Institution.

21. *Arbitration of Differences.*—In case any dispute shall arise between the trustees or managers of this Bank, or any person or persons acting under them, and any individual depositor therein, or any trustee of a depositor, or any person claiming to be such executor, administrator, or next of kin, then, and in every such case, the matter so in dispute shall be referred to the barrister at law appointed by the commissioners for the reduction of the national debt, under the authority of the 9 Geo. 4. c. 92. s. 45.; and whatever award, order, or determination shall be made by the said barrister, shall be binding and conclusive upon all parties, and shall be final, to all intents and purposes, without any appeal.

Purchase of Government Annuities by depositors in Savings Banks.—The act 2 & 3 Will. 4. c. 14. enables depositors in Savings Banks and others to purchase government annuities for life or for years, and either immediate or deferred. At present these annuities are limited to 20*l.* a year. The money advanced is returnable in case the contracting party does not live to the age at which the annuity is to become payable, or is unable to continue the monthly or annual instalments. That this measure was benevolently intended, and that it may be productive of advantage to many individuals, cannot be doubted; but we look upon all attempts, and particularly those made by government, to get individuals to exchange capital for annuities, as radically objectionable; and as being subversive of principles which ought to be strengthened rather than weakened.—(See FUNDS.)

Summary of Savings Banks, &c. in England, Wales, and Ireland, November, 1832.

In England there were, on the 10th of November, 1832, 384 Savings Banks: of these, 7 have made no return, the remaining Banks contain,				In Wales there were on the 10th of November, 1832, 23 Savings Banks: 1 has made no return; the remaining Banks contain,

BANKS (UNITED STATES).

[*Historical Account of Banking in the United States.*—Although various plans had been formed, as well before as during the war of the Revolution, for the establishment of a public bank of deposit, discount, and circulation, the first which was actually carried into execu-

tion, within the territory of the United States, was that of Mr. Robert Morris, the Superintendent of Finance under the Old Congress. The Bank of North America was incorporated by that body on the last day of the year 1781, and by the Legislature of Pennsylvania on the first day of the following month of April. Besides the powers incidental to every corporation, it was authorized to hold property, real and personal, "to the amount of ten millions of Spanish silver milled dollars, and no more." Its capital, therefore, might be just what the stockholders thought proper to make it within this limit; and no restrictions whatever were imposed by law on the extent of its issues.

The bank, however, went into operation in January, 1782, with a capital of only \$400,000. Of this sum \$254,000 were subscribed by Mr. Morris, in behalf of the general government; thus making it the principal stockholder, and, in fact, giving it the entire control over the institution. Why the sum subscribed by individual stockholders was so small, as appears from this statement, was owing chiefly to the distrust, which pervaded the community, of the ability and willingness of the bank to maintain the notes they might issue at their par or specie value. Experience had hitherto led the people to look with suspicion on every thing in the shape of paper money. Paper promises to pay had been, for a long period, put forth by the different States of the Confederacy; and the value of such promises had uniformly, after a time, become depreciated, and frequently exceedingly depreciated. The public had also, very lately, witnessed the fall to utter worthlessness of the "continental money" of Congress. In such circumstances, it is not singular that capitalists in general should have thought it improbable that the business of a bank of circulation could be carried on with a sufficient degree of success to enable them to receive, after the payment of all the necessary expenses, the ordinary rate of profits in other employments.

Even the comparatively small amount of capital, with which the Bank of North America has been stated to have commenced its operations, was to a considerable extent merely nominal. The government took out of the bank with one hand what it put in with the other. Nay, the money borrowed by it from the bank left to the latter only the inconsiderable sum of about \$70,000 to constitute its proper banking capital. To what amount its notes were in fact put into circulation, we have no means of determining. But it must be obvious that, in the then existing state of public opinion in relation to paper money, this amount could not have been very large; notwithstanding every contrivance or artifice was resorted to which honest men could make use of, in order to produce a general impression favourable to the credit of the bank. And we may here add, that to us it appears altogether incredible that a banking institution on so contracted a scale, operating too under circumstances so unpropitious, should have had, as has often been very confidently asserted, an extraordinary effect in restoring public and private credit, and in aiding the fiscal operations of the government.

By a proper degree of caution at the outset in the issue of its notes, and in consequence of their being received by the States, indifferently with specie, in payment for duties and taxes, such an amount was before long successfully put into circulation, as to enable the bank to make dividends at the rate of from 12 to 16 per cent. per annum. In this condition of things, capitalists, of course, no longer had any doubts of the expediency of engaging in the business of banking; and the project of a new bank was formed, to be styled the Bank of Pennsylvania. To prevent its being carried into execution, the books of the Bank of North America were reluctantly opened for additional subscriptions. These were now procured without difficulty; and bank notes were thereupon issued to so great an amount as to yield, as before, extraordinary profits to the stockholders, and on this account, as also on account of the successive expansions and contractions of the currency which were extensively laid to the charge of the bank, to excite against it a strong popular feeling. In consequence, the Legislature of Pennsylvania took away, in 1785, the charter which they had granted to it in 1782. Yet the bank still carried on its business, claiming the right to do so under the act of Congress above mentioned. It, however, obtained a new charter from the State of Pennsylvania in 1787; and its existence has been continued, by successive acts of incorporation, without interruption, down to the present time.

When the general government went into operation under the present constitution, only two other banks had been incorporated in the whole extent of the country. These were the Bank of New York, in the city of New York, and the Bank of Massachusetts, in Boston. It was, then, with a very limited experience only on the part of the community, of the effects of banking, that the Secretary of the Treasury, Mr. Alexander Hamilton, in December, 1790, presented to Congress his celebrated report, recommending the establishment of a bank of the United States. The advocates of the measure, besides maintaining the expediency of it, as a means of stimulating the industry of the people and augmenting the national wealth, held it to be a most useful, and therefore so desirable an instrument, for exercising the fiscal functions of the government, as to entitle it to be regarded, in the language of the constitution, as "necessary and proper for carrying into execution" the powers vested in the government by the constitution. Its opponents denied both its expediency and constitutionality. Most of them preferred a metallic currency to one composed of bank notes; whilst the measure was by many regarded as unconstitutional, because, however convenient the

proposed bank might be to the government, in their opinion it could not, in the true meaning of the constitution, be pronounced to be necessary and proper for carrying into execution other powers, of a primary nature, expressly conferred by that document. The act, incorporating the Bank of the United States, passed the Senate on the 20th of January, 1791, a few members only of this body having resisted its passage, and the House of Representatives, by a vote of 39 to 20, on the 8th day of February following. After great deliberation, and after having requested and received elaborate opinions for and against the adoption of the measure from the several members of his cabinet, who were equally divided on the subject, the bill was signed by the President and became a law on the 14th of the same month.

As the act incorporating this first Bank of the United States, is one of great importance in the civil and financial history of the country, and may be regarded as a model on which, in many respects, future bank charters were framed; it is judged better to insert it *verbatim* than to give any abstract or abridgment of it. It is as follows:—

An Act to incorporate the Subscribers to the Bank of the United States.

Whereas it is conceived that the establishment of a bank for the United States, upon a foundation sufficiently extensive to answer the purposes intended thereby, and at the same time, upon the principles which afford adequate security for an upright and prudent administration thereof, will be very conducive to the successful conducting of the national finances; will tend to give facility to the obtaining of loans, for the use of the government, in sudden emergencies; and will be productive of considerable advantages to trade and industry in general: Therefore,

§ 1. *Be it enacted, &c.* That a bank of the United States shall be established; the capital stock whereof shall not exceed ten millions of dollars, divided into twenty-five thousand shares, each share being four hundred dollars; and that subscriptions, towards constituting the said stock, shall, on the first Monday of April next, be opened at the city of Philadelphia, under the superintendence of such persons, not less than three, as shall be appointed for that purpose, by the President of the United States, (who is hereby empowered to appoint the said persons accordingly), which subscriptions shall continue open until the whole of the said stock shall have been subscribed.

§ 2. That it shall be lawful for any person, copartnership, or body politic, to subscribe for such or so many shares as he, she, or they shall think fit, not exceeding one thousand, except as shall be hereafter directed relatively to the United States; and that the sums respectively subscribed, except on behalf of the United States, shall be payable, one fourth in gold and silver, and three fourths in that part of the public debt which, according to the loan proposed in the fourth and fifteenth sections of the act, entitled "An act making provision for the debt of the United States," shall bear an accruing interest, at the time of payment, of six per centum per annum, and shall also be payable in four equal parts, in the aforesaid ratio of specie to debt, at the distance of six calendar months from each other; the first whereof shall be paid at the time of subscription.

§ 3. That all those who shall become subscribers to the said bank, their successors and assigns, shall be, and are hereby, created and made a corporation and body politic, by the name and style of *The president, directors, and company of the bank of the United States*; and shall so continue until the fourth day of March, one thousand eight hundred and eleven: And by that name shall be, and are hereby, made able and capable, in law, to have, purchase, receive, possess, enjoy, and retain, to them and their successors, lands, tenements, hereditaments, goods, chattels, and effects, of what kind, nature, or quality, soever, to an amount not exceeding, in the whole, fifteen millions of dollars, including the amount of the capital stock aforesaid; and the same to sell, grant, demise, alien, or dispose of; to sue and be sued, plead and be impleaded, answer and be answered, defend and be defended, in courts of record, or any other place whatsoever: And also to make, have, and use a common seal, and the same to break, alter, and renew at their pleasure; and also to ordain, establish, and put in execution such by-laws, ordinances and regulations, as shall seem necessary and convenient for the government of the said corporation, not being contrary to law, or to the constitution thereof (for which purpose general meetings of the stockholders shall, and may, be called by the directors, and in the manner hereinafter specified), and generally to do and execute all and singular acts, matters, and things, which to them it shall or may appertain to do; subject, nevertheless, to the rules, regulations, restrictions, limitations, and provisions hereinafter prescribed and declared.

§ 4. That for the well ordering of the affairs of the said corporation, there shall be twenty-five directors; of whom there shall be an election on the first Monday of January in each year, by the stockholders or proprietors of the capital stock of the said corporation, and by plurality of the votes actually given; and those who shall be duly chosen at any election shall be capable of serving as directors, by virtue of such choice, until the end or expiration of the Monday of January next ensuing the time of such election, and no longer. And the said directors, at their first meeting after each election, shall choose one of their number as president.

§ 5. That as soon as the sum of four hundred thousand dollars, in gold and silver, shall have been actually received on account of the subscriptions to the said stock, notice thereof shall be given, by the persons under whose superintendence the same shall have been made, in at least two public gazettes printed in the city of Philadelphia; and the said persons shall, at the same time, in like manner, notify a time and place, within the said city, at the distance of ninety days from the time of such notification, for proceeding to the election of directors; and it shall be lawful for such election to be then and there made; and the persons who shall then and there be chosen shall be the first directors, and shall be capable of serving, by virtue of such choice, until the end or expiration of the Monday in January next ensuing the time of making the same, and shall forthwith thereafter commence the operations of the said bank, at the said city of Philadelphia. *And provided further*, That in case it should at any time happen, that an election of directors should not be made upon any day, when, pursuant to this act, it ought to have been made, the said corporation shall not, for that cause, be deemed to be dissolved; but it shall be lawful, on any other day, to hold and make an election of directors, in such manner as shall have been regulated by the laws and ordinances of the said corporation. *And provided lastly*, That in case of the death, resignation, absence from the United States, or removal of a director by the stockholders, his place may be filled up, by a new choice, for the remainder of the year.

§ 6. That the directors for the time being shall have power to appoint such officers, clerks, and servants under them, as shall be necessary for executing the business of the said corporation, and to allow them such compensation for their services, respectively, as shall be reasonable; and shall be capable of exercising such other powers and authorities, for the well governing and ordering of the affairs of the said corporation, as shall be described, fixed, and determined, by the laws, regulations, and ordinances of the same.

§ 7. That the following rules, restrictions, limitations, and provisions shall form and be fundamental articles of the constitution of the said corporation, viz.

1. The number of votes to which each stockholder shall be entitled shall be according to the number of shares he shall hold, in the proportions following, that is to say: For one share, and not more than two shares, one vote: For every two shares above two, and not exceeding ten, one vote: For every four shares above ten, and not exceeding thirty, one vote: For every six shares above thirty, and not exceeding sixty, one vote: For every eight shares above sixty, and not exceeding one hundred, one vote: And for every ten shares above one hundred, one vote: But no person, copartnership, or body politic, shall be entitled to a greater number than thirty votes. And after the first election, no share, or shares, shall confer a right of suffrage, which shall not have been held three calendar months previous to the day of election. Stockholders actually resident within the United States, and none other, may vote in elections by proxy.

2. Not more than three fourths of the directors in office, exclusive of the president, shall be eligible for the next succeeding year: But the director, who shall be president at the time of an election, may always be re-elected.

3. None but a stockholder, being a citizen of the United States, shall be eligible as a director.

4. No director shall be entitled to any emolument, unless the same shall have been allowed by the stockholders, at a general meeting. The stockholders shall make such compensation to the president for his extraordinary attendance at the bank, as shall appear to them reasonable.

5. Not less than seven directors shall constitute a board for the transaction of business, of whom the president shall always be one, except in case of sickness, or necessary absence; in which case his place may be supplied by any other director, whom he, by writing under his hand, shall nominate for the purpose.

6. Any number of stockholders, not less than sixty, who, together, shall be proprietors of two hundred shares or upwards, shall have power, at any time, to call a general meeting of the stockholders, for purposes relative to the institution, giving, at least, ten weeks' notice, in two public gazettes of the place where the bank is kept, and specifying, in such notice, the object, or objects, of such meeting.

7. Every cashier or treasurer, before he enters upon the duties of his office, shall be required to give bond, with two or more sureties, to the satisfaction of the directors, in a sum not less than fifty thousand dollars, with condition for his good behaviour.

8. The lands, tenements, and hereditaments, which it shall be lawful for the said corporation to hold, shall be only such as shall be requisite for its immediate accommodation, in relation to the convenient transacting of its business, and such as shall have been bona fide mortgaged to it by way of security, or conveyed to it in satisfaction of debts, previously contracted in the course of its dealings, or purchased at sales upon judgments which shall have been obtained for such debts.

9. The total amount of the debts which the said corporation shall, at any time, owe, whether by bond, bill, note, or other contract, shall not exceed the sum of ten millions of dollars, over and above the moneys then actually deposited in the bank for safe keeping, unless the contracting of any greater debt shall have been previously authorised by a law of the United States. In case of excess, the directors, under whose administration it shall happen, shall be liable for the same in their natural and private capacities; and an action of debt may, in such case, be brought against them, or any of them, their, or any of their, heirs, executors, or administrators, in any court of record of the United States, or either of them, by any creditor or creditors, of the said corporation, and may be prosecuted to judgment and execution; any condition, covenant, or agreement, to the contrary notwithstanding. But this shall not be construed to exempt the said corporation, or the lands, tenements, goods, or chattels of the same, from being also liable for, and chargeable with the said excess. Such of the said directors who may have been absent when the said excess was contracted, or created, or who may have dissented from the resolution, or act, whereby the same was so contracted or created, may, respectively, exonerate themselves from being so liable, by forthwith giving notice of the fact, and of their absence or dissent, to the president of the United States, and to the stockholders, at a general meeting which they shall have power to call for that purpose.

10. The said corporation may sell any part of the public debt whereof its stock shall be composed but shall not be at liberty to purchase any public debt whatsoever; nor shall, directly or indirectly, deal or trade in any thing, except bills of exchange, gold or silver bullion, or in the sale of goods, really and truly pledged for money lent, and not redeemed in due time; or of goods which shall be the produce of its lands. Neither shall the said corporation take more than at the rate of six per centum per annum, for, or upon, its loans or discounts.

11. No loan shall be made by the said corporation for the use, or on account, of the government of the United States, to an amount exceeding one hundred thousand dollars, or of any particular state, to an amount exceeding fifty thousand dollars, or of any foreign prince or state, unless previously authorised by a law of the United States.

12. The stock of the said corporation shall be assignable and transferable, according to such rules as shall be instituted in that behalf, by the laws and ordinances of the same.

13. The bills obligatory, and of credit, under the seal of the said corporation, which shall be made to any person, or persons, shall be assignable, by endorsement thereupon, under the hand, or hands, of such person, or persons, and of his, her, or their assignee, or assignees, and so as absolutely to transfer, and vest the property thereof in each, and every, assignee, or assignees, successively, and to enable such assignee, or assignees, to bring and maintain an action thereupon, in his, her, or their, own name, or names. And bills or notes, which may be issued by order of the said corporation, signed by the president, and countersigned by the principal cashier, or treasurer, thereof, promising the payment of money to any person, or persons, his, her, or their order, or to bearer, though not under the seal of the said corporation, shall be binding and obligatory upon the same, in the like manner, and with the like force and effect, as upon any private person, or persons, if issued by him, or them, in his, her, or their, private or natural capacity, or capacities; and shall be assignable and negotiable, in like manner as if they were so issued by such private person or persons; that is to say, those which shall be payable to any person, or persons, his, her, or their order, shall be assignable by endorsement, in like manner, and with the like effect, as foreign bills of exchange now are; and those which are payable to bearer shall be negotiable, and assignable, by delivery only.

14. Half yearly dividends shall be made of so much of the profits of the bank as shall appear to the directors advisable; and once in every three years, the directors shall lay before the stockholders, at a general meeting, for their information, an exact and particular statement of the debts which shall have remained unpaid after the expiration of the original credit, for a period of treble the term of that credit; and of the surplus of profit, if any, after deducting losses and dividends. If there shall be a failure in the payment of any part of any sum subscribed by any person, copartnership, or body politic, the party failing shall lose the benefit of any dividend which may have accrued prior to the time for making such payment, and during the delay of the same.

15. It shall be lawful for the directors aforesaid, to establish offices wheresoever they shall think fit, within the United States, for the purposes of discount and deposit only, and upon the same terms, and in the same manner, as shall be practised at the bank; and to commit the management of the said offices, and the making of the said discounts, to such persons, under such agreements, and subject to such regulations, as they shall deem proper; not being contrary to law, or to the constitution of the bank.

16. The officer at the head of the treasury department of the United States shall be furnished, from time to time, as often as he may require, not exceeding once a week, with statements of the amount of the capital stock of the said corporation, and of the debts due to the same; of the moneys deposited therein; of the notes in circulation, and of the cash in hand; and shall have a right to inspect such general accounts in the books of the bank as shall relate to the said statements: *Provided*, That this shall not be construed to imply a right of inspecting the account of any private individual, or individuals, with the bank.

§ 5. That if the said corporation, or any person or persons for or to the use of the same, shall deal or trade, in buying or selling any goods, wares, merchandise, or commodities whatsoever, contrary to the provisions of this act, all and every person and persons, by whom any order, or direction, for so dealing or trading, shall have been given, and all and every person and persons, who shall have been concerned as parties or agents therein, shall forfeit and lose treble the value of the goods, wares, merchandises, and commodities, in which such dealing and trade shall have been; one half thereof to the use of the Informer, and the other half thereof to the use of the United States, to be recovered with costs of suit.

§ 9. That if the said corporation shall advance or lend any sum, for the use or on account of the government of the United States, to an amount exceeding one hundred thousand dollars; or of any particular State, to an amount exceeding fifty thousand dollars; or of any foreign prince or state (unless previously authorized thereto by a law of the United States), all and every person and persons, by and with whose order, agreement, consent, approbation, or connivance, such unlawful advance or loan shall have been made, upon conviction thereof, shall forfeit and pay, for every such offence, treble the value or amount of the sum or sums which shall have been so unlawfully advanced or lent; one fifth thereof to the use of the Informer, and the residue thereof to the use of the United States; to be disposed of by law, and not otherwise.

§ 10. That the bills or notes of the said corporation, originally made payable, or which shall have become payable, on demand, in gold and silver coin, shall be receivable in all payments to the United States.

§ 11. That it shall be lawful for the president of the United States, at any time or times, within eighteen months after the first day of April next, to cause a subscription to be made to the stock of the said corporation, as part of the aforesaid capital stock of ten millions of dollars, on behalf of the United States, to an amount not exceeding two millions of dollars; to be paid out of the moneys which shall be borrowed by virtue of either of the acts, the one entitled "An act making provision for the debt of the United States;" and the other, entitled "An act making provision for the reduction of the public debt;" borrowing of the bank an equal sum, to be applied to the purposes for which the said moneys shall have been procured; reimbursable in ten years, by equal annual instalments; or at any time sooner, or in any greater proportions, that the government may think fit.

§ 12. That no other bank shall be established, by any future law of the United States, during the continuance of the corporation hereby created; for which the faith of the United States is hereby pledged.

The high dividends of the Bank of North America, previous to the date of the incorporation of that of the United States, have been already noticed. They, however, gradually declined as other banks sprang into existence; but were still as high as 10 per cent. in 1801, and so late as 1810, at the rate of 9 per cent. per annum. During the existence too of the Bank of the United States, from 1791 to 1811, its dividends amounted to from nearly 8 to 10 per cent. And at the last mentioned date, "none of the banks divided less than 8 per cent., and some of them much more."

Hence it is not to be wondered at, that, as the period of the expiration of the charter of the United States Bank approached, the stockholders should have been exceedingly desirous of obtaining a renewal of it. Application was, accordingly, made by them for this purpose to Congress, so early as the spring of the year 1808. Their memorial on the subject was referred by the Senate to the then Secretary of the Treasury, Mr. Gallatin, "to consider and report thereon, at the next session of Congress." In pursuance of the reference thus made to him, that officer, on the last day of the next session, presented a report favourable to the views of the memorialists, and in which he made the following suggestions:—

"I. That the bank should pay interest to the United States on the public deposits, whenever they shall exceed a certain sum, which may perhaps be fixed at about three millions of dollars.

II. That the bank should be bound, whenever required, to lend to the United States a sum not exceeding three fifths of its capital, at a rate of interest not exceeding six per cent.; the amount of such loan or loans to be paid by the bank in instalments, not exceeding a certain sum, monthly, and to be reimbursed at the pleasure of government.

III. That the capital stock of the bank should be increased to thirty millions of dollars, in the following manner, viz.

1. Five millions of dollars to be subscribed by citizens of the United States, under such regulations as would make an equitable apportionment amongst the several States and Territories.

2. Fifteen millions to be subscribed by such States as may desire it, and under such equitable apportionments among the several States as may be provided by law; and a branch to be established in each subscribing State, if applied for by the State.

3. The payments, either by individuals or States, to be either in specie or in public stock of the United States, at such rates as may be provided by law.

4. The subscribing States to pay their subscription in ten annual instalments, or sooner if it suits their convenience, but to receive dividends in proportion only to the amount of subscription actually paid; and their shares of bank stock not to be transferable.

IV. That some share should be given in the direction to the general and state governments, the general government appointing a few directors in the general direction, and the government of each subscribing State appointing a few directors in the direction of the branch established in such State."

Mr. Gallatin concluded his report by remarking that the result of his plan would be, "first, that the United States, receiving an interest on the public deposits, might, without inconvenience, accumulate, during years of peace and prosperity, a treasure sufficient to meet periods of war and calamity, and thereby avoid the necessity of adding, by increased taxes, to the distresses of such periods. Secondly, that they might rely on a loan of eighteen mil-

tions of dollars, on any sudden emergency. Thirdly, that the payment of the greater part of the proposed increase of capital, being paid in ten annual instalments, that increase would be gradual, and not more rapid than may be required by the progressive state of the country. Fourthly, that the bank itself would form an additional bond of common interest and union among the several States."

Presented, as this report was, on the very last day of the session of Congress, that body, of course, rose without any action having been had in relation to it.

During the session of 1809-1810, the subject of the recharter of the bank did not come up in the Senate; but in the House, the memorial, previously presented by the stockholders, was referred to a select committee, who reported a resolution declaring "that it is proper to make provision for continuing the establishment of the Bank of the United States, with offices of discount and deposit, under the regulations necessary for the beneficial administration of the national finances, during such time and on such conditions, as may be defined by law." Another resolution was offered by a member, "that it is expedient to inquire into the propriety of establishing a national bank." These resolutions were referred to different committees. And two bills were, in consequence, reported to the House; one of which was entitled "A bill to establish a National Bank" the other, "An act to incorporate the subscribers to the Bank of the United States." By the former bill, a bank was to be established in the city of Washington, with branches in the Territories of the United States, and in the States respectively, on application of their legislatures; the capital of which bank was not to exceed 15,000,000 dollars. This bill met with very little favour, as it was generally conceded that the proper place for a bank, with a large capital, was a large city, having extensive mercantile transactions, which was very far from being the case with Washington city. Indeed, the only object which the advocates of the bill had in view, when they argued in behalf of placing the national bank in the District of Columbia, where the entire legislative power was vested in Congress, was, if possible, to overcome the constitutional scruples of a portion of the members as to their authority to incorporate an institution of the kind in any of the states. The bill for renewing the charter of the existing bank seemed at first to be much more in accordance with the views of a majority of the House. After having been debated, it was, however, laid on the table, and not again taken up during the remainder of the session. Provision had been made in it for the payment by the bank into the treasury of the United States of a bonus of 1,250,000 dollars; the bank, on the other hand, to be better enabled to pay this bonus, was authorised to add a million of dollars to the former amount of its capital. It was, also, made obligatory upon it to lend to the government, at any time the latter might require a loan, any sum not exceeding five millions of dollars, at a rate of interest not exceeding six per cent. per annum. The bank was further bound to pay to the United States, in conformity with the suggestion made by Mr. Gallatin, an interest at the rate of three per cent. per annum, on all sums of money above the sum of three millions of dollars, which should accumulate in the bank to the credit of the Treasurer of the United States, or in any of its branches, and which should remain there for one whole year. And the government was to be at liberty to subscribe to a certain number of additional shares, annually for a term of years.

A new petition was presented to Congress, in the beginning of the next session (December, 1810), by the stockholders of the Bank of the United States, for the renewal of their charter; which petition was, in both the Senate and House of Representatives, referred to a committee, that of the House being composed of one member from each state of the Union. This committee, early in January, 1811, reported a bill, for a renewal of the charter, not unlike the one above mentioned as having been laid on the table during the preceding session. After much debate, the bill reported was, on the 24th of that month, indefinitely postponed by a vote of 85 to 64. No report had as yet been made by the committee of the Senate. On the 5th of February, only four weeks before the close of the session and the expiration of the charter of the bank, they reported a bill for its renewal, the first section of which was, on the 20th day of the month, struck out by the casting vote of the Vice President, George Clinton. The fate of the bank was thus decided; and nothing remained for it but to close its business.

To enable it to do so with more convenience to itself, and to prevent as much as possible the distress among the community which its friends confidently asserted would inevitably ensue from its affairs being wound up in a short period of time, application was made to both Houses of Congress, in a few days afterwards, for a temporary continuation of its powers, for this purpose only. The request so preferred was, nevertheless, refused. A committee of the House of Representatives, to which it had been referred, stated, that they "are of opinion that a law of Congress, granting the powers prayed for, would facilitate the final adjustment of the affairs of the bank, although they do not think such a law indispensable to that object. But believing, as your committee do, that, in granting the original charter to the stockholders, Congress transcended the legitimate powers of the constitution, the same objection now presents itself to the extension of any of their corporate capacities."

Trustees were appointed, who proceeded so expeditiously in settling the accounts of the

bank, that, in about a year and a half after the expiration of the charter, they had already paid to the stockholders 88 per cent. of the capital stock. It is proper to mention that all this was accomplished without any extraordinary derangement of the currency, and without any of the disastrous effects which had been anticipated and dreaded by many among the most intelligent men of the country. And it may not be uninteresting to note the fact, that the whole amount of the sums, which were received by the stockholders, from first to last, amounted to 108½ dollars, on every 100 dollars of stock.

That no extraordinary derangement of the currency followed immediately upon the refusal of Congress to recharter the Bank of the United States, and the rapid winding up of its concerns, was owing chiefly to the extent in which the notes of the other banks of the country were issued; an extent much greater, indeed, than would have sufficed to take the place of the United States Bank notes in the circulation. At this period, these institutions had become very numerous, especially in the eastern and middle states. The aggregate capitals of the banks "most deserving of notice" amounted, in the beginning of the year 1811, according to a statement in the American edition of the Edinburgh Encyclopedia, article Banks, to nearly five times that of the Bank of the United States. In the course of a single year, this amount was augmented fifty per cent. A sort of mania for the creation of new banks seemed every where to prevail, and often nearly as much in districts almost exclusively agricultural as in those where a great extent of commerce was carried on. Such was the anxiety displayed in Pennsylvania for the incorporation of local banks, that it probably contributed in no slight degree to the rejection there by the Legislature, of an application on the part of the Bank of the United States for a charter, with a capital of five millions of dollars, although a bonus was offered the state of half a million of dollars, together with a loan of another half million.

"During the session of 1812-13" (we quote the words of an able report made to the Senate of Pennsylvania, January 29th, 1820, by a committee, of which Condé Raguet, Esq. was chairman), "a bill to incorporate twenty-five institutions, the capitals of which amounted to nine millions five hundred and twenty-five thousand dollars, was passed by both Houses of the Legislature, by a bare majority of one vote in each. The bill was returned by the governor, with his objections, which were sensible and cogent, and on a reconsideration the votes were 38 to 40. At the following session the subject was renewed with increased ardour, and a bill authorising the incorporation of forty-one banking institutions with capitals amounting to seventeen millions of dollars, was passed by a large majority. This bill was also returned by the governor, with additional objections, but two thirds of each house (many members of which were pledged to their constituents to that effect) agreeing on its passage, it became a law, on the 21st of March, 1814, and thus inflicted upon the commonwealth, an evil of a more disastrous nature than has ever been experienced by its citizens. Under this law thirty-seven banks, four of which were established in Philadelphia, actually went into operation.

"The immediate commencement of a number of these banks, with scarcely a *bona fide* capital equal to the first instalment, for the convenient mode of discounting stock notes, to meet the subsequent payments, was soon discovered, increased the mass of paper credits already too redundant, and depreciated the whole circulating medium so far below specie value, as to excite a want of confidence in its convertibility. In the absence of a foreign demand for specie, a domestic one arose. The laws of the New England States had been so rigorous upon the subject of banks, which were liable to a penalty of 12 per cent. per annum, for the non-payment of their notes, that no depreciation of their currency took place. The consequence thereof was, that the difference between the New England prices of commodities, stocks and foreign bills of exchange, and those of Pennsylvania, was equal to the extent of the depreciation of the latter; and as our bank notes were redeemable on demand, the most profitable remittance which could be made to New England, in exchange for her commodities, was specie; and this demand created a run upon the banks which they were not able to withstand. The situation of the southern and western banks was precisely similar to that of our own. All had over-issued, and a general depreciation had ensued. The same causes produced the same effects, and a general stoppage of all the banks in the United States, except those of New England, took place in August and September, 1814. The New England demand, it is true, was increased by two causes, viz. *first*, by facilities in foreign trade through neutral vessels, which were afforded them by an exemption from the blockade of the enemy, and, *secondly*, by a well grounded apprehension that the southern banks, from their extensive emissions, would necessarily become embarrassed. Certain it is, however, that all these causes combined could not have produced a general suspension of payment, had our banks observed the same caution in their issues as that which characterized the banks of the eastern states."

The following table, from Mr. Gallatin's valuable little work, entitled "Considerations on the Currency and Banking System of the United States," presents the results of that gentleman's researches respecting the progress of the banking system in the United States, in the period from 1810 to 1816.

	Capital.	Notes in circulation.	Specie.
1st Jan. 1811.—Bank of the United States - -	\$10,000,000	5,400,000	5,800,000
88 State banks - -	42,610,801	22,700,000	9,600,000
Total - -	52,610,801	28,100,000	15,400,000
1815.—308 State banks - -	82,259,500	45,500,000	17,000,000
1816.—246 do. do. - -	89,922,423	68,000,000	19,000,000

Mr. Crawford, in his report to the House of Representatives, of January 12th, 1820, estimated the bank notes in circulation in 1816, as high as \$9 millions of dollars. And Mr. Pitkin is of opinion that the truth lay between the amounts stated by Mr. Gallatin and Mr. Crawford.

The unequal distribution of the specie of the banks, on the 1st of January, 1815, was, according to the first of these two gentlemen, as follows:—

	Capital.	Circulation.	Specie.
"At that time the banks of the four States of Maine, Massachusetts, Rhode Island and New Hampshire, had	\$15,500,000	5,320,000	8,300,000
The States of Pennsylvania and Maryland, with the District of Columbia, had	26,000,000	13,750,000	3,000,000
And all the other States - -	40,930,000	25,630,000	5,800,000"

Not only did the banks which had suspended specie payments enlarge their issues, with a view to augment their profits, so as to cause their paper to become depreciated below its nominal value; but this depreciation was very different in different parts of the country. For example, soon after the suspension of specie payments, in September, 1814, while the notes of the New York city banks were 10 per cent. below their par or specie value, those of Baltimore were at a discount of no less than 20 per cent. This inequality, too, continued to a greater or less extent until the return of the banks to specie payments. Mr. M'Duffie, in his report of the 18th of April, 1830, to the House of Representatives, in relation to the re-charter of the Bank of the United States, remarks concerning the state of the currency on the 1st day of July, 1816, that "among the principal eastern cities, Washington and Baltimore were the points at which the depreciation was the greatest. The paper of the banks in these places was from 20 to 23 per cent. below par. At Philadelphia the depreciation was considerably less, though, even there, it was from 17 to 18 per cent. But in the interior of the country, where banks were established, the depreciation was even greater than at Washington and Baltimore. In the western part of Pennsylvania, and particularly at Pittsburgh, it was 25 per cent." It may be added, that during the period of which we speak, specie had so entirely disappeared from the circulation, that the smallest payments, for marketing and other ordinary purchases of daily occurrence, were everywhere made in paper money issued by the banks, by corporations of various descriptions, or even by individuals.

Scarcely had the suspension by the banks of specie payments taken place, and the consequences above mentioned begun to be exhibited, when the Secretary of the Treasury, Mr. Alexander J. Dallas, on the 17th of October, 1814, recommended to Congress the establishment of a national bank, as the proper remedy to be applied.

He proposed that such a bank should be incorporated for a term of twenty years, to be established at Philadelphia, with a power to erect offices of discount and deposit elsewhere; that the capital of the bank should be fifty millions of dollars, three fifths of it to be subscribed by corporations, companies, or individuals; and two fifths of it by the United States; that the former subscriptions should be paid, one fifth part in gold or silver coin, and four fifth parts in gold or silver coin, or in six per cent. stock, issued since the declaration of war, and in treasury notes, in the proportion of one fifth in treasury notes, and three fifths in six per cent. stock; and that the subscription of the United States should be paid in this kind of stock. The United States were to be at liberty, also, to substitute six per cent. stock for the amount of the treasury notes subscribed by corporations, companies, and individuals, as the notes respectively became due and payable. No part of the public stock, constituting a portion of the capital of the bank, was to be sold during the war; nor at any subsequent time for less than par, nor at any time to an amount exceeding one moiety, without the consent of Congress; and the bank was to be bound to loan to the United States \$30,000,000.

A bill was reported to the House of Representatives, Nov. 7th, by the Committee of Ways and Means, in conformity with the views of the Secretary, which were also understood to be those of the President; which bill contained a clause authorising the bank to suspend specie payments, whenever such a measure should, in the opinion of the President, be advisable. On the proposition, however, of Mr. Calhoun, this clause, with that rendering it obligatory on the bank to make loans to the government, were stricken out of the bill,—no portion of the capital was to be subscribed by the United States, and none of the directors to be appointed by them,—and the capital, the six millions in specie only excepted, was to be in treasury notes to be *thereafter* issued. The capital was subsequently reduced to thirty millions of dollars. While the bill in its present form was still pending, the Chairman of the Committee

of Ways and Means addressed a letter to the Secretary of the Treasury, requesting him to communicate his opinion "in relation to the effect which a considerable issue of treasury notes (to which should be attached the quality of being receivable in subscriptions to the bank) might have upon the credit of the government, and particularly on the prospects of a loan for 1815." An answer unfavourable to the bill was promptly returned by the Secretary; and it was thereupon, on the 28th of November, rejected by a vote of 101 to 49, many of its friends being unwilling to insist upon its adoption, after having been assured of its being unsatisfactory to the executive branch of the government.

A bill was now introduced into the Senate, and passed by a vote of 17 to 14, in substantial conformity with the views of the Secretary, before stated. The thirteenth section of this was as follows:—

"That if, during the continuance of the present war between the United States and Great Britain, and a period of one year after the termination of the said war, demands shall, at any time or times, be made upon the said corporation, for gold and silver coin, to an amount, and under circumstances, which induce a reasonable and probable belief, that the said gold and silver coin is intended to be exported from, and out of, the United States, so as greatly to diminish or endanger the specie capital of the government and country, as well as of the said corporation; or that the said gold and silver coin is intended to be wilfully withdrawn from the circulation, so as greatly to embarrass, obstruct, and discredit the pecuniary transactions of the people and the government, as well as of the said corporation; or that the said gold and silver coin is demanded, in consequence of a wilful and sinister accumulation of the bills and notes of the said corporation, with the intention to impair or destroy the credit of the said corporation; then, and in every such case, and as often as such cases shall occur, it shall be lawful for the directors of the said corporation to suspend its payments in specie, and their duty forthwith, to represent the same to the President of the United States. And it shall be thereupon lawful for the President of the United States to direct the said corporation to resume, or to continue to suspend, its payments in specie, for such time as he shall deem it expedient; and the said corporation shall resume, or continue to suspend, its payments in specie, according to such directions. And the President of the United States shall cause a statement of the proceedings, in all such cases, to be laid before Congress, if in session, immediately; if not in session, then within ten days after the next meeting of Congress; and such suspension may continue until removed by Congress, or by the President."

With such a section as the one now recited, not only did it pass the Senate by the vote of 17 to 14 above stated, but it was defeated in the House of Representatives merely by the casting vote of the speaker, Mr. Cheves. This took place on the 2d of January, 1815. The bill was, however, reconsidered on the following day, and, on the 7th of January, passed the House by a vote of 120 to 37, having been amended by reducing the capital of the bank from fifty to thirty millions of dollars, as well as by striking out from the bill those parts of it which authorised the suspension of the specie payments, and which obliged the bank to make loans to the government. On the bill being returned to the Senate, as amended, it was again amended, by the increase of the capital of the bank from thirty to thirty-five millions of dollars, and by the reinstatement in the bill of the section authorising a suspension, in certain cases, of payments in specie. These amendments not being agreed to by the House, the Senate, January 20th, receded from its amendments, and passed the bill without them. It was destined to receive the veto of the President, Mr. Madison. "Waiving the question of the constitutional authority of the Legislature to establish an incorporated bank, as being precluded," in his judgment, "by repeated recognitions, under varied circumstances, of the validity of such an institution, in acts of the legislative, executive, and judicial branches of the government, accompanied by indications, in different modes, of a concurrence of the general will of the nation;" he objects to the bill because "the proposed bank does not appear to be calculated to answer the purposes of reviving the public credit, of providing a national medium of circulation, and of aiding the treasury by facilitating the indispensable anticipations of the revenue, and by affording to the public more durable loans."

And the President was not alone in being ready to waive the scruples which he had formerly entertained as to the constitutionality of a national bank, in consequence of a growing conviction of the necessity of such an institution for the fiscal operations of the general government. The Secretary of the Treasury, Mr. Dallas, had already expressed himself in reference to this question of constitutionality in language very similar to that of Mr. Madison; and the minority of only 37 in the House of Representatives on the final passage of the bill is itself sufficient evidence of the opposition to a national bank having, at the period of which we speak, very much declined, as well on the ground of inconsistency with the powers bestowed upon Congress by the constitution, as on the ground of its inexpediency. Indeed, comparatively few persons were then disposed to take the former ground. Almost the only question at issue between the contending parties seemed to be what was the most desirable mode of organising a bank.

The friends of an institution organised in accordance with the views of the President and Secretary, did not yet despair of accomplishing their object before the rising of Congress.

They succeeded in getting the Senate to pass such a bill as they desired, on the 11th of February; which bill was, however, indefinitely postponed in the House of Representatives, on the 17th of the same month, by a vote of 74 to 73. It is more than probable that, but for the news of peace with Great Britain, which had just arrived, the bill would have become a law, and the country would have had irremediably imposed upon it an institution authorised by law to issue millions and tens of millions of promises to pay specie to its creditors, and authorised at the same time to refuse the fulfilment of those promises.

During the session of Congress of 1815—16, the subject of the incorporation of a national bank was resumed; and a bill was passed in the House of Representatives, on the 14th of March, 1816, by a vote of 80 to 71, and in the Senate, with amendments, by a vote of 22 to 12, on the 3d of April. These amendments having been concurred in by the House, the bill was approved by the president, on the 10th of April, and constituted the charter of the late Bank of the United States. We give this bill entire, as follows.

An act to incorporate the subscribers of the Bank of the United States.

§ 1. *Be it enacted &c.* That a bank of the United States of America shall be established, with a capital of thirty-five millions of dollars, divided into three hundred and fifty thousand shares, of one hundred dollars each share. Seventy thousand shares, amounting to the sum of seven millions of dollars, part of the capital of the said bank, shall be subscribed and paid for by the United States, in the manner hereinafter specified; and two hundred and eighty thousand shares, amounting to the sum of twenty-eight millions of dollars, shall be subscribed and paid for by individuals, companies, or corporations, in the manner hereinafter specified.

§ 2. That subscriptions for the sum of twenty-eight millions of dollars, towards constituting the capital of the said bank, shall be opened on the first Monday in July next, at the following places; that is to say: at Portland, in the District of Maine; at Portsmouth, in the state of New-Hampshire; at Boston, in the state of Massachusetts; at Providence, in the state of Rhode Island; at Middletown, in the state of Connecticut; at Burlington, in the state of Vermont; at New York, in the state of New York; at New Brunswick, in the state of New Jersey; at Philadelphia, in the state of Pennsylvania; at Wilmington, in the state of Delaware; at Baltimore, in the state of Maryland; at Richmond, in the state of Virginia; at Lexington, in the state of Kentucky; at Cincinnati, in the state of Ohio; at Raleigh, in the state of North Carolina; at Nashville, in the state of Tennessee; at Charleston, in the state of South Carolina; at Augusta, in the state of Georgia; at New Orleans, in the state of Louisiana; and at Washington, in the District of Columbia. And the said subscriptions shall be opened under the superintendence of five commissioners at Philadelphia, and of three commissioners at each of the other places aforesaid, to be appointed by the president of the United States, who is hereby authorized to make such appointments, and shall continue open every day, from the time of opening the same, between the hours of ten o'clock in the forenoon and four o'clock in the afternoon, for the term of twenty days, exclusive of Sundays, when the same shall be closed, and immediately thereafter the commissioners, or any two of them, at the respective places aforesaid, shall cause two transcripts or copies of such subscriptions to be made, one of which they shall send to the secretary of the treasury, one they shall retain, and the original they shall transmit, within seven days from the closing of the subscriptions as aforesaid, to the commissioners at Philadelphia aforesaid. And, on the receipt of the said original subscriptions, or of either of the said copies thereof, if the original be lost, mislaid, or detained, the commissioners at Philadelphia aforesaid, or a majority of them, shall immediately thereafter convene, and proceed to take an account of the said subscriptions. And if more than the amount of twenty-eight millions of dollars shall have been subscribed, then the said last mentioned commissioners shall deduct the amount of such excess from the largest subscriptions, in such manner as that no subscription shall be reduced in amount while any one remains larger: *Provided*, That if the subscriptions taken at either of the places aforesaid shall not exceed three thousand shares, there shall be no reduction of such subscriptions, nor shall, in any case, the subscriptions taken at either of the places aforesaid be reduced below that amount. And, in case the aggregate amount of the said subscriptions shall exceed twenty-eight millions of dollars, the said last mentioned commissioners, after having apportioned the same as aforesaid, shall cause lists of the said apportioned subscriptions to be made out, including in each list the apportioned subscription for the place where the original subscription was made, one of which lists they shall transmit to the commissioners, or one of them, under whose superintendence such subscriptions were originally made, that the subscribers may thereby ascertain the number of shares to them respectively apportioned as aforesaid. And, in case the aggregate amount of the said subscriptions made during the period aforesaid, at all the places aforesaid, shall not amount to twenty-eight millions of dollars, the subscriptions to complete the said sum shall be and remain open at Philadelphia aforesaid, under the superintendence of the commissioners appointed for that place; and the subscriptions may be then made by any individual, company, or corporation, for any number of shares, not exceeding, in the whole, the amount required to complete the said sum of twenty-eight millions of dollars.

§ 3. That it shall be lawful for any individual, company, corporation, or state, when the subscriptions shall be opened as hereinbefore directed, to subscribe for any number of shares of the capital of the said bank, not exceeding three thousand shares, and the sums so subscribed shall be payable, and paid, in the manner following; that is to say: seven millions of dollars thereof in gold or silver coin of the United States, or in gold coin of Spain of the dominions of Spain, at the rate of one hundred cents for every twenty-eight grains and sixty hundredths of a grain of the actual weight thereof, or in other foreign gold or silver coin at the several rates prescribed by the first section of an act regulating the currency of foreign coins in the United States, passed tenth day of April, one thousand eight hundred and six, and twenty-one millions of dollars thereof in like gold or silver coin, or in the funded debt of the United States, contracted at the time of the subscriptions respectively. And the payments made in the funded debt of the United States, shall be paid and received at the following rates; that is to say: the funded debt bearing an interest of six per centum per annum, at the nominal or par value thereof; the funded debt bearing an interest of three per centum per annum, at the rate of sixty-five dollars for every sum of one hundred dollars of the nominal amount thereof; and the funded debt bearing an interest of seven per centum per annum, at the rate of one hundred and six dollars and fifty-one cents for every sum of one hundred dollars of the nominal amount thereof; together with the amount of the interest accrued on the said several denominations of funded debt, to be computed and allowed to the time of subscribing the same to the capital of the said bank as aforesaid. And the payments of the said subscriptions shall be made and completed by the subscribers, respectively, at the times and in the manner following; that is to say: at the time of subscribing there shall be paid five dollars on each share, in gold or silver coin as aforesaid, and twenty-five dollars more in coin as aforesaid, or in funded debt as aforesaid; at the expiration of six calendar months

after the time of subscribing, there shall be paid the further sum of ten dollars on each share, in gold or silver coin as aforesaid, and twenty-five dollars more in coin as aforesaid, or in funded debt as aforesaid; at the expiration of twelve calendar months from the time of subscribing, there shall be paid the further sum of ten dollars on each share, in gold or silver coin as aforesaid, and twenty-five dollars more, in coin as aforesaid, or in funded debt as aforesaid.

§ 4. That, at the time of subscribing to the capital of the said bank as aforesaid, each and every subscriber shall deliver to the commissioners, at the place of subscribing, as well the amount of their subscriptions, respectively, in coin as aforesaid, as the certificates of funded debt, for the funded debt proportions of their respective subscriptions, together with a power of attorney, authorizing the said commissioners, or a majority of them, to transfer the said stock in due form of law to "the president, directors, and company, of the bank of the United States," as soon as the said bank shall be organized: *Provided always*, That if, in consequence of the apportionment of the shares in the capital of the said bank among the subscribers, in the case, and in the manner, hereinbefore provided, any subscriber shall have delivered to the commissioners, at the time of subscribing, a greater amount of gold or silver coin and funded debt than shall be necessary to complete the payments for the share or shares to such subscribers, apportioned as aforesaid, the commissioners shall only retain so much of the said gold or silver coin and funded debt as shall be necessary to complete such payments, and shall, forthwith, return the surplus thereof, on application for the same, to the subscribers lawfully entitled thereto. And the commissioners, respectively, shall deposit the gold and silver coin, and certificates of public debt, by them respectively received as aforesaid from the subscribers to the capital of the said bank, in some place of secure and safe keeping, so that the same may and shall be specifically delivered and transferred, as the same were by them respectively received, to the president, directors, and company, of the bank of the United States, or to their order, as soon as shall be required after the organization of the said bank. And the said commissioners appointed to superintend the subscriptions to the capital of the said bank as aforesaid, shall receive a reasonable compensation for their services, respectively, and shall be allowed all reasonable charges and expenses incurred in the execution of their trust, to be paid by the president, directors, and company, of the bank, out of the funds thereof.

§ 5. That it shall be lawful for the United States to pay and redeem the funded debt subscribed to the capital of the said bank, at the rates aforesaid, in such sums, and at such times, as shall be deemed expedient, any thing in any act or acts of Congress, to the contrary thereof notwithstanding. And it shall also be lawful for the president, directors, and company, of the said bank, to sell and transfer for gold and silver coin, or bullion, the funded debt subscribed to the capital of the said bank as aforesaid: *Provided always*, That they shall not sell more thereof than the sum of two millions of dollars in any one year; nor sell any part thereof at any time within the United States, without previously giving notice of their intention to the secretary of the treasury, and offering the same to the United States for the period of fifteen days, at least, at the current price, not exceeding the rates aforesaid.

§ 6. That, at the opening of subscription to the capital stock of the said bank, the secretary of the treasury shall subscribe, or cause to be subscribed, on behalf of the United States, the said number of seventy thousand shares, amounting to seven millions of dollars as aforesaid, to be paid in gold or silver coin, or in stock of the United States, bearing interest at the rate of five per centum per annum; and if payment thereof, or of any part thereof, be made in public stock, bearing interest as aforesaid, the said interest shall be payable quarterly, to commence from the time of making such payment on account of the said subscriptions; and the principal of the said stock shall be redeemable in any sums, and at any periods, which the government shall deem fit. And the secretary of the treasury shall cause the certificates of such public stock to be prepared, and made in the usual form, and shall pay and deliver the same to the president, directors, and company, of the said bank, on the first day of January, one thousand eight hundred and seventeen; which said stock it shall be lawful for the said president, directors, and company, to sell and transfer, for gold and silver coin or bullion, at their discretion: *Provided*, They shall not sell more than two millions of dollars thereof in any one year.

§ 7. That the subscribers to the said bank of the United States of America, their successors and assigns, shall be, and are hereby, created a corporation and body politic, by the name and style of "the president, directors, and company, of the bank of the United States," and shall so continue until the third day of March, in the year one thousand eight hundred and thirty-six, and by that name shall be, and are hereby, made able and capable, in law, to have, purchase, receive, possess, enjoy, and retain, to them and their successors, lands, rents, tenements, hereditaments, goods, chattels, and effects, of whatsoever kind, nature, and quality, to an amount not exceeding, in the whole, fifty-five millions of dollars, including the amount of the capital stock aforesaid; and the same to sell, grant, demise, alien, or dispose of; to sue and be sued, plead and be impleaded, answer and be answered, defend and be defended, in all state courts having competent jurisdiction, and in any circuit court of the United States: and also to make, have, and use, a common seal, and the same to break, alter, and renew, at their pleasure: and also to ordain, establish, and put in execution, such by-laws and ordinances, and regulations, as they shall deem necessary and convenient for the government of the said corporation, not being contrary to the constitution thereof, or to the laws of the United States; and generally to do and execute all and singular the acts, matters, and things, which to them it shall or may appertain to do; subject, nevertheless, to the rules, regulations, restrictions, limitations, and provisions, hereinafter prescribed and declared.

§ 8. That, for the management of the affairs of the said corporation, there shall be twenty-five directors, five of whom, being stockholders, shall be annually appointed by the president of the United States, by and with the advice and consent of the Senate, not more than three of whom shall be residents of any one state; and twenty of whom shall be annually elected at the banking house in the city of Philadelphia, on the first Monday of January in each year, by the qualified stockholders of the capital of the said bank, other than the United States, and by a plurality of votes then and there actually given, according to the scale of voting hereinafter prescribed: *Provided always*, That no person, being a director in the bank of the United States, or any of its branches, shall be a director of any other bank; and should any such director act as a director in any other bank, it shall forthwith vacate his appointment in the direction of the bank of the United States. And the directors, so duly appointed and elected, shall be capable of serving, by virtue of such appointment and choice, from the first Monday in the month of January of each year, until the end and expiration of the first Monday in the month of January of the year next ensuing the time of each annual election to be held by the stockholders as aforesaid. And the board of directors, annually, at the first meeting after their election in each and every year, shall proceed to elect one of the directors to be president of the corporation, who shall hold the said office during the same period for which the directors are appointed and elected as aforesaid: *Provided also*, That the first appointment and election of the directors and president of the said bank shall be at the time and for the period hereinafter declared: *And provided also*, That in case it should at any time happen that an appointment or election of directors, or an election of the president of the said bank, should not be so made as to take effect on any day when in pursuance of this act, they ought to take effect, the said corporation shall not, for that cause, be deemed to be dissolved; but it shall be lawful at any other time to make such appointments, and to hold such elections, (as the case may be;) and the manner of holding the elections shall be regulated by the by-laws and ordinances of the said corporation: and until such appointments or elections

be made, the directors and president of the said bank, for the time being, shall continue in office: *And provided also*, That in case of the death, resignation, or removal, of the president of the said corporation, the directors shall proceed to elect another president from the directors as aforesaid; and in case of the death, resignation, or absence, from the United States, or removal of a director from office, the vacancy shall be supplied by the president of the United States, or by the stockholders, as the case may be. But the president of the United States alone shall have power to remove any of the directors appointed by him as aforesaid.

§ 9. That as soon as the sum of eight millions four hundred thousand dollars, in gold and silver coin and in the public debt, shall have been actually received on account of the subscription to the capital of the said bank (exclusively of the subscription aforesaid, on the part of the United States) notice thereof shall be given by the persons under whose superintendence the subscription shall have been made at the city of Philadelphia, in at least two newspapers printed in each of the places (if so many be printed in such places respectively) where subscriptions shall have been made; and the said persons shall, at the same time, and in like manner, notify a time and place, within the said city of Philadelphia, at the distance of at least thirty days from the time of such notification, for proceeding to the election of twenty directors as aforesaid, and it shall be lawful for such election to be then and there made. And the president of the United States is hereby authorised, during the present session of congress, to nominate, and, by and with the advice and consent of the senate, to appoint, five directors of the said bank, though not stockholders, any thing in the provisions of this act to the contrary notwithstanding; and the persons who shall be elected and appointed as aforesaid, shall be the first directors of the said bank, and shall proceed to elect one of the directors to be president of the said bank; and the directors and president of the said bank, so appointed and elected as aforesaid, shall be capable of serving in their respective office, by virtue thereof, until the end and expiration of the first Monday of the month of January next ensuing the said appointments and elections; and they shall then and thereforth commence, and continue the operations of the said bank, at the city of Philadelphia.

§ 10. That the directors for the time being, shall have power to appoint such officers, clerks, and servants, under them, as shall be necessary for executing the business of the said corporation, and to allow them such compensation for their services, respectively, as shall be reasonable; and shall be capable of exercising such other powers and authorities for the well governing and ordering of the officers of the said corporation, as shall be prescribed, fixed, and determined, by the laws, regulations, and ordinances, of the same.

§ 11. That the following rules, restrictions, limitations, and provisions, shall form and be fundamental articles of the constitution of the said corporation, to wit: 1. The number of votes to which the stockholders shall be entitled, in voting for directors, shall be according to the number of shares he, she, or they, respectively, shall hold, in the proportions following, that is to say; for one share and not more than two shares, one vote; for every two shares above two, and not exceeding ten, one vote; for every four shares above ten, and not exceeding thirty, one vote; for every six shares above thirty, and not exceeding sixty, one vote; for every eight shares above sixty, and not exceeding one hundred, one vote; and for every ten shares above one hundred, one vote; but no person, copartnership, or body politic, shall be entitled to a greater number than thirty votes; and after the first election, no share or shares shall confer a right of voting, which shall not have been helden three calendar months previous to the day of election. And stockholders actually resident within the United States, and none other, may vote in elections by proxy. *Second*. Not more than three fourths of the directors elected by the stockholders, and not more than four fifths of the directors appointed by the president of the United States, who shall be in office at the time of an annual election, shall be elected or appointed for the next succeeding year; and no director shall hold his office more than three years out of four in succession: but the director who shall be the president at the time of an election, may always be re-appointed, or re-elected, as the case may be. *Third*. None but a stockholder, resident citizen of the United States, shall be a director; nor shall a director be entitled to any emolument; but the directors may make such compensation to the president, for his extraordinary attendance at the bank, as shall appear to them reasonable. *Fourth*. Not less than seven directors shall constitute a board for the transaction of business, of whom the president shall always be one, except in case of sickness or necessary absence; in which case his place may be supplied by any other director whom he, by writing, under his hand, shall depute for that purpose. And the director so deputed may do and transact all the necessary business, belonging to the office of the president of the said corporation during the continuance of the sickness or necessary absence of the president. *Fifth*. A number of stockholders, not less than sixty, who, together, shall be proprietors of one thousand shares or upwards, shall have power, at any time, to call a general meeting of the stockholders, for purposes relative to the institution, giving at least ten weeks' notice in two public newspapers of the place where the bank is seated, and specifying in such notice the object or objects of such meeting. *Sixth*. Each cashier or treasurer, before he enters upon the duties of his office, shall be required to give bond, with two or more sureties, to the satisfaction of the directors, in a sum not less than fifty thousand dollars, with a condition for his good behaviour, and the faithful performance of his duties to the corporation. *Seventh*. The lands, tenements, and hereditaments, which it shall be lawful for the said corporation to hold, shall be only such as shall be requisite for its immediate accommodation in relation to the convenient transacting of its business, and such as shall have been bona fide mortgaged to it by way of security, or conveyed to it in satisfaction of debts previously contracted in the course of its dealings, or purchased at sales, upon judgments which shall have been obtained for such debts. *Eighth*. The total amount of debts which the said corporation shall at any time owe, whether by bond, bill, note, or other contract, over and above the debt or debts due for money deposited in the bank, shall not exceed the sum of thirty-five millions of dollars, unless the contracting of any greater debt shall have been previously authorised by law of the United States. In case of excess, the directors under whose administration it shall happen, shall be liable for the same in their natural and private capacities; and an action of debt may, in such case, be brought against them, or any of them, their or any of their heirs, executors, or administrators, in any court of record of the United States, or either of them, by any creditor or creditors of the said corporation, and may be prosecuted to judgment and execution, any condition, covenant, or agreement, to the contrary notwithstanding. But this provision shall not be construed to exempt the said corporation, or the lands, tenements, goods, or chattels, of the same, from being also liable for, and chargeable with, the said excess. Such of the said directors who may have been absent when the said excess was contracted or created, or who may have dissented from the resolution or act whereby the same was so contracted or created, may respectively exonerate themselves from being so liable, by forthwith giving notice of the fact, and of their absence or dissent, to the president of the United States, and to the stockholders, at a general meeting, which they shall have power to call for that purpose. *Ninth*. The said corporation shall not, directly or indirectly, deal or trade in any thing except bills of exchange, gold or silver bullion, or in the sale of goods really and truly pledged for money lent and not redeemed in due time, or goods which shall be the proceeds of its lands. It shall not be at liberty to purchase any public debt whatsoever, nor shall it take more than at the rate of six per centum per annum for or upon its loans or discounts. *Tenth*. No loan shall be made by the said corporation, for

the use or on account of the government of the United States, to an amount exceeding five hundred thousand dollars, or of any particular state, to an amount exceeding fifty thousand dollars, or of any foreign prince or state, unless previously authorized by a law of the United States. *Eleventh.* The stock of the said corporation shall be assignable and transferable, according to such rules as shall be instituted, in that behalf, by the laws and ordinances of the same. *Twelfth.* The bills obligatory and of credit, under the seal of the said corporation, which shall be made to any person or persons, shall be assignable by endorsement thereupon, under the hand or hands of such person or persons, and his, her, or their, executors or administrators, and of his, her, or their assignee or assignees, and so as absolutely to transfer and vest the property thereof in each and every assignee or assignees successively, and to enable such assignee or assignees, and his, her, or their, executors or administrators, to maintain an action thereupon in his, her, or their, own name or names: *Provided,* That said corporation shall not make any bill obligatory, or of credit, or other obligation under its seal, for the payment of a sum less than five thousand dollars. And the bills or notes which may be issued by order of the said corporation, signed by the president and countersigned by the principal cashier or treasurer thereof, promising the payment of money to any person or persons, his, her, or their, order, or to bearer, although not under the seal of the said corporation, shall be binding and obligatory upon the same, in like manner, and with like force and effect, as upon any private person or persons, if issued by him, her, or them, in his, her, or their, private or natural capacity or capacities, and shall be assignable and negotiable in like manner as if they were so issued by such private person or persons; that is to say, those which shall be payable to any person or persons, his, her, or their, order, shall be assignable by endorsement, in like manner and with the like effect as foreign bills of exchange now are; and those which are payable to bearer shall be assignable and negotiable by delivery only: *Provided,* That all bills or notes, so to be issued by said corporation, shall be made payable on demand, other than bills or notes for the payment of a sum not less than one hundred dollars each, and payable to the order of some person or persons; which bills or notes it shall be lawful for said corporation to make payable at any time not exceeding sixty days from the date thereof. *Thirteenth.* Half yearly dividends shall be made of so much of the profits of the bank as shall appear to the directors advisable; and once in every three years the directors shall lay before the stockholders, at a general meeting, for their information, an exact and particular statement of the debts which shall have remained unpaid after the expiration of the original credit, for a period of treble the term of that credit, and of the surplus of the profits, if any, after deducting losses and dividends. If there shall be a failure in the payment of any part of any sum subscribed to the capital of the said bank, by any person, copartnership, or body politic, the party failing shall lose the benefit of any dividend which may have accrued prior to the time for making such payment, and during the delay of the same. *Fourteenth.* The directors of the said corporation shall establish a competent office of discount and deposit in the district of Columbia, whenever any law of the United States shall require such an establishment; also one such office of discount and deposit in any state in which two thousand shares shall have been subscribed or may be held, whenever, upon application of the legislature of such state, congress may, by law, require the same: *Provided,* The directors aforesaid shall not be bound to establish such office before the whole of the capital of the bank shall have been paid up. And it shall be lawful for the directors of the said corporation to establish offices of discount and deposit wheresoever they shall think fit, within the United States or the territories thereof, and to commit the management of the said offices, and the business thereof, respectively, to such persons, and under such regulations, as they shall deem proper, not being contrary to law or the constitution of the bank. Or instead of establishing such offices, it shall be lawful for the directors of the said corporation, from time to time, to employ any other bank or banks, to be first approved by the secretary of the treasury, at any place or places that they may deem safe and proper, to manage and transact the business proposed as aforesaid, other than for the purposes of discount, to be managed and transacted by such offices, under such agreements, and subject to such regulations, as they shall deem just and proper. Not more than thirteen, nor less than seven, managers or directors, of every office established as aforesaid, shall be annually appointed by the directors of the bank, to serve one year; they shall choose a president from their own number; each of them shall be a citizen of the United States, and a resident of the state, territory, or district, wherein such office is established; and not more than three fourths of the said managers or directors, in office at the time of an annual appointment, shall be re-appointed for the next succeeding year; and no director shall hold his office more than three years out of four, in succession; but the president may be always re-appointed. *Fifteenth.* The officer at the head of the treasury department of the United States shall be furnished, from time to time, as often as he may require, not exceeding once a week, with statements of the amount of the capital stock of the said corporation, and of the debts due to the same; of the moneys deposited therein; of the notes in circulation, and of the specie in hand; and shall have a right to inspect such general accounts in the books of the bank as shall relate to the said statement: *Provided,* That this shall not be construed to imply a right of inspecting the account of any private individual or individuals with the Bank. *Sixteenth.* No stockholder, unless he be a citizen of the United States, shall vote in the choice of directors. *Seventeenth.* No note shall be issued of less amount than five dollars.

§ 12. That if the said corporation, or any person or persons, for or to the use of the same, shall deal or trade in buying or selling goods, wares, merchandise, or commodities, whatsoever, contrary to the provisions of this act, all and every person and persons by whom any order or direction for so dealing or trading shall have been given, and all and every person and persons, who shall have been concerned as parties or agents therein, shall forfeit and lose treble the value of the goods, wares, merchandise, and commodities, in which such dealing and trade shall have been; one half thereof to the use of the informer, and the other half thereof to the use of the United States; to be recovered in any action of law, with costs of suit.

§ 13. That if the said corporation shall advance or lend any sum of money for the use or on account of the government of the United States, to an amount exceeding five hundred thousand dollars; or of any particular state, to an amount exceeding fifty thousand dollars; or of any foreign prince or state (unless previously authorized thereto by a law of the United States), all and every person and persons, by and with whose order, agreement, consent, approbation, and connivance, such unlawful advance or loan shall have been made, upon conviction thereof, shall forfeit and pay, for every such offence, treble the value or amount of the sum or sums which have been so unlawfully advanced or lent; one fifth thereof to the use of the informer, and the residue thereof to the use of the United States.

§ 14. That the bills or notes of the said corporation, originally made payable, or which shall have become payable, on demand, shall be receivable in all payments to the United States, unless otherwise directed by act of congress.

§ 15. That, during the continuance of this act, and whenever required by the secretary of the treasury, the said corporation shall give the necessary facilities for transferring the public funds from place to place, within the United States, or the territories thereof, and for distributing the same in payment of the public creditors, without charging commissions, or claiming allowance, on account of difference of exchange; and shall also do and perform the several and respective duties of the commissioners of loans for the several states, or of any one or more of them, whenever required by law.

§ 16. That the deposits of the money of the United States, in places in which the said bank and branches thereof may be established, shall be made in said bank or branches thereof, unless the secretary of the treasury shall at any time otherwise order and direct; in which case the secretary of the treasury shall immediately lay before congress, in session, and, if not, immediately after the commencement of the next session, the reasons of such order or direction.

§ 17. That the said corporation shall not, at any time, suspend and refuse payment in gold and silver, of any of its notes, bills, or obligations; nor of any moneys received upon deposits in said bank, or in any of its offices of discount and deposits. And if the said corporation shall, at any time, refuse or neglect to pay, on demand, any bill, note, or obligation, issued by the corporation, according to the contract, promise, or undertaking, therein expressed; or shall neglect or refuse to pay, on demand, any moneys received in said bank, or in any of its offices aforesaid, on deposits, to the person or persons entitled to receive the same, then, and in every such case, the holder of any such note, bill, or obligation, or the person or persons entitled to demand and receive such moneys as aforesaid, shall, respectively, be entitled to receive and recover interest on the said bills, notes, obligations, or moneys, until the same shall be fully paid and satisfied, at the rate of twelve per centum per annum, from the time of such demand as aforesaid: *Provided*, That congress may, at any time hereafter, enact laws enforcing and regulating the recovery of the amount of the notes, bills, obligations, or other debts, of which payment shall have been refused as aforesaid, with the rate of interest above mentioned, vesting jurisdiction for that purpose in any courts, either of law or equity, of the courts of the United States, or territories thereof, or of the several states, as they may deem expedient.

§ 18. That if any person shall falsely make, forge, or counterfeit, or cause or procure to be falsely made, forged, or counterfeited, or willingly aid or assist in falsely making, forging, or counterfeiting, any bill or note in imitation of, or purporting to be, a bill or note issued by order of the president, directors, and company, of the said bank, or any order or check on the said bank or corporation, or any cashier thereof; or shall falsely alter, or cause or procure to be falsely altered, or willingly aid or assist in falsely altering, any bill or note issued by order of the president, directors, and company, of the said bank, or any order or check on the said bank or corporation, or any cashier thereof; or shall pass, utter, or publish, or attempt to pass, utter, or publish, as true, any false, forged, or counterfeited, bill or note, purporting to be a bill or note issued by order of the president, directors, and company, of the said bank, or any false, forged, or counterfeited, order or check upon the said bank or corporation, or any cashier thereof, knowing the same to be falsely forged or counterfeited; or shall pass, utter, or publish, or attempt to pass, utter, or publish, as true, any falsely altered bill or note, issued by order of the president, directors, and company, of the said bank, or any falsely altered order or check on the said bank or corporation, or any cashier thereof, knowing the same to be falsely altered, with intention to defraud the said corporation, or any other body politic or person; or shall sell, utter, or deliver, or cause to be sold, uttered, or delivered, any forged or counterfeit note or bill, in imitation, or purporting to be, a bill or note issued by order of the president and directors of the said bank, knowing the same to be false, forged, or counterfeited; every such person shall be deemed and adjudged guilty of felony, and being thereof convicted by due course of law, shall be sentenced to be imprisoned and kept to hard labour, for not less than three years nor more than ten years, or shall be imprisoned not exceeding ten years, and fined not exceeding five thousand dollars: *Provided*, That nothing herein contained shall be construed to deprive the courts of the individual states of a jurisdiction, under the laws of the several states, over any offence declared punishable by this act.

§ 19. That if any person shall make or engrave, or cause or procure to be made or engraved, or shall have in his custody or possession, any metallic plate, engraved after the similitude of any plate from which any notes or bills, issued by the said corporation, shall have been printed, with intent to use such plate, or to cause or suffer the same to be used, in forging or counterfeiting any of the notes or bills issued by the said corporation; or shall have in his custody or possession any blank note or notes, bill or bills, engraved and printed after the similitude of any notes or bills issued by said corporation, with intent to use such blanks, or cause or suffer the same to be used, in forging or counterfeiting any of the notes or bills issued by the said corporation; or shall have in his custody or possession any paper adapted to the making of bank notes or bills, and similar to the paper upon which any notes or bills of the said corporation shall have been issued, with intent to use such paper, or cause or suffer the same to be used, in forging or counterfeiting any of the notes or bills issued by the said corporation; every such person, being thereof convicted by due course of law, shall be sentenced to be imprisoned and kept to hard labor for a term not exceeding five years, or shall be imprisoned for a term not exceeding five years and fined in a sum not exceeding one thousand dollars.

§ 20. That, in consideration of the exclusive privileges and benefits conferred by this act upon the said bank, the president, directors, and company, thereof, shall pay to the United States, out of the corporate funds thereof, the sum of one million and five hundred thousand dollars, in three equal payments; that is to say: five hundred thousand dollars at the expiration of two years; five hundred thousand dollars at the expiration of three years; and five hundred thousand dollars at the expiration of four years after the said bank shall be organized and commence its operations in the manner heretofore provided.

§ 21. That no other bank shall be established by any future law of the United States during the continuance of the corporation hereby created, for which the faith of the United States is hereby pledged: *Provided*, Congress may renew existing charters for banks in the district of Columbia, not increasing the capital thereof, and may also establish any other bank or banks in said district, with capitals not exceeding, in the whole, six millions of dollars, if they shall deem it expedient. And, notwithstanding the expiration of the term for which the said corporation is created, it shall be lawful to use the corporate name, style, and capacity, for the purpose of suits for the final settlement and liquidation of the affairs and accounts of the corporation, and for the sale and disposition of their estate, real, personal, and mixed; but not for any other purpose, or in any other manner, whatsoever, nor for a period exceeding two years after the expiration of the said term of incorporation.

§ 22. That if the subscriptions and payments to said bank shall not be made and completed so as to enable the same to commence its operations, or if the said bank shall not commence its operations on or before the first Monday in April next, then, and in that case, congress may, at any time within twelve months thereafter, declare, by law, this act null and void.

§ 23. That it shall, at all times, be lawful for a committee of either house of congress, appointed for that purpose, to inspect the books, and to examine into the proceedings, of the corporation hereby created, and to report whether the provisions of this charter have been, by the same, violated or not; and whenever any committee, as aforesaid, shall find and report, or the president of the United States shall have reason to believe, that the charter has been violated, it may be lawful for congress to direct, or the president to order, a *scire facias* to be sued out of the circuit court of the district of Pennsylvania, in the name of the United States (which shall be executed upon the president of the corporation for the time being, at least fifteen days before the commencement of the term of said court), calling on the said corporation to show cause wherefore the charter hereby granted shall not be declared forfeited; and it shall be lawful for the said court, upon the return of the said *scire facias*, to examine into the truth of the alleged violation, and if such violation be made appear, then to pronounce and adjudge that the said charter is forfeited and annulled. *Provided, however*, Every issue

of fact which may be joined between the United States and the corporation aforesaid, shall be tried by jury. And it shall be lawful for the court aforesaid to require the production of such of the books of the corporation as it may deem necessary for the ascertainment of the controverted facts: and the final judgment of the court aforesaid shall be examinable in the supreme court of the United States, by writ of error, and may be there reversed or affirmed, according to the usages of law.

The bank commenced operations on the 7th of January, 1817; and soon after entered into a compact with the State banks for a simultaneous resumption of specie payments. It was agreed that this should take place on the 20th of February, on the condition, among others, that the Bank of the United States should not demand payment of any balances which might accumulate against the State institutions, until that bank and its branches should have discounted for individuals, not having duties to pay, at some of the principal Atlantic ports, to the amount of \$6,000,000.

Immediately on going into operation, every effort was, very naturally, made by the bank to push its paper into circulation, and to make its transactions as extensive as possible. Its discounts were augmented, in the course of little more than a month, from three to twenty millions of dollars; and in the end of October, of the same year, they already amounted to 33 millions. With respect to the circulation of its notes, this was soon only limited by the physical inability of the President and Cashier to sign more than a certain number of them in a given time. On the whole, however, there is no doubt that the continued expansion of its paper by the Bank of the United States more than counterbalanced any contraction of that of the other banks, which may have ensued by means of its action upon them. The whole currency of the country remained still in a depreciated condition. Prices were universally high; and the spirit of speculation in the different kinds of stocks especially was everywhere rife. Independently of any other consideration, a return to a more natural state of things could not fail before long to ensue, from the exportation of specie, and the consequent necessity of the banks to curtail their discounts. This reaction, it is also true, must necessarily give occasion to much pecuniary embarrassment and distress to almost every portion of the community. But the distress, when it actually came, was unquestionably very much aggravated by the system of management adopted in the early administration of the new Bank of the United States. In the first place, not only were its discounts and circulation augmented altogether too rapidly, but its discounts were, to a considerable extent, made to the stockholders, on pledges of their stock. The object which the directors had, at the outset, in thus favouring the stockholders, above every other class of borrowers, was to enable them to pay the specie portion of the several instalments due by them for their shares, as the time for their payment occurred. As a consequence, the whole amount of the specie paid into the bank by the stockholders, instead of being what was contemplated by Congress, when they incorporated the bank, viz. \$7,000,000, was, it is probable, considerably short of a third of this sum. But it soon became a practice to lend to the stockholders to the extent of the par value of their shares, on a pledge of these to the bank, without any personal security. Persons of little or no property were, by this means, enabled to hold bank stock, even to a very large amount; since all that they needed to do was to procure from the bank, on a pledge of the stock which they purchased, the very money which they were called upon to pay for it. An increased demand was in this way created for the stock; and it is not surprising that its price in the market should have been, for some time, almost steadily on the rise, as well as that it should have presented a tempting field for the operations of the speculator and the gambler. Again, it was in the natural order of things that, when a contraction on the part of the bank became necessary, the directors, instead of throwing any portion of the pledged stock into the market, which would have a tendency to lower the value of the stock, should curtail their discounts of mercantile paper to an extent far greater than would otherwise have been requisite, and should thus, as we have said, have aggravated the pecuniary embarrassments incidental to every sudden diminution of the circulating medium.

We cannot better continue this account of the mode in which the Bank of the United States was managed, in the period under consideration, than by adopting the language of Mr. Cheves, the second president of the bank, in a report made by him to the stockholders in 1832, "The bank, immediately on its commencement, did a very extensive business, imported vast sums of specie, paid its notes and those of the offices, without reference to the places where they were payable, at the bank and all the principal offices north of the Potomac, while they were, under the charter, necessarily received every where in payments of debts to the government of the United States; and drafts were given without limit, on the parent bank and northern offices, by the western offices, at par or at a premium merely nominal. As soon as the notes of the southern and western offices were paid or received by the bank and northern offices, they were returned to them and re-issued in perpetual succession. The result was, that the bank and the great northern offices were drained of their capital, and on the 20th of July, 1818, only eighteen months after the institution began its operations, it was obliged to commence a rapid and heavy curtailment of the business of the bank and its offices. During all this time, it had the advantage of immense government deposits. At the moment that curtailments were ordered, the government deposits in the bank and its branches, including the deposits of public officers, amounted to eight millions of dollars, and

they had been larger at preceding periods. Curtailments were ordered from time to time, at the southern and western offices, to the amount of seven millions of dollars, and at the parent bank to the amount of two millions, though at the latter they were made to the amount of 3,600,000 dollars, and upwards, between the 30th of July, 1818, and the 1st of April, 1819. No curtailments were ordered at the offices of New York and Boston, because there was no room for them, yet necessity obliged them to reduce their business very much. The curtailments at all points within the above mentioned dates, being eight months, were 6,530,000 dollars, 49 cents. Yet after these immense and rapid curtailments, the most sensible and vital points (Philadelphia, New York, and Boston) were infinitely in worse condition than when the remedy was devised.

"At that moment" (the 1st of April, 1819) "the discount line of the important office at Boston was only 94,584 dollars, 37 cents. And when in this wretched state, the southern and western circulation was pouring in upon these weak points, and the government was at liberty, according to the practice of the time, to draw on every office of the bank, for the gross amount of its deposits, throughout the whole establishment, whether north, south, east, or west. The southern and western offices were not restrained from issuing their notes, which they did most profusely. The curtailments, in many instances, resulted merely in a change of debts bearing interest, for debts due by local banks, or the notes of local banks, on neither of which was interest received. The western offices curtailed their discounted paper, but they purchased what were called *race horse bills*, to a greater amount than their curtailments. The bank itself continued, during the whole period, to purchase and collect drafts on the southern and even western offices, though almost the whole of the active capital already lay in those quarters of the Union, and though the great object of the curtailments was to draw funds from these points. The debt due in Kentucky and Ohio, instead of being reduced, was within this period actually increased upwards of half a million of dollars. Instead of getting relief from the southern and western offices generally, where curtailments had been ordered, the bank was still further exhausted by the intervening operations.

"At the commencement of this period, (a period commencing with the order for curtailments, and ending March, 1819,) the bank was indebted to Baring, Brothers & Co., Reed, Irving & Co., Adams, Robertson, & Co., and Thomas Wilson & Co., the sum of 1,586,345 dollars, 47 cents, growing principally, if not entirely, out of its specie operations. Of this sum the greater part was paid during this period. It had, however, contracted new debts with Baring, Brothers & Co., and Thomas Wilson & Co., of which there remained due, including any balance which may have been due on the former accounts, the sum of 876,648 dollars; and, within the same period, it had disposed of 2,270,926 dollars, 65 cents of its funded debt, furnishing by these compound operations ways and means, in addition to its curtailments, to the amount of 1,561,229 dollars, 13 cents, and making, with these curtailments, a reduction in the productive capital of the bank, within the period of eight months, of eight millions of dollars, and upwards.

"At the close of this period, the discounts on personal security at Philadelphia had been so long the subject of curtailment, that a small portion of them admitted of further reduction, and, after great efforts, a rule had been established to reduce the discounts which had been granted on the stock of the bank, at the rate of five per cent. every 60 days. The latter constituted the bulk of the discounted paper, and so small a reduction afforded no relief against a great and immediate demand. Even this small reduction was the subject of loud, angry, and constant remonstrance among the borrowers, who claimed the privileges and the favours which they contended were due to stockholders, and sometimes succeeded in communicating their sympathies to the board. All the funded debt which was valuable had been disposed of, and the proceeds exhausted. The specie in the vaults at the close of the day, on the 1st of April, 1819, was only 126,745 dollars, 28 cents, and the bank owed to the city banks, deducting balances due to it, an aggregate balance of 79,126 dollars 99 cents.

"It is true there were in the mint 287,978 dollars, 9 cents, and *in transitu* from Kentucky and Ohio over land, 250,000 dollars; but the Treasury dividends were payable on that day to the amount of near 500,000 dollars, and there remained at the close of the day more than one half of the sum subject to draft, and the greater part of the sum which had been drawn during the day remained a charge upon the bank, in the shape of temporary deposits, which were almost immediately withdrawn. Accordingly, on the 12th of the same month, the bank had in its vaults but 71,522 dollars, 47 cents, and owed to the city banks a balance of 196,148 dollars, 47 cents; exceeding the specie in its vaults 124,895 dollars, 19 cents. It must again be remarked, that it had yet the sum before mentioned in the mint, as well as the sum *in transitu* from Ohio and Kentucky: this last sum (250,000 dollars) arrived very seasonably on the next day, or a day or two thereafter. The bank in this situation, the office at New York was little better, and the office at Boston a great deal worse. At the same time the bank owed to Baring, Brothers & Co., and Thomas Wilson & Co., nearly 900,000 dollars, which it was bound to pay immediately, and which was equivalent to a charge upon its vaults to that amount. It had, including the notes of the offices, a circula-

tion of six millions of dollars to meet, to which were to be added the demands of depositors, public and private, at a time, too, when the scarcity of money called forth every disposable dollar, and therefore created demands upon the bank for an unusual portion of the ordinary deposits and circulation.

"The sums which were collected daily on account of the revenue, in branch paper, were demandable the next day in Philadelphia, and, at the same time, at every office of the establishment, at the discretion of the officers of government. The revenue was chiefly paid in branch paper, as well at Boston and New York as at Philadelphia, and while the duties were thus paid at one counter, in branch paper, the debentures, which amounted to one million of dollars every three months, were demanded and paid at the other, in specie or its equivalent—money of the place. Many additional details, increasing the difficulties of the moment, might be added. The southern offices were remitting tardily, and the western not at all. All the resources of the bank would not have sustained it in this course and mode of business another month. Such was the prostrate state of the bank of the nation, which had, only twenty-seven months before, commenced business with an untrammelled active capital of twenty-eight millions of dollars."

Mr. Cheves then goes on to state the losses incurred by the bank and its offices, especially at Baltimore, in consequence of the improper conduct of certain of the officers connected with it. The losses in that city alone, he says, were estimated at the sum of 1,671,221 dollars, 87 cents. "The aggregate of the losses of the institution, growing out of the operations which preceded the 6th of March, 1819, exceeded considerably 3,500,000 dollars. The dividends during the same time amounted to 4,410,000 dollars. Of this sum 1,348,553 dollars, 98 cents, were received as the interest on the public debt held by the bank, which leaves, as the entire profits on all the operations of banking, the sum of 3,061,441 dollars, 2 cents, which is less by at least half a million of dollars, than the losses sustained on the same business.

"Thus stood the bank at the organisation of the present administration. I was elected and took my seat as President of the Board on the 6th of March, 1819. But some time, of course, was necessary to look into the state of the bank, before measures of relief could be projected. Its danger, however, was too manifest and too pressing to allow much time for this purpose. The principal errors which produced the danger were fortunately of easy discovery, and to them the proper remedy was immediately applied. The southern and western offices were immediately directed not to issue their notes, and the bank ceased to purchase and collect exchanges on the south and west."

"At a meeting of the directors on the 9th of April, which was very full, the state of the bank was submitted to them, and a select committee appointed, to whom the subject of its difficulties was referred, and after very mature deliberation that committee made a report, which was unanimously agreed to. The principal means of relief proposed and agreed to were:

1. To continue the curtailments previously ordered.
2. To forbid the offices, at the south and west, to issue their notes when the exchanges were against them.
3. To collect the balances due by local banks to the offices.
4. To claim of the government the time necessary to transfer funds from the offices where money was collected to those where it was to be disbursed, as well as like time (until the difficulties of the banks were removed) to transfer funds to meet the notes of offices paid in the bank or other offices than those where they were payable according to their tenor.
5. To pay debentures in the same money in which the duties on which the debentures were secured had been paid.
6. To obtain a loan in Europe for a sum not exceeding 2,500,000 dollars, for a period not exceeding three years.

"These measures, simple and obvious as they are, and some of them so strangely overlooked so long, lifted the bank in the short space of seventy days (from the 6th of March to the 17th of May) from the extreme prostration which has been described to a state of safety, and even in some degree of power, enabled it to cease its curtailments, except at points where it had an excess of capital, to defy all attacks upon it, and to sustain other institutions which wanted aid and were ascertained to be solvent; above all to establish the soundness of the currency, which had just before been deemed hopeless; and in a single season of business (the first) to give to every office as much capital as it could advantageously employ."

Nothing more need be added to this exposition of Mr. Cheves, in order to enable the reader to understand the injurious action of the bank, at the period of which we are speaking, on the currency of the country, than to state the fact that the branches of the United States Bank made a practice of exchanging their drafts on the Atlantic cities for the notes of the local banks, upon which they required interest to be paid. The obvious consequence of this proceeding was to stimulate those institutions to enlarge their business also to a very extravagant extent; thus contributing to render the contraction of the currency in the western states, when it necessarily happened, both more extensive and more sudden than it would otherwise have been.

The mismanagement of the affairs of the Bank of the United States could not fail to attract the attention of Congress. It was brought before the House of Representatives by a

resolution offered by Mr. Spencer of New York, on the 25th of November, 1818; which resolution was referred to a select committee of which the mover of the resolution was the chairman. This committee, on the 16th of January following, made an elaborate report, concluding with an explicit declaration, that, in their opinion, the charter of the bank had in several instances been violated. However, excepting the passage of a bill to prevent the larger stockholders from having an undue number of votes at elections, they did not recommend any specific action, on the part of Congress, to correct "the many evils and mischiefs" depicted by them, "because, by the provisions of the charter, the Secretary of the Treasury has full power to apply a prompt and adequate remedy, whenever the situation of the bank shall require it." Resolutions were shortly after offered to the House, for taking the proper measures preparatory to declaring the charter of the bank to have been forfeited; but they were voted down by very large majorities.

It is unnecessary to go into any details here concerning the history of the Bank of the United States, from the period at which we have now arrived until the meeting of Congress in December, 1829, when the President presented the question of its recharter for the consideration of that body. Its "expansions and contractions," as well as those of the banks of the country generally, during the whole of this time were merely such as are incidental to the operations of all banks of circulation. The President observed that "the charter of the Bank of the United States expires in 1836, and its stockholders will, most probably, apply for a renewal of their privileges. In order to avoid the evils resulting from precipitancy, in a measure involving such important principles, and such deep pecuniary interests, I feel that I cannot, in justice to the parties interested, too soon present it to the deliberate consideration of the legislature and the people. Both the constitutionality and the expediency, of the law creating this bank, are well questioned by a large portion of our fellow-citizens; and it must be admitted by all, that it has failed in the great end of establishing a uniform and sound currency.

"Under these circumstances, if such an institution is deemed essential to the fiscal operations of the government, I submit to the wisdom of the legislature whether a national one, founded upon the credit of the government, and its revenues, might not be devised, which would avoid all constitutional difficulties, and, at the same time, secure all the advantages to the government and country that were expected to result from the present bank."

The Committee of Ways and Means of the House of Representatives, through their chairman, Mr. McDuffie, made a report on the 13th of April, 1830; in which, after an elaborate examination of the several questions presented by the message of the President, and submitted to them for consideration, they conclude that Congress has the constitutional power to incorporate a bank, such as that of the United States; that it is expedient to establish and maintain such an institution; and that it is inexpedient to establish "a national bank, founded upon the credit of the government and its revenues."

In the Senate, a resolution had been referred, early in the same session, to the committee of finance, directing them to inquire into the expediency of establishing a uniform national currency for the United States; which committee reported on the 29th of March, and, like that of the House of Representatives, expressed opinions, concerning the currency and the Bank of the United States, in direct opposition with those of the President.

No further steps were taken by either the Senate or the House of Representatives on the subject, until the session of 1831-32, when the bank made application to Congress for a renewal of its charter. The President had, in the mean while, a second, and a third time, in successive annual messages, reiterated his views in opposition to such a renewal. This did not prevent a bill from passing through both branches of the national legislature, incorporating anew the Bank of the United States; which bill was, however, *retroed* by the President, who stated his reasons for doing so in a message to the Senate, where the bill had originated. It was there promptly reconsidered; but, failing to obtain in its favour the constitutional majority of two-thirds of the members of that body, it was finally rejected on the 13th day of July, 1832.

The removal by the President of the government deposits from the Bank of the United States, in the autumn of 1833; the adoption, in consequence, by Congress of what has styled the deposit bank system, as a means of safely keeping the public money; the passage of the act of June 23d, 1836, for the distribution of the surplus revenue among the different states of the Union; the issue by the Secretary of the Treasury of the famous specie circular, of July 11th, 1836; the incorporation of the Bank of the United States by the Legislature of Pennsylvania, early in the same year; the derangement in the currency of the country, which led, in May of the following year, to the general suspension of specie payments by the banks; the resumption of specie payments by the banks, in the summer of 1838; with the adoption by the State of New York, and one or two others, of a system of "free banking;" constitute the principal events, in the monetary and financial history of the United States, during the last six years. They are, of course, fresh in the recollection of our readers; and, on this account, as well as with the view of abstaining entirely from any interference on our part in the party contentions to which those events have afforded an ample

field, we shall content ourselves with enumerating them here, and inserting below the act incorporating the Pennsylvania Bank of the United States, as also the act to authorise the business of banking, passed by the Legislature of the State of New York, April 18th, 1838.

An Act to repeal the State Tax on Real and Personal Property, and to continue and extend the Improvements of the State, by Railroads and Canals, and to charter a state bank, to be called the "United States Bank."

§ 1. *Be it enacted, &c.*, That all and every provision of the Acts of Assembly, passed the twenty-fifth day of March, in the year one thousand eight hundred and thirty-one, respectively, entitled An act assessing a tax on personal property, to be collected with the county rates and levies, for the use of the commonwealth, and An act to increase the county rates and levies for the use of the commonwealth, be and the same are hereby repealed, except so far as relates to the collection of taxes assessed before the first day of October last: Provided, That the said repeal shall not go into effect, until all the terms and provisions hereinafter set forth shall be fully complied with.

§ 2. That the present stockholders of the Bank of the United States, (excepting the United States and the treasurer of the United States,) and such other persons as may become stockholders agreeably to the by-laws made for that purpose, to an amount not exceeding in the whole the present capital of the said bank, their successors and assigns, be and are hereby created a corporation and body politic, by the name and style of "The President, Directors, and Company of the Bank of the United States;" and shall so continue until the third day of March, in the year one thousand eight hundred and sixty-six; and by that name shall be and are hereby made capable in law, to have, purchase, and receive, possess, enjoy, and retain, to them and their successors, lands, rents, tenements, hereditaments, goods, chattels, and effects, of whatsoever kind, nature, and quality, and the same to sell, grant, demise, alien or dispose of, to sue and be sued, to use a common seal, and the same to alter and renew, and to make such by-laws and ordinances as they shall deem necessary, not being contrary to this act, the constitution of the United States, or to the constitution and laws of this commonwealth; and also to prescribe rules for the transfer of the stock of said corporation, and generally to do all the acts which to them it shall or may appertain to do, and to enjoy the same privileges and authority given by law to any bank within this commonwealth, subject to the rules and restrictions hereinafter prescribed.

§ 3. For the management of the affairs of the said corporation, there shall be annually elected at the banking-house, in the city of Philadelphia, on the first Monday in January in each year, by a plurality of votes, which shall be given by the qualified stockholders of the said bank, in person or by proxy, twenty directors, who shall be capable of serving for one year, and who shall, at the first meeting after their election in each year, proceed to elect one of the directors to be the president of the corporation, who shall hold the said office during the same period for which the directors are elected; but if an election of directors or of the president should not be made on that day, the said corporation shall not for that cause be dissolved, but it shall be lawful at any other time to hold such elections; and until such elections be made, the directors and president for the time being shall continue in office; and in case of the death or resignation of the president, the directors shall elect another president from their own number: and in case of the death or resignation of a director, the vacancy may be supplied by the remaining directors.

§ 4. The following shall be the fundamental articles of the said corporation, to wit:

1. None but a stockholder who is a citizen of the United States shall be a director, or vote at an election for directors, either in person or by proxy; and all proxies shall be dated within sixty days before the day of each election. The number of votes to which each stockholder shall be entitled in voting for directors shall be as follows: for one share and not more than two shares, one vote; for every two shares above two and not exceeding ten shares, one vote; for every four shares above ten and not exceeding thirty, one vote; for every six shares above thirty, and not exceeding sixty, one vote; for every eight shares above sixty, and not exceeding one hundred, one vote; but no person, partnership, or body politic, shall be entitled to a greater number than thirty votes: and after the first election, no share or shares shall confer a right of voting, unless the same shall have been held three calendar months before the day of election.

2. Not more than three fourths of the directors who shall be in office at the time of an annual election, shall be elected for the succeeding year, and no director shall hold his office for more than three years out of four in succession, but the director who shall be the president may always be re-elected; and previous to each election of directors, the board of directors shall appoint three stockholders, not directors, to be judges of the election, who shall conduct and regulate the same, after having severally taken and subscribed an oath or affirmation, before some justice of the peace or alderman, well and faithfully and lawfully to conduct the election, and who, after the conclusion of the ballot, shall decide and openly declare who are chosen directors for the ensuing year. No director of any other bank shall be, at the same time, a director of this bank; nor shall the governor, or any executive or judicial officer of this commonwealth, or member of congress, or of the state legislature, be a director.

3. Not less than seven directors shall constitute a board for the transaction of business, of whom the president shall always be one, except in case of sickness or necessary absence, in which case his place may be supplied by any other director whom he by writing under his hand shall depute for that purpose; and in case the president shall not so depute, the board of directors may elect a director to act during the absence of the president.

4. A general meeting of the stockholders for purposes relative to the institution, may at any time be called, either by the board of directors, or by sixty or more stockholders owning one thousand or more shares of the capital stock, on giving at least six weeks' notice in two public newspapers published in the city of Philadelphia, and specifying in such notice the object or objects of such meeting. And there shall be a general meeting of the stockholders at the banking house, in the city of Philadelphia, on the first Monday of January in every year, at which time the directors shall lay before them a general and particular statement of the affairs of the company.

5. The lands, tenements, and hereditaments which it shall be lawful for the said corporation to hold, shall be only such as shall be requisite for its immediate accommodation in transacting its business, and such as shall have been bona fide mortgaged to it by way of security, or conveyed to it in satisfaction of debts previously contracted in the course of its dealings, or purchased at sales upon judgments which shall have been obtained for such debts, or purchased for the purpose of securing such debts. The said corporation shall not directly, or indirectly, deal or trade in any thing except bills of exchange, gold and silver bullion, or in the sale of goods really and truly pledged for money lent, and not redeemed in due time,—or goods which shall be the proceeds of its lands. Neither shall it make any loan to any foreign prince or state unless previously authorised by law. The said corporation shall not be at liberty to purchase any stock whatever, except their own stock, treasury notes, or public stocks created by the government of the United States, or of this State, or stock of or loans to any of the incorporated companies of this State, for the construction and improvement of,

roads, bridges, canal or inland navigation, or other stocks which may be bona fide pledged as security for debts to the bank, and not duly redeemed.

6. The rate of discount at which loans may be made by said Bank within this commonwealth, shall not exceed one half of one per centum for thirty days. And the notes and bills which shall be issued by order of said corporation, or under its authority, shall be binding upon it, and those made payable to order, shall be assignable by endorsement, but none shall be issued of a denomination less than ten dollars; and if the bank shall neglect or refuse to pay its notes or bills or moneys deposited when due, on demand made at the bank during banking hours, the person or persons entitled to the same shall receive interest thereon at the rate of twelve per centum a year until payment be made. And the notes of the corporation in circulation shall never exceed the capital actually paid in. The total amount of debts which the said corporation may at any time owe, whether by bond, note, or other contract, excepting the amount of money due to depositors, shall not at any time exceed double the amount of capital stock actually paid in; and in case of excess, the directors under whose administration it shall happen, shall be liable in their individual capacities, and an action of debt may in such case be brought against them, or any of them, or any of their heirs, executors or administrators, in any court having competent jurisdiction, by any creditor or creditors of such corporation, and may be prosecuted to judgment and execution, any condition, covenant or agreement to the contrary notwithstanding; but this shall not be construed to exempt the said corporation, or the lands, tenements, goods and chattels of the same, from being also liable for, and chargeable with the said excess. Such of the said directors as may have been absent when the said excess was contracted or created, shall not be considered as consenting thereto, or liable therefor, and those who may have dissented from the resolution or act whereby the same was so contracted or created, and who shall enter their dissent upon the minutes of the board, may exonerate themselves from being so liable, by forthwith giving notice of the fact to the stockholders at a general meeting, which they shall have power to call for that purpose.

7. If the said bank should at any time refuse to pay any of its notes, bills, obligations, or deposited moneys, in gold or silver, then at or after the expiration of three months from the time of the first refusal of said bank to pay as aforesaid, it shall and may be lawful for the holder or proprietor of the same, to make application in writing to any judge of any court in the proper county, to allow him or her to make proof of said refusal on oath or affirmation, by one or more disinterested witness or witnesses, before said judge, whose duty it shall be to give at least ten days' notice to the president or cashier of said bank, of the time and place of making such proof, in order that an opportunity may be afforded for rebutting the same by testimony, and if the facts be substantiated, it shall be the duty of the said judge to reduce the same to writing, and to transmit the same to the Governor. And it shall be the duty of the Governor, immediately on the receipt of the written proof above specified, to issue his proclamation, declaring the charter of the said bank to be forfeited. And from and after the tenth day after the date of the said proclamation, the charter of the said bank shall be absolutely null and void, and of no effect whatsoever—except that the said bank shall be liable, in its corporate capacity, for the fulfillment of all contracts previously made and entered into by it; and the stockholders thereof shall have power to elect directors as usual, and be capable of compelling the fulfillment of any contract entered into with said bank, previously to the date of the said forfeiture.

8. Dividends of so much of the profits as the directors may deem advisable, shall be declared twice a year, on the first Mondays of January and July in each year, and paid to the stockholders on demand at any time after the expiration of ten days therefrom. But such dividends shall in no case exceed the amount of the net profits, actually acquired by the bank, so that the capital stock of the said bank shall never thereby be impaired. If the directors of the bank shall make any dividends which shall impair the capital stock of said bank, the directors consenting thereto, shall be liable in their individual capacities, to such corporation for the amount of the stock so divided; and each director present when such dividend shall be made, shall be adjudged to be consenting thereto, unless he forthwith enter his protest on the minutes of the board, and give public notice to the stockholders of the declaring of such dividend.

9. The salary of the President shall be established and allowed by the stockholders at a general meeting, and no compensation shall be allowed to any person for his services as a director. The board of directors shall appoint a cashier, and such other officers, clerks, and persons as shall be necessary for transacting the business of the bank, and shall take from each such security as the by-laws shall prescribe, and shall make to each a just compensation for his services.

10. The said bank shall make to the auditor general monthly returns of its condition, showing the details of its operations, according to the form of the returns the Bank of the United States now makes to the Secretary of the Treasury of the United States, or according to such form as may be established by law.

§ 5. It shall at all times be lawful for a committee of the legislature, appointed for that purpose, to inspect the books and examine into the proceedings of the corporation hereby created, and to report whether the provisions of this charter have been by the same abused or violated, or not; and if the officers of said corporation should refuse to be sworn or affirmed, or give evidence, or to produce all such of their books or papers as may be demanded before any such committee, then the legislature may by law declare the said charter void, and repeal the same; and whenever any committee as aforesaid shall find and report, or the Governor shall have reason to believe, that the charter has been violated, it may be lawful for the legislature to direct, or the Governor to order, a scire facias to be issued out of the supreme court of Pennsylvania, in the name of the Commonwealth of Pennsylvania (which shall be executed on the president of the corporation for the time being, at least ten days before the commencement of the term of said court), calling on said corporation to show cause wherefore the charter hereby granted, shall not be declared forfeited; and it shall be lawful for said court upon the return of said scire facias to examine into the truth of the alleged violation, and if such violation be made to appear, then to pronounce or adjudge that such charter is forfeited and annulled: Provided, however, every issue of fact which may be joined between the commonwealth or the corporation, such issue shall be tried by jury, and on the trial thereof, the commonwealth shall have the right to change the venue from the county of Philadelphia to any adjoining county. And it shall be lawful for the court aforesaid, to require the production of such of the books or papers of the corporation, as it may deem necessary for the ascertainment of the controverted facts, and the final judgment of said court shall be subject to all the usages of law in other cases.

§ 6. In consideration of the privileges granted by this act, and in lieu of all taxes on dividends, the said corporation shall pay into the Treasury of the Commonwealth the sum of two millions of dollars, at such time and in such installments as the Governor may require: Provided, That at least thirty days' notice shall be given by the Governor, of the time when each installment will be required: And provided also, that for all sums the Governor shall not so require to be paid within three months after the acceptance of this charter by the stockholders, interest at the rate of five per cent. a year shall be paid by the corporation, commencing at the expiration of the said three months, and terminating thirty days before the time fixed for the payment of each sum; and the said corporation shall also, whenever required by law, advance on permanent loan any sum or sums, not exceeding in the whole six millions of dollars, and for each sum of money so loaned, shall receive from the common-

wealth a negotiable certificate of stock, reimbursable on the third day of March, one thousand eight hundred and sixty-eight, transferable at the Bank of Pennsylvania, or such other place as the legislature may hereafter designate, bearing an interest of either four or five per cent. per annum, payable half-yearly at the Bank of Pennsylvania, or such other place as the legislature may hereafter designate, as the law requiring such loan may determine, and in case the interest shall be five per cent. shall pay to the commonwealth one hundred and ten dollars in money for each hundred dollars in stock; or if the interest be four per cent. shall pay one hundred dollars in money for each hundred dollars in stock; and the said corporation shall be bound, whenever required by law, to advance to the commonwealth as a temporary loan, any sum of money not exceeding one million of dollars in any one year, at an interest of four per cent. a year, reimbursable at the pleasure of the commonwealth, within twelve months from the date of the loan; and the said corporation shall further pay to the Treasurer for the use of the commonwealth, the sum of five hundred thousand dollars on the third day of March, Anno Domini, one thousand eight hundred and thirty-seven, and shall pay the further sum of one hundred thousand dollars on the first Monday of June next, and the like sums of one hundred thousand dollars on each succeeding first Monday of June, for nineteen years thereafter, to be added to and paid over with the annual appropriation provided by the commonwealth for common school purposes, and be distributed according to the several laws of this commonwealth regulating the distribution of such appropriation; and the said corporation shall further be bound to subscribe the following sums to the capital stock of the following named companies, if requested so to do by the directors of the said companies, or either of them, within one year from the passage of this act, namely: To the capital stock of the Baltimore and Ohio Railroad Company, the sum of two hundred thousand dollars; To that of the Williamsport and Elmira Railroad Company, the sum of two hundred thousand dollars; To the Monongahela Navigation Company, fifty thousand dollars, if the same be incorporated, at the opening of the books of subscription for the capital stock thereof, and the further sum of fifty thousand dollars as soon as one hundred thousand dollars subscribed by other persons or bodies corporate shall have been bona fide expended in the construction of the said work; To the Cumberland Valley Railroad Company, one hundred thousand dollars; To the Warren and Pinegrove Railroad Company, twenty thousand dollars; To the Warren and Franklin Turnpike-road Company, fifteen thousand dollars, if the said company be incorporated in this session of the legislature; To the Warren and Ridgeway Turnpike-road Company, five thousand dollars; To the Johnstown and Ligonier Turnpike-road Company, ten thousand dollars; To the Snow Shoe and Packerville Turnpike Company, twenty thousand dollars; To the Roseburg and Mercer Turnpike Company, five thousand dollars. All of which subscriptions shall place the said bank on the same footing as to the rights and liabilities with the original subscribers to said companies respectively: Provided, That such subscription shall not be made to the stock of the Baltimore and Ohio Railroad Company until a law of Maryland shall be passed, and assented to by said company, enabling the Commonwealth of Pennsylvania, and any company or companies duly authorised by the said commonwealth, to intersect by Railroad and unite with the Baltimore and Ohio Railroad, at any point in the state of Maryland; and that the whole amount so to be subscribed by the said bank, shall be appropriated exclusively to the construction of the Railroad from Cumberland to Pittsburgh; and that no payment shall be called for by the directors of the Baltimore and Ohio Railroad Company on account of said subscription, until at least twenty miles of the Railroad within the state of Pennsylvania shall have been bona fide placed under contract, and the construction thereof actually begun.

§ 11. The said bank may establish two offices of discount and deposit in this state, one of which shall be at such place in the county of Beaver as the directors may select for the purpose.

§ 15. Nothing in this act contained shall take effect until the several sections and provisions relating to the bank of the United States shall have been accepted by the stockholders thereof, at a general meeting, which acceptance shall be made known to the Governor on or before the third day of March next; whereupon every preceding section of this act shall be in full force. And within thirty days after the acceptance by the stockholders of the existing Bank of the United States, notice shall be given by the directors thereof, that on a day named, not exceeding thirty days thereafter, an election shall be held for directors under the charter so accepted, which election shall be held in like manner as elections are now held in said bank; and the directors so elected shall elect a President, and shall serve until the first annual election: *Provided*, That from the said third day of March to the holding of the election authorised by this section, the President and directors in office at the time of such acceptance may continue to act.

In April, 1836, the United States Bank was authorised to establish, in addition to the two offices specified in the 11th section of the act just recited, an office of discount and deposit in the town of Erie; but this office is not to be continued there longer than the first day of January, 1850. The Bank was also authorised to purchase and hold any real estate belonging to the late Bank of the United States, and to purchase and hold any bank stock. All proxies, moreover, dated at least sixty days before the date of any election, shall be lawful.

An Act to authorise the business of Banking, passed April 18, 1838.

The people of the State of New York, represented in senate and assembly, do enact as follows:

§ 1. The comptroller is hereby authorised and required to cause to be engraved and printed in the best manner, to guard against counterfeiting, such quantity of circulating notes, in the similitude of bank notes in blank, of the different denominations authorised to be issued by the incorporated banks of this state, as he may from time to time deem necessary, to carry into effect the provisions of this act, and of such form as he may prescribe. Such blank circulating notes shall be countersigned, numbered, and registered, in proper books to be provided and kept for that purpose in the office of said comptroller, under his direction, by such person or persons as the said comptroller shall appoint for that purpose, so that each denomination of such circulating notes shall all be of the same similitude, and bear the uniform signature of such register, or one of such registers.

§ 2. Whenever any person or association of persons, formed for the purpose of banking under the provisions of this act, shall legally transfer to the comptroller any portion of the public debt now created or hereafter to be created by the United States or by this state, or such other states of the United States as shall be approved by the comptroller, such person or association of persons shall be entitled to receive from the comptroller an equal amount of such circulating notes, of different denominations, registered and countersigned as aforesaid; but such public debt shall in all cases be, or be made to be, equal to a stock of this state, producing five per cent. per annum, and it shall not be lawful for the comptroller to take any stock at a rate above its par value.

§ 3. Such person or association of persons are hereby authorised, after having executed and signed such circulating notes in the manner required by law, to make them obligatory promissory notes payable on demand, at the place of business within this state, of such person or association, to loan and circulate the same as money, according to the ordinary course of banking business as regulated by the laws and usages of this state.

§ 4. In case the maker or makers of any of such circulating notes, countersigned and registered as aforesaid, shall at any time hereafter on lawful demand during the usual hours of business between

the hours of ten and three o'clock, at the place where such note is payable, fail or refuse to redeem such note in the lawful money of the United States, the holder of such note making such demand may cause the same to be protested for non-payment by a notary public, under his seal of office in the usual manner; and the comptroller, on receiving and filing in his office such protest, shall forthwith give notice in writing to the maker or makers of such note to pay the same; and if he or they shall omit to do so for ten days after such notice, the comptroller shall immediately thereupon (unless he shall be satisfied that there is a good and legal defence against the payment of such note or notes), give notice in the state paper that all the circulating notes issued by such person or association will be redeemed out of the trust funds in his hands for that purpose; and it shall be lawful for the comptroller to apply the said trust funds belonging to the maker or makers of such protested notes to the payment and redemption of such notes, with costs of protest, and to adopt such measures for the payment of all such circulating notes put in circulation by the maker or makers of such protested notes, pursuant to the provisions of this act, as will in his opinion most effectually prevent loss to the holders thereof.

§ 5. The comptroller may give to any person or association of persons, so transferring stock in pursuance of the provisions of this act, powers of attorney to receive interest or dividends thereon, which such person or association may receive and apply to their own use; but such powers may be revoked upon such person or association failing to redeem the circulating notes so issued, or whenever, in the opinion of the comptroller, the principal of such stock shall become an insufficient security; and the said comptroller, upon the application of the owner or owners of such transferred stock in trust, may, in his discretion, change or transfer the same for other stocks of the kind before specified in this act, or may re-transfer the said stocks, or any part thereof, or the mortgages, or any of them hereinafter mentioned and provided for, upon receiving and cancelling an equal amount of such circulating notes delivered by him to such person or association, in such manner that the circulating notes shall always be secured in full either by stocks or by stocks and mortgages, as in this act provided.

§ 6. The bills or notes so to be countersigned, and the payment of which shall be so secured by the transfer of public stocks, shall be stamped on their face, "Secured by the pledge of public stocks."

§ 7. Instead of transferring public stocks as aforesaid to secure the whole amount of such bills or notes, it shall be lawful for such person or association of persons, in case they shall so elect before receiving any of the said bills or notes, to secure the payment of one half of the whole amount so to be issued, by transferring to the comptroller bonds and mortgages upon real estate, bearing at least six per cent. in arrear of this state, payable annually or semi-annually; in which case all such bills or notes issued by the said person or association of persons, shall be stamped on their face, "Secured by pledge of public stocks and real estate."

§ 8. Such mortgages shall be only upon improved, productive, unincumbered lands within this state, worth, independently of any buildings thereon, at least double the amount for which they shall be so mortgaged; and the comptroller shall prescribe such regulations for ascertaining the title and the value of such lands as he may deem necessary; and such mortgages shall be payable within such time as the comptroller may direct.

§ 9. The comptroller may, in his discretion, resign the said bonds and mortgages, or any of them, to the person or association who transferred the same, on receiving other approved bonds and mortgages of equal amount; and when any sum of the principal of the bonds and mortgages transferred to the comptroller shall be paid to him, he shall notify the person or association that transferred the bonds and mortgages of such payment, and may pay the same to such person or association on receiving other approved bonds and mortgages of equal amount.

§ 10. The person or association of persons assigning such bonds and mortgages to the comptroller, may receive the annual interest to accrue thereon, unless default shall be made in paying the bills or notes to be countersigned as aforesaid, or unless in the opinion of the comptroller the bonds and mortgages or stocks so pledged shall become an insufficient security for the payment of such bills or notes.

§ 11. In case such person or association of persons shall fail or refuse to pay such bills or notes on demand in the manner specified in the 4th section of this act, the comptroller, after the ten days' notice therein mentioned, may proceed to sell at public auction the public stocks so pledged or the bonds and mortgages so assigned, or any or either of them, and out of the proceeds of such sale shall pay and cancel the said bills or notes, default in paying which shall have been made as aforesaid; but nothing in this act contained shall be considered as implying any pledge on the part of the state for the payment of said bills or notes, beyond the proper application of the securities pledged to the comptroller for their redemption.

§ 12. The public debt, and bonds, and mortgages, to be deposited with the comptroller by any such person or association, shall be held by him exclusively for the redemption of the bills or notes of such person or association put in circulation as money, until the same are paid.

§ 13. The plates, dies, and materials to be procured by the comptroller for the printing and making of the circulating notes provided for hereby, shall remain in his custody and under his direction; and the expenses necessarily incurred in executing the provisions of this act, shall be audited and settled by the comptroller, and paid out of any moneys in the treasury not otherwise appropriated; and for the purpose of reimbursing the same, the said comptroller is hereby authorised and required to charge against and receive from such person or association applying for such circulating notes, such rate per cent. thereon as may be sufficient for that purpose, and as may be just and reasonable.

§ 14. It shall not be lawful for the comptroller, or other officer, to countersign bills or notes for any person or association of persons, to an amount in the aggregate exceeding the public debt, or public debt and bonds and mortgages at their value, as provided in the 2d section of this act, deposited with the comptroller by such person or association; and any comptroller or other officer who shall violate the provisions of this section shall, upon conviction, be adjudged guilty of a misdemeanour, and shall be punished by a fine not less than five thousand dollars, or be imprisoned not less than five years, or by both such fine and imprisonment.

§ 15. Any number of persons may associate to establish offices of discount, deposit, and circulation, upon the terms and conditions, and subject to the liabilities prescribed in this act; but the aggregate amount of the capital stock of any such association shall not be less than one hundred thousand dollars.

§ 16. Such persons, under their hands and seals, shall make a certificate which shall specify:—

1. The name assumed to distinguish such association, and to be used in its dealings.
2. The place where the operations of discount and deposit of such association are to be carried on, designating the particular city, town, or village.
3. The amount of the capital stock of such association, and the number of shares into which the same shall be divided.
4. The names and places of residence of the shareholders, and the number of shares held by each of them respectively.
5. The period at which such association shall commence and terminate; which certificate shall be proved or acknowledged and recorded in the office of the clerk of the county where any office of such association shall be established, and a copy thereof filed in the office of the secretary of state.

§ 17. The certificate required by the last preceding section to be recorded and filed in the offices of the clerk of the county and secretary of state as aforesaid, or copies thereof, duly certified by either of those officers, may be used as evidence in all courts and places for and against any such association.

§ 18. Such association shall have power to carry on the business of banking, by discounting bills, notes, and other evidences of debt; by receiving deposits; by buying and selling gold and silver bullion, foreign coins and bills of exchange in the manner specified in their articles of association for the purpose authorised by this act; by loaning money on real and personal security; and by exercising such incidental powers as shall be necessary to carry on such business; to choose one of their number as president of such association, and to appoint a cashier, and such other officers and agents as their business may require, and to remove such president, cashier, officers and agents at pleasure, and appoint others in their place.

§ 19. The shares of said association shall be deemed personal property, and shall be transferable on the books of the association in such manner as may be agreed on in the articles of association, and every person becoming a shareholder by such transfer, shall, in proportion to his shares, succeed to all the rights and liabilities of prior shareholders; and no change shall be made in the articles of association by which the rights, remedies, or security of its existing creditors shall be weakened or impaired. Such association shall not be dissolved by the death or insanity of any of the shareholders therein.

§ 20. It shall be lawful for any association of persons organised under this act by their articles of association, to provide for an increase of their capital and of the number of the associates, from time to time, as they may think proper.

§ 21. Contracts made by any such association, and all notes and bills by them issued and put in circulation as money, shall be signed by the president or vice-president and cashier thereof; and all suits, actions, and proceedings brought or prosecuted by or on behalf of such association, may be brought or prosecuted in the name of the president thereof; and no such suit, action, or proceeding, shall abate by reason of the death, resignation, or removal from office of such president, but may be continued and prosecuted according to such rules as the courts of law or equity may direct, in the name of his successor in office, who shall exercise the powers, enjoy the rights, and discharge the duties of his predecessor.

§ 22. All persons having demands against any such association, may maintain actions against the president thereof; which suits or actions shall not abate by reason of the death, resignation, or removal from office of such president, but may be continued and prosecuted to judgment against his successor; and all judgments and decrees obtained or rendered against such president for any debt or liability of such association, shall be enforced only against the joint property of the association, and which property shall be liable to be taken and sold by execution under any such judgment or decree.

§ 23. No shareholder of any such association shall be liable in his individual capacity for any contract, debt, or engagement of such association, unless the articles of association by him signed shall have declared that the shareholder shall be so liable.

§ 24. It shall be lawful for such association to purchase, hold, and convey real estate for the following purposes:—

1. Such as shall be necessary for its immediate accommodation in the convenient transaction of its business; or

2. Such as shall be mortgaged to it in good faith, by way of security for loans made by, or moneys due to, such association; or

3. Such as shall be conveyed to it in satisfaction of debts previously contracted in the course of its dealings; or

4. Such as it shall purchase at sales under judgments, decrees or mortgages held by such association.

5. The said association shall not purchase, hold or convey real estate in any other case, or for any other purpose; and all conveyances of such real estate shall be made to the president, or such other officer as shall be indicated for that purpose in the articles of association; and which president or officer, and his successors, from time to time, may sell, assign and convey the same, free from any claim thereon, against any of the shareholders, or any person claiming under them.

§ 25. Upon the application of creditors or shareholders of any such association, whose debts or shares shall amount to one thousand dollars, and stating facts, verified by affidavit, the chancellor may, in his discretion, order a strict examination to be made by one of the masters of his court of all the affairs of such association, for the purpose of ascertaining the safety of its investments, and the prudence of its management; and the result of every such examination, together with the opinion of the master and of the chancellor thereon, shall be published in such manner as the chancellor shall direct, who shall make such order in respect to the expenses of such examination and publication as he may deem proper.

§ 26. Such associations shall, on the first Mondays of January and July in every year after having commenced the business of banking as prescribed by this act, make out and transmit to the comptroller, in the form to be provided by him, a full statement of the affairs of the association, verified by the oath of the president or cashier, which statement shall contain

1. The amount of the capital stock paid in according to the provisions of this act or secured to be paid.

2. The value of the real estate of the association, specifying what portion is occupied by the association as necessary to the transaction of its business.

3. The shares of stock held by such association; whether absolutely or as collateral security; specifying each kind and description of stock, and the number and value of the shares of each.

4. The amount of debts due to the association, specifying such as are due from monied or other corporations or associations; and also specifying the amount secured by bond and mortgage or judgment; and the amount which ought to be included in the computation of losses.

5. The amount of debts due by such association; specifying such as are payable on demand, and such as are due to monied or other corporations or associations.

6. The amount of claims against the association not acknowledged by its debts.

7. The amount of notes, bills, or other evidences of debt, issued by such association.

8. The amount of the losses of the association; specifying whether charged on its capital or profits, since its last preceding statement, and of its dividends declared and made during the same period.

9. The average amount in each month during the preceding six months of the debts due to and from the association; the average amount of specie possessed by the same during each month, and the amount of bills and notes issued by such association and put in circulation as money, and outstanding against the association, on the first day of each of the preceding six months.

10. The average amount in each month during the preceding six months due to the association, from all the shareholders in the association; also the greatest amount due to the association in each of the said preceding six months, from all the shareholders in such association.

11. The amount which the capital of the said association has been increased during the preceding six months, if there shall have been any increase of the said capital; and the names of any persons

who may become parties to the said articles of association, or may have withdrawn therefrom since their last report.

It shall be the duty of the comptroller to cause the statement required to be made by this section, to be published in a newspaper printed in the county where the place of business of such association is situated, and in the state paper; the expense of which shall be paid by such association.

§ 27. If such association shall neglect to make out and transmit the statement required in the last preceding section, for one month beyond the period when the same is required to be made, or shall violate any of the provisions of this act, such association may be proceeded against and dissolved by the court of chancery, in the same manner as any monied corporation may be proceeded against and dissolved.

§ 28. If any portion of the original capital of any such association shall be withdrawn for any purpose whatever whilst any debts of the association remain unsatisfied, no dividends or profits on the shares of the capital stock of the association shall thereafter be made, until the deficit of capital shall have been made good, either by subscription of the shareholders, or out of the subsequently accruing profits of the association; and if it shall appear that any such dividends have been made, it shall be the duty of the chancellor to make the necessary orders and decrees for closing the affairs of the association, and distributing its property and effects among its creditors and shareholders.

§ 29. Such association shall be liable to pay the holder of every bill or note put in circulation as money, the payment of which shall have been demanded and refused, damages for non-payment thereof, in lieu of interest, at and after the rate of fourteen per cent. per annum, from the time of such refusal until the payment of such evidence of debt, and the damages thereon.

§ 30. The president and cashier of every association formed pursuant to the provisions of this act, shall at all times keep a true and correct list of the names of the shareholders of such association, and shall file a copy of such list in the office of the clerk of the county where any office of such association may be located, and also in the office of the comptroller, on the first Mondays of January and July in every year.

§ 31. It shall not be lawful for any association formed under the provisions of this act, to make any of its bills or notes of a denomination less than one thousand dollars, to be put in circulation as money, payable at any other place than at the office where the business of the association is carried on and conducted.

§ 32. The legislature may at any time alter or repeal this act.

§ 33. No association of persons authorized to carry on the business of banking under this act, shall at any time, for the space of twenty days, have on hand at their place of business, less than twelve and a half per cent. in specie on the amount of the bills or notes in circulation as money.

It has been already mentioned, on the authority of Mr. Gallatin, that the State banks, on the 1st January, 1816, a short time only before the incorporation by Congress of the Bank of the United States, amounted in number to 246, with a capital of about \$90,000,000, and that, in 1830, their number amounted to as many as 330. From this date, however, down to the present moment, their number has been continually increasing; until it has at length reached, including branch banks, to between 800 and 900. A very general conviction has ensued of the expediency of some modification or change in a system presenting so many different sources of a paper currency, all of them in a considerable degree independent of each other, and liable, in consequence, to frequent and extensive expansions and contractions of their issues.

To guard against the evils of the banking system, the banks, in many of the States, are obliged to make an annual statement to the legislature of their condition, specifying the amount of their capitals paid in, of their bills in circulation, of their deposits, and of the specie in their vaults. In New York, commissioners are appointed by the legislature to examine into the affairs of the banks, and to make report accordingly. But the measure, in relation to the banking system, which is peculiar to that State, is the establishment of a "safety fund," as a security to the public against losses resulting from the failure of banks. One half per cent. on the capital of these institutions is exacted from them annually. When the fund, thus obtained, shall amount to half a million of dollars, no farther payment on their part is to be made; and this amount is put out at interest and accumulates, until the failure occurs of some bank, whose notes it is then appropriated to redeem. As soon as the fund shall again fall below a half million of dollars, the half per cent. above mentioned is again exacted, and so on. Another measure, which has been adopted as a security against over issues by the banks, is the compelling of them to pay a very high interest, commonly 12 per cent. or even as much as 24 per cent., upon every sum which they refuse to pay in specie, whether of their notes in circulation, or of the deposits made with them. And in some of the States the banks have been prohibited from issuing any notes below the denomination of five dollars.

Notwithstanding, however, all the contrivances hitherto invented for remedying the acknowledged evils of our existing banking system, the opinion of the public seems to be at present divided, between first, a preference for a currency purely metallic; secondly, for one to consist in part of metallic money, and in part of a paper money to be issued exclusively by the general government, or by some institution created, or commissioners appointed by it, subjected to certain checks and responsibilities, to prevent over issues; thirdly, for the incorporation once more of a bank of the United States, with a capital sufficiently large to give it a control over the other banks of the country, numerous as they now are; and, lastly, the introduction of the free system of banking, of which the State of New York has furnished an example. Perhaps, indeed, we ought rather to have said that public opinion was divided between the two last mentioned schemes, since those who are advocates of the former two, constitute as yet, without doubt, only a small minority of the people.

We here abstain altogether from expressing our own preferences; contenting ourselves

with the remark, in reference to the proposed free system of banking, that in our view it is singular that the principal evils which pertain to the existing system, and which pertain to it especially on account of the great multiplication of the sources whence paper money is issued, should look for a remedy to the enactment of a law, granting liberty to the investment of capital without limit in the business of banking, and therefore also to the issuing of paper money without limit. It is comparatively easy to devise means to secure the public against losses which may arise from the ultimate failure of banks to comply with their engagements; and it is against losses of this nature that the advocates among us of a free trade in banking seem to have been particularly solicitous to provide. These losses, indeed, have been sufficiently extensive, and injurious to the community. Mr. Gallatin enumerates as many as 165 banks which either failed, or discontinued their business, from the 1st of January, 1811, to the 1st of July, 1830. Still there can be little doubt that the distresses and losses which have arisen from fluctuations in the quantity and value of the circulating medium have been of far greater amount. Against these evils, little or no provision seems to have been deemed requisite.

No. I.—Comparative View of the Condition of all the Banks in the United States at four different periods.

No. VII.—Statement of the Condition of the Bank of the United States in the Year 1837, on the Days mentioned.

[illegible]

From this date the notes of the old bank were separated from those of the new bank, as shown lower down in the column.

The stock paid by the government was purchased by the bank, and it is presumed makes use of the income in the stock account, which first appears in this month.

The amount paid for the stock is represented by the bonds due the government

"From documents" (we quote from the Journal of Commerce of January 18, 1839) "appended to the annual Report of the Comptroller, just published, it appears that, under the General Banking Law passed at the last session of the Legislature, certificates have been filed in the office of the Secretary of State from FIFTY-FOUR banking associations, with an aggregate capital subscribed, of \$12,319,175, and with a reserved right to increase the same to the aggregate amount of \$487,680,000. The articles of association are so framed as to cover this enormous amount, in case it should ever be wanted. The duration of the associations, as contemplated by their articles, varies from 25 years to 4050 years. At the time of making out the Comptroller's statements, 24 of the fifty-six associations had been organized, and had applied to that officer for bills in the aggregate amount of \$2,493,090; comprising 296,000 one dollar bills, 173,045 twos, 20,000 threes, 218,600 fives, 33,300 tens, 1250 twenties, 900 fifties, 1150 hundreds, 60 five hundreds, and 50 thousands. Sixteen associations had already made transfers of State stocks, or State stocks and mortgages, to the Comptroller, in the aggregate amount of \$1,170,090 of stocks, and \$422,900 of mortgages. The particulars of these various items will be found in the annexed tables.

"Several associations, for which bills have been ordered, have their securities ready, and will transfer them to the Comptroller as soon as the bills can be prepared. The process of engraving the plates, from which the bills were to be struck, occupied so much time, that it was only a few weeks since any of the associations could be supplied. A further delay is occasioned by the circumstance that all the bills are required to be countersigned by the Registers, who are only two in number, Messrs. John O. Cole and J. M. Woodward, and whose pens cannot move fast enough to supply the demand from so many associations, all desiring to commence operations immediately. The whole amount countersigned prior to the 29th of December was \$370,200. The securities lodged with the Comptroller are to be applied exclusively to the redemption of the bills which are countersigned and registered in the Comptroller's office; i. e. in case said bills should fail to be redeemed by the associations at their counters. The interest on the securities is paid to the associations so long as they continue to redeem their bills. In any event, the holders of the bills are safe; the securities, held by the Comptroller as a guard against contingencies, being alone sufficient for their redemption. The mortgages lodged with the Comptroller, are required by the law to be only upon 'improved, productive, unincumbered lands within this State, worth, independently of any buildings thereon, at least double the amount for which they shall be so mortgaged.' And only one half of the securities lodged with the Comptroller can consist of mortgages at all. The residue must consist of State or national stocks. The amount of bills, given out by the Comptroller to any association, is never to exceed the amount of securities lodged by said association in his hands. In the case of each association he appoints commissioners to view the premises on which mortgages are offered, and to make a full report to him both in regard to title and value. On the whole, we do not see but every precaution has been taken to guard the interests of bill-holders, which the case admits of."

BANKS (UNITED STATES).

No. XI.—Statement of the Amount and kinds of Securities pledged by the several Banks which have gone into operation under the General Banking Law.

In here concluding what we have thought proper to add to the author's article on banking, properly so called, we earnestly recommend to our readers, besides the American works already referred to in the preceding pages, the *Financial Register*, in two 8vo. volumes, edited by Condy Raguet, Esq. It embraces a great mass of information on currency and banking, of high interest to the merchant as well as to the political economist, and rendered accessible on the cheapest terms.

In regard to Savings' Banks, we may mention that their introduction into the United States dates from the month of December, 1816. The "Philadelphia Saving Fund Society" was then instituted by a number of intelligent and philanthropic citizens, with the object in view of promoting habits of foresight and saving among the labouring poor of their vicinity. As was to have been expected from the novelty of the undertaking, and the difficulty with which the habits of a people, and especially of the comparatively uneducated portion of a people, can be in any way changed, the amount of the deposits made with the society was at first quite inconsiderable. During the first 13 months the deposits had, in fact, only reached the sum of \$3,945.41. The society was incorporated by the legislature of the State in February 1819; and on the 31st of March of that year, when the funds were transferred to the corporation, they amounted to \$45,114.85. That the institution had, in the mean time, been managed with due discretion and skill was testified by the legislature making the articles of association and the by-laws of the society the basis of the act of incorporation. From the date of the passing of this act, however, the deposits began to increase more rapidly than they had hitherto done. In 1821, they exceeded \$200,000; the maximum of deposits then allowed being \$300,000. The legislature, by a supplementary act passed in March 1824, just as the deposits were approaching the sum just mentioned, extended the maximum allowed to an amount twice as large. And as the deposits continued to augment, the maximum was still farther extended, until at present \$1,500,000 is the amount of deposits which is authorised to be received.

The interest allowed to depositors, originally 4 $\frac{1}{2}$ per cent., was, in consequence of a fall in the general rate of interest, reduced in December 1820, to 4 per cent; and, since February 1823, no deposits greater than 200 dollars could be received from the same person in any one year.

The deposits received in 1837, a year of extraordinary pecuniary pressure, amounted to \$422,698.92; while the payments to depositors were \$712,444.96. In 1838, when that pressure was in a considerable degree alleviated, the deposits received exceeded the payments to the depositors; the former amounting to \$459,711.38; and the latter to \$449,084.94.

The whole amount of deposits, since the establishment of the society down to the close of the year 1838, was \$6,794,813.03; that of deposits returned, during the same period, \$5,720,474.42.

The benefits of the institution have been extended to 38,743 depositors.

Since the establishment of the "Philadelphia Saving Fund Society," and especially since the experience of its successful operation, other societies have sprung into existence at New York, Boston, Baltimore, and elsewhere in the United States, conducted on similar princi-

ples. The details given above will serve as a favourable illustration of their nature as well as of the mode in which they have been administered.

We subjoin, as a farther illustration of their nature, the original act of incorporation of the Philadelphia Society; together with its "rules and regulations respecting deposits and payments."

An Act incorporating the Philadelphia Saving Fund Society.

WHEREAS, a voluntary association of a number of the citizens of Philadelphia and its neighbourhood, under the title of "THE PHILADELPHIA SAVING FUND SOCIETY," has for some time existed, and has been established for the sole purpose of receiving and investing in public stock or substantial security on real estate, such small sums as may be saved from the earnings of tradesmen, mechanics, labourers, servants and others, and of affording to industrious persons the advantages of security and interest. And whereas the members of this society by their memorial to the legislature have prayed to be perpetuated, and brought into legal existence by being incorporated and established by law, with perpetual succession, for the purpose of receiving, holding and improving, in such way as to them may seem proper, all such real and personal estate, as the said institution shall become possessed of, or entitled to, by gift, grant, devise, bequest, purchase, deposit, loan and payment, for the purpose of the said institution.

Therefore,

§ 1. *Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same,* That Andrew Bayard, Samuel Archer, Richard Bache, Charles N. Bancroft, Clement C. Biddle, Samuel Breck, Turner Camac, Reuben Haines, Thomas Hale, Adam Konigsmacher, Ludwig Krumbhaar, John M'Crea, Samuel B. Morris, Isaac W. Norris, Richard Peters, Jun., Condy Raguet, Joseph Rotch, William Schlatter, Samuel Spackman, John C. Stocker, John Strawbridge, Roberts Vaux, John Vaughan, Daniel B. Smith, and Matthew C. Ralston, and their successors, forever, be, and they are hereby erected and made one body politic and corporate, in deed and in law, by the name, style and title, of "THE PHILADELPHIA SAVING FUND SOCIETY," and by the same name shall have perpetual succession, and are hereby made able and capable in law, to have, purchase, receive, take, hold, possess, enjoy, and retain, to them and their successors, lands, rents, tenements, hereditaments, stock, goods, chattels, and effects of what kind, nature, or quality, soever, whether real, personal, or mixed, by gift, grant, demise, bargain and sale, devise, bequest, testament, legacy, loan, deposit or advance, or by any other mode of conveyance or transfer whatever, and the same to give, grant, bargain, sell, demise, convey, assure, transfer, alien, pay, release, and dispose of, for the whole or any less estate or property than they have in the same, and also to improve and augment the same, in such manner and form as the said society by their by-laws and regulations shall order and direct, and shall and may apply the same with the rents, issues, profits, income, interest and profits of such estate, and the moneys arising from the sale, alienation, disposal, or employment thereof to the uses, ends and purposes of their institution, according to the rules, regulations and orders of their society now in force, or which, according to the provisions, hereinafter made, shall from time to time, be declared, touching the same, as effectually and fully, as any natural person or body politic or corporate within this state, by the constitution and laws of this commonwealth, can do and perform. And the said society, by the name, style and title aforesaid, shall and may sue, and be sued, plead, and be impleaded, answer, and be answered, defend, and be defended, in all courts of law within the commonwealth, and elsewhere, and also make, have, and use a common seal, and the same break, alter and renew at their pleasure; and shall have power also to make, establish, ordain, and put in execution, such by-laws, ordinances and regulations, as shall to them, or a majority of such quorum of them (as has already or shall hereafter be directed), seem meet or convenient for the government of such corporation, not being contrary to the constitution and laws of this commonwealth; and generally to do and execute all and singular such acts, matters and things, which to the said corporation shall or may appertain, and be necessary for the purposes thereof, subject, nevertheless, to the rules, regulations, restrictions, limitations, and provisions, herein prescribed and declared.

§ 2. *And be it further enacted by the authority aforesaid,* That the following rules, limitations and provisions, shall form and be fundamental articles of the constitution of the corporation.

1. The institution shall be conducted by twenty-five managers, who shall annually, on the first Monday in January, choose one of their number as President, and shall have power to appoint a Secretary, Treasurer, and such other officers, as the business of the corporation may require. The seat of any manager, who shall have neglected to attend for three successive stated meetings, may be vacated by the board; and any of the officers of the society may be removed at the pleasure of the board.

2. The managers shall have power to fill up by ballot, after notice of one month, any vacancy which may occur in their own body or officers; two-thirds of the members present to agree to all removals and new appointments; and no appointment or removal to take place when a less number than thirteen managers are present.

3. No emolument whatever shall be received by the president or managers for their services.

4. The money deposited shall bear an interest at the rate of four and eight-tenths per cent. per annum, and shall be repaid when required, upon two weeks' notice, with the interest thereon, to the time of such notice.

5. No sum less than one dollar shall be received as a deposit, and no interest shall be allowed on any payments, until they amount to the sum of five dollars, the interest on which will be twenty-four cents per annum, or two cents per calendar month. Every additional sum of five dollars that may be lodged, will bear interest in the same manner.

6. Interest is to be estimated by calendar months, and in order to avoid the calculation of days upon small sums, no interest will be allowed for the fractional parts of a month.

7. Two or more managers shall attend at the office of the society, at such times as may be appointed by the board of managers, to receive deposits, and to pay such sums as may be withdrawn. No money shall be drawn out under five dollars, unless to close an account.

8. The deposits and payments shall be regularly entered in the books of the office, and every person depositing money, shall be furnished with a duplicate of his or her account, in which every deposit or payment shall be regularly entered as soon as made.

9. A cash book and ledger shall be kept at the office, in which the deposit money and payments shall be immediately entered.

10. A book shall be kept at the office in which every depositor shall be at liberty to appoint some person or persons to whom, in the event of his or her death, the money shall be paid, if not otherwise disposed of by will.

11. The managers shall meet at least once in every month, and five shall be a quorum. The books, Treasurer's accounts and other documents shall be produced at such meetings.

12. The managers shall be at liberty any time to refuse deposits, and on giving one month's notice

to return such as have been made, with interest thereon, to be calculated to that time and no longer.

13. A report shall be annually prepared by three auditors, who shall not be managers or officers of the corporation, chosen by the board, and such report shall be published in one or more of the gazettes of the City of Philadelphia and the managers shall annually transmit one copy of the said report to the speaker of the Senate, and one copy to the speaker of the House of Representatives.

14. The managers shall not receive deposits from any one person, to a greater amount than five hundred dollars in any one year, and the amount of the deposits received by the corporation, shall at no time exceed three hundred thousand dollars.

§ 3. *And be it further enacted by the authority aforesaid, That until the election of the officers aforesaid, pursuant to this act, the officers now elected and appointed shall be and continue officers of the said society; and that no member of the said corporation, in any deed, testament or gift, grant, devise, or other instrument, or contract, or conveyance, shall vitiate or defeat the same, if the said corporation, shall be sufficiently described to ascertain the intent of the party or parties, to give, devise, bequeath, assure to or contract with the corporation hereby created, by the name aforesaid. Nor shall any of the non-users of the said privileges hereby granted, create any forfeiture of the same, but the same may be exercised by the said corporation; and notwithstanding any failure to meet at any of the times appointed herein or by the by-laws and ordinances of the said society, to hold their annual or other meetings for elections or other subjects for consideration, the officers then in office shall continue to hold and exercise their respective offices, until others shall be duly elected to succeed them, at some future meeting of the said society, which the said corporation is hereby authorized to hold, for such purpose.*

§ 4. *And be it further enacted by the authority aforesaid, That if at any time the said corporation shall misuse or abuse any of the privileges granted by this act, or if it shall appear that the said privileges are injurious to the citizens of this commonwealth, the legislature shall have power to revoke and annul them, at any time they may deem the same expedient.*

Rules and Regulations respecting Deposits and Payments.

1. Of Deposits.

1. Every person desirous of becoming a depositor with this society, shall, at the time of making the first deposit, sign his or her name in a book provided for the purpose, and shall state his or her business, occupation or calling, and place of residence, which shall be recorded in the same book.

2. No money will be received from any depositor, unless his or her book be brought at the time; and the society will not hold itself accountable for any money brought to its office to be deposited, unless an entry thereof be made in the book of the depositor by the proper officer of the society, at the time of making the deposit.

3. No sum less than one dollar can be received as a deposit, and no person can deposit to a greater amount than two hundred dollars in any one year.

4. Whenever the moneys standing to the credit of any depositor shall amount to the sum of one thousand dollars, no further deposit can be received from such depositor; and compound interest shall cease to be computed in favour of such depositor.

5. Every deposit made by one person for the benefit of another person, shall be expressed to be "*in trust*;" and no deposit shall be received or be expressed to be received, from one person "*by*" another person, or by one person "*for*" another person.

6. No deposit will be received in the name of any *unincorporated* society or association of persons. In all cases in which any such society or association shall be desirous of making a deposit, the same may be done in the name of some person "*in trust for*" such society or association; and in every such case, the trustee alone will be entitled to receive payments; and his receipt, with the production of the book, will be considered by this society, and is agreed by the depositors to be, a sufficient discharge. In case of the death of such trustee, or in case the society or association in trust for whom the deposit was made, shall be desirous of appointing another in his place, the vacancy must be filled, or the substitution made, according to law.

2. Of the interest payable to Depositors.

1. Interest is allowed by this society at the rate of *four per cent. per annum*; but no interest is allowed on any deposits until they amount to the sum of *five dollars*. Every additional sum of *five dollars* will bear interest in the same manner.

2. Interest is estimated by calendar months, and no interest is allowed for the fractional parts of a month.

3. The interest payable on deposits will, at the conclusion of every year, either be added to the principal, and will from time to time become principal, and bear the same interest, or will be paid to the depositor, according to the rules prescribed for payments.

3. Of payments to Depositors.

1. No depositor can receive any payment without having given two weeks' notice.

2. When notice is given, the book must be sent to the office, and the Treasurer must be informed at the time how much is wanted; and if the whole amount is wanted, the book must be left at the office for settlement.

3. At the expiration of the two weeks, payment will be made of the amount required.

4. In all cases in which the whole amount is withdrawn, the book must be given up to the society.

5. No sum less than five dollars can be withdrawn, unless to close an account, or in payment of interest to a depositor.

6. No payment can in any case be made, unless the book is produced at the time of giving notice, and at the expiration of the two weeks.

7. No check or order for the payment of money will be accepted; and no transfer or assignment of the book, or of the money belonging to a depositor, can be acknowledged.

8. In case any depositor shall be unable by reason of sickness or other infirmity, or of absence from the city, to attend in person to receive any payment, he or she may receive the same by means of a power of attorney duly executed and proven or acknowledged. Blank powers of attorney for this purpose will be furnished *gratis*, at the office of the society.

9. In case of the death of a depositor, payment can be made only to his or her executors or administrators producing the book, unless an appointment shall have been made by such depositor in the book of the society of a person to receive the same, agreeably to the 10th article of the constitution of this society.

10. In all cases in which deposits are made in the names of two or more persons, either in their own right, or in trust for others, they must all appear at the office at the time payment is desired, and sign joint receipt, except in case of death or inability as aforesaid, unless at the time of making the deposit, it is expressed on the book of the society, and signed by such persons, that the deposit may be withdrawn by "*either of them*," or "*any two of them*," or otherwise, as the case may be.

4. *Of Books lost, destroyed, &c.*

1. In case any depositor shall lose his or her book, or the same shall be destroyed or fraudulently obtained from such depositor, immediate notice thereof is to be given at the office of the society.

2. After the expiration of the two weeks from the time of notice given that any book has been lost or destroyed, if a satisfactory explanation be given, and a bond of indemnity, with a sufficient surety, be given to the society, the amount to the credit of the depositor in the books of the society, will be paid to him or her.

3. If it shall appear that the book has been fraudulently obtained from the depositor as aforesaid, the society shall not be liable to pay the amount deposited, or any part thereof, and will not furnish another book to the depositor, unless satisfactory evidence be produced that notice of the application to the society for such purpose, was given at least thirty days previously, to the person in whose hands the book was supposed to be, or if the person be not known, that notice of such application was given for the same space of time, in at least one daily newspaper published in this city; and a bond of indemnity shall also be given as aforesaid.

4. If any person shall present a deposit-book at the office of this society, and allege himself or herself untruly, to be the depositor named therein, and shall thereby obtain from the officers of this society the amount deposited, or any part thereof, and the actual depositor shall not have given previous notice at the office, of his book having been lost or taken from him, this society will not be responsible for the loss so sustained by any depositor, neither will this institution be liable to make good the same, provided that such payment has been entered in the book of the depositor at the time when made.

5. *Depositors to sign these Rules, &c.*

Every person making a deposit for the first time is to sign a book containing these Rules and Regulations, which he thereby signifies his assent to and his willingness to be bound by: and by receiving the book with these Rules and Regulations printed thereon, he is informed of the same: and any alteration made in these regulations, and any new regulations made by the managers shall be equally binding on all depositors as those by them subscribed, after the same shall have been duly made known.—*Am. Ed.*]

BANGKOK, the capital of the kingdom of Siam, situated about 20 miles from the sea, on both sides of the river Menam, but chiefly on its left or eastern bank, in lat. 13° 40' N., long. 101° 10' E. The Menam opens in the centre nearly of the bottom or the Gulf of Siam. There is a bar at its mouth, consisting, for the most part, of a mud flat 10 miles in depth. The outer edge of this flat, which is little more than 200 yards broad, is sandy and of harder materials than the inner part; which is so soft, that when a ship grounds on it during the ebb, she often sinks 5 feet in the mud and clay, which supports her upright, so that she is but little inconvenienced. The highest water on the bar of the Menam, from February to September, is about 13½ feet; and in the remaining 4 months, somewhat more than 14 feet,—a difference probably produced by the accumulation of water at the head of the bay after the south-west monsoon, and by the heavy floods of the rainy season. On account of the deficiency of water on the bar, vessels sent to Bangkok had better, perhaps, not exceed 200 or 250 tons burden. In all other respects, the river is extremely safe and commodious. Its mouth is no sooner approached, than it deepens gradually; and at Paknam, two miles up, there are 6 and 7 fathoms water. This depth increases as you ascend, and at Bangkok is not less than 9 fathoms. The only danger is, or rather was, a sand bank off Paknam, bare at low water; but on this a fort or battery has been erected within the last few years, affording at all times a distinct beacon. The channel of the river is so equal, that a ship may range from one side to another, approaching the banks so closely that her yards may literally overhang them. The navigation is said to be equally safe all the way up to the old capital of Yuthia, 80 miles from the mouth of the river.

The city of Bangkok extends along the banks of the Menam to the distance of about 2½ miles; but is of no great breadth, probably not exceeding 1½ mile. On the left bank there is a long street or row of floating houses; each house or shop, for they are in general both, consisting of a distinct vessel, which may be moored any where along the banks. Besides the principal river, which at the city is about a quarter of a mile broad, the country is intersected by a great number of tributary streams and canals, so that almost all intercourse at Bangkok is by water. The population has been computed at 50,000 or 60,000, half of whom are Chinese settlers.

The total area of the kingdom of Siam has been estimated at 190,000 square miles, and the population at only 2,790,500, principally resident in the rich valley of the Menam. Of the entire population, it is supposed that not less than 440,000 are Chinese. The common necessities of life at Bangkok are exceedingly cheap. A cwt. of rice may always be had for 2s. and very often for 1s. Other necessities, such as salt, palm-sugar, spices, vegetables, fish, and even flesh, are proportionably cheap. The price of good pork, for example, is 2½d. per lb. A duck may be had for 7d. and a fowl for 3d. The neighbourhood of Bangkok is one of the most productive places in the world for fine fruits; for here are assembled, and to be had in the greatest perfection and abundance, the orange and the lichi of China, the mangoe of Hindostan, and the mangostein, durian, and shaddock of the Malay countries.

Monies, Weights, and Measures.—Gold and copper are not used as money in Siam, and the currency consists only of cowrie shells and silver. The denominations are as follow:—200 bin or cowries make 1 *hai-nung*; 2 *hai-nungs*, 1 *sing-p'ai*; 2 *sing-p'ais*, 1 *fuang*; 2 *fuangs*, 1 *salung*; 4 *salungs*, 1 *bat* or *tical*; 8 *ticals*, 1 *cattie*; 100 *ticals*, 1 *picul*.

The standard coin is the *bat*, which Europeans have called a *tical*; but there are also coins, though less frequently, of the lower denominations. These are of a rude and peculiar form. They are, in

fact, nothing more than small bits of a silver bar bent, and the ends beaten together. They are impressed with two or three small stamps, not covering the whole surface of the coin. The cattle and picul are, of course, only used in speaking of large sums of money. Gold and silver are weighed by small weights, which have the same denominations as the coins. The p'hai-nung, the lowest of these, is in this case subdivided into 32 sangs, or red beans, the *Abrus precatorius* of botanists.

The bat, or tical, was assayed at the mint of Calcutta; it was found to weigh 236 grains; its standard, however, was uncertain, and the value of different specimens varied from 1 rupee 3 annas and 3 pice, to 1 rupee 3 annas and 7 pice. The value, therefore, in sterling money, is about 2s. 6d., and it is so considered.

In respect to ordinary measures, the Siamese cattle is double the weight of the Chinese cattle, which as is well known, is equal to 14 lb. avoirdupois. The picul, however, is of the same weight, consisting in the one case of 50 catties only, and in the other of 100. In weighing rice and salt, a large measure is used, consisting, in respect to the first of 22 piculs, and of the last of 25 piculs. Rice is also measured by the basket, of which 100 go to the large measure above-mentioned.

The long measures are as follow:—12 finger breadths make 1 span; 2 spans, 1 cubit; 4 cubits, 1 fathom; 20 fathoms, 1 sen; and 109 sen, 1 yuta, or, as it is more commonly pronounced by the Siamese, yut. The fathom is the measure of most frequent use, and the Siamese have a pole of this length divided into its fractional parts. This, as nearly as can be ascertained, is equal to about 6 feet 6 inches. The sen appears to be also used in the admeasurement of land, and to be the name of a square measure of 50 fathoms to the side.

Port Regulations and Duties.—As soon as a European ship reaches the bar of Siam, she must, according to the regulations of the country, communicate with the chief of the village of Paknam, at the mouth of the Menam, and from him obtain a pilot. At Paknam, the rule is to land ammunition, cannon, and small arms; but this regulation is not very rigidly insisted on. The duties and other imposts levied on external trade are somewhat complex, and differ in some degree according to the class of vessels subjected to them, and which consist of junks carrying on trade with China Proper, junks of the island of Hai-nan, junks trading to the Malay Islands, and European shipping. The imposts consist of a duty on the measurement or dimensions of the vessel; an *ad valorem* duty upon imports; and a rated tariff in most cases, with an *ad valorem* duty in a few on exports. The first named class of vessels, viz.: the large junks trading with the principal ports of China, pay no measurement or import duties, because these are vessels belonging to the king, or to the princes, or courtiers, licensed to engage freely in this branch of trade. The Hai-nan junks pay 40 ticals per Siamese fathom, on the extreme breadth of the vessel. The junks trading to the Malay countries, in lieu of measurement duty, pay 130 ticals each, without regard to size. Neither of these vessels pay import duties. The measurement duties on European vessels are estimated at 118 ticals per fathom, besides an inconsiderable impost in the form of an anchorage fee. The cargoes of these alone pay an import duty, which is reckoned at 8 per cent. *ad valorem*, levied in kind.

The tariff on exports consists of specific duties, of which the following are specimens:—

	per picul	2½ ticals.
Ivory	-	-
Stick lac	-	-
Sugar, if exported under a European flag	-	1½
Ditto — an Indian flag	-	1
Cotton wool	-	½

Trade.—The foreign trade of Siam is conducted with China, Cochin China, Cambodia, and Tonquin, Java, Singapore, and the other British ports within the Straits or Malacca, with an occasional intercourse with Bombay and Surat, England and America. The most important branch of the foreign trade is that with China. This is wholly carried on in vessels of Chinese form, navigated by Chinese, but the greater portion of them are built in Siam. The whole of the Chinese trade centres in Bangkok, with the exception of a few junks, which trade to Sungora and Ligor. The ports of China which carry on trade with Siam, are, Canton, Kiang-mui, and Changlin, in the province of Quantong; Amoi, or Emwi, in Fokien; Limpo, or Nimpo, in Chekiang; with Siang-hai and Saochen, in Kiang-nan; besides several ports of the great island Hai-nan. These junks are expected in Siam in the following order;—those of the island of Hai-nan usually arrive in January; and those from the provinces of Canton, Fokien, and Chekiang, in the latter end of February, and down to the beginning of April. They all sail from the Menam in the months of June and July, when the south-west monsoon is at its height, and, of course, there is but one voyage performed yearly. The imports from China are very numerous, consisting of what are called in commercial language “assorted cargoes.” The following is a list of the principal commodities:—Coarse earthenware and porcelain, spelter, quicksilver, tea, lacksoy (vermicelli), dried fruits, raw silk, crapes, satins, and other silk fabrics, nankeens, shoes, fans, umbrellas, writing paper, sacrificial paper, incense rods, and many other minor articles. Not the least valuable part of the importations are immigrants.

The exports from Siam are also very various, but the following list comprehends the most considerable:—Black pepper, sugar, tin, cardamoms, eagle-wood, sapan-wood, red mangrove bark, rose-wood for furniture and cabinet work, cotton, ivory, stick lac, rice, areca nuts, salt fish; the hides and skins of oxen, buffaloes, elephants, rhinoceroses, deer, tigers, leopards, otters, civet cats, and pangolins; of snakes, and rays, with the belly-shell of a species of land tortoise; the horns of the buffalo, ox, deer, and rhinoceros; the bones of the ox, buffalo, elephant, rhinoceros, and tiger; dried deer's sinews; the feathers of the pelican, of several species of storks, of the peacock and kingfisher, &c.; and, finally, euculent swallows' nests. The tonnage carrying on the China trade amounts in all to probably about 130 junks in number, a few of which are of 1,000 tons burden, and the whole shipping is not short of 35,000 tons.

The trade with the different countries of the Malay Archipelago forms the next most important branch of the Siamese commerce, and the only one respecting which it can be necessary to give any particulars in this place. It is conducted with the following ports:—Patain,

Kalantan, Tringano, Pahang, Rhio, Singapore, Malacca, Penang, Batavia, Samarang, Cheribon, Palembang, and Pontianak. In this intercourse, the staple exports of Siam are sugar, salt, oil, and rice; to which may be added the minor articles of stick lac, iron pans, coarse earthenware, hogs' lard, &c. The returns are British and Indian piece goods, opium, with a little glass ware, and some British woollens from the European settlements, with commodities suited for the Chinese market, such as pepper, tin, dragon's blood, rattans, biche-de-mer, esculent swallows' nests, and Malay camphor from the native ports.

The following are believed to be the quantities of the two greatest staple articles of Siamese export; viz. clayed sugar, 10,000 tons; black pepper, 3,525 tons.

(We are indebted for this, as we have been for many other excellent communications, to our esteemed friend, John Crawford, Esq., who ascertained the particulars on the spot.)

BANKRUPT AND BANKRUPTCY. In the general sense of the term, bankrupt is equivalent to insolvent, and is applied to designate any individual unable to pay his debts. But in the law of England bankrupts form that particular class of insolvents who are engaged in trade, or who "seek their living by buying and selling," and who are declared, upon the oath of one or more of their creditors, to have committed what the law has defined to be an *act of bankruptcy*. At present, however, we shall merely lay before the reader a few observations with respect to the principles and leading provisions embodied in the law as to bankruptcy and insolvency; referring the reader to the article **INSOLVENCY AND BANKRUPTCY**, for a detailed statement of these and the other provisions in that law.

"All classes of individuals, even those who have least to do with industrious undertakings, are exposed to vicissitudes and misfortunes, the occurrence of which may render them incapable of making good the engagements into which they have entered, and render them bankrupt or insolvent. But though bankruptcy is most frequently, perhaps, produced by uncontrollable causes, it is frequently also produced by the thoughtlessness of individuals, or by their repugnance to make those retrenchments which the state of their affairs demands; and sometimes also by fraud or bad faith. Hence it is, that the laws with respect to bankruptcy occupy a prominent place in the judicial system of every state in which commerce has made any progress, and credit been introduced. They differ exceedingly in different countries, and stages of society; and it must be acknowledged that they present very many difficulties, and that it is not possible, perhaps, to suggest any system against which pretty plausible objections may not be made.

"The execrable atrocity of the early Roman laws with respect to bankruptcy is well known. According to the usual interpretation of the law of the twelve tables, which Cicero has so much eulogised, the creditors of an insolvent debtor might, after some preliminary formalities, cut his body to pieces, each of them taking a share proportioned to the amount of his debt; and those who did not choose to resort to this horrible extremity, were authorised to subject the debtor to chains, stripes, and hard labour; or to sell him, his wife, and children, to perpetual foreign slavery *trans Tyberim*! This law, and the law giving fathers the power of inflicting capital punishment on their children, strikingly illustrate the ferocious and sanguinary character of the early Romans.

"There is reason to think, from the silence of historians on the subject, that no unfortunate debtor ever actually felt the utmost severity of this barbarous sentence; but the history of the republic is full of accounts of popular commotions, some of which led to very important changes, that were occasioned by the exercise of the power given to the creditors of enslaving their debtors, and subjecting them to corporal punishments. The law, however, continued in this state till the year of Rome 427, 120 years after the promulgation of the twelve tables, when it was repealed. It was then enacted, that the persons of debtors should cease to be at the disposal of their creditors, and that the latter should merely be authorised to seize upon the debtor's goods, and sell them by auction in satisfaction of their claims. In the subsequent stages of Roman jurisprudence, further changes were made, which seem generally to have leaned to the side of the debtor; and it was ultimately ruled, that an individual who had become insolvent without having committed any fraud, should upon making a *cessio bonorum*, or a surrender of his entire property to his creditors, be entitled to an exemption from all personal penalties.—(Terasson, *Histoire de la Jurisprudence Romaine*, p. 117.)

"The law of England distinguishes between the insolvency of persons engaged in trade, and that of others. The former can alone be made bankrupts, and are dealt with in a comparatively lenient manner. 'The law,' says Blackstone, 'is cautious of encouraging prodigality and extravagance by indulgence to debtors; and therefore it allows the benefit of the laws of bankruptcy to none but actual traders, since that set of men are, generally speaking, the only persons liable to accidental losses, and to an inability of paying their debts without any fault of their own. If persons in other situations of life run in debt without the power of payment, they must take the consequences of their own indiscretion, even though they

* *Fremant omnes, licet! dicam quod sentio; bibliothecas, mehercule, omnium philosophorum unus mihi videtur duodecim libellarum libelline; sigile termin fontes et capita viderit et authoritatis pondere et utilitatis uberitate superare.—De Oratore, lib. 1.*

meet with sudden accidents that may reduce their fortunes; for the law holds it to be an unjustifiable practice for any person but a trader to encumber himself with debts of any considerable value. If a gentleman, or one in a liberal profession, at the time of contracting his debts has a sufficient fund to pay them, the delay of payment is a species of dishonesty, and a temporary injustice to his creditors; and if at such time he has no sufficient fund, the dishonesty and injustice are the greater: he cannot, therefore, murmur if he suffer the punishment he has voluntarily drawn upon himself. But in mercantile transactions the case is far otherwise; trade cannot be carried on without mutual credit on both sides; the contracting of debts is here not only justifiable, but necessary; and if, by accidental calamities, as by the loss of a ship in a tempest, the failure of brother traders, or by the nonpayment of persons out of trade, a merchant or trader becomes incapable of discharging his own debts, it is his misfortune and not his fault. To the misfortunes, therefore, of debtors, the law has given a compassionate remedy, but denied it to their faults; since at the same time that it provides for the security of commerce, by enacting that every considerable trader may be declared a bankrupt, for the benefit of his creditors as well as himself, it has also, to discourage extravagance, declared that no one shall be capable of being made a bankrupt but only a trader, not capable of receiving the full benefit of the statutes but only an *industrious trader*.—(*Commentaries*, book ii. cap. 31.)

“After the various proceedings with respect to bankruptcy have been gone through, if nothing be discovered to impeach the honesty of the debtor, he is allowed a certificate or discharge, provided *three out of five* of his creditors both in number and value agree to sign it. The bankrupt is then entitled to a reasonable allowance out of his effects; which is however, made to depend partly on the magnitude of his dividend. Thus, if his effects will not pay half his debts, or 10s. in the pound, he is left to the discretion of the commissioners and assignees, to have a competent sum allowed him, not exceeding 3 per cent. upon his estate, or 300*l.* in all; but if his estate pay 10s. in the pound, he is to be allowed 5 per cent., provided such allowance do not exceed 400*l.*; 12s. 6*d.* then 7½ per cent. under a limitation as before of its not exceeding 500*l.*; and if 15s. in the pound, then the bankrupt shall be allowed 10 per cent. upon his estate, provided it do not exceed 600*l.*

“According to our present law, when a person not a trader becomes insolvent, he may after being actually imprisoned at the suit of some of his creditors for fourteen days, present a petition to the court to be relieved; and upon surrendering his entire property, he is, unless something fraudulent be established against him, entitled to a discharge. While, however, the certificate given to the bankrupt relieves him from all future claims on account of debts contracted previously to his bankruptcy, the discharge given to an insolvent only relieves him from imprisonment; in the event of his afterwards accumulating any property, it may be seized in payment of the debts contracted anterior to his insolvency. This principle, was recognised in the *cessio bonorum* of the Romans, of which the insolvent act is nearly a copy.

“It may be questioned, however, notwithstanding what Blackstone has stated, whether there be any good ground for making a distinction between the insolvency of traders and other individuals. There are very few trades so hazardous as that of a farmer, and yet should he become insolvent, he is not entitled to the same privileges he would have enjoyed had he been the keeper of an inn, or a commission agent! The injustice of this distinction is obvious; but, without dwelling upon it, it seems pretty clear that certificates should be granted indiscriminately to all honest debtors. Being relieved from all concern as to his previous incumbrances, an insolvent who has obtained a certificate is prompted to exert himself vigorously in future, at the same time that his friends are not deterred from coming forward to his assistance. But when an insolvent continues liable to his previous debts, no one, however favourably disposed, can venture to aid him with a loan; and he is discouraged, even if he had means, from attempting to earn any thing more than a bare livelihood; so that, while creditors do not, in one case out of a hundred, gain the smallest sum by this constant liability of the insolvent, his energies and usefulness are forever paralyzed.

“The policy of imprisoning for debt seems also exceedingly questionable. Notwithstanding the deference due to the great authorities who have vindicated this practice, I confess I am unable to discover any thing very cogent in the reasonings advanced in its favour. Provided a person in insolvent circumstances intimate his situation to his creditors, and offer to make a voluntary surrender of his property to them, he has, as it appears to me, done all that should be required of him, and ought not to undergo any imprisonment. If he had deceived his creditors by false representations, or if he conceal or fraudulently convey away any part of his property, he should of course be subjected to the pains and penalties attached to swindling; but when such practices are not alleged, or cannot be proved, sound policy, I apprehend, would dictate that creditors ought to have no power over the persons of their debtors, and that they should be entitled only to their effects. The maxim *caveat emptor*, is not more trite than true. It is said, that the fear of imprisonment operates as a check to prevent persons from getting into debt; and so no doubt it does. But then it must, on the other hand, be borne in mind, that the power to imprison tempts individuals to trust to its

influence to enforce payment of their claims, and makes them less cautious in their inquiries as to the condition and circumstances of those to whom they give credit. The carelessness of tradesmen and their extreme earnestness to obtain custom, are, more than any thing else, the great causes of insolvency; and the power of imprisoning merely tends to foster and encourage these habits. If a tradesman trust an individual with a loan of money or goods, which he is unable to pay, he has made a bad speculation. But why ought he, because he has done so, to be allowed to arrest the debtor's person? If he wished to have perfect security, he either should not have dealt with him at all, or dealt with him only for ready money; such transactions are, on the part of tradesmen perfectly voluntary; and if they place undue confidence in a debtor who has not misled them by erroneous representations of his affairs, they have themselves only to blame.

"It would really, therefore, as it appears to us, be for the advantage of creditors, were all penal proceedings against the persons of honest debtors abolished. The dependence placed on their efficacy is deceitful. A tradesman ought rather to trust to his own prudence and sagacity to keep out of scrapes, than to the law for redress; he may deal upon credit with those whom he knows; but he should deal for ready money only with those of whose circumstances and characters he is either ignorant or suspicious. By bringing penal statutes to his aid, he is rendered remiss and negligent. He has the only effectual means of security in his own hands; and it seems highly inexpedient that he should be taught to neglect them, and put his trust in prisons.

"It is pretty evident, too, that the efficacy of imprisonment in deterring individuals from running into debt has been greatly overrated. Insolvents who are honest, must have suffered from misfortune, or been disappointed in the hopes they entertained of being able, in one way or other, to discharge their debts. The fear of imprisonment does not greatly influence such persons; for when they contract debts, they have no doubt of their ability to pay them. And though the imprisonment of *bona fide* insolvents were abolished, it would give no encouragement to the practices of those who endeavour to raise money by false representations; for these are to be regarded as swindlers, and ought as such to be subjected to adequate punishment. (See CREDIT.)

"But the regulations with respect to bankruptcy and insolvency differ radically in other important respects. An individual cannot be subjected to the insolvent law, except by *his own act*, that is, his petitioning for relief from actual imprisonment for debt; and, on the other hand, an individual cannot be made a bankrupt and subjected to the bankrupt law, except by the act of *another*, that is, of a petitioning creditor*, as he is called, swearing that the individual in question is indebted to him, and that he believes he has committed what is termed an act of bankruptcy. These differences, coupled with the refinements introduced into other branches of the law, give rise to very extraordinary results.

"While the law of England gives the creditor an unnecessary degree of power over the debtor's person, it does not give him sufficient power over his property. In this respect, indeed, it is so very defective, that one is almost tempted to think it had been intended to promote the practices of fraudulent debtors. The property of persons subjected to the bankrupt laws, as well as those who *choose to subject themselves* to the insolvent laws, is placed at the disposal of assignees or trustees for the benefit of their creditors; but when a person possessed of property, but not subject to the bankrupt laws, contracts debts, if he go abroad, or live within the rules of the King's Bench or the Fleet, or remain in prison without petitioning for relief (in neither of which cases can he be subjected to the insolvent laws), he may most probably continue to enjoy the income arising from that property without molestation.

"It is true, the law says that the creditors shall be authorised to seize the debtors' *lands and goods*,—a description which an unlearned person would be apt to conclude was abundantly comprehensive; but the law is so interpreted, that neither funded property, money, nor securities for money, are considered goods. If the debtor have a copyhold estate, it cannot be touched in any way whatever; if his estate be freehold, the creditor may, after a tedious process, receive the rents and profits, but no more, during the lifetime of his debtor. Should the debtor die before judgment against him in a court has been obtained, then, unless the debt be on bond, the creditor has no recourse upon the land left by the debtor, whatever may be its tenure: 'nay, though his money borrowed on note or bill has been laid out in buying land, the debtor's heir takes that land, wholly discharged of the debt!'"—(*Lord Brougham's Speech on the State of the Law*, p. 100.)

"In consequence of this preposterously absurd system, an individual known to have a large income, and enjoying a proportionally extensive credit, may, if he go to Paris or Brussels, or confine himself within the rules of the King's Bench or Fleet, defraud his creditors of every farthing he owes them, without their being entitled to touch any part of his fortune. All owners of funded, mortgaged, and copyhold property, have a licence given them to cheat

* One creditor, whose debt is to the amount of upwards of 100*l.*; or two, whose debts amount to 150*l.*; or three, whose debts amount to 200*l.*

with impunity; and the only wonder is, not that some do, but that a vast number more do not avail themselves of this singular privilege. In point of fact, therefore, the power of imprisonment is operative only on the really necessitous—on those from whom it can extract little or nothing. The rich debtor is seldom subjected to its operation; he resorts, before a writ can be executed against him, either to the Continent or the rules, and then laughs at the impotent wrath of those he has defrauded, and perhaps ruined. That such a system of law should be suffered to exist in a commercial country, and so little outcry be raised against it, is truly astonishing, and strikingly exemplifies the power of habit in reconciling us to the most pernicious absurdities. Can any one wonder at the frequency of fraudulent bankruptcy, when it is thus fostered and encouraged?

"A reform of the bankrupt law on the principles already mentioned, seems, therefore, to be imperiously called for. Its evils were forcibly stated by Mr. Brougham (now Lord Brougham) in his 'Speech on the State of the Law.' He has also pointed out the remedial measures necessary to be adopted to render this important department of commercial jurisprudence consistent with the obvious principles of justice and common sense. 'Let the whole,' says he, 'of every man's property, real and personal—his real, of what kind soever, copyhold, leasehold, freehold; his personal, of whatever nature, debts, money, stock, chattels—be taken for the payment of all his debts equally, and, in cases of insolvency, let all be distributed rateably; let all he possesses be sifted, bolted from him unsparingly, until all his creditors are satisfied by payment or composition; but let his person only be taken when he conceals his goods, or has merited punishment by fraudulent conduct.'—(pp. 106—110.) Were these measures adopted, and a certificate given to every man who has been divested of his property for behoof of his creditors, and against whom no charge of fraud has been established, there would be little room for improvement in the principles of the law of bankruptcy."—(See my *Principles of Political Economy*, 2d ed. pp. 264—274.)

[For Bankrupt laws in the United States, see article *INSOLVENCY*.—*Am. Ed.*]

BARCALAO, or BACALAO, the Spanish name for cod.

BARCELONA, the capital of Catalonia, and the principal town of Spain, on the Mediterranean, in lat. 41° 22' N., and long. 2° 10' E. It is a strongly fortified, well-built city. The population is supposed to amount to about 150,000. Barcelona is eminently distinguished in the history of the middle ages, for the zeal, skill, and success with which her citizens prosecuted commercial adventures at a very early period. She would seem also to be entitled to the honour of having compiled and promulgated the famous code of maritime law known by the name of the *Consolato del Mare*; and the earliest authentic notices of the practice or marine insurance and of the negotiation of bills of exchange are to be found in her annals.* Catalonia has continued, amidst all the vicissitudes it has undergone, to be the most industrious of the Spanish provinces; and several valuable and extensive manufactures have been established at Barcelona. Latterly, however, her commerce, owing to a variety of causes, but principally to oppressive restrictions on the importation of foreign goods, and the emancipation of South America, has very much declined.

The Harbour, which is naturally bad, is formed by a mole or jetty, which has recently been a good deal enlarged, running out to a considerable distance in a southerly direction, and having a light-house and some batteries near its extremity. The depth of water within the mole is from 18 to 20 feet; but there is a bar between the mole and Montju, which has frequently not more than 10 feet water; and which would, it is believed, entirely shut up the harbour, were it not occasionally lowered by means of dredging machines. Vessels in the harbour moor at a short distance from the mole; where, though exposed to the southerly gales, they are so well protected that no accident of any consequence has taken place since the dreadful storm of 1821. Large ships must anchor outside the mole, and in winter are much incommoded by winds. Vessels entering the harbour are under no obligation to take a pilot on board; but they are always in attendance, and it is generally deemed safest to have their assistance in passing the bar.

Tariff.—Of prohibited articles, the most important are tobacco, cotton goods, salt, gunpowder, brandy, carcase, leather, balzes, soap, wearing apparel, hemp, fire-arms, copper, beads, mattresses, furniture, manufactured tin, flour, and all sorts of grain and pulse, manufactured cast iron, earthenware, blankets, paper, oil-cloths, sealing-wax, &c.

The following were the duties on the principal articles allowed to be imported into Barcelona in 1833:—

Articles.	Spanish Wts.	National Flag.	Foreign Flag.	Eng. Wts.	Nat. Flag.	For. Flag.	Articles.	Span. Wts.	National Flag.	Foreign Flag.	Eng. Wts.	National Flag.	For. Flag.
					Sterl. s. d. c.	Sterl. s. d. c.						Sterling. s. d. c.	Sterl. s. d. c.

* For proofs of this, see the articles *MARITIME LAW*, *INSURANCE*, &c. in this Dictionary. The *Memorias Historicas sobre la Marina, Comercio, &c. de Barcelona*, by Capmany, in 4 vols. 4to, is one of the most valuable and authentic works that has ever been published on the commerce, arts, and commercial and maritime legislation of the middle ages. The first volume is the most interesting, at least to the general reader; the others consisting principally of extracts from the archives of the city.† There is a brief but pretty good account of the early trade of Barcelona, drawn principally from Capmany in the work of Depping, *Histoire du Commerce entre le Levant et l'Europe depuis les Croisades*, &c. tom. 1. c. 5.

All articles whatever, the produce of the soil, or the manufacture of the country, may at present be exported; and, in most instances, without paying any duty. In this respect there is nothing in the legislation of Spain to which to object; but the government seems, like many others, to have forgotten that reciprocity is the beginning, the middle, and the end of commerce,—that there can be no exportation without an equivalent importation; and that, to prohibit or restrict the latter is, in fact, to prohibit or restrict the former.

Custom-house and Warehousing Regulations, same as at Antwerp; which see.

Port Charges.—The following are the various charges of a public nature that would be paid by a Spanish and a British ship, each of 300 tons burden, unloading and loading mixed cargoes in Barcelona—

Spanish Vessel.	Reals.	British Vessel.	Reals.
Anchorage	75	Anchorage	75
New do.	15	Double do.	75
Cleaning of port	90	New do.	15
Lighters	8	Cleaning of port	10
Captain of the port	10	Lighters	8
Light-house of Tarifa	100	Captain of the port	10
Loading (1 real per ton)	300	Light-house of Tarifa	211
Extraordinary contribution	40	New male (8 reales per ton)	2,400
New male	60	Loading (1 real per ton)	300
Total	575	Extraordinary contribution	40
		Cumulative fees usually required	180
		Total	3,300

Taking the real at 4d., this would be 24 11s. 2d. on the Spanish ship, and 65s. on the British do.

Commission is at the rate of 3 1/2 per cent. on goods shipped, and 2 per cent. on those received on consignment. Goods are sometimes sold for ready money, and sometimes on credit for 3 or 4 months; a month's discount is 1 1/2 per cent. per month. There are no banking establishments in Barcelona.

Insurance on ships is effected by individuals, but insurance on houses, lives, &c. are unknown here.

Taxes.—At the Custom-house, real taxes only are allowed; and the

net weights must be rigorously manifested. A surplus of 5 per cent. is, however, allowed, to cover any inaccuracies in the proportion between foreign and Spanish weights, but if the weight of any parcel should turn out to be 3 per cent. greater than is marked in the manifest, the surplus is seized, at the same time that the importer loses the benefit of the 5 per cent. allowed by law, and becomes liable to the penalties of smuggling. The taxes usually allowed by merchants are, on Havannah sugar 15 per cent.; on coffee 2 per cent., exclusive of the barrel, bag, &c. in which it is contained; on cocoa and pepper 2 per cent.; Pernambuco cotton 4 lbs. per bale; other cotton 1 lb. per cwt.

Sea-stores of all sorts are dear at Barcelona, but they may always be obtained. Beef costs about 7d. per lb., and bacall about 8 dollars per cwt.

Money.—Accounts are kept in *libras* of 20 *reales*, 240 *dineros*, or 480 *mitos*. The *libra* is likewise divided into *reales de plata Catalana*, of 3 *reales* each; and into *reales aragones*, of 3 *reales* each. Hence, 6-7 of the former, or 10 of the latter, = 1 *libra Catalana*.

The *libra Catalana* is = 2s. 4d. sterling nearly.

The *peso duro*, or hard dollar, is valued at 17 1/2 *reales Catalana*, or about such dollar making 16 *reales*.

Weights and Measures.—There are endless discrepancies amongst the weights and measures in the different Spanish provinces, and there is a very great discrepancy in the accounts of the authors who have written upon them. The following statements are taken from Neikambrer's—

The quintal is divided into 4 *arrobas*, or 104 lbs. of 13 oz. to the pound. The pound = 6-174 English grains = 4 kilogram = 6226-6 oz. of Holland. 100 lbs. of Barcelona = 58-215 lbs. avoirdupois.

The yard named *canto*, is divided into 8 *palmas*, of 4 *cuartas*, and is = 21 inches very nearly. Hence, 100 *cantos* = 50-455 metres = 77-5 yards of Amsterdam = 84-514 English yards.

The *cuartara*, or measure for grain, is divided into 12 *cortones* and 45 *piculinas*. 100 *cuartones* = 83-534, or 29 1/4 Winchester quenters.

The *carga*, or measure for liquids, is divided into 12 *cortones* or *arrobas*, 24 *cortones*, and 72 *mitadillos*. It is = 38-7 English wine gallons. 4 *cargas* = 1 pipe. The pipe of Majorca contains 107 *cortones*.

Imports.—Account of the Quantity and Value of the principal Foreign Articles imported into Barcelona during the Three Years ending with 1831.

Articles.	In 1830.	Value in Sterling Money.	In 1830.	Value in Sterling Money.	In 1831.	Value in Sterling Money.
Cotton	18,600 bales	100,000	23,900 bales	127,000	43,400 bales	260,000
Sugar	14,100 boxes	112,000	23,600 boxes	198,000	20,300 boxes	160,000
Hides	67,500	54,000	63,400	62,000	75,000	56,000
Cocoa	4,100 bags	25,000	8,800 bags	50,000	7,300 bags	41,000
Coffee	1,400 cwt.	2,800	2,030 cwt.	4,500	620 cwt.	1,200
Bees'-wax	1,200 cwt.	4,300	700 cwt.	1,100	460 cwt.	2,400
Horns	111,000	2,200	123,800	2,600	95,000	2,000
Specie	51,400 dollars	10,300	39,285 dollars	7,900	260,700 dollars	76,300
Dye woods	15,000 cwt.	9,000	5,000 cwt.	3,000	10,000 cwt.	9,000
Fish	70,000 cwt.	84,000	42,000 cwt.	50,000	61,300 cwt.	77,000
Iron hoops	23,000 bundles	17,000	6,000 bundles	5,000	4,000 bundles	3,300
Staves	400,000	6,400	830,800	14,850	702,000	16,000
Cheese	2,000 cwt.	6,000	1,000 cwt.	3,000	2,000 cwt.	6,000
Tar	700 barrels	800	180 barrels	300	—	—
Butter	50 cwt.	300	—	—	—	—
Indigo	300 cwt.	8,000	750 cwt.	30,000	900 cwt.	36,000
Pepper	600 cwt.	1,200	800 cwt.	1,600	700 cwt.	1,400
Cinnamon	250 cwt.	10,000	800 cwt.	28,000	1,000 cwt.	40,000

Grain is usually represented as forming an important article in the imports into Barcelona; but its importation from abroad is prohibited; and the wants of the city are supplied either by land carriage from the interior, or by coasting vessels from the Spanish ports more to the north.

Of the imports specified above, the greater portion are furnished by Cuba and Porto Rico. The imports from France are also considerable. Those from England, which were once very large, have dwindled to almost nothing. The only goods now openly imported from Great Britain, are iron hoops, hardware, and woollen stuffs, and these in too small quantities to deserve notice. Fish is principally supplied by Sweden and Denmark. Smuggling, particularly in tobacco and printed cottons, is carried on to a considerable extent.

Exports.—The principal exports are wrought silks, soap, fire-arms, paper, hats, laces, ribands, steel, &c. But no vessels, except a few that take on board manufactured goods for the Spanish West Indies, are loaded here; and even this trade is much fallen off. Upwards of 2,000 hands used formerly to be employed in the city in the manufacture of shoes for the colonies; but their export has now nearly ceased. The cotton manufacture has made some progress in the town and its vicinity, and is increasing. The principal articles of native produce that Catalonia has to export are most conveniently shipped at Villanova, Tarragona, and Salou. They consist of wine, brandy, nuts, almonds, cork bark, wool, fruits, &c. Of these, Cuba takes annually about 12,000 pipes of wine, worth at an average 4s. per pipe, and about 3,000 pipes of brandy, worth 6s. per do.; South America, 16,000 pipes of wine, and 6,000 no. brandy; the north of Europe, 2,000 pipes of wine, and 2,000 do. brandy. A good deal of brandy is sent to Cadix and Cetta: most part of the former finds its way into the wine vaults of Xeres; and the latter, being conveyed by the canal of Languedoc to the Gironne, is used in the preparation of the wines of Bordeaux. From 25,000 to 30,000 bags of nuts are annually sent from Tarragona to England. Tarragona also exports about 12,000 bags of almonds.

In 1831, only 125 foreign ships, of the burden of 15,120 tons entered Barcelona. Of these, 31

Tuscan, 24 Sardinian, 19 Swedish, 18 English, 14 French, 8 American, &c. The ships belonging to the port carry on no foreign trade except to the Spanish West Indies; they are few in number, and are daily decreasing. Those engaged in the coasting trade are usually of very small burden. The customs duty in the same year did not exceed 100,000*l*.

(We have derived these details from various sources; but principally from the *Consul's Answer to Circular Queries*, and from *Ingli's Spain* in 1830, vol. II. pp. 384-387. and 392.)

BARILLA (Du. *Soda*; Fr. *Soude*, *Barille*; Ger. *Soda*, *Barilla*; It. *Barriglia*; Port. *Solda*, *Barrilha*; Rus. *Socianka*; Sp. *Barrilla*; Arab. *Kali*), carbonate of soda—(see **ALKALIES**), is found native in Hungary, Egypt, and many other countries. It is largely used by bleachers, manufacturers of hard soaps, glass-makers, &c. The barilla of commerce consists of the ashes of several marine and other plants growing on the sea-shore. The best, or Alicant barilla, is prepared from the *Salsola soda*, which is very extensively cultivated for this purpose in the *huerla* of Murcia, and other places on the eastern shores of Spain.—(*Townsend's Travels in Spain*, vol. iii. p. 195.) The plants are gathered in September, dried and burned in furnaces heated so as to bring the ashes into a state of imperfect fusion, when they concrete into hard, dry, cellular masses of a greyish blue colour. Sicily and Teneriffe produce good barilla, but inferior to that of Alicant and Carthage. Kelp, which is a less pure alkali, is formed by the incineration of the common sea-wrack.—(See **KELP**.)

The Saracens established in Spain seem to have been the first who introduced the manufacture of barilla into Europe. They called the plants employed in its preparation *kali*; and this, with the Arabic article *al* prefixed, has given rise to the modern chemical term alkali.

Of 184,649 cwt. of barilla imported into Great Britain in 1831, 61,921 cwt. came from Spain, 95,995 from Teneriffe, and 23,867 from Sicily. The values of these species are, for the most part, in the proportion of about 12, 9, and 10; that is, if Spanish barilla fetch 12*l*. a ton, Teneriffe barilla will fetch 9*l*., and Sicilian 10*l*. Prime quality in barilla is to be distinguished by its strong smell when wetted, and by its whitish colour. Particular attention should be paid to have as little smell or dust as possible. The duties on barilla have recently been very considerably reduced.—(See **TARIFF**.)

At an average of the three years ending with 1831, the barilla entered for home consumption amounted to 255,299 cwt. a year. In 1832, it produced 15,324*l*. 6*s*. 2*d*. nett revenue.

(The duties on barilla used in the bleaching of linen are to be repaid to the persons using it, under such regulations as the commissioners of customs may issue.—(4 & 5 Will. 4. c. 89. § 14).—*Sup.*)

[Barilla is imported into the United States, free of duty, chiefly from the Canary islands. The value of it annually imported, on an average of four years ending with 1837, amounted to little more than 100,000 dollars; scarcely any of which was subsequently exported.—*Am. Ed.*]

BARK, the outer rind of plants. There is an immense variety of barks known in commerce, as cinnamon, Peruvian bark, oak bark, quercitron, &c. The term "bark" is, however, generally employed to express either Peruvian bark, or oak bark; and it is these only that we shall describe in this place.

1. *Peruvian or Jesuit's Bark* (Fr. *Quinquina*; Ger. *Kron-china*; Du. *China-bast*; Sp. *Quina*, *Quinquina*; Lat. *Quinquina*, *Cortex Peruvianus*). There are three principal species of this bark known in commerce, which have been elaborately described by Dr. A. T. Thomson, from whose account the following particulars are selected.

The first species is the *pale bark* of the shops. It is the produce of the *Cinchona lanceifolia*, and is the original cinchona of Peru. It is now very scarce. It is imported in chests covered with skins, each containing about 200 lbs., well packed, but generally mixed with a quantity of dust and other heterogeneous matter. It consists of pieces 8 or 10 inches long, some of them being scarcely one-tenth of an inch thick, singly and doubly quilled, or rolled inwards; the quills, generally, being in size from a swan's quill to an inch and a half. It is internally of a pallid fawn or cinnamon hue; but approximate, on being moistened, to the colour of a pale orange. When in substance it has scarcely any odour: but during decoction the odour is sensible, and agreeably aromatic. The taste is bitter, but not unpleasant, acidulous, and austere.

The second species, or red bark, is obtained from the *Cinchona oblongifolia*, growing on the Andes. It is imported in chests containing from 100 to 150 lbs. each. It consists of variously sized pieces, most of them flat, but some partially quilled or rolled. The internal part is woody, and of a rust red colour; it has a weak peculiar odour; and its taste is much less bitter, but more austere and nauseous, than that of the other barks.

The third species, or yellow bark of the shops, is obtained from the *Cinchona cordifolia*, growing in Quito and Santa Fé. It is imported in chests containing from 90 to 100 lbs. each, consisting of pieces 8 or 10 inches long, some quilled, but the greater part flat. The interior is of a yellow colour, passing to orange. It has nearly the same odour in decoction as the pale; the taste is more bitter and less austere, and it excites no astringent feeling when chewed. The goodness decreases when the colour varies from orange yellow to pale yellow; when of a dark colour, between red and yellow, it should be rejected.

It is needless to add, that bark is one of the most valuable medical remedies. The Indians were unacquainted with its uses, which seem to have been first discovered by the Jesuits. It was introduced into Europe in 1632, but was not extensively used till the latter part of the seventeenth century. According to M. Humboldt, the Jesuits' bark annually exported from America amounts to from 12,000 to 14,000 quintals. Of these, 2,000 are furnished by Santa Fé, and 110 by Loxa; Peru furnishing the remainder, which is shipped at Callao, Guayaquil, &c.

2. *Oak Bark* (Fr. *Ecorce de la Chêne*; Ger. *Eichenrinde*; It. *Corteccia della Quercia*; Lat. *Quercus cortex*). The bark of the common oak is a powerful astringent, and is preferred to all other substances for tanning leather. The bark of the larch is now, however, used for the same purpose. The import of oak bark is very considerable; but owing to the cork tree being a species of oak (*Quercus Suber*), bark for tanning and cork bark are usually mixed together in the parliamentary returns. The latter, however, does not amount to a tenth part of the whole quantity imported. The imports of both sorts amounted, in 1831, to 931,075 cwt., which is about the average importation. Of this quantity, no less than 608,304 cwt. were brought from the Netherlands (Holland and Belgium), 62,437 cwt. from Germany, &c. Cork bark is almost entirely imported from Italy, Spain, and Portugal; the imports from them being, in the above-mentioned year, Italy 95,163 cwt., Spain 78,067 cwt., and Portugal only 187 cwt. The quality of bark varies according to the size and age of the tree, the season when it is barked, &c., so much, that the price varies, at this moment, from about 6*l.* to about 10*l.* per ton. The duty, which is 13*s.* 4*d.* a ton, produced in 1832, in Great Britain, 22,251*l.* 0*s.* 6*d.* nett.

Quercitron is the bark of a species of oak tree (*Quercus tinctoria*). It is not used, at least in this country, for tanning, but for imparting a yellow dye to silk and wool. It is principally imported from North America. The price varies, at present, according to the quality, from about 12*s.* 6*d.* to 15*s.* a cwt., duty (1*s.*) included. At an average of the three years ending with 1831, the entry for home consumption were 25,016 cwt. a year.

We are indebted for the discovery and application of the useful properties of quercitron to Dr. Bancroft. The doctor obtained a patent for his invention in 1775; but the American war breaking out soon after, deprived him of its advantages. In consideration of this circumstance, parliament passed, in 1785, an act. (25 Geo. 3. c. 38.) securing to him the privileges conveyed by his patent for 14 years. At the expiration of the latter period, the House of Commons agreed to extend the doctor's privilege for an additional 7 years; but the House of Lords rejected the bill. Like too many discoverers, Dr. Bancroft profited but little by his invention, though it has been of great use to the arts and manufactures of the country.—(See *Bancroft on Permanent Colours*, vol. ii. p. 112., and the *Report of the Committee of the House of Commons on Patents*, Appendix. p. 176.)

Oak bark, the produce of Europe, is not to be imported into the United Kingdom for home consumption, except in British ships; or in ships of the country of which it is the produce, or in ships of the country from which it is imported, on pain of forfeiting the goods, and 100*l.* by the master of the vessel.—(7 & 8 Geo. 4. c. 58.)

BARLEY (Fr. *Orge*; Ger. *Gerstengraupen*; Du. *Rijg*; It. *Orzo*; Sp. *Cebada*; Rus. *Falschmea*; Lat. *Hordeum*; Arab. *Dhourra*; Hind. *Jow*), a species of bread-corn (*Hordeum* Lin.), of which there are several varieties. It is extensively cultivated in most European countries, and in most of the temperate districts of Asia and Africa. It may also be raised between the tropics; but not at a lower elevation than from 3,000 to 4,000 feet, and then it is not worth cultivating. Large quantities of barley have been, for a lengthened period, raised in Great Britain. Recently, however, its cultivation has been supposed, though probably on no good grounds, to be declining. In 1765, Mr. Charles Smith estimated the number of barley consumers in England and Wales at 739,000; and as a large proportion of the population of Wales, Westmoreland, and Cumberland continue to subsist chiefly on barley bread, we are inclined to think that this estimate may not, at present, be very wide of the mark. But the principal demand for barley in Great Britain is for conversion into malt, to be used in the manufacture of ale, porter, and British spirits; and though its consumption in this way has not certainly increased proportionally to the increase of wealth and population, still there does not seem to be any grounds for supposing that it has diminished. Barley is also extensively used in fattening black cattle, hogs, and poultry. It now generally follows turnips, and is a very important crop in the rotation best adapted to light soils. The principal barley counties of England are Norfolk, Suffolk, Cambridge, Bedford, Herts, Leicester, Nottingham, the upper parts of Hereford, Warwick, and Salop. The produce varies, according to soil, preparation, season, &c., from about 20 to 60 or 70 bushels an acre. The most usual crop is from 28 to 36 or 38 bushels. The Winchester bushel of good English barley generally weighs about 50 lbs., but the best Norfolk barley sometimes weighs 53 or 64 lbs. Its produce in flour is about 12 lbs., to 14 lbs. grain. Barley is a tender plant, and easily hurt in any stage of its growth. It is more hazardous than wheat, and is, generally speaking, raised at a greater expense; so, that its cultivation should not be attempted except when the soil and climate are favourable for its growth.—(For details as to

the prices of barley, the quantities imported and exported, &c., see *CORN LAWS AND CORN TRADE*. And for further details as to its consumption and culture, see *Smith's Tracts on the Corn Trade*, 2d ed. p. 182.; *Brown on Rural Affairs*, vol. ii. p. 42.; *Loudon's Encyc. of Agriculture*, &c.)

[Barley has long been cultivated in various parts of America, especially in Canada, and in the States as far south as Virginia.

There are two species. One of these is called winter barley, from the seed being sown in autumn, and remaining in the earth during the winter. It ripens about July. The grain is longer, and the hull thicker, than in the other species. In weight, it seldom exceeds 47 lbs. to the bushel. Under favourable circumstances, 50 bushels have been raised from an acre of ground; though the produce generally does not exceed 25 or 30.

The other species, called spring barley, is sown in the spring, and also ripens about July. This species has two varieties, distinguished from each other by the number of rows of grain on the head, as two-rowed and four-rowed barley. The crop is generally from 25 to 30 bushels per acre, and frequently weighs from 48 to 52 lbs. per bushel. By common consent, however, among the dealers in this article, the weight of a bushel is fixed at 48 lbs.; at which rate it is now altogether bought and sold.

Barley, in the United States, is generally raised for *malting*, and is seldom made into flour, barley bread being almost unknown. Small quantities are hulled, and used in soup and for medicinal purposes. It is also used as food for cattle; but only occasionally, as the price of it is ordinarily much greater in proportion than that of Indian corn or oats.

New soils are best fitted for the cultivation of barley; and it is a very uncertain crop on lands on which it has been often sown. Hence its culture has been abandoned in many sections of the country, where large quantities were formerly raised.—*Am. Ed.*]

BARLEY-SUGAR (*Fr. Sucre d'orge*; *Ger. Gerstenzucker*; *It. Penito*; *Sp. Alfenique*; *Lat. Alphenix*), a preparation of sugar, candied with orange or lemon peel.

BARRATRY, in navigation, is, in its most extensive sense, any fraudulent or unlawful act committed by the master or mariners of a ship, contrary to their duty to their owners, and to the prejudice of the latter. It appears to be derived from the Italian word *barratrare*, to cheat. It may be committed by running away with a ship, wilfully carrying her out of the course prescribed by the owners, delaying or defeating the voyage, deserting convoy without leave, sinking or deserting the ship, embezzling the cargo, smuggling, or any other offence whereby the ship or cargo may be subjected to arrest, detention, loss, or forfeiture.

It is the practice, in most countries, to insure against barratry. Most foreign jurists hold, that it comprehends every fault which the master and crew can commit, whether it arise from fraud, negligence, unskillfulness, or mere imprudence. But in this country it is ruled, that no act of the master or crew shall be deemed barratry, unless it proceed from a *criminal* or *fraudulent* motive.

"Barratry can only be committed by the master and mariners by some act contrary to their duty, in the relation in which they stand to the owners of the ship. It is, therefore, an offence against them, and consequently an owner himself cannot commit barratry. He may, by his fraudulent conduct, make himself liable to the owner of the goods on board, but not for *barratry*. Neither can barratry be committed against the owner, *with his consent*; for though he may be liable for any loss or damage occasioned by the misconduct of the master to which he consents, yet this is not barratry. Nothing is more clear than that a man can never set up as a crime, an act done by his own direction or consent."—(*Marshall on Insurance*, book i. c. 12. § 6.)

When, therefore, the owner of a ship is also the master, no act of barratry can be committed; for no man can commit a fraud against himself.

It is a maxim in law, that fraud shall not be presumed, but must be clearly proved; and it is a rule in questions of insurance, that he who charges barratry must substantiate it by conclusive evidence.

It is not necessary, to render an act barratrous, that it should be committed with a criminal intent as respects the owners, in order to injure them, or to benefit the captain or crew. It may even be committed with a view to promote the owner's interest; for an *illegal act* done without the authority or privity of the owners, and which proves detrimental to them, is barratry, whatever be the motives in which it originated. Lord Ellenborough, in an able judgment, has laid it down as clear law, "that a breach of duty by the master in respect of his owners, with a fraudulent or criminal intent, or *ex maleficio*, is barratry; that it makes no difference whether this act of the master be induced by motives of advantage to himself, malice to the owner, or a *disregard of those laws which it was his duty to obey*; and that it is not for him to judge or suppose, in cases not intrusted to his discretion, that he is not breaking the trust reposed in him, when he endeavours to advance the interests of his owners by means which the law forbids, and which his owners also must be taken to have forbidden."

The circumstance of the owners of ships being permitted to insure against the barratry of the master and mariners can hardly fail, it may be not uncharitably presumed, of rendering

them less scrupulous in their inquiries with respect to their character than they would otherwise be. Perhaps, therefore, it might be expedient to prohibit such insurances, or to lay some restrictions upon them. They were, indeed, expressly forbidden by the Ordinance of Rotterdam; and Lord Mansfield, whose authority on all points connected with the law of insurance is so deservedly high, seems to have thought that it would be well to exclude barratry entirely from policies, and to cease "making the underwriter become the insurer of the conduct of the captain whom he does not appoint, and cannot dismiss, to the owners who can do either." But though it were expedient to prevent the owners from making an insurance of this sort, nothing can be more reasonable than that third parties, who freight a ship, or put goods on board, should be allowed to insure against such a copious source of loss.—(For a further discussion of this subject, see the article *MARINE INSURANCE*; and *Marshall on Insurance*, book i. c. 12. § 8., and *Park on Insurance*, c. 5.)

Owners, masters, or seamen, who wilfully cast away, burn, or destroy ships, to the prejudice of freighters or insurers, incur the penalty of death.—(See *SEAMEN*.)

BARREL, a cask or vessel for holding liquids, particularly ale and beer. Formerly the barrel of beer in London contained only 32 ale gallons — 32½ Imperial gallons: but it was enacted by 43 Geo. 3. c. 69., that 36 gallons of beer should be taken to be a barrel; and by the 6 Geo. 4. c. 58. it is enacted, that whenever any gallon measure is mentioned in any excise law, it shall always be deemed and taken to be a standard Imperial gallon. At present, therefore, the barrel contains 36 Imperial gallons. It may be worth while observing that the barrel or cask is exclusively the produce of European ingenuity; and that no such article is known to any nation of Asia, Africa, or America, who have not derived it from Europeans.

[In the United States the barrel in use is uniformly one of 31½ gallons.—*Am. Ed.*]

BARWOOD, a red dye wood brought from Africa, particularly from Angola, and the river Gaboon. The dark red which is commonly seen upon British Bandana handkerchiefs is for the most part produced by the colouring matter of barwood, saddened by sulphate of iron.—(*Bancroft on Colours*.) The imports of barwood, in 1829, amounted to 246 tons 16 cwt. It fetches at present (October, 1833) from 9*l*. to 11*l*. a ton (duty 5*s*. included) in the London market.

BASKETS (Fr. *Corbeilles*; Ger. *Körbe*; It. *Paniere*; Sp. *Canastas*, *Canastos*; Rus. *Korsinū*) are made, as every one knows, principally of the interwoven twigs of willow, osier, birch, &c., but frequently also of rushes, splinters of wood, straw, and an immense number of other articles. They are used to hold all sorts of dry goods, and are constructed of every variety of quality and shape. Besides the vast quantities produced at home, some of the finer kinds are imported under an *ad valorem* duty of 20 per cent. In 1832, this duty produced 1,044*l*. 7*s*. 9*d*., showing that the value of the foreign baskets entered for home consumption in the same year had been 5,221*l*. 18*s*. 9*d*.

BAST, for straw hats or bonnets. See *HATS*.

BATAVIA, a city of the island of Java, the capital of the Dutch possessions in the East Indies, and the principal trading port of the Oriental islands, in lat. 6° 12' S., long. 106° 54' E., situated in the north-west part of the island, on an extensive bay. The harbour, or rather road, lies between the main land and several small uninhabited islands, which, during the boisterous or north-western monsoon, afford sufficient shelter and good anchorage. Ships of from 300 to 500 tons anchor at about a mile and a half from shore. A small river runs through the town, navigable for vessels of from 20 to 40 tons, from the sea, a couple of miles inland; a number of canals branch off from it into different parts of the town, affording great conveniences for trade. Batavia was formerly so notorious for its insalubrity, that General Daendels was anxious to transfer the seat of government to Sourabaya; but being thwarted in this, he set about building a new town, a little further inland, on the heights of Weltevreden, whither the government offices were immediately removed. Most of the principal merchants have now their residences in the new town, repairing only to the old city, when business requires it, during a portion of the day. In consequence, the old town is at present principally occupied by Chinese, and the descendants of the ancient colonists, several of its streets having been deserted and demolished. Recently, however, the Baron Capellen, whose enlightened administration will long be gratefully remembered in Java, sensible of the superior advantages of the old town as a place of trade, exerted himself to prevent its further decay, by removing the causes of its unhealthiness; to accomplish which, he widened several of the streets, filled up some of the canals, and cleaned others, demolished useless fortifications, &c.; and the effect of these judicious measures has been, that Batavia is now as healthy as any other town in the island. The population, according to an accurate census taken in 1824, consisted of 3,025 Europeans and their descendants, 23,108 natives, 14,708 Chinese, 601 Arabs, and 12,419 slaves; in all, 53,861 persons, exclusive of the garrison. As the population has increased since, it may at present be estimated at about 60,000, independently of the military, of which there are always a considerable number. Among the principal merchants are Dutch, English, Americans, French, and Germans. The island of Java forms the most important portion of the Dutch possessions in the East, and is,

in fact, one of the finest colonies in the world. It contains an area of 50,000 square miles, with a population of 6,000,000 individuals, or 120 to the square mile. The annual revenue of the Dutch government, which possesses about two thirds of the island, amounts to about 3,000,000*l.* sterling; and the military force amounts to about 15,000; of which not less than 8,000 are European troops, being about one third of the whole European force in British India, which has a population of 90,000,000, and an area of between 1,200,000 and 1,300,000 square miles of territory.

The staple products of the island are rice (of which 25,500 tons were exported in 1828), a variety of pulses, vegetable oils, tobacco, sugar, and coffee. The production of sugar is rapidly increasing. In 1832 the exports were estimated at 200,000 piculs (12,000 tons); but it was supposed that the exports in 1833 would not fall short of 18,000 tons; and as the Dutch authorities have made extensive contracts with the owners of large tracts of land to take sugar at very remunerating prices for some years to come, it has been calculated that the exports of 1834 would amount to 400,000 piculs, or about 24,000 tons. The production of indigo, cocoa, tea, and raw silk, is making considerable progress. The tin exported from Batavia is brought from Banca, the copper from Japan, the finer spices from the Moluccas, and the pepper from Sumatra.

In 1828, the exports from and imports into Batavia were, in quantity and value, as follows:—

Exports.				Imports.			
Articles.	Piculs of 136 lbs. each.	Florins.		Articles.	Piculs of 136 lbs. each.	Florins.	
Coffee	416,171	8,024,039		Cotton manufactures, Netherlands	—	2,940,632

Notes.—Taking the last at 2 tons, the quantity of tonnage which cleared outwards will be 136,389, and inwards 126,556 tons.

Port Regulations.—The following is the substance of the port regulations of Batavia:—1st. The commander of a ship arriving in the roads, is not to land himself, or permit any of his crew or passengers to land, until his vessel be visited by a boat from the guard-ship.—2d. The master, on landing is first to wait on the master attendant, and afterwards report himself at the police office.—3d. A manifest of the whole cargo must be delivered at the Custom-house within 24 hours of the ship's arriving in the roads.—4th. The master of the vessel must lodge the ship's papers with the master attendant when he first lands, which are duly delivered up to him when he receives his port clearance from the same authority.—5th. No goods can be shipped or landed after sunset, under a penalty of 500 florins.—6th. No goods can be shipped on Sunday without a special permission from the water fiscal, which, however, is never refused on application.—7th. No muskets or ammunition can be imported; but the prohibition does not extend to fowling pieces exceeding 100 florins value.

Tariff.—With respect to the tariff, all foreign woollens and cottons, being the manufacture of countries to the westward of the Cape of Good Hope, imported under a foreign flag, pay an *ad valorem* duty of 20 per cent., and under the Netherlands flag, of 12½ per cent., that is, a duty upon the wholesale price at Batavia, not in bond. With the exception of wines, spirits, and opium, which pay a rated duty, all other articles, if imported under a foreign flag, pay an *ad valorem* duty, rated on the invoice value, of 18-38 per cent., and if under the Netherlands flag, of 8-19 per cent. Cottons and woollens, the manufacture of the Netherlands, if accompanied by a certificate of origin, are duty free; but since the separation of Belgium and Holland, there have been no importations of cotton manufactures claiming this privilege. The export duty on coffee, if exported on a foreign bottom to a foreign country, is 3 florins per picul; if on a foreign bottom to a port in the Netherlands, 4 florins; and if on a Netherlands bottom to a Netherlands port, 2 florins. Sugar, if exported on a foreign bottom to whatever country, pays 1 florin per picul; but if exported on a Netherlands bottom to a Netherlands port, is duty free. Rice, on whatever bottom exported, and to whatever country, pays a duty of 3 florins per coyang of 27 piculs. Tin, exported on a foreign ship to whatever port, 4 florins per picul; and by a Netherlands ship, 2 florins per picul. The trade in spices is now monopolised by the Netherlands Trading Company.

Goods are received in *entrepôt* not only at Batavia, but at the ports of Samarang, Sourabaya, and Anjio in Java, and Rhio in the Straits of Malacca, on payment of a duty of 1 per cent. levied on the invoice value.

Money.—Accounts are kept at Batavia, in the florin or guilder, divided into centimes, or 100 parts, represented by a proper coinage or doits. The florin is a new coin made expressly for India, but of the same value as the florin current in the Netherlands. It is usually estimated at the rate of 12 to the pound sterling, but the correct par is 11 florins 58 centimes per pound. Doubloons, and the coins of Continental India, are receivable at the Custom-house at a fixed tariff; the Spanish dollar, for example, at the rate of 100 for 260 florins.

Weights.—The Chinese weights are invariably used in commercial transactions at Batavia, and throughout Java and the other Dutch possessions in India. These are the picul, and the cattie, which is its hundredth part. The picul is commonly estimated at 135 Dutch, or 133½ lbs. avoirdupois, but at Batavia it has been long ascertained and considered to be equal to 136 lbs. avoirdupois.—*Choyendorp, Corp & Co. par F. de Java, cap. 8, &c.; Evidence of Gillian MacLaine, Esq. before the Select Committee of the House of Commons on the Affairs of the East India Company, 1831, and private communications from the same.)*

(Statements with respect to the Imports and Exports of Java during the Years 1830—1834.)

Years.	Imports of Cotton Goods from Europe. Value in Florins.	Total Imports. Value in Florins.	Exports.				Tin, Basco. Piculs.	Exports. Value in Florins.	Pepper. Piculs.

Among the articles imported into Java, in 1834, were copper, iron, steel, &c. value 875,166 florins; glass and earthenware, 399,321 do.; wines and spirits, 951,345 do.; provisions, 406,158, &c. The total value of the exports, in 1834, was, 29,021,317 florins, which, at 20d. to the florin, is equal to 2,418,435*l*. We have not learned the exact amount of the imports during the same year, but taking them at 2,000,000*l*. the whole trade of the island would amount to about 4,400,000*l*. or 4,500,000*l*.

Remarks on the above Statements.—These statements show, that the trade of Java has increased very materially since 1830. In fact, there wants nothing but an enlightened, liberal administration, that by dealing fairly, and giving confidence to the natives, should develop the resources of this noble island, to render Java by far the most valuable of all the eastern colonial possessions of any European power. It is due to the Dutch to state, that their colonial government is now materially improved, as compared with what it formerly was; but it is still susceptible of much amendment; and it is to be hoped, seeing the wonderful influence that a more liberal system has had in Cuba, and other foreign colonies, and even in Java itself, that the administration of the latter will be still farther improved.

It is stated in the Dictionary (p. . .) that the export of coffee from Java might be estimated at about 18,000 tons; but it appears from the above table, that it has increased so rapidly that it amounted, in 1834-5, taking the picul at 136 lbs., to 61,981,066 lbs., or to above 37,000 tons! The export of sugar during the same year exceeded 22,300 tons.—*Sup.*

BATTEN, a name in common use for a scantling of wood 2½ inches thick and 7 wide. If above 8 inches wide, it is called deal.

BAZAAR, a term used in the East to designate a market, or building in which various articles of merchandise are exposed for sale. Bazaars are now met with in most large cities of Europe. There are several in London, of which the one in Soho-square is the most considerable.

BDELLIUM (Arab. *Aflatoon*), a gum-resin, semi-pellucid, and of a yellowish brown or dark brown colour according to its age, unctuous to the touch, but brittle; soon, however, softening between the fingers; in appearance it is not unlike myrrh, of a hitterish taste, and moderately strong smell. Two kinds have been distinguished: the *opocarpusum* of the ancients, which is thick like wax; and the common dark sort. It is found in Persia and Arabia, but principally in the latter; all that is met with in India is of Arabic origin. The tree which produces it has not been clearly ascertained.—(*Ainslie's Materia Indica*.)

BEACONS, in commerce and navigation, public marks or signals to give warning of rocks, shoals, &c. No man is entitled to erect a light-house, beacon, &c., without being empowered by law. The Trinity House corporation are authorised to set up beacons in whatever places they shall think fit; and any person who shall wilfully remove or run down any buoy, beacon, &c. belonging to the Trinity House, or to any other corporation, individual or individuals, having authority to establish it, shall, besides being liable to the expense of replacing the same, forfeit a sum not less than 10*l*. nor more than 50*l*. for every such offence.—(6 Geo. 4. c. 125, § 91.)—(See *BUOYS*.)

BEADS (Fr. *Rosaires*; Ger. *Rosenkranze*; Du. *Paternosters*; It. *Corone*; Sp. *Coronas*), small globules or balls used as necklaces, and made of different materials; as pearl, steel, amber, garnet, coral, diamonds, crystal, glass, &c. Roman Catholics use beads in rehearsing their Ave Marias and Paternosters. Glass beads or bugles are imported in large quantities into India and Africa, and also into Borneo and Sumatra. They are brought partly from Europe, and partly from China and the Persian Gulf. The glass beads sent from England are all imported, principally, we believe, from Venice. The non-manufacture in this country is said to be a consequence of the excise regulations on the manufacture of glass.

BEANS (Fr. *Fèves*; Ger. *Bohnen*; It. *Fave*; Rus. *Boobii*; Sp. *Habas*; Lat. *Fabæ*), a well-known vegetable of the pulse species, largely cultivated both in gardens and fields. Its cultivation is of much importance in rural economy, inasmuch as it has gone far to supersede fallows on strong loams and clays.

BEAVER. See *SKINS*.

BEECH (*Fagus sylvatica*), a forest tree to be met with every where in England. There is only one species, the difference in the wood proceeding from the difference of soil and situation. A considerable quantity of beech is grown in the southern parts of Bucks. It is not much used in building, as it soon rots in damp places; but it is used as piles in places where it is constantly wet. It is manufactured into a great variety of tools, for which

its great hardness and uniform texture render it superior to all other sorts of wood; it is also extensively used in making furniture.

BEEF, as every one knows, is the flesh of the ox. It is used either fresh or salted. Formerly it was usual for most families, at least in the country, to supply themselves with a stock of salt beef in October or November, which served for their consumption until the ensuing summer; but in consequence of the universal establishment of markets where fresh beef may be at all times obtained, the practice is now nearly relinquished, and the quantity of salted beef made use of as compared with fresh beef is quite inconsiderable. Large supplies of salted beef are, however, prepared at Cork and other places for exportation to the East and West Indies. During the war, large supplies were also required for victualling the navy. The vessels engaged in the coasting trade, and in short voyages, use only fresh provisions.

The English have at all times been great consumers of beef; and at this moment more beef is used in London, as compared with the population, than any where else.—(For further details with respect to the consumption of beef, &c., see **CATTLE**.)

BEER. See **ALE** AND **BECK**.

BELL-METAL (Fr. *Metal de Fonte ou de Cloches*; Ger. *Gluckengut*; Du. *Kloekpys*; Sp. *Campanil*; Rus. *Kolokhnaja mjed*), a composition of tin and copper, usually consisting of 3 parts of copper and 1 of tin. Its colour is greyish white; it is very hard, sonorous, and elastic. Less tin is used for church bells than for clock bells; and in very small bells, a little zinc is added to the alloy.—(*Thomson's Chemistry*.)

BENZONIN. See **BALSAM**.

BERGEN, the first commercial city of Norway, situated at the bottom of a deep bay, in lat. 60° 24' N., long. 6° 20' E. Population 21,000. The bay is indosed on all sides by rugged rocks and islands: the water is deep; but, owing to the number and intricacy of the passages, the access to the town is attended at all times with a good deal of difficulty, and should never be attempted without a pilot. Codfish, salted or dried, is one of the principal articles of export; when dried, it is called stock-fish, and goes chiefly to Italy and Holland. The cod fishery employs several thousand persons during the months of February and March; and the exports amounted, in 1829, to 184,064 barrels. The herring fishery, which used to be very successfully carried on upon the coasts of Norway, has, for a good many years, been comparatively unproductive. Whale oil, skins, bones, tar, with immense numbers of lobsters, &c., are exported. The exports of timber from Bergen are inconsiderable, and none has latterly gone to England. Norway timber is not so large as that brought from Prussian ports, nor so free from knots; but, being of slower growth, it is more compact, and less liable to rot. The planks are either red or white fir or pine: the red wood is produced from the Scotch fir; the white wood, which is inferior in price and estimation, is the produce of the spruce fir: each tree yields three pieces of timber of 11 or 12 feet in length; and is 70 or 80 years of age before it arrives at perfection. The planks or deals of Bergen are, however, a good deal inferior to those of Christiania. The imports into Bergen principally consist of grain from the Baltic; and salt, hardware, coffee, sugar, &c. from England.

For *Monies, Weights, and Measures*, see **CHRISTIANIA**; where there are further details as to the trade and navigation of Norway.

We subjoin an account of the principal exports from Bergen in 1829.

Bones	-	50 tons.	Oil, whale	-	2,402 tons.
Fish, Lobsters	-	250,000 number.	Skins, goat, buck, and deer	-	440 cwt.
Cod, smoked and dry	-	15,373 tons.	sheep and lamb	-	75 do.
— salt	-	184,064 barrels.	fox, martin, otter, &c.	-	97 skins.
— roe, ditto	-	12,427 do.	Tar	-	451 barrels.
Pickled sprats	-	1,912 kegs.	Wood, timber and deals	-	340 tons.
Horns, ox and cow	-	178 cwt.	staves	-	800 number.
Moss, rock	-	121 tons.			

(Private information.)

BERRIES (*Baccæ*), the fruits or seeds of many different species of plants. The berries quoted in London Price Currents are bay, juniper, Turkey, and Persian.

1. *Bay Berries* (Fr. *Baies de Laurier*; Ger. *Lorbeer*; It. *Bacchi di Lauro*; Sp. *Bayas*), the fruit of the *Laurus nobilis*. This tree is a native of the south of Europe, but it is cultivated in this country, and is not uncommon in our gardens. The berry is of an oval shape, fleshy, and of a dark purple colour, almost black; it has a sweet fragrant odour, and an aromatic astringent taste. Bay berries, and the oil obtained by boiling them in water, are imported from Italy and Spain.—(*Thomson's Dispensatory*.)

2. *Juniper Berries* (Fr. *Génévrier*; Du. *Serenboom*; It. *Ginepro*; Sp. *Embro*), the fruit of the common juniper (*Juniperus communis*). They are round, of a black purple colour, and require two years to ripen. They have a moderately strong, not disagreeable, but peculiar smell, and a warm, pungent, sweetish taste, which, if they be long chewed, or previously well bruised, is followed by a considerable bitterness. They are found in this country; but most of those made use of here are imported from Holland, Germany, and Italy. They should be chosen fresh, not much shrivelled, and free from mouldiness, which they are apt to contract in keeping. On distillation with water, they yield a volatile essential oil, very subtle and pungent, and in smell greatly resembling the berries. The peculiar

flavour and diuretic qualities of Geneva depend principally on the presence of this oil. English gin is said to be, for the most part, flavoured with oil of turpentine.—(*Lewis's Mat. Med.*; *Thomson's Dispensatory*.)

The duty on juniper berries, previously to 1832, was 11s. 1d. a cwt., being more than 100 per cent. on their price in hand. The oppressiveness of this duty seems to have been the principal reason why turpentine, which in point of flavour and all other respects is so inferior, has been largely used in preference to juniper berries in the preparation of gin. This oppressive duty was reduced, in 1832, to 2s., and we entertain little doubt that this wise and liberal measure will at no distant period occasion the receipt of a greater amount of revenue, at the same time that it cannot fail materially to improve the beverage of a large proportion of the people.

Italian juniper berries fetched at present (Sept. 1833), in the London market, from 9s. 6d. to 10s. 6d. a cwt., duty included; and German and Dutch ditto, from 8s. to 9s.

3. *Turkey Yellow Berries*, the unripe fruit of the *Rhamnus infectiorius* of Linnaeus. They are used as a dye drug, in preparing a lively but very fugitive yellow, for topical application in calico-printing. Considerable quantities of them are exported from Salonica, to which they are brought from Thessaly and Albania. An inferior sort is produced in France.—(*Bancroft on Colours*.) The duty on Turkey berries is 2s.; and their price, duty included, in the London market, is (Sept. 1833) 34s. to 36s. a cwt.

4. *Persian Yellow Berries* are said by the merchants to be of the same species as the Turkey yellow berries. The colours which they yield are more lively and lasting. They are high priced, fetching (duty 2s. included) from 110s. to 130s. a cwt. Hitherto the imports have been very inconsiderable; the yellow berries (Turkey as well as Persian) entered for home consumption during the 3 years ending with 1831, being only 1,939 cwt. a year. The net revenue derived from all sorts of berries imported in 1832, was 3,062l. 12s. 4d.

BERYL, called by the jewellers *Aquamarine*. This stone was suspected by Pliny to be a variety of the emerald; a conjecture which modern mineralogists have completely confirmed. The term emerald is applied to that particular variety which presents its own peculiar colour, or *emerald green*; while that of beryl is given indiscriminately to all the other varieties; as the sea green, pale blue, golden yellow, and colourless. Pliny says that the beryl is found in India, and rarely elsewhere; but besides India, it is found in Peru and Brazil; at Nantes and Limoges, in France; in the Wicklow mountains, in Ireland; in the district of Cairngorm, in Scotland; and in various other places.—(*Plin. Hist. Nat.* lib. xxxvii. cap. 5.; *Ency. Brit.* new edit.)

"Those only which are of good colour and sufficient depth are manufactured; they have a pretty, lively effect, if in good proportion and well polished. Large stones, from one to three and four ounces, are not uncommon, but from their bulk are only in request as specimens for the cabinet: smaller stones suitable for necklaces may be bought at low prices, within the reach of every description of purchasers; ring stones may be had at a few shillings each; and larger, for brooches or seals, from 1l. to 5l. and often lower."—(*Mawe on Diamonds*, &c. 2d Edit.)

BETEL-NUT, or ARECA (*Sans.* and *Hind.* *Supari*; *Malay*, *Pinang*; *Javan*, *Jambi*), the fruit of the *Areca catechu*, a slender and graceful palm, rising to the height of about 30 or 40 feet; it produces fruit at the age of five or six years, and continues bearing till its 25th or 30th year. The fruit, which is the only part of the palm that is made use of, is eaten both in its unripe and in its mature state. When ripe, it is of the size of a small egg, and of an orange colour; the exterior part consists of a soft, spongy, fibrous matter, inclosing a nucleus resembling a nutmeg in shape, internal structure, and colour, but usually larger, and always harder. A single tree produces, according to its situation, age, culture, &c., from 200 to 800 nuts. They are objects of great importance in the East, forming the principal ingredient of a compound in universal use as a masticatory in all Central and Tropical Asia. The other ingredients are the leaf of the Betel pepper—(which see), in which the areca nut is wrapped; a little *Сатунам*—(which see); and generally, but not always, a little *catechu* or terra japonica—(see *Сатсрю*). The whole compound is called *betel*, and is used to an extent of which it is difficult for a European to form a just idea. All individuals, without exception of age or sex, begin at an early period to accustom themselves to betel. They are unceasingly masticating it, and derive a gratification from its use that strangers can neither understand nor explain. It reddens the saliva, gives a bright hue to the lips, and, in course of time, renders the teeth quite black. It is said to dispel nausea, excite appetite, and strengthen the stomach. Besides being used as an article of luxury, it is a kind of ceremonial which regulates the intercourse of the more polished classes of the East. When any person of consideration visits another, after the first salutations, betel is presented; to omit it on the one part would be considered neglect, and its rejection would be judged an affront on the other. No one of inferior rank addresses a dignified individual without the previous precaution of chewing betel; two people seldom meet without exchanging it; and it is always offered on the ceremonious interviews of public missionaries. The areca nut is, in consequence, an article of very extensive trade. The countries which yield it most largely for exportation are Malabar, Ceylon, and Sumatra. Of the extent of this trade, some notion may be formed from the fact, that the imports of areca into Bengal in 1829–30, were 695

tons, and into Canton, 2,894 tons, though Bengal and Southern China are countries in which areca is largely produced.—(See the article *Betel* in the new edition of the *Ency. Britannica*; *Bell's Review of the External Commerce of Bengal*; *Crawford's Indian Archipelago*, vol. i. p. 103., vol. iii. p. 414.; *Chinese Calendar and Register for 1832, &c.*)

BETEL-LEAF (Hind. *Pan*; Malay, *Sireh*; Javan. *Suro*), the leaf alluded to in the foregoing article. It is the produce of a species of pepper vine (*Piper betel*), and somewhat resembles the ivy leaf. In their fresh state, betel leaves form an important article of Eastern traffic, being every where used in the preparation of betel. The *Piper betel* is a scandent plant, and poles are placed in the ground, round which it twines itself. In consequence of the great consumption of its leaves, it is extensively cultivated throughout Tropical Asia. It grows in the greatest perfection in rich soils close to the equator; and is raised with more difficulty the further we recede from it.—(*Ency. Britannica*, new edition, article *Betel*; *Crawford's Indian Archipelago*, vol. i. p. 403.)

BEZOAR (Arab. *Padrij*; Hind. *Zehar-morah*; Pers. *Padzehr Kanie*), a concretion found in the stomach of an animal of the goat kind; it has a smooth glossy surface, and is of a dark green or olive colour; the word bezoar, however, has lately been extended to all the concretions found in animals;—such as the *hog bezoar*, found in the stomach of the wild boar in India; the *bovine bezoar*, found in the gall-bladder of the ox, common in Nepal; and the *camel bezoar*, found in the gall-bladder of the camel; this last is much prized as a yellow paint by the Hindoos. The finest bezoar is brought to India from Borneo and the sea-ports of the Persian Gulf; the Persian article is particularly sought after, and is said to be procured from animals of the goat kind, *Capra Gazella*. Many extraordinary virtues were formerly ascribed to this substance, but without any sufficient reason.—(*Ainslie's Materia Indica*.)

BILBAO, or (as it is commonly, though incorrectly, written in this country) **BILBOA**, a sea-port town of Spain, in the province of Biscay, on the river Ybai Cabal, about 9 miles from Portugalete. Population 14,500.

Port.—The bay of Bilbao lies between *Punto Galea* on its east, and *Punto Luznero* on its western side, distant about 3 miles. It stretches S. E. to within $\frac{1}{2}$ of a mile of Portugalete, in lat. $43^{\circ} 20' 10''$ N., long. $3^{\circ} 54' 4''$ W., near the mouth of the river on which Bilbao is built. The water in the bay varies from 5 to 10 and 14 fathoms. There is a bar at the mouth of the river, between Santurce and Portugalete, on which there is not above four feet water at ebb tide. High water at full and change at 3 h. r. m. Spring tides rise about 13 feet; and large ships taking advantage of them sometimes ascend the river as far as Bilbao; but they usually load and unload by lighters, either at Portugalete, or at Olavina, 4 miles below the town. Pilots are to be had at Santurce, without the bar. In winter, a heavy sea sometimes sets into the bay; but if the pilot cannot go off, he places himself on one of the batteries to the N. W. of Santurce, and makes signals with a red flag, so as to direct the ship to the best anchorage ground.—(See *Laurie's* excellent *Chart of the Bay of Biscay*, with the *Sailing Directions* that accompany it.)

Trade.—Bilbao is favourably situated for commerce. The Biscayans are distinguished for the zeal and courage with which they have defended their peculiar privileges, and for their industry and activity. Bilbao and Santander are the principal ports through which the extensive province of Old Castile, and large portions of Leon and Navarre, most easily communicate with foreign countries. They have in consequence, particularly the former, a pretty considerable foreign trade. Wool is one of the principal articles of export; but since the introduction of Merino sheep into Germany, and their extraordinary increase in that country, this branch of Spanish commerce, though still of a good deal of importance, has materially declined. Since the abolition, in 1820, of all restrictions on the exportation of corn, flour, &c., the shipments of wheat from Bilbao have been, in some years, very considerable. The supplies are principally brought from the provinces of Palencia, Valladolid, and Zamora, which yield immense quantities of wheat. The distance is from 130 to 140 English miles; and owing to the badness of the roads, and the deficient means of transport, the rate of carriage advances enormously when there is any extraordinary foreign demand. If the *Canal of Castile*, intended to unite the Douro with Reynosa, Bilbao, and Santander, were completed, it would make a considerable revolution in this trade. The *campos*, or plains, on the south side of the Douro, are amongst the finest wheat countries in the world; the crops being frequently so abundant, that the peasants decline reaping the fields at a distance from the villages! In 1831, 146,234 quarters of Spanish wheat, principally from Bilbao, were imported into Great Britain. The iron manufactures of Biscay are in a state of considerable activity, and some part of the produce is exported. The principal articles of importation are woollen fabrics, cod-fish, cutlery, and jewellery; sugar, coffee, cacao, and other colonial products, spices, indigo, &c. In 1831, 210 foreign ships, of the burden of 18,822 tons, entered the port of Bilbao. The countries to which these ships belonged are not mentioned; but in 1828, 49 British ships, of the burden of 6,051 tons, entered the port.—(We have derived these details from the *Foreign Quarterly Review*, No. 9. art. *Spain*; the *Annuaire du Commerce Maritime* for 1833, p. 265.; the *Parl. Paper*, No. 550. Sess. 1833; and private information.)

Measures, Weights, and Measures, same as those of Cadiz; which see. We may mention, however that the fanega, or measure for grain, is equivalent to 165 Winchester quarters.

BILL OF EXCHANGE. See **EXCHANGE.**

BILL OF HEALTH, a certificate or instrument signed by consuls or other proper authorities, delivered to the masters of ships at the time of their clearing out from all ports or places suspected of being particularly subject to infectious disorders, certifying the state of health at the time that such ships sailed. A *clean bill* imports, that at the time that the ship sailed no infectious disorder was known to exist. A *suspected bill*, commonly called a *touched patent* or bill, imports that there were rumours of an infectious disorder, but that it had not actually appeared. A *foul bill*, or the absence of clean bills, imports that the place was infected when the vessel sailed.—(See **QUARANTINE.**)

BILL OF LADING, is a *formal receipt* subscribed by the master of a ship in his capacity of carrier, acknowledging that he has received the goods specified in it on board his ship, and binding himself (under certain exceptions) to deliver them, in the like good order as received, at the place, and to the individual named in the bill, or his assigns, on his or their paying him the stipulated freight, &c. When goods are sent by a ship hired by a charter-party, the bills of lading are delivered by the master to the merchant by whom the ship is chartered; but when they are sent by a *general ship*,—that is, by a ship not hired by charter-party, but employed as a general carrier,—each individual who sends goods on board, receives a bill of lading for the same. In all cases, therefore, the bill of lading is the evidence of and title to the goods shipped.

The liability of a carrier, at common law, to deliver the goods intrusted to his care, is cancelled only by "the act of God and the king's enemies." But to limit this responsibility, the following exception is now, invariably almost, introduced into the clause in bills of lading, binding the master to the delivery of the goods:—"The act of God, the king's enemies, fire, and all and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind soever, excepted."

Bills of lading are not, in general, immediately given by the master on receiving the goods. The usual practice is for the master or his deputy to give a common receipt for the goods, which is delivered up on receiving the bill of lading. The latter should always be required within 24 hours after the goods are received on board.

Three sets of all bills of lading are made out on stamped paper: one of these should be remitted by the first post to the person to whom the goods are consigned, a second being sent to him by the ship; the third is retained by the shipper of the goods. The master ought always to retain copies of the bills of lading for his government. A stamp duty of 3s. is charged on all bills of lading, whether for goods exported or carried coastwise.

The usual form of a bill of lading is as follows:—

W. B. } N. B.—SHIPPED, in good order and well conditioned, by A. B. merchant, in and upon
No. 1. a. 10. } the good ship called _____, whereof C. D. is master, now in the river Thames, and
bound for _____, the goods following, viz. [here describe the goods.] marked and
numbered as per margin, to be delivered, in the like good order and condition, at
aforesaid, (the act of God, the king's enemies, fire, and all and every other
dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind so-
ever, excepted,) unto the said A. B. or his assigns, be or they paying for the said goods
at the rate of _____ per piece freight, with prime and average accustomed. In witness
whereof, I the said master of the said ship, have affirmed to three bills of lading, of this
tenour and date; any one of which bills being accomplished, the other two are to be void.
London, this _____ day of _____, 1831. C. D., Master.

But in the case of ships homeward bound from the West Indies, which send their boats to fetch the cargo from the shore, the exception in the bill of lading is usually expressed as follows:—"The act of God, the king's enemies, fire, and all and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind soever, *save risks of boats, so far as ships are liable thereto*, excepted." Other exceptions may be and are sometimes introduced; but the above is the general form.

Transfer of Bills of Lading.—Bills of lading are transferable either by blank or special indorsement, like bills of exchange. And whatever may be the character of the person to whom the goods are consigned, whether he be a buyer, or merely the factor, agent, or broker of the consignor, the *bona fide* holder of the bill of lading indorsed by the consignee, is entitled to the goods, and may claim them from the master, if he can prove that he has purchased the bill for a *good consideration*; but unless he can do this, he is not entitled to the goods.—(*Holt, Law of Shipping*, 2d ed. p. 363.)

Formerly, a factor, though he might sell, could not *pledge* the goods of his principal. But the hardship and inconvenience arising from this rule were such, that it was set aside by the act 6 Geo. 4. c. 94. The second section of this act declares, that any person in possession of a bill of lading shall be deemed the true owner of the goods specified in it, so as to make a sale or pledge by him of such goods or bill of lading valid, unless the person to whom the goods are sold or pledged has notice that the seller or pledger is not the actual and *bona fide* owner of the goods.—(See **FACTOR.**)

Delivery under Bill of Lading.—It being usual to sign and deliver three bills of lading, it is possible that there may be conflicting demands upon the captain by the different holders. Nothing, however, is, in such a case, required of him, except that he act with good faith, and

to the best of his judgment; and that he make delivery of the goods to the person who first demands them of him, upon presentment of the bill of lading, *provided the circumstances be not such as to justify a suspicion* of his having unfairly got possession of it. If he act differently, he is answerable, according to the peculiarities of the case, to the person injured by his negligence; the bill of lading being not only the instructions of the merchant to him, as his carrier or servant, but his own especial agreement to deliver according to its conditions.

Where several bills of lading of a different import have been signed, no regard is to be paid to the time when they were first signed by the master; but the person who first gets legal possession of one of them from the owner or shipper, has a right to the consignment; and where such bills of lading, though different upon the face of them, are constructively the same, and the master has acted *bona fide*, a delivery according to such legal title will discharge him from all.—(*Holt*, p. 375. and 377.)

BILL OF SALE, a contract under seal, by which an individual conveys or passes away the right and interest he has in the goods or chattels named in the bill. The property of ships is transferred by bill of sale.—(See REGISTER.)

BILL OF SIGHT. When a merchant is ignorant of the real quantities or qualities of any goods assigned to him, so that he is unable to make a perfect entry of them, he must acquaint the collector or comptroller of the circumstance; and they are authorised, upon the importer or his agent making oath that he cannot, for want of full information, make a perfect entry, to receive an entry by *bill of sight*, for the packages, by the best description which can be given, and to grant warrant that the same may be landed and examined by the importer in presence of the officers; and within 3 days after any goods shall have been so landed, the importer shall make a perfect entry, and shall either pay down the duties, or shall duly warehouse the same.—(3 & 4 Will. 4. c. 52. § 24.)

In default of perfect entry within 3 days, such goods are to be taken to the king's warehouse; and if the importer shall not, within 1 month, make perfect entry, and pay the duties thereon, or on such parts as can be entered for home use, together with charges of moving and warehouse rent, such goods shall be sold for payment of the duties.—§ 25.

The East India Company are authorised without the proof before-mentioned, to enter goods by bill of sight, and to make perfect entry, and pay the duties within 3 months.—§ 26.

BILL OF STORE, is a license granted by the Custom-house, to merchants, to carry such stores and provisions as are necessary for a voyage, free of duty.

By the act 3 and 4 Will. 4. c. 52., returned goods may be entered by bill of store, as follows:—

From 5th January, 1825, it shall be lawful to re-import into the United Kingdom, from any place, on a ship of any country, any goods (except as herein-after excepted) which shall have been legally exported from the United Kingdom, and to enter the same by bill of store, referring to the entry outwards, and exportation thereof; provided the property in such goods continue in the person by whom or on whose account the same have been exported; and if the goods so returned be foreign goods which had before been legally imported into the United Kingdom, the same duties shall be payable thereon as would, at the time of such re-importation, be payable on the like goods, under the same circumstances of importation as those under which such goods had been originally imported; or such goods may be warehoused upon a first importation thereof; provided always, that the several sorts of goods enumerated or described in the list following shall not be re-imported into the United Kingdom for *home use*, upon the ground that the same had been legally exported from thence, but that the same shall be deemed to be *foreign goods*, whether originally such or not, and shall also be deemed to be imported for the first time into the United Kingdom; viz.

Goods exported, which may not be re-imported for Home Use.

Corn, grain, meal, flour, and malt; hops, tobacco, tea.

Goods for which any bounty or any drawback of excise had been received on exportation, unless by special permission of the commissioners of customs, and on repayment of such bounty or such drawback.

All goods, for which bill of store cannot be issued in manner herein-after directed, except small remnants of British goods, by special permission of the commissioners of customs, upon proof to their satisfaction that the same are British, and had not been sold.—§ 33.

The person in whose name any goods so re-imported were entered for exportation, shall deliver to the searcher, at the port of exportation, an exact account signed by him of the particulars of such goods, referring to the entry and clearance outwards, and to the return inwards of the same, with the marks and numbers of the packages both inwards and outwards; and thereupon the searcher, finding that such goods had been legally exported, shall grant a bill of store for the same; and if the person in whose name the goods were entered for exportation was not the proprietor thereof, but his agent, he shall declare upon oath on such bill of store the name of the person by whom he was employed as such agent; and if the person to whom such returns are consigned shall not be such proprietor and exporter, he shall declare upon oath on such bill of store the name of the person for whose use such goods have been consigned to him; and the real proprietor, ascertained to be such, shall make oath upon such bill of store to the identity of the goods so exported and so returned, and that he was at the time of exportation and of re-importation the proprietor of such goods, and that the same had not during such time been sold or disposed of to any other person; and such affidavits shall be made before the collectors or comptrollers at the ports of exportation and of importation respectively, and thereupon the collector and comptroller shall admit such goods to entry by bill of store, and grant their warrant accordingly.—§ 34.

(The 6 & 7 Will. 4. c. 60. enacts, that goods legally, exported, and which are afterwards re-imported, may, if the proprietor thereof be resident abroad, be entered by bill of store, on the proprietor subscribing a declaration as to the identity of the goods, and that

they did and do belong to him, and have not been sold or disposed of to any other person; such declaration to be subscribed before the British Consul, &c.—(\$ 2.)—*Sup.*)

BILLINGSGATE, a market for fish, contiguous to the Custom-house in London. It is held every lawful day, and was established in 1699 by stat. 10 & 11 Will. 3. c. 24. Every person buying fish in Billingsgate market, may sell the same in any other market-place or places within the city of London or elsewhere, by retail, with this condition, that none but fishmongers be permitted to sell in fixed shops or houses. No person or persons shall purchase at Billingsgate any quantity of fish, to be divided by lots or in shares amongst any fishmongers or other persons, in order to be afterwards put to sale by retail or otherwise; nor shall any fishmonger engross, or buy in the said market, any quantity of fish, but what shall be for his own sale or use, under the penalty of 20*l*. No person is to have in his possession, or expose to sale, any spawn of fish, or fish unsizable, or out of season.—(36 Geo. 3. c. 118.) The minimum size of the lobsters to be sold at Billingsgate is fixed by statute.—(See *LOBSTERS*.)

No fish of foreign taking or curing, or in foreign vessels, is to be imported into the United Kingdom, under penalty of forfeiture, except turbot and lobsters, stock-fish, live cels, anchovies, sturgeon, botargo, and caviare. Fresh fish of British taking, and imported in British ships, and turbot, however taken or imported, may be landed without report, entry or warrant.—(6 Geo. 4. c. 107.)

For some further remarks with respect to this subject, see *FISH*.

BIRCH (Fr. *Bouleau*; Du. *Berke*; Ger. *Birke*; It. *Betulla*; Lat. *Betula*; Pol. *Brzoza*; Rus. *Bereza*; Sp. *Abedul*, *Betulla*), a forest tree met with every where in the north of Europe. It is applied to various purposes. In Lapland, Norway, and Sweden, the long twigs of the birch are woven into mats and twisted into ropes; the outer bark forms an almost incorruptible covering for houses; and the inner bark is used in periods of scarcity, as a substitute for bread. Russia leather is prepared by means of the empyrenatic oil of the birch. It is an excellent wood for the turner, being light, compact, and easily worked. Its durability is not very great. It is sometimes used in the manufacture of herring barrels.

BIRDLIME (Ger. *Vogelleim*; Fr. *Glu*; It. *Pania*; Sp. *Liga*; Rus. *Ptitshei Klei*) exudes spontaneously from certain plants, and is obtained artificially from the middle bark of the holly. Its colour is greenish, its flavour sour, and it is gluey, shining, and tenacious. The natural is more adhesive than the artificial birdlime.—(*Thomson's Chemistry*.)

BIRDS' NESTS (Ger. *Indianische Vogelnester*; Du. *Indiatische Vogelnestjes*; Fr. *Nids de Tunkin*; It. *Nidi di Tuschino*; Sp. *Nidos de la China*; Java. *Susu*; Malay, *Sarangburung*), the nests of a species of swallow peculiar to the Indian islands (*Hirundo eculeuta*), very much esteemed in China. In shape this nest resembles that of other swallows; it is formed of a viscid substance; and in external appearance, as well as consistence, is not unlike fibrous, ill-coagulated isinglass. Esculent nests are principally found in Java, in caverns that are most frequently, though not always, situated on the sea-coast. Many conflicting statements have been made as to the substance of nests; some contending that they are formed of sea-foam or other marine products, and others that they are elaborated from the food of the bird, &c. But these are points as to which nothing satisfactory is known.

We borrow from Mr. Crawford's valuable work on the *Eastern Archipelago* (vol. iii. pp. 432–437.), the following authentic and curious details as to the traffic in this singular production:—"The best nests are those obtained in deep damp caves, and such as are taken before the birds have laid their eggs. The coarsest are those obtained after the young are fledged. The finest nests are the whitest, that is, those taken before the nest has been rendered impure by the food and feces of the young birds. They are taken twice a-year, and, if regularly collected, and no unusual injury be offered to the caverns, will produce very equally, the quantity being very little, if at all, improved by the caves being left altogether unmolested for a year or two. Some of the caverns are extremely difficult of access, and the nests can only be collected by persons accustomed from their youth to the office. The most remarkable and productive caves in Java, of which I superintended a moiety of the collection for several years, are those of *Karang-bolang*, in the province of *Bagien*, on the south coast of the island. Here the caves are only to be approached by a perpendicular descent of many hundred feet, by ladders of bamboo and rattan, over a sea rolling violently against the rocks. When the mouth of the cavern is attained, the perilous office of taking the nests must often be performed by torch-light, by penetrating into recesses of the rock where the slightest trip would be instantly fatal to the adventurers, who see nothing below them but the turbulent surf making its way into the chasms of the rock.

"The only preparation which the birds' nests undergo is that of simple drying, without direct exposure to the sun, after which they are packed in small boxes, usually of half a picul. They are assorted for the Chinese market into three kinds, according to their qualities, distinguished into *first or best*, *second*, and *third* qualities. Caverns that are regularly managed, will afford, in 100 parts, 53·3 parts of those of the first quality, 35 parts of those of the second, 11·7 parts of those of the third.

"The common prices for birds' nests at Canton are, for the first sort, no less than 3,500 Spanish dollars the picul, or 5*l*. 1*8s*. 1*d*. per lb.; for the second, 2,500 Spanish dollars per picul; and for the third, 1,600 Spanish dollars. From these prices it is sufficiently evident, that the birds' nests are no more than an article of expensive luxury. They are consumed only by the great; and, indeed, the best part is sent to the capital for the consumption of the court. The sensual Chinese use them, under the imagination that they are powerfully stimulating and tonic; but it is probable that their most valuable quality is their being perfectly harmless. The people of Japan, who so much resemble the Chinese in many of their habits, have no taste for the edible nests; and how the latter acquired a taste for this foreign commodity is no less singular than their persevering in it. Among the westerns

nations there is nothing parallel to it, unless we except the whimsical estimation in which the Romans held some articles of luxury, remarkable for their scarcity rather than for any qualities ascribed to them."

Mr. Crawford estimates the whole quantity of birds' nests exported from the Archipelago at 242,400 lbs. worth 264,300. "The value," he observes, "of this immense property to the country which produces it, rests upon the capricious wants of a single people. It is claimed as the exclusive property of the sovereign, and every where forms a valuable branch of his income, or of the revenue of the state. This value, however, is of course not equal, and depends upon the situation and the circumstances connected with the caverns in which the nests are found. Being often in remote and sequestered situations, in a country so lawless, a property so valuable and exposed is subject to the perpetual depredation of freebooters, and it not unfrequently happens that an attack upon it is the principal object of the warfare committed by one petty state against another. In such situations, the expense of affording them protection is so heavy, that they are necessarily of little value. In situations where the caverns are difficult of access to strangers, and where there reigns enough of order and tranquillity to secure them from internal depredation, and to admit of the nests being obtained without other expense than the simple labour of collecting them, the value of the property is very great. The caverns of *Karang-balang*, in Java, are of this description. These annually afford 6,810 lbs. of nests, which are worth, at the Batavia prices of 3,200, 2,500, and 1,800 Spanish dollars the picul, for the respective kinds, nearly 130,000 Spanish dollars; and the whole expense of collecting, curing, and packing, amounts to no more than 11 per cent. on this amount. The price of birds' nests is of course a monopoly price, the quantity produced being by nature limited, and incapable of augmentation. The value of the labour expended in bringing birds' nests to market is but a trifling portion of their price, which consists of the highest sum that the luxurious Chinese will afford to pay for them, and which is a tax paid by that nation to the inhabitants of the Indian islands. There is, perhaps, no production upon which human industry is exerted, of which the cost of production bears so small a proportion to the market price."—(See also the valuable work of *Count Hogendorp, Coup d'Œil sur l'île de Java*, p. 201.)

BISMUTH (Ger. *Wismuth*; Du. *Bismuth*, *Bergsteen*; Fr. *Bismuth*; It. *Bismutte*; Sp. *Bismuth*, *Piedra inga*; Rus. *Wismut*; Lat. *Bismuthum*), a metal of a reddish white colour, and almost destitute of taste and smell. It is softer than copper; its specific gravity is 9.822. When hammered cautiously, its density is considerably increased; it breaks, however, when struck smartly by a hammer, and, consequently, is not malleable, neither can it be drawn out into wire; it melts at the temperature of 476°.—(*Thomson's Chemistry*.)

"Bismuth is used in the composition of pewter, in the fabrication of printers' types, and in various other metallic mixtures. With an equal weight of lead, it forms a brilliant white alloy, much harder than lead, and more malleable than bismuth, though not ductile; and if the proportion of lead be increased, it is rendered still more malleable. Eight parts of bismuth, 5 of lead, and 3 of tin, constitute the fusible metal, sometimes called *Newton's*, from its discoverer, which melts at the heat of boiling water, and may be fused over a candle in a piece of stiff paper without burning the paper. Pewterers' solder is formed of one part of bismuth, with 5 of lead, and 3 of tin. It forms the basis of a sympathetic ink."—(*Urs*.)

BITUMEN (Ger. *Judenpeck*; Du. *Jodenhym*; It. *Asfalto*; Sp. *Asfalto*; Port. *Asphalto*; Rus. *Asfalt*; Lat. *Asphaltum*, *Bitumen Judæicum*). This term includes a considerable range of inflammable mineral substances, burning with flame in the open air. They differ in consistency, from a thin fluid to a solid; but the solids are for the most part liquefiable at a moderate heat. They are,—1. *Naphtha*; a fine, white, thin, fragrant, colourless oil, which issues out of white, yellow, or black clays in Persia and Media. This is highly inflammable. Near the village of Amiano, in the state of Parma, there exists a spring which yields this substance in sufficient quantity to illuminate the city of Genoa, for which purpose it is employed. With certain vegetable oils, naphtha is said to form a good varnish.—2. *Petroleum* is much thicker than naphtha, resembling in consistence common tar. It has a strong disagreeable odour, and a blackish or reddish brown colour. During combustion, it emits a thick black smoke, and leaves a little residue in the form of black coal. It is more abundant than the first mentioned variety, from which it does not seem to differ, except in being more inspissated. It occurs, oozing out of rocks, in the vicinity of beds of coal, or floating upon the surface of springs. In the Birman empire, near Rainanghong, is a hill containing coal, into which 520 pits have been sunk for the collection of petroleum, the annual produce of the hill being about 400,000 hogshheads. It is used by the inhabitants of that country as a lamp oil, and, when mingled with earth or ashes, as fuel. In the United States it is found abundantly in Kentucky, Ohio, and New York, where it is known by the name of *Seneca* or *Genevée* oil. It is also obtained from wells in the island of Zante. Herodotus tells us, that he has seen these wells—(lib. iv. c. 195.); and the description he has given of them, and of the mode of obtaining the petroleum, corresponds, in all respects, with the accounts of the best modern travellers. The average annual produce of the Zante springs is about 100 barrels.—(*Chandler's Travels in Greece*, 4to ed. p. 301.; *Holland's Travels in Greece*, 4to ed. p. 18.) Petroleum is particularly abundant in Persia. "When taken from the pit, it is a thick liquid resembling pitch. The bottoms of most vessels which navigate the Euphrates and Tigris are covered with it, and it is also used in lamps, instead of oil, by the natives. The most productive fountains are those of Kerkook, Mendali, and Bedka. The wells in the neighbourhood of the latter seem to be quite inexhaustible, being no sooner emptied than they again begin to fill. Some of them have been found to yield from 1,000 to 1,500 lbs. a day!"—(*Kinneir's Persian Empire*, p. 39. and 359.)—3. *Maltha*, or *Sea-wax*, is a solid whitish substance, not unlike tallow. It melts when heated, and in

cooling assumes the consistence of white cerate. This is, most probably, the *bitumen candidum* of Pliny (*Hist. Nat.* lib. xxxv. c. 15.). It is not used as pitch; but it affords a better light than petroleum, and emits a less disagreeable smell. It is found on the surface of the Baikal Lake in Siberia, at the foot of the mountains of Bucktari in Persia, and in some other places.—4. *Elastic Bitumen* yields easily to pressure; is flexible and elastic. It emits a strong bituminous odour, and is about the weight of water. On exposure to the air it hardens, and loses its elasticity. It takes up the traces of crayons in the same manner as caoutchouc, or Indian rubber, whence it has obtained the name of *mineral caoutchouc*. It has hitherto been found only in the lead mines of Derbyshire.—5. *Compact Bitumen*, or *Asphaltum*, is of a shining black colour, solid, and brittle, with a conchoidal fracture. Its specific gravity varies from 1 to 1.6. Like the former varieties, it burns freely, and leaves but little residuum. It is found in India, on the shores of the Dead Sea, in France, in Switzerland, and in large deposits in sandstone in Albania; but nowhere so largely as in the island of Trinidad, where it forms a lake three miles in circumference, and of a thickness unknown. A gentle heat renders it ductile, and when mixed with grease or common pitch, it is used for paying the bottoms of ships, and is said to protect them from the teredo of the West Indian seas. The ancients employed bitumen in the construction of their buildings. The bricks of which the walls of Babylon were built were, it is said (*Herodotus*, lib. i. § 179.), cemented with hot bitumen, which gave them unusual solidity.

BLACKING (Ger. *Schuhschwürze*, *Wichse*; Fr. *Noir (de cordonnier)*; It. *Nero da vgnere le scarpe*; Sp. *Negro de zapatos*). A factitious article, prepared in various ways, used in the blacking of shoes. It is in very extensive demand.

BLACK-LEAD, or **PLUMBAGO** (Du. *Potloot*; Fr. *Mine de plomb noir*, *Plomb de mine*, *Potlot*; Ger. *Pottloth*, *Reisbley*; It. *Miniera di piombo*, *Piombaggine*, *Corezolo*; Lat. *Plumbago*; Sp. *Piedra mineral de plomo*), a mineral of a dark steel grey colour, and a metallic lustre; it is soft and has a greasy feel; it leaves a dark coloured line when drawn along paper. It is principally employed in the making of pencils; it is also employed in the making of crucibles, in rubbing bright the surface of cast-iron utensils, and in diminishing friction, when interposed between rubbing surfaces. The finest specimens of this mineral are found in the celebrated mine of Borrowdale, in Cumberland, worked since the days of Queen Elizabeth.—(*Thomson's Chemistry*.) Recently, plumbago, of a very good quality, has been imported from Ceylon.

BLACK-LEAD PENCILS (Du. *Potlootpennen*; Fr. *Crayons noirs*; Ger. *Bleystifte*; It. *Lapis nero*; Port. *Lapis negro*; Rus. *Karanschü*; Sp. *Lapiz negro*), are formed of black-lead encircled with cedar.

BLOOD-STONE (Ger. *Blutstein*; Fr. *Pierre sanguine d crayon*; It. *Sanguigna*; Sp. *Piedra sanguinaria*; Lat. *Hæmatites*), or the *Lapis hæmatites*, a species of calcedony, is a mineral of a reddish colour, hard, ponderous, with long pointed needles. It is found among iron ore in great abundance. These stones are to be chosen of the highest colour, with fine striae or needles, and as much like cinnabar as possible. Goldsmiths and gilders use it to polish their work. It is also used for trinkets.

BLUBBER (Ger. *Thran*, *Fischtran*; Du. *Thraan*; It. *Olio di pesce*; Sp. *Grassa*, *Acete de pescado*; Rus. *Salo vorwannee*, *Worwan*; Lat. *Oleum piscinum*), the fat of whales and other large sea-animals, of which train oil is made. The blubber is the *adepe* of the animal: it lies under the skin, and over the muscular flesh: it is about 6 inches in thickness, but about the under lip it is 2 or 3 feet thick. The whole quantity yielded by one of these animals ordinarily amounts to 40 or 50, but sometimes to 80 or more cwt. Formerly train oil was manufactured from the blubber in the seas round Spitzbergen, and other places where whales were caught; but the practice is now to bring the blubber home in casks, and to prepare the oil afterwards.

It is enacted by the 6 Geo. 4. c. 107 § 44., that before any blubber, train oil, spermaceti oil, head matter, or whale fins, shall be entered as being entirely the produce of sea-animals caught by the crews of ships fitted out in the United Kingdom, or the Islands of Jersey, Guernsey, Sark, and Man, the master of the ship importing such goods shall make oath, and the importer also shall make oath, to the best of his knowledge and belief, that the same are the produce of fish or creatures living in the sea, taken and caught wholly by the crew of such ship, or by the crew of some other ship (naming it) fitted out in the United Kingdom, or in one of the islands of Guernsey, Jersey, Alderney, Sark, or Man (naming which).

Before blubber, train oil, &c. can be entered as from a British possession, a certificate must be obtained from the Custom-house officer at such British possession, or in default of such officer being there, from two principal inhabitants, notifying that oath had been made before him or them that such blubber, &c. was the produce of fish or creatures living in the sea, and had been taken by British subjects usually residing in some part of his Majesty's dominions; and the importer is to make oath, to the best of his knowledge and belief, to the same effect.

The gauging of casks of oil and blubber is dispensed with since 1825. They are to be passed at the rate of 120 gallons the pipe, and 63 gallons the hogshead.

BOATS are open vessels, commonly wrought by oars, and of an endless variety of shapes, according to the purposes to which they are to be applied.

It is ordered by stat. 6 Geo. 4. c. 108., that every boat belonging to or attached to any other vessel, shall have painted on the outside of the stern of such boat, the name of the vessel and place to which

she belongs, and the master's name within side of the transom, in white or yellow Roman letters, 3 inches long, on a black ground, under pain of forfeiture. Boats *not belonging* to vessels, are to be painted with the name of the owner and place to which they belong, under penalty of forfeiture. All boats having double sides or bottoms, or secret places for the purpose of concealing goods, or having any hole, pipe, or other device for the purpose of running goods, are to be forfeited.

Regulations of Watermen on the Thames.—From Chelsea Bridge towards Windsor, 3d. per half mile for scullers.

Over the water directly between Windsor and Crawley's wharf, Greenwich (excepting the Sunday ferries), for one person, 3d.; two persons, 1d. each; exceeding two persons, 1d. each.

To or from ships westward of Greenwich, for one person, 2d.; exceeding one person, 1d. each; and, where the distance to the ship does not exceed the distance across the river, the fare across the river shall be taken.

To or from ships eastward of Greenwich, at the rate of 6d. per half mile.

To or from vessels for passengers, for one person 4d.; exceeding one person, 3d. each, with not exceeding 56 lb. of luggage for each. After this at the rate of 1s. per cwt.

Watermen detained by passengers to be paid for time or distance, at the option of the watermen.

	s. d.	Each succeeding hour	s. d.
By Time for a Pair of Oars.—First hour	2 0	-	1 0
Second hour	1 6	For the day	12 0

To last from 7 A. M. to 5 P. M. between Michaelmas and Lady Day; and from 6 A. M. to 6 P. M. from Lady Day to Michaelmas.

SCULLER'S FARES.

The Bridges &c. stand in the following order.

London Bridge	Nine Elms	Shadwell Dock Stairs
Southwark Bridge	Red House, Battersea	Kidney ditto
Blackfriars Bridge	Swan Stairs, Chelsea	Limehouse Hole ditto
Waterloo Bridge	Chelsea Bridge	Ditto, Torrington Arms
Westminster Bridge	Iron Gate	Deptford, George Stairs
Lambeth Stairs	Union Stairs	Ditto, Low-Water Gate
Vauxhall Bridge	King Edward ditto	Greenwich, Crawley's Wharf.

The fare from either of the above places to the next is 3d., and so on in proportion.

Passage Boats.—Oars' Fare 8 Passengers. Sculler's Fare 6 Passengers.

	each		each		each

For a full boat load of luggage, same as for 6 passengers. For half a load, same as for 4 passengers.

Penalties.—Taking more than fare, not exceeding 2l.

Waterman to have a list of fares in his boat, and on not permitting the passenger to examine it, the passenger is discharged from paying his fare, and the waterman may be fined not exceeding 5l.

Refusing to take a passenger, or not answering when called by the number of his boat, not exceeding 5l.

Unnecessarily delaying a passenger, not exceeding 5l.

Refusing to permit any person to read the name and number of his boat, or to tell his Christian or surname, or the number of his boat, *on being paid his fare*, or making use of any abusive language, not exceeding 5l.

Rules and By-laws made by the Court of Aldermen, 15th of April, 1828.—Letting his boat remain at any wharf, while wilfully absent, or not being ready to take a passenger into his boat, not exceeding 1l.

Refusing to give his name or number, or that of any other waterman, not exceeding 1l.

Obstructing any other waterman in taking in or landing a passenger, or obstructing a passenger, not exceeding 1l.

Towing or being towed by any other boat without the consent of all the passengers, not exceeding 2l.

Agreeing to take any less sum than the rate allowed, and afterwards demanding more than the sum agreed for, not exceeding 2l.

Only two boats to be placed aboard any steamboat at the same time in turn. Waterman, previous to taking turn as aforesaid, to lie with his boat upon his oars at least one boat's length distant from any other boat lying alongside, and shall not approach nearer, until after the former boat shall have proceeded two boats' length, not exceeding 5l.

The offices of Harbour-masters are in Little Thames street, St. Catharine's; and Canal Office, Blackwall.

BOLE, a friable earthy substance, a species of the soapstone family. Specific gravity 1.4 to 2. It is found in the island of Lemnos, whence it is sometimes called Lemnian earth; and in Armenia, Italy, France, Silesia, various parts of South America, &c. Armenian and French boles were at one time not uncommon in this country, being used in the materia medica, but they are now entirely, or almost entirely, discarded. In India, however, Armenian bole still continues to be in extensive demand. It is brought to Bombay from the Persian Gulf. It is soft, feels greasy to the touch, adheres strongly to the tongue, and is very frangible; it is generally of a yellowish brown colour; though sometimes it is seen of a fine flesh red, which is the variety held in the highest estimation. Some savage nations, such as the Ottomques, described by M. Humboldt, are in the habit of allaying the pains of hunger by eating boles. The Javanese, when they wish to become thin, eat cakes,

called *tanaampo*, made of bole.—(*Lewis, Mat. Medica; Thomson's Chemistry; Ainslie's Cat. Indica.*)

BOHEA, a species of tea. See TEA.

BOMBAY, a sea-port on the western coast of British India, being, after Calcutta and Canton, the greatest commercial emporium in the East; lat. $18^{\circ} 56' N.$, long. $72^{\circ} 57' E.$ It is situated on the south-eastern extremity of a small island of the same name, separated from the main land by an arm of the sea, forming, with the contiguous islands of Colabah, Salsette, Butcher's Island, and Caranjah, one of the best harbours in India. Bombay Island was ceded by the Portuguese to the English in 1661, as the dower of Queen Catherine, wife of Charles II., and was taken possession of in 1664; so that it has been in our occupation about 170 years, being by far the oldest of our possessions in the East. In 1668, it was transferred by the crown to the East India Company, by letters patent, in free and common soccage, on payment of the annual rent of 10*l*. But, by the present charter, it has reverted to the crown, with the rest of the Company's assets, being held by the Company in trust merely. On its cession to the crown of England, in 1661, its population did not exceed 15,000 souls, the outcasts of the natives of India. It now contains 15,474 houses, valued at 3,606,424*l*. and a population exceeding 239,000. The following statement of the population of Bombay, at different periods, will show its progress:—

1664, when taken possession of	-	15,000	1816	-	-	-	-	161,550
1716, - - - - -	-	16,000	1830	-	-	-	-	239,000

The census of 1816 exhibits the proportion of the different classes of inhabitants as follows:—

British, not military	-	-	1,840	Hindooes	-	-	-	103,900
Ditto, military and marine	-	-	2,460	Parsees	-	-	-	18,550
Native Christians, Armenians, and descendants of Portuguese	-	-	11,500				Total	161,550
Jews	-	-	800					
Mohammedans	-	-	28,000					

The fort stands on the south-east extremity of the island, on a narrow neck of land, immediately over the harbour. The fortifications are extensive, and on the sea side very strong.

Bombay Harbour is one of the safest and most commodious in India. It is bounded on the west and north by the island of Colabah, or Old Woman's Island, Bombay Island, and the island of Salsette. The first two are separated only by a narrow creek fordable at low water, and Bombay Island was joined to Salsette by a causeway constructed in 1805. On the east side of the harbour, between it and the main land, is Butcher's Island, distant about 4 miles from Bombay; and immediately behind Butcher's Island is the famous island of Elephanta. About 3 miles south from Butcher's Island is the island of Caranjah, on the western side of which, next the harbour, is an extensive shoal. S. W. from Caranjah, distant about 5 miles, is Tull point; between which and Colabah, or Old Woman's Island, is the entrance to the harbour. There is a light-house on the southern extremity of Colabah Island, elevated about 150 feet above the level of the sea, which in clear weather may be seen at the distance of 7 leagues. The point on which the light-house stands is surrounded on all sides by an extensive reef of rocks divided into prongs: of these, the most dangerous is the prong stretching S. W. about 3 miles from the light-house, and forming the northern boundary of the entrance into the harbour. The reef stretching W. N. W. from Tull point about $3\frac{1}{2}$ miles, forms the southern boundary of the entrance; the breadth of the channel between them being about 3 miles, with a depth of from 7 to 8 fathoms. In going into the harbour, it is necessary to clear a sunken rock, lying almost due east from the light-house, at about $1\frac{1}{2}$ mile distant; and also a bank, called the middle ground, lying nearly opposite to and about $1\frac{1}{2}$ mile from the southern extremity of the town.—(See *Nicholson and Watson's Plan of Bombay Harbour.*)

Docks.—Bombay is the only port of consequence in British India in which the rise and fall of the tide are so considerable as to admit of the formation of extensive wet docks. At ordinary spring tides, the rise is about 14 feet, but occasionally as high as 17. The capacious docks constructed by the East India Company are their property, and are for the most part under the direction of Parsees, who, excepting the Chinese, are the most industrious and intelligent people of the East. The expense of repairing ships in them is enormous. Merchant vessels of great size, or from 1,000 to 1,200 tons burden, for the cotton trade to China, have been built in these docks. Frigates and line-of-battle ships have also been occasionally constructed in them, sometimes under the exclusive direction of Parsee artificers. Ships built at Bombay, on account of the timber being brought from a great distance, are very costly; but being, contrary to the practice in other parts of India, entirely constructed of teak, they are the most durable vessels in the world, requiring little repair, and often running 50 or 60 years. Being for the most part built by natives, without any very strict application of the rules of art, they are commonly, though not always, heavy sailers.

Monies.—Accounts are here kept in rupees; each rupee being divided into 4 quarters, and each quarter into 100 reas. The rupee is also divided into 16 annas, or 50 pice. An urdee is 2 reas; a doreca, 6 reas; a dooganey, or single pice, 4 reas; a fuddee, or double pice, 8 reas; a pauncha is 5 rupees; and a gold mohur, 15 rupees. Of these, the annas and reas only are imaginary monies. The coins of Bombay are the mohur, or gold rupee, the silver rupee, and their divisions; also the double and single pice, the urdee, and doreca, which are copper coins with a mixture of tin or lead. The following is the assay and sterling value of the present gold and silver coinage of Bombay:—

		Gross Weight.	Pure Metal.	Standard Value.
Gold mohur	-	179.0	164.68	29.18
Silver rupee	-	179.0	164.68	2.48

In the East India Company's financial accounts rendered to parliament, the Bombay rupee is reckoned at 2s. 3d. The charge for coinage in the Bombay Mint is 2½ per cent. for gold, and 3 per cent. for silver, including the charges for refining. The machinery for this mint was sent out from England a few years ago, and is complete, but very costly. At Bombay there are no banks, as at Madras and Calcutta, and paper money is unknown in mercantile transactions.

Weights and Measures.—The weights and measures used at Bombay are as follow:—

Gold and Silver Weight.

1 Wall	=	4.475
40 Walls	=	1 Tola = 179

Pearl Weight.

1 Tucka	=	0.308
134 Tuckas	=	1 Ruttee = 3
24 Ruttees	=	1 Tank = 72

Commercial Weight.

1 Tank	=	0 0 2.488
72 Tanks	=	1 Seer = 0 11 3.2
40 Seers	=	1 Maund = 28 0 0

These weights are used for all heavy goods, excepting salt.

Grain Measure.

2 Tippees	=	1 Seer = 0 11 3.2
4 Seers	=	1 Pally = 2 12 12.8

All the foregoing standards are likewise divided into halves, quarters, &c. The preceding weights and measures are generally used in Bombay; but it sometimes occurs in mercantile transactions, that calculations are made in pounds and maunds, which last weight is reckoned at 40, 40½, 41, 41½, and 44 seers; and sometimes in Surat candles of 20, 21, and 22 maunds.

Shipping, Commerce, &c.—At Bombay there is an insurance society with a capital of 20 lacs of rupees, or about 200,000*l.* sterling; and there are also private underwriters who insure separately on ships. In 1820, and we believe the number continues about the same, there were 45 registered ships belonging to this port engaged in the trade to China and Europe, the aggregate burden of which amounted to about 20,000 tons, giving at an average 450 tons to each ship. These are for the most part navigated by Indian seamen or Lascars, those of Bombay being accounted by far the best in India; the master and superior officers only being Englishmen. Besides these large vessels, there is a numerous class of native craft, under various forms and names. In 1820, they were computed to amount in all to near 47,000 tons, of from 2 to 175 tons each. These vessels, besides furnishing the town with firewood, hay, straw, &c. from the neighbouring continent, navigate coastways from Cape Comorin to the Gulf of Cutch, and sometimes cross the sea to Muscat and the Arabian Gulf. During the eight fair months, that is, from October to May, the largest sized vessels perform five or six trips to Damaun, Surat, Cambay, Broach, Jumbosier, and Cutch, bringing from these ports, where they sometimes winter, and where many of their owners reside, cotton, ghee, oil, pulse, wheat, cotton cloths, timber, firewood, putchok, mawah, &c.; and return to the northern ports laden with the produce of Europe, Bengal, and China. The capital employed in this trade, in the minor articles of commerce, exclusive of cotton, has been estimated to amount to 1,500,000*l.* sterling.

The island of Bombay, a small and sterile spot, containing only about 18½ square miles, affords no produce for exportation; indeed, hardly yields a week's consumption of corn for its inhabitants. Neither is the neighbouring territory fruitful; nor does the whole presidency of Bombay, although estimated to contain about 70,000 square miles, and from 10,000,000 to 11,000,000 inhabitants, yield, with the exception of cotton and rice, any of the great colonial staples, such as coffee, sugar, and indigo; a circumstance that seems mainly ascribable to the impolitic restraints upon the employment of British settlers and capital that have been hitherto imposed by law, and acted upon with peculiar rigour in this and the sister presidency of Madras, in contradistinction to the greater latitude afforded in Bengal. Bombay is, notwithstanding, a great emporium for the exports and imports of foreign countries. Its principal trade is carried on with the countries on the Gulfs of Cambay, Persia, and Arabia: with Calcutta, China, Great Britain, and other European countries, and the United States of America. From the countries on the Gulf of Cambay it receives cotton wool and grain; and from the Persian and Arabian Gulfs, raw silk of Persia, copper from the same country, and also pearls, galls, coffee, gum arabic, bdellium, copal, myrrh, olibanum, and asafetida, with dates, and other dried fruits, horses, and bullion. Its exports to Arabia and Persia consist of grain, raw sugar from China and Bengal, British cotton manufactures, woollens, and metals, pepper and other spices. From Calcutta, Bombay receives raw silk, sugar, indigo, and grain; and exports to it oak timber, coir, or the fibre of the coco nut husk, with coco nuts and sandal-wood. The trade between Bombay and Calcutta has declined since

7 Pailies	=	1 Parah = 19 9 0.6
8 Parahs	=	1 Candy = 156 12 12.8

Salt Measure.

10½ Adowlies	=	1 Parah = 1607.81
100 Parahs	=	1 Anna = 1607.61
16 Annas	=	1 Bash = 25721.76

The anna weighs 2½ tons, and the rash 40 tons.

Liquor Measure.

(Spirits and Country Arrack.)

The seer weighs 60 Bombay Rupees, and equals 11b. 8oz. 8½ dr.; and 50 seers make the maund.

Long Measure.

16 Tussoos	=	1 Hath = 18
24 Tussoos	=	1 Guz = 27

the abolition of the restrictive system in 1815 gave to Bombay a wider intercourse with foreign countries. Previously to the opening of the trade, Calcutta was the *entrepôt* from which many of the productions of the neighbourhood of Bombay used to find a market in distant countries. In 1813 and 1814, according to the Custom-house returns of Calcutta, the value of the imports into it from Bombay amounted to 400,000*l.* sterling; in 1819 and 1820, to 360,000*l.*; and in 1827 and 1828, to 200,000*l.* The exports from Calcutta to Bombay in the first-named year amounted to 280,000*l.*; and in 1827, to only half that amount. The greatest branch of the trade of Bombay used to be that with China; but it has considerably declined of late years. The principal article of export is cotton wool, to which opium has been added since we obtained possession of the province of Malwa. The minor articles are pepper, sandal-wood, Arabian gums, salt-fish, fish maws, and sharks' fins. The imports consist of alum, camphor, cassia, nankeens, rhubarb, tea, raw sugar, vermilion, and other paints, with a considerable quantity of bullion. In 1828 and 1829, the number of ships which cleared out from Bombay for Canton was 36, of the burden of 25,731 tons; but the number which entered from thence was only 30, of the burden of 17,534 tons; many of the ships which cleared out having made intermediate voyages after discharging their cargoes at Canton.

The principal export from Bombay to Great Britain is cotton wool, after which follow pepper, cardamoms, Arabian gums and drugs, and Persian raw silk. The chief imports are cotton fabrics and cotton twist, for both of which Bombay is, after Calcutta, the greatest mart in India; woollens, iron, copper, spelter, glass-ware, &c. &c. Bombay trades with France and Hamburg, but not to any considerable amount. Neither is her trade with the United States of America of much importance. The following statements, drawn up from papers laid before parliament in 1830 and 1831, show the whole amount of the trade carried on by Bombay, including Surat, with Great Britain, foreign Europe, and America, in the years 1813 and 1814, and 1828 and 1829:—

Imports into Bombay and Surat.

	1813 and 1814.			1828 and 1829.		
	Merchandise.	Bullion.	Total.	Merchandise.	Bullion.	Total.
From Great Britain	£ 275,716	£ 110	£ 275,826	£ 781,348	—	£ 781,348
— France	—	—	—	63,391	—	63,391
— Hamburg	—	—	—	7,339	—	7,339
— America	—	—	—	1,461	—	1,461
Total	275,716	110	275,826	853,394	—	853,394

Exports from Bombay and Surat.

	1813 and 1814.			1828 and 1829.		
	Merchandise.	Bullion.	Total.	Merchandise.	Bullion.	Total.
To Great Britain	£ 135,342	£ 169,811	£ 305,154	£ 694,654	£ 139,113	£ 833,767
— France	—	—	—	5,995	—	5,995
— Hamburg	—	—	—	—	—	—

Total	135,342	169,811	305,154	700,649	139,113	839,762

In some of the intermediate years between 1814 and 1829 there was some trade between Bombay, Portugal, and Brazil, but not very considerable. It will appear from these statements that the present imports into Bombay from Great Britain amount to above 780,000*l.*, and the export: to near 840,000*l.*; the first having increased since the opening of the free trade by 500,000*l.* sterling, or above 180 per cent., and the latter by somewhat more than that amount.

Dock Regulations.—At daylight the wickets of the gates are opened, and at 7 o'clock the sentry gate. Half an hour after sunset the gates are shut, the wicket of the centre gate being left open till the evening gun is fired. No boats, saving those belonging to the Company's marine department, or his Majesty's navy, are permitted to come to the dock-yard stairs; but must use the piers expressly constructed for their accommodation. No meat, stores, or baggage for the merchant shipping, of any description, are to be passed through the dock-yards. After the firing of the evening gun, nobody belonging to the ships in the harbour, below the rank of a commissioned officer, is to be allowed to land or enter the dock-yard, without the express permission of the master attendant, or other constituted authorities.

Boats' crews are not to be permitted to quit their boat at the stairs, after the hour of shutting the gates. Small craft are not to deliver firewood or any other lading within the limits of the yard, without the superintendent's sanction. The ships and vessels in dock are not to land any lumber whatever on the pier. No cargo of any description is to be landed in or passed through the yard, from or to any ship in dock, without the superintendent's permission in writing. No fire or light is allowed

on board any ship or vessel in dock, without the authority of the superintendent, to whom the purposes for which either may be required, must be stated in writing.

Export of Cotton from Bombay to China, England, &c., with prices, freights, &c. from 1824 to 1831.

From 1,500 to 3,000 bales may be added to the exports to China for each year, as, after the Company's vessels are nominally loaded, the captains take from 200 to 500 bales, which are never placed upon the Custom-house records.

(See *Milburn's Oriental Commerce*; *Hamilton's East India Gazetteer*, 1836; *Bombay Calendar and Register*; *Kelly's Cambist*; *Wilson's Review of the External Commerce of Bengal*, under head "Coast of Malabar;" *Port. Papers relating to the Finances of India, and Trade of India and China*, 1830 and 1831; *Second Appendix to Report of the Select Committee on Public Departments*, 1832, p. 274; *Circular of Beckwith & Co.*, &c.)

BOMBAZINE, a kind of silk stuff, originally manufactured at Milan, and thence sent into France and other countries. Now, however, it is nowhere manufactured better, or in larger quantities, than in this kingdom.

BONES of cattle and other animals are extensively used in the arts, in forming handles for knives, and various other purposes. So long as bones are preserved fresh, a highly nutritious jelly may be obtained from them.

Bones have latterly been employed, particularly in Lincolnshire and Yorkshire, as a manure for dry soils, with the very best effect. They are commonly ground and drilled in, in the form of powder, with turnip seed. Their effect is considerably increased when they have undergone the process of fermentation. The quantities employed are usually about 25 bushels of dust, or 40 bushels of large, to the acre. Besides the immense supplies collected at home, they have begun, within these few years, to be largely imported from the Continent, principally from the Netherlands and Germany. They occupy about 40,000 tons of small vessels belonging to these countries. Mr. Huskisson estimated the real value of those annually imported for the purpose of being used as manure at 100,000*l.*; and he contended, that it was not too much to suppose, that an advance of between 100,000*l.* and 200,000*l.* expended on this article occasioned 500,000 additional quarters of corn to be brought to market.—(*Loudon's Encyclopedia of Agriculture*; *Mr. Huskisson's Speech*, May 7, 1827.)

Account of the Declared Value of the Bones imported into Great Britain during each of the Twelve Years ending with the fifth of January, 1833; and of the Amount of Duty charged on the same.—(*Part. Paper*, No. 708. Sess. 1833.)

There are no means of distinguishing between the bones imported for manure and for other purposes.

BOOK, BOOKS (Ger. *Bücher* ; Du. *Boeken* ; Da. *Bøger* ; Sw. *Böcker* ; Fr. *Livres* ; It. *Libri* ; Sp. *Libros* ; Port. *Livros* ; Rus. *Knigi* ; Pol. *Książki*, *Księgi* ; Lat. *Libri*), a written or printed treatise or treatises on any branch of science, art, or literature, composed in the view of instructing, amusing, or persuading the reader.

Copyright is the right which the authors of books or treatises claim to the exclusive privilege of printing, publishing, and selling them.

Books are sometimes blank, as account books ; but these enjoy no peculiar privileges, and do not come within the scope of our inquiries.

Books are divided into the following *classes*, according to the mode in which the sheets of the paper on which they are printed or written are folded : viz. *folio*, when the sheet is folded into two leaves ; *quarto*, when folded into four ; *octavo*, when folded into eight ; *duodecimo*, when the sheet is folded into twelve, &c. In making these classifications, no attention is paid to the size of the sheet.

1. *Progress and present State of the Law as to the Copyright of Books.*—It has been doubted whether in antiquity, an author had any exclusive right to a work, or whether, having once published it, he could restrain others from copying it, and selling copies. We incline to think that he could. The public sale of copies of works is often referred to in the classics ; and in such a way as warrants the inference that they were productive to the author, which could not have been the case had every one been permitted to copy them at pleasure. Terence, in one of his plays (*Prolog. in Eunuch.* l. 20), says, *Fabulam, quam nunc acturi sumus, postquam ediles emerunt* ; but why should the magistrates have bought it, had it been free to every one to copy it ? Martial, in one of his epigrams, says—

*Sunt quidam, qui me dicunt non esse poetam :
Sed qui me vendit, bibliopola, putat.*

Mart. lib. xiv. Ep. 194.

This evidently conveys the idea that he had assigned the right to sell his book to a single person, who profited by it. Passages to the same effect may be found in Horace (*De Arte Poetica*, line 345.), Juvenal (*Sat.* 7. line 83.), &c.

It would have been singular, indeed, had it been otherwise. Of all the species of property a man can possess, the fruits of his mental labours seem to be most peculiarly his own. And though it may, we think, be shown, that many serious inconveniences would result from giving the same absolute and interminable property over ideas that is given over material objects, these inconveniences could hardly have been perceived in antiquity.

It will also be observed, that in antiquity a copyright was of much less value than in modern times. Books could then not only be multiplied by copying them with the pen ; and if any one chose privately to copy a work, or to buy it of another, it must have been very difficult to hinder him ; but when printing had been introduced, the greater cheapness of books not only extended the demand for them in far greater proportion, and consequently rendered copyrights more valuable, but it also afforded the means of preventing their piracy. Printing is not a device by which a few copies of a book can be obtained at a cheap rate. It is productive of cheapness only when it is employed upon a large scale, or when a considerable impression is to be thrown off. And hence, after its invention, piracy could hardly be committed in secret : the pirated book had to be brought to market ; the fraud was thus sure to be detected, and the offending party might be prosecuted and punished.

For a considerable time after the invention of printing, no questions seem to have occurred with respect to copyrights. This was occasioned by the early adoption of the licensing system. Governments soon perceived the vast importance of the powerful engine that had been brought into the field ; and they endeavoured to avail themselves of its energies by interdicting the publication of all works not previously licensed by authority. During the continuation of this system, piracy was effectually prevented. The licensing act (13 & 14 Chas. 2. c. 2.) and the previous acts and proclamations to the same effect, prohibited the printing of any book without consent of the owner, as well as without a licence. In 1694, the licensing act finally expired, and the press then became really free. Instead, however, of the summary methods for obtaining redress for any invasion of their property enjoyed by them under the licensing acts, authors were now left to defend their rights at common law ; and as no author or bookseller could procure any redress for a piracy at common law, except in so far as he could prove damage, property in books was virtually annihilated ; it being in most cases impossible to prove the sale of one printed copy out of a hundred. Under these circumstances, applications were made to parliament for an act to protect literary property, by granting some speedy and effectual method of preventing the sale of spurious copies. In consequence, the statute 9 Ann. c. 19. was passed, securing to authors and their assignees the exclusive right of printing their books for 14 years certain, from the day of publication, with a contingent 14 years, provided the author were alive at the expiration of the first term. Persons printing books protected by this act, without the consent of the authors or their assignees, were to forfeit the pirated copies, and *l. d.* for every sheet of the same. Such books as were not entered at Stationers' Hall were excluded from the benefit of this act.

It had been customary, for some time previous to this period, for the libraries of the Universities of Oxford and Cambridge, &c. to get a copy of most books entered at Stationers' Hall; and the act of Anne made it imperative that one copy of all works entitled to its protection should be delivered to the following libraries; viz. the Royal Library, now transferred to the British Museum; the Libraries of Oxford and Cambridge; the Libraries of the four Scotch Universities; the Library of Sion College, London; and that of the Faculty of Advocates in Edinburgh;—in all, *nine* copies.

The act of Anne did not put to rest the questions as to copyrights. The authors contended that it did not affect their natural ownership, and that they or their assignees were entitled to proceed at *common law* against those who pirated their works after the period mentioned in the statute had expired. The publishers of spurious editions resisted these pretensions, and contended that there was either no right of property at common law in the productions of the mind; or that, supposing such a right to have existed, it was superseded by the statute of Anne. There was some difference of opinion in the courts as to these points; but Lord Mansfield, Mr. Justice Blackstone, and the most eminent Judges, were favourable to the claims of the authors. However, it was finally decided, upon an appeal to the House of Lords in 1774, that an action could not be maintained for pirating a copyright after the term specified in the statute.—(*Godson on the Law of Patents and Copyrights*, p. 205.)

The act of Queen Anne referred only to Great Britain; but in 1801, its provisions were extended to Ireland; the penalty, exclusive of forfeiture, on printing or importing books without consent of the proprietor, was also increased from 1*l.* to 3*d.* a sheet. In return for this concession, two additional copies of all works entered at Stationers' Hall were to be delivered; one to Trinity College, Dublin, and one to the King's Inns, Dublin.

Every one must be satisfied that 14 years' exclusive possession is far too short a period to indemnify the author of a work, the composition of which has required any considerable amount of labour and research; though 28 years is, perhaps, all things considered, as proper a period as could be fixed upon. Now, the grand defect of the statute of Anne consisted in its making the right to the exclusive possession for 28 years contingent on the fact of a person having lived a day more or less than 14 years after the publication of his work. This was making the enjoyment of an important right dependent on a mere accidental circumstance over which man has no control. Could any thing be more oppressive and unjust than to hinder an author from bequeathing that property to his widow and children, that would have belonged to himself had he been alive? Nothing, indeed, as it appears to us, can be more obvious than the justice of extending all copyrights to the same period, whether the authors be dead or not.

But though the extreme hardship, not to say injustice, of the act of Queen Anne had been repeatedly pointed out, its provisions were continued down to 1814, when the existing copyright act, 54 Geo. 3. c. 156, was passed. This act extended the duration of all copyrights, whether the authors were dead or alive, to 28 years certain; with the further provision, that if the author should be alive at the end of that period, he should enjoy the copyright during the residue of his life. We subjoin the principal clauses of this statute.

Having recited the acts 8 Anne, c. 19. and 41 Geo. 3. c. 107., it enacts that so much of the said several recited acts as requires that any copies of any books which shall be printed or published, or reprinted and published with additions, shall be delivered by the printers thereof to the warehouse-keeper of the said Company of Stationers, for the use of any of the libraries in the said act mentioned, and as requires the delivery of the said copies by the warehouse-keeper for the use of the said libraries, and as imposes any penalty on such printer or warehouse-keeper for not delivering the said copies, shall be repealed.

And that 11 printed copies of the whole of every book, and of every volume thereof, upon the paper upon which the largest number or impression of such book shall be printed for sale, together with all maps and prints belonging thereto, which from and after the passing of this act shall be printed and published, on demand thereof being made in writing to or left at the place of abode of the publisher or publishers thereof; at any time within twelve months next after the publication thereof, under the hand of the warehouse-keeper of the Company of Stationers, or the librarian or other person thereto authorised by the persons or body politic and corporate, proprietors or managers of the libraries following; *viz.* the British Museum, Sion College, the Bodleian Library at Oxford, the Public Library at Cambridge, the Library of the Faculty of Advocates at Edinburgh, the Libraries of the Four Universities of Scotland, Trinity College Library and the King's Inns Library at Dublin, or so many of such 11 copies as shall be respectively demanded, shall be delivered by the publishers thereof respectively, within 1 month after demand made thereof in writing as aforesaid, to the warehouse-keeper of the said Company of Stationers; which copies the said warehouse-keeper shall receive for the use of the library for which such demand shall be so made; and he is hereby required, within 1 month after any such book or volume shall be so delivered to him, to deliver the same for the use of such library. And if any such publisher or warehouse-keeper shall not observe the directions of this act, he and they so making default shall forfeit, besides the value of the said printed copies, the sum of 5*l.* for each copy not so delivered or received, together with the full costs of suit; to be recovered by action in any court of record in the United Kingdom.—§ 2.

Provided always, that no such copy shall be so demanded or delivered, &c. of the second, or of any subsequent edition of any such book, unless the same shall contain additions or alterations; and in case any edition after the first shall contain any addition or alteration, no printed copy thereof shall be demanded or delivered, if a printed copy of such additions or alterations only, printed in an unal-

form manner with the former edition of such book, be delivered to each of the libraries aforesaid: provided also, that the copy of every book that shall be demanded by the British Museum shall be delivered of the best paper on which such work shall be printed.—§ 3.

And whereas by the said recited acts it is enacted, that the author of any book, and the assigns of such author, should have the sole liberty of printing and reprinting such book for the term of 14 years &c.; and it was provided, that after the expiration of the said term of 14 years, the right of printing or disposing of copies should return to the authors thereof, if they were then living, for another term of 14 years: and whereas it will afford further encouragement to literature, if the duration of such copyright were extended; be it enacted, that the author of any book or books composed, and not printed and published, or which shall hereafter be composed, and be printed and published, and his assigns, shall have the sole liberty of printing and reprinting such book or books, for the full term of *twenty-eight years*, to commence from the day of first publishing the same; and also, if the author shall be living at the end of that period, for the residue of his natural life; and if any bookseller or printer, or other person whatsoever, in any part of the United Kingdom of Great Britain and Ireland, in the Isles of Man, Jersey, or Guernsey, or in any other part of the British dominions, shall, from and after the passing of this act, within the times granted and limited by this act, print, reprint, or import, or shall cause to be printed, &c. any such book, without the consent of the author, or other proprietor of the copyright, first had in writing; or knowing the same to be so printed, &c. without such consent, shall sell, publish, or expose to sale, or cause to be sold, &c., or shall have in his possession for sale, any such book, without such consent first had and obtained; such offender shall be liable to a special action at the suit of the author or other proprietor of such copyright; and every such author or other proprietor may, in such special action, recover damages, with double costs; and every such offender shall also forfeit such book, and every sheet of such book, and shall deliver the same to the author or other proprietor, to be made waste paper of, and shall also forfeit the sum of 2*l.* for every sheet thereof either printed or printing, or published or exposed to sale; the one moiety thereof to any person who shall sue for the same.—§ 4.

And in order to ascertain what books shall be from time to time published, the publishers of every book demandable under this act shall, within 1 calendar month after the day on which any such book shall be first sold, published, advertised, or offered for sale, within the bills of mortality, or within 3 calendar months in any other part of the United Kingdom, enter the title to the copy of every such book, and the names and places of abode of the publisher, in the register book of the Company of Stationers in London (for every of which several entries the sum of 2*s.* shall be paid, and no more), under a penalty of the sum of 5*l.* together with eleven times the price at which such books shall be sold or advertised; to be recovered, together with full costs of suit, by persons authorised to sue, and who shall first sue for the same: provided, that in the case of magazines, reviews, or other periodical publications, it shall be sufficient to make such entry in the register book of the said Company within 1 month next after the publication of the first number or volume: provided, that no failure in making any such entry shall in any manner affect any copyright, but shall only subject the person making default to the penalty aforesaid under this act.—§ 5.

Provided always, that if any publisher shall be desirous of delivering the copy of such book or volume, on behalf of any of the said libraries, at such library, it shall and may be lawful for him to deliver the same at such library; and such delivery shall be held as equivalent to a delivery to the said warehouse-keeper.

And if the author of any book, which shall not have been published 14 years at the time of passing this act, shall be living at the said time, and if such author shall afterwards die before the expiration of the said 14 years, then the personal representative of the said author, and the assigns of such personal representative, shall have the sole right of printing and publishing the said book for the further term of 14 years after the expiration of the first 14.

And if the author of any book which has been already published shall be living at the end of 25 years after the first publication, he or she shall, for the remainder of his or her life, have the sole right of printing and publishing the same.

Actions and suits shall be commenced within 12 months next after such offence committed, or be void and of no effect.—§ 7, 8, 9, 10.

Musical compositions, engravings, maps, sculptures, models, &c. enjoy a similar protection.

The great practical difficulty in interpreting the copyright acts, is in distinguishing between an original work and a copy made, *animo furandi*, from one already in existence. The following is a summary of Mr. Godson's remarks on this subject:—

"The identity of a literary work consists entirely in the *sentiments* and *language*. The same conceptions, clothed in the same words, must necessarily be the same composition; and whatever method is taken of exhibiting that composition to the ear or the eye, by *recital*, or by *writing*, or by *printing*, in any number of copies, or at any period of time, the property of another person has been violated; for the new book is still the identical work of the real author.

"Thus, therefore, a transcript of nearly all the sentiments and language of a book is a glaring piracy. To copy part of a book, either by taking a few pages *verbatim*, when the sentiments are not new, or by imitation of the principal ideas, although the treatises in other respects are different, is also considered to be illegal.

"Although it was held by Ellenborough C. J. that a variance in *form* and *manner* is a variance in *substance*, and that any material alteration which is a *materialisation* cannot be considered as a piracy; yet a piracy is committed, whether the author attempt an original work, or call his book an abridgement, if the principal parts of a book are servilely copied or unfairly varied.

"But if the main design be not copied, the circumstance that part of the composition of one author is found in another is not itself piracy sufficient to support an action. A man may fairly adopt part of the work of another; he may so make use of another's labours for the promotion of science, and the benefit of the public, but having done so, the question will be, Was the matter so taken used fairly with that view, and without what may be termed the *animo furandi*?

"In judging of a quotation, whether it is fair and candid, or whether the person who quotes has been swayed by the *animo furandi*, the quantity taken and the manner in which it is adopted, of course, must be considered.

"If the work complained of be in *substance* a copy, then it is not necessary to show the intention to pirate; for the greater part of the matter of the book having been purloined, the intention is apparent, and other proof is superfluous. A piracy has undoubtedly been committed.

"But if only a *small portion* of the work is quoted, then it becomes necessary to show that it was done *animo furandi*, with the intention of depriving the author of his just reward, by giving his work to the public in a cheaper form. And then the *motive* of doing it becomes a subject of inquiry; for it is

not sufficient to constitute a piracy, that part of one author's book is found in that of another, unless it be nearly the whole, or so much as will show (being a question of fact for the jury) that it was done with a bad intent, and that the matter which accompanies it has been colourably introduced."—(pp. 215—217.)

"If a work be of such a libellous or mischievous nature as to affect the public morals, and that the author cannot maintain an action at law upon it, a court of equity will not interpose with an injunction to protect that which cannot be called property. Even if there be a doubt as to its evil tendency, the Lord Chancellor will not interfere."—(Godson, p. 213.)

II. Expediency of limiting Copyrights to Twenty-eight Years.—It is argued by many that copyrights should be made perpetual; that were this done, men of talent and learning would devote themselves much more readily than at present to the composition of works requiring great labour; inasmuch as the copyright of such works, were it perpetual, would be an adequate provision for a family. But we doubt much whether these anticipations would be realised. Most books or manuscripts are purchased by the booksellers, or published upon the presumption that there will immediately be a considerable demand for them; and we apprehend that when copyrights are secured for 28 years certain, very little more would be given for them were they made perpetual. When an annuity, or the rent or profit arising out of any fixed and tangible property, with respect to which there can be no risk, is sold, if the number of years for which it is to continue be considerable, the price which it is worth, and which it fetches, does not differ materially from what it would bring were it perpetual. But the copyright of an unpublished work is, of all descriptions of property in which to speculate, the most hazardous; and the chances of reaping contingent advantages from it, at the distance of 28 years, would be worth very little indeed.

Those who write books, and those who publish them, calculate on their obtaining a ready and extensive sale, and on their being indemnified in a few years. Very few authors, and still fewer booksellers, are disposed to look forward to so distant a period as 28 years for remuneration. They are mostly all sanguine enough to suppose that a much shorter term will enable them to reap a full harvest of fame and profit from the publication; and we doubt much whether there be one case in a hundred, in which an author would obtain a larger sum for a perpetual copyright, than for one that is to continue for the period stipulated in the late act.

But while the making of copyrights perpetual would not, as it appears to us, be of any material advantage to the authors, there are good grounds for thinking that it would be disadvantageous to the public. Suppose an individual calculates a table of logarithms to five or seven places; if his computations be correct, no improvement can be made upon them, to the extent at least to which they go; but is he or his assignees to be entitled, in all time to come, to prevent other individuals from publishing similar tables, on the ground of invasion of private property? Such a pretension could not be admitted without leading to the most mischievous consequences; and yet there is no real ground (though the courts have attempted to make one) on which the claim in question and others of the same description could be resisted, were copyrights made perpetual, and placed in all respects on the same footing as other property. We therefore, are clearly of opinion that good policy suggests the limitation of the exclusive right of printing and publishing literary works to such a reasonable period as may secure to authors the greater part of the profit to be derived from their works; and that this period being expired, they should become public property.

Perhaps the period of 28 years might be advantageously extended to 35 or 40; but we are satisfied that more injury than benefit would result to literature, by extending it beyond that term. In France, copyrights continue for 20 years after the death of the author. In most of the German states they are perpetual; this, however, until very recently, hardly indemnified the authors for the ease with which spurious copies might be obtained from other states. But by a late resolution of the Diet, a copyright secured in one state is good in all.

III. Taxes on Literature.—These taxes have been carried to such an extent in England as to be in the highest degree injurious. They are at once impolitic, oppressive, and unjust; impolitic, because they tend to obstruct the growth and diffusion of knowledge; oppressive, because they very frequently swallow up the entire reward of the labours of the most deserving persons; and unjust, because they are not proportioned to the value of the article on which they are laid, and are, indeed, much oftener paid out of capital than out of profit.

These taxes consist of the duty on paper—(See *PAPER*), the duty on advertisements—(See *ADVERTISEMENTS*), and the 11 copies given to the public libraries. The following statements, drawn up by a very competent authority (Mr. Rees, of the firm of Longman, Rees, and Co.), show the mode in which they operate. They refer to an octavo volume of 500 pages, the paper such as this, with the ordinary quantity of matter on the page, and sold by retail for 12s. a copy.

Estimate of the cost of such a volume, when 500, 750, and 1,000 copies are printed, showing what part of this cost consists of taxes.

The following statement shows the operation of the duties on a pamphlet of 5 sheets or 80 pages, of which 500 copies are printed:—

<i>Pamphlet, Five Hundred Number.</i>						Cost.	Duty.
						£ s. d.	£ s. d.
Printing	-	-	-	-	-	14 14 0	0 0 0
Extras	-	-	-	-	-	5 5 0	0 0 0
Paper	-	-	-	-	-	6 0 0	1 0 0
Stitching	-	-	-	-	-	0 12 6	0 0 0
Advertising (say)	-	-	-	-	-	7 2 0	2 3 8
25 copies for author and public libraries. 475 copies for sale, 25 for 2l. 14s.						23 13 6	3 3 6
Profit to author and publisher, interest, &c. after all are sold						51 6 0	
						£17 12 6	

These statements set the oppressive operation of the taxes on literature in a very striking point of view. Where the edition is an average one of 750 copies, the duties amount to about a *seventh*, or $14\frac{1}{3}$ per cent. of the cost of the edition. If the edition consist of 500 or 750 copies, the duties amount to more than the entire remuneration of the author; and if it consist of 1,000 copies, they amount to about as much!

It is essential, however, to bear in mind that the previous statements show only how the duties affect books when the *entire impression is sold off at the full publication price*; but this *seldom happens*. Excluding pamphlets, it may be truly affirmed, that, at an average, the original impression of half the books printed is hardly ever sold off, except at a ruinous reduction of price. Now, if we suppose, in the previous example of an edition of 750 copies, that only 625 instead of 725 were sold, the result would be that only 57l. 19s. would remain as profit to the author and publisher, and as a compensation for interest, the risk of bad debts, &c. Were only 500 copies sold, the cost would not be more than balanced; and there would be nothing whatever to remunerate the author for his labour, or the bookseller for the use of his capital. Were only 400 copies sold, government would have received 28l.

19s. 11d. of duty from a speculation by which the author had lost all his labour, and the bookseller 36s. 15s. of his capital! The mere possibility of such a supposition being realised, would be a sufficient ground for a revision of the duties; but, in point of fact, such cases, instead of being merely possible or rare, are of *every day occurrence*!

There is a radical difference between the demand for books, or of food for the mind, and food for the body. The latter is always sure, under any circumstances, to command a sale. The demand for it is comparatively constant; it cannot be dispensed with. If a tax be laid on malt, hats, or shoes, it will, perhaps, somewhat lessen the demand for these articles; but the quantities of them brought to market, in future, will sell for such an advanced price as will leave the customary rate of profit to their producers. But with books the case is altogether different. The taste for them is proverbially capricious; so much so, that the most sagacious individuals are every day deceived in their anticipations as to the success of new works, and even as to the sale of new editions. But if a book do not take, it is so very ruinous an affair, that a publisher is glad to dispose of the greater part of an impression at a fourth or fifth part of its regular price; and is often, indeed, obliged to sell it as *waste paper* to the trunk-maker or the tobacconist.

On a late investigation into the affairs of an extensive publishing concern, it was found, that of 130 works published by it in a given time, *fifty had not paid their expenses*. Of the 80 that did pay, 13 only had arrived at a second edition; but, in most instances, these second editions had not been profitable. In general it may be estimated, that of the books published, a *fourth* do not pay their expenses; and that only *one in eight or ten can be re-printed with advantage*. As respects pamphlets, we know we are within the mark, when we affirm that not *one in fifty* pays the expenses of its publication!

Now, when such is the fact, can any thing be more glaringly unjust than to impose the same duty on all works before they are published? In a *very few* cases, such duty may fall principally on the buyers, and be only a reasonable deduction from the profits of the author and publisher; but in a vast number more it *swallows* them up entirely; and in very many cases there are no profits for the duty to absorb, so that it falls wholly on the capital of the unfortunate author or publisher. Were the judges of the courts of law to decide cases by a throw of the dice, there would be quite as much of reason and justice in their decisions, as there has been in the proceedings of our finance ministers as to taxes on literature. If books *must* be taxed, let publishers be put under the *surveillance* of the excise; let them be obliged to keep an account of the books they sell, and let them be taxed accordingly; but do not let the loss arising from an unsuccessful literary speculation—and more than half such speculations are unsuccessful—be aggravated to a ruinous degree by the pressure of a system of taxation, than which there is nothing, even in Algiers, more unequal or oppressive.

The reduction of the advertisement duty has done something to lessen this injustice. But the above statements, which apply to the reduced duty, show that the relief is most inadequate. It acknowledges, without correcting, the evil. Instead of being reduced, this duty ought to have been entirely repealed. Before the reduction it only amounted to about 170,000*l.* a year; and there cannot be a doubt that the loss of revenue occasioned by its repeal, and by the repeal of half the paper duty, would, at no distant period, be made up by the greater productiveness of the remaining duty on paper, resulting from its greater consumption. The advertisement duty presses very severely on all sorts of works, but particularly on pamphlets: it may, indeed, be said to have utterly destroyed the latter class of publications, in so far at least as they are a source of profit.

But we object altogether to the imposition of taxes on books previously to their being published. It is not possible, for the reasons already stated, that such taxes can be otherwise than *unjust*. This objection to them might, indeed, be removed by imposing the duties according to the number and value of the copies actually sold. Still such duties must, however imposed, by raising the price of books, and preventing the diffusion of knowledge among the poorer and least instructed classes, be in the utmost degree injurious; at the same time that they can never be rendered considerably productive. They seem, in fact, to have every quality that taxes ought not to have, and hardly one that they should have.

The delivery of *eleven* copies to public libraries is exceedingly burdensome upon the more expensive class of works, of which small impressions only can be printed; eleven copies of such works would in many instances be a very fair profit for the author; and the obligation to make such a sacrifice has frequently, indeed, caused their publication to be abandoned. A tax of this sort would not be tolerable, even were it imposed for a public purpose; but such is not the object of its imposition. Though called *public*, the libraries which receive the eleven copies are, with the exception of the British Museum, private establishments, belonging to particular corporations or institutions, and *accessible only to their members*. Why, when an author produces a book, should he be compelled to bestow copies of it on the lawyers of Edinburgh and Dublin, and on the Universities? On what principle can these bodies pretend to demand from him a portion of his property? Perhaps it might be expedient, in order to insure the preservation of every work, that copies of it should be

deposited, one in London, one in Edinburgh, and one in Dublin. Even this would be calling upon authors to make a considerable sacrifice for the public advantage. But to call upon them to sacrifice *ten* copies, exclusive of that given to the British Museum, for the benefit of so many *private institutions*, is a proceeding utterly at variance with every principle of justice.

The law of other countries is, in this respect, far preferable to ours. In America, Prussia, Saxony and Bavaria, only *one* copy of any work is required from the author; in France and Austria, *two* copies are required; and in the Netherlands *three*. The governments of the most despotical states treat authors better than they have hitherto been treated by the legislature of England.

IV. *Book Trade of Great Britain*.—London is the great centre of the British book trade; the number of new publications that issue from its presses being far greater than all that appear in the rest of the empire. Within the course of the last forty years, however, many very important works, have been published at Edinburgh; but the latter, as well as those that appear at Oxford, Cambridge, Glasgow, &c., are principally disposed of by the London trade. The booksellers of Edinburgh, and of all the provincial towns, have agents in London to whom they consign a certain number of copies of every work they publish; and to whom, also, they address their orders for copies of such new or old works as they have occasion for. The London booksellers, who act as agents for those in the country, are in the habit of regularly despatching parcels to their correspondents on the last day of each month, with the magazines and other monthly publications; but if any new work of interest appears in the interim, or orders be received from the country that cannot be conveniently deferred to the end of the month, a parcel is immediately forwarded by coach. The booksellers of Edinburgh and Dublin act as agents for those of London, and supply the Scotch and Irish country trade with the metropolitan publications.

The price of new works is fixed by the publishers, who grant a deduction to the retail dealers of from 20 to 25 per cent. on the price of *quartos*, and from 25 to 30 per cent. on that of *octavos*, and those of smaller size. The credit given by the publishers to the retailers varies from seven to twelve months; a discount being allowed for prompt payment at the rate of 5 per cent. per annum.

From inquiries we have made, we believe it may be laid down that about 1,500 *volumes* of new publications (exclusive of reprints, pamphlets, and periodical publications not in volumes) are annually produced in Great Britain: and, estimating the average impression of each volume at 750 copies, we have a grand total of 1,125,000 volumes; the value of which, if sold at an average publication price of 9s. a volume, would be 606,250*l*. The number of reprinted volumes, particularly of school-books, is very great; and if to these we add the reviews, magazines, pamphlets, and all other publications, exclusive of newspapers, the total *publication value* of the new works of all sorts, and new copies of old works, that are annually produced, may be estimated at about 750,000*l*. At an average of the three years ending with 1831, 1,176 new works were annually entered in Stationers' Hall; but, as no account is kept of the size or price of these works, this return furnishes no clue by which to judge of the number of volumes, their magnitude or value. This deficiency might easily be supplied either by the Stationers' Hall or the British Museum keeping an account of the size and price of all the new books coming into their hands, and making an annual abstract of the same.

The old book trade carried on in Great Britain is very extensive, and employs many dealers. The price of old books depends very much on their condition; but, independently of this circumstance, it is very fluctuating and capricious; equally good copies of the same works being frequently to be had in some shops for a half or a third of what they can be bought for in others.

V. *Regulations as to Importation of Works*.—For the duties, see *TARIFF*. To prevent foreign books and maps, the property of individuals, from being charged with duty more than once, the proprietor shall, on each importation subsequent to the original one, make oath, that the duties were paid when they were first imported, or that he purchased them in this country in a fair way of trade; that they are the identical books or maps he exported from this kingdom, and that they are now brought back for his private use, and not for sale. —(*Treasury Order*, 3d, and *Customs Order*, 8th of October, 1818.)

No books, first composed, written or printed in the United Kingdom, imported for sale, except books not reprinted in the United Kingdom within 20 years, or being parts of collections, the greater part of which had been composed or written abroad, shall be imported into the United Kingdom, under forfeiture thereof.—(3 & 4 *Will.* 4. c. 52. § 58.)

Books first composed or written, or printed and published, in the United Kingdom, and reprinted in any other country or place, may not be entered to be warehoused.—§ 59.

The permission to import English works reprinted abroad for private use, is limited to a *single* copy of each work, brought as a part of a passenger's baggage, for the private use of the parties themselves.—(*Treasury Order*, 29th of June 1830.)

Account of the Amount of Duty paid upon the Foreign Books imported into the United Kingdom during each of the Ten Years ending with 1830.—(*Parl. Paper*, No. 146. Sess 1832.)

1824	17,237	17 3						

VI. *Book Trade of France*.—The activity of the French press has been very greatly increased since the downfall of Napoleon. The Count Daru, in a very instructive work (*Notions Statistiques sur la Librairie*) published in 1827, estimated the number of printed sheets, exclusive of newspapers, produced by the French press in 1816, at 68,852,883; and in 1825, at 128,011,483! and we believe that the increase from 1825 down to the present period has been little if anything inferior. The quality of many of the works that have recently issued from the French press is also very superior; and it may be doubted whether such works as the *Biographie Universelle*, the new and enlarged edition of the *Art de vérifier les Dates*, in 38 vols. octavo, and the two octavo editions of *Bayle's Dictionary*, could have been published in any other country. The greater number of new French works of merit, or which it is supposed will command a considerable sale, are immediately reprinted in the Netherlands or Switzerland, but principally in the former. To such an extent has this piratical practice been carried, that it is stated in the *Requête* presented by the French booksellers to government in 1826, that a single bookseller in Brussels had, in 1825 and 1826, and the first six months of 1827, reprinted 318,615 volumes of French works! Having nothing to pay for copyright, these counterfeit editions can be afforded at a lower price than those that are genuine. This is a very serious injury to French authors and publishers, not only by preventing the sale of their works in foreign countries, but from the ease with which spurious copies may be introduced into France.

All the French booksellers are *brevetés*, that is, licensed, and sworn to abide by certain prescribed rules. This regulation is justly complained of by the publishers, as being vexatious and oppressive; and as tending to lessen the number of retail booksellers in the country, and to prevent that competition which is so advantageous.

The discount allowed by the French publishers to the retail dealers is not regulated, as in England, by the size of the volumes, but by the subjects. The discount on the sale of books of history, criticism, and general literature, is usually about 25 per cent.; in the case of mathematical and strictly scientific works, it is seldom more than 10 or 15 per cent.; while upon romances, tales, &c. it is often as high as 50 or 60 per cent.

VII. *German Book Trade*.—"This trade is very much facilitated by the book fairs at Leipzig; the Easter fair being frequented by all the booksellers of Germany, and by those of some of the neighbouring countries, as of France, Switzerland, Denmark, Livonia, &c., in order to settle their mutual accounts, and to form new connections. The German publisher sends his publications to the keeper of assortments *à condition*, that is, on commission, for a certain time, after which the latter pays for what have been sold, and may return the remainder. This is not so favourable for the publisher as the custom in the French and English book trades, where the keepers of assortments take the quantity they want at a fixed rate. In the German book trade, it is the custom for almost every house, either in the country or abroad, which publishes or sells German books, to have its agent at Leipzig, who receives and distributes its publications. A., of Riga, who publishes a book calculated for the German trade, has his agent B., in Leipzig, to whom he sends, free of expense, a number of copies of his publication, that he may distribute the new work to all the booksellers with whom he is connected, from Vienna to Hamburgh, and from Strasburgh to Königsberg, each of whom has his agent in Leipzig. Instructions are also given as to the number of copies to be sent to each. B. delivers those copies in Leipzig to the agents, who send them every week, or more or less frequently, by the post or by carriers, at the expense of the receiver. C., of Strasburgh, who finds that he has not received copies enough, writes for an additional number of copies to his agent D., of Leipzig: D. gives the order to B., who delivers the number wanted to D., to be transmitted to C. This arrangement is advantageous to the German book trade, as well as to Leipzig. The dealer receives every thing from Leipzig; and as a great number of packets, with books from all parts of Germany, arrive there for him every week, he can have them packed together and sent at once. The carriage is thus much less than if the packets were sent to him separately from the different places; and the whole business is simplified. The booksellers are also enabled to agree with ease on a certain discount per cent. No such intimate connection of the booksellers has yet been formed in any other country. The German booksellers rarely unite, as is the practice in England, in undertaking the publication of extensive works."—(*German Conversations-Lexicon*, American edition.)

The literary deluge which commenced in Germany in 1814 still continues to increase

Importation of Books.—Under the late law, such books as might be imported were admitted, provided they were of editions printed in or since the year 1801, on payment of a duty of 5*l.* a cwt.; but this duty has been reduced to 2*l.* 10*s.* a cwt.; with the additional proviso, that the books, besides being printed in or since 1801, are in *foreign living languages*.—(4 & 5 Will. 4 c. 89 § 15.) This condition was inserted principally to obviate the risk of dictionaries, or the class books used in our schools, being supplied from the Continent; the booksellers contending that the 2*l.* 10*s.* a cwt. of duty was insufficient to balance the influence of the paper duty, and the peculiar burdens incident to the getting up of books in this country. It has been alleged, indeed, that it will not effect its purpose; because, as is contended, both Latin and Greek are living languages; the former being spoken in certain parts of Hungary and Poland, and the latter in Greece! But the intention of the legislature is too obvious to admit of its being defeated by any quibbling of the sort now mentioned. By a living language is meant a language spoken by a nation or people, and not by a few learned individuals; and the dialect of the modern Greeks is abundantly different from that of their ancestors. The duty of 1*l.* a cwt. on foreign books printed prior to 1801 ought to be repealed; it throws obstructions in the way of their importation, while it is quite unproductive of revenue.

Smuggling of English Books from abroad.—Very considerable loss is sustained by literary men and booksellers, by the clandestine importation of English works printed abroad, of which the copyright has not expired. There is hardly, in fact, one of our popular authors, copies of whose works, printed in France or America, may not be readily procured in London; and as those by whom they are printed have neither copyright nor paper duty to pay, they are able materially to undersell the native article. It is surely unnecessary to say, that every practicable effort should be made to hinder such an invasion of private property; and in this view we beg to suggest, that the permission given to persons coming from abroad to bring with them single copies of all prohibited works, ought to be withdrawn. It opens a door for smuggling and fraud; and there is neither sense nor justice in allowing any individual to invade the rights of another, merely because he has been across the Channel. A specific penalty, recoverable by a summary process, ought also to be imposed on every individual offering such books for sale. This would be much more effectual in preventing such practices than the existing law.—See *Dict. p.* 190.—*Sup.*

[In addition to the statements of the author concerning copyright in the different European countries, we may mention that the government of Denmark, by an ordinance of the 7th of May 1828, not merely sanctioned a perpetual right of literary property in its own subjects, but even went so far as to assert a similar right in the case of foreigners, by prohibiting all reprints of foreign books, excepting by an authority to do so derived from their authors or proprietors abroad. Copyright in Russia, by a law enacted in 1828, was conferred upon an author and his heirs, until the expiration of 25 years after his death. A law of the 25th January 1817, common to both Holland and Belgium, and probably still in force, notwithstanding the separation of the two countries, guarantees the right of literary property for a period extending from the publication of a book until 30 years after the death of an author; any edition of his work, published without his consent, being rendered liable to confiscation. The publisher is also subjected to a penalty, equivalent to the price of 2000 copies, to accrue to the benefit of the party injured, and is obliged to pay a considerable fine to be appropriated to the support of the poor. On again offending in a similar manner, the

publisher may be declared incapable of pursuing his occupation. The disturbed condition of Spain and Portugal, for some years past, renders what the law is in those countries concerning the press and literary property of comparatively little moment. And in respect to Italy and Switzerland, whatever protection to authors is professedly granted by the governments of the different states into which they are subdivided, these states are so numerous, and so independent of each other in their legislation on the subject of literary property, that very little protection is in reality afforded. A work which appears at Florence may, for example, be immediately reprinted at Modena; and the possibility of any pecuniary advantage being derived by the author from his labours may thus be at once entirely frustrated.

An author, in the United States, by the act of Congress of May 31st, 1790, "for the encouragement of learning, &c.," had, if a citizen or a resident in the country, an exclusive copyright in his works conferred upon him for a term of 14 years,—a right renewable when this term shall have expired, provided the author be then living, in favour of him and his legal representatives, for the farther term of 14 years. By an act passed February 3d, 1831, the privilege in question is to be enjoyed in the first instance during a term of 28 years; and if, at the expiration of this term, the author, or his widow, or any child of his, be still living, it may be enjoyed for 14 years more. The expense of procuring a copyright is very trifling; and only one copy of a work is required from the author, which is to be delivered to the Secretary of State, to be preserved in his office.

Latterly, there has been almost every where a tendency to extend the right of literary property; and the justice as well as expediency of assimilating it to the right of property in material things, by making it perpetual, has been argued with much earnestness and force. The desirableness, too, of an international copyright law, placing the rights of authors on the same footing in every portion of the civilised and literary world, has been of late frequently expressed in quarters entitled to the highest respect. These topics were brought to the consideration of the Congress of the United States, in the winter of 1837, by a petition signed by 56 British authors, asking the privilege to secure copyrights for their works in the United States. The committee of the Senate, to whom this petition was referred, made a report favourable to the object of the petitioners, accompanied by the following bill, which was, however, not acted upon.

A Bill to amend the act entitled "An Act to amend the several acts respecting copyright."

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the provisions of the act to amend the several acts respecting copyrights, which was passed on the third day of February, eighteen hundred and thirty-one, shall be extended to, and the benefits thereof may be enjoyed by, any subject or resident of the United Kingdom of Great Britain and Ireland, or of France, in the same manner as if they were citizens or residents of the United States, upon depositing a printed copy of the title of the book or other work for which a copyright is desired, in the clerk's office of the district court of any district in the United States, and complying with the other requirements of the said act: Provided, That this act shall not apply to any of the works enumerated in the aforesaid act, which shall have been etched or engraved, or printed and published, prior to the passage of this act: And provided, also, That, unless an edition of the work for which it is intended to secure the copyright, shall be printed and published in the United States simultaneously with its issue in the foreign country, or within one month after depositing as aforesaid the title thereof in the clerk's office of the district court, the benefits of copyright hereby allowed shall not be enjoyed as to such work."

For a concise and excellent view of what has been done on the subject of copyright generally, both abroad and at home, we may refer the reader to the little work entitled "Remarks on Literary Property" by Philip H. Nicklin, Esq., lately published. He will be well repaid for the time he may spend in its perusal.

The progress of publication and of the book trade in the United States has been exceedingly rapid. Previous to the year 1803, most of the books published, besides the Bible, were such as were adapted for elementary instruction in the schools. In that year the *whole* of the Bible was set up by Mathew Carey, Esq., then actively engaged in the business of bookselling and publishing, and kept permanently standing in the 4to form. Long afterwards, however, pocket Bibles and other kinds continued to be imported, chiefly from Scotland. There cannot, at the present time, be less than 100 sets of stereotype plates, of various sizes, in use for the printing of Bibles.

At the date above mentioned, such standard works as Shakespeare and the *Pilgrim's Progress* were constantly imported. Now there must be half a dozen sets of plates of Shakespeare alone.

A fact evincive of the great extent to which the book trade is carried on is the division of labour which exists among our principal booksellers and publishers. One deals exclusively in law books; another confines his attention to medicine; another again to theology; and a fourth is concerned only with school books.

The most extensive and costly works have been printed in the United States; such as *Rees's* and *Brewster's Encyclopedias*.

The first *trades' sale* took place in 1824. Since that time the amount of books annually disposed of at trades' sales has been constantly increasing; until the amount at present has probably reached the sum of half a million of dollars.

The sale of five bookselling establishments, it is said, amounted, in 1836, to \$1,350,000.

And it was stated in a report made to the United States Senate during the late session of Congress, "that the number of persons employed in the United States, in the various branches connected with book-making and periodical publication, is estimated at 200,000, and the capital employed in those branches, at from 30 to 40 millions of dollars."

The progress of authorship in this country has been perhaps more rapid than in any other. It commenced, of course, with the books used in schools, for which there was a large demand. The authors of such books, it is probable, derive a larger revenue from their works than in any other country. American school books are now constantly reprinted in England. This is even occasionally true in reference to American editions of the Greek and Latin classics in use for purposes of instruction. Books of science also, which are used in our colleges and higher seminaries, have become almost universally American. Step by step, we have risen, until Irving and Cooper have obtained higher prices for their works than have been received in Europe, except by a very few authors. Of Prescott's "Ferdinand and Isabella" 3,000 copies have been printed, and nearly all have been sold in 16 months. Of Bancroft's "United States" 4,000 have been sold. A single publisher is said to have paid, in the five years preceding 1834, \$135,000 for copyrights, out of which \$30,000 were for two works only. Carey, Lea, and Blanchard subsequently paid \$30,000 in a single year to American writers; and Harper and Brothers have paid about the same sum for several years past.

The imports of books into this country, in the years 1834, 1835, 1836, and 1837, amounted in value to \$176,635, \$204,958, \$293,371, and \$248,164, respectively; and the exports of books, during the same period, to \$42,543, \$67,354, \$61,553, and \$41,438. The former were chiefly from England and France; while the latter were, for the most part, destined for the Mexican and South American market. It may be added too that the exports consisted mostly of books printed in the United States.—*Am. Ed.*)

BOOK-KEEPING, the art of keeping the accounts and books of a merchant. Book-keeping by double entry means that mode or system in which every entry is double, that is, has both a deb'tor and a creditor. It is called also the Italian method, because it was first practised in Venice, Genoa, and other towns in Italy, where trade was conducted on an extensive scale at a much earlier date than in England, France, or other parts of Europe. This method, however familiar to merchants and book-keepers, seems intricate to almost all who have not practised it; nor is the dryness and difficulty of the task much lessened by the printed works on the subject, which, having been compiled more by teachers than by practical merchants, contain a number of obsolete rules and unnecessary details. The most effectual mode of giving clearness and interest to our remarks will be, first to state a few mercantile transactions, and then to explain the nature of the accounts and entries which result from them.

The Journal of a mercantile house ought to open, at the beginning of each year, with an enumeration of their assets and debts, as follows:—

Folio of Ledger.	SUNDRIES Drs. to STOCK.		£ s. d.	
	For the following, being the assets of the house.

			£ 32,391	17 10

Let the transaction to be first explained be an order for goods from a correspondent abroad. A house in Jamaica sends instructions to the house at home to buy and ship a quantity of manufactured articles, suited to the Jamaica market, as follows:—

Order from JAMES ALLAN & Co., of Kingston, Jamaica, to HENRY BARCLAY & Co., of London.

J. A. & Co.	<i>Linen</i> ; Lint Strellitz Osnaburgs, 14 bales, about 6d. $\frac{1}{2}$ yard.
	Best tow Strellitz do., 9 bales, 4d. or $\frac{1}{2}$ d.
	Best white Platina, 1 case.
	Linen tick assorted, $\frac{1}{2}$ ths width, 9d., 1s., 1s. 3d.; 10 pieces each, cut up in 22-yard lengths.
	<i>Woollens</i> ; 5 bales Penistones, $\frac{1}{2}$ ths wide, best indigo blue, 1s. a yard.
	<i>Cottons</i> ; 50 pieces stout calico, 28 yards each, $\frac{1}{2}$ ths wide, 4d. a yard.
	50 do. do. do. $\frac{1}{2}$ ths, superior, 5d. a yard.
	100 do. stout calico shirting, $\frac{1}{2}$ ths wide, superior, 6d. a yard.
	<i>Hats</i> ; 4 dozen gentlemen's superfine black, 30s. each.
	2 do. do. do. drab, 20s. each.
	1 do. youth's do. black, 15s. each.
	20 do. felt hats, for negroes, 22s. $\frac{1}{2}$ dozen.
	<i>Shoes</i> ; 10 dozen prime calf-skin shoes, full size, 65s. $\frac{1}{2}$ dozen.
	10 do. youth's do. 52s. $\frac{1}{2}$ dozen.
	5 do. gentlemen's dress do. 72s. $\frac{1}{2}$ dozen.

This order the London merchant divides among six, seven, or more wholesale dealers, according to their respective lines of business. Each dealer, or tradesman, as he is commonly called, provides his portion of the order in the course of the fortnight, three weeks, or month, allowed him by the merchant; and when the goods are packed and ready to ship, he sends in his account, or bill of parcels, thus:—

London, 20th February, 1831.

Messrs. HENRY BARCLAY & Co.

Bought of SIMON FRAZER.

J. A. & Co. No. 8.	10 pieces best tow Strellitz Osnaburgs, 140 yards each, at 4d. $\frac{1}{2}$ yard	-	-	-	£	s.	d.

		-	-	-	-	-	10	14
41.	Do. the same	-	-	-	-	-	10	14
		-	-	-	-	-	£33	2

The merchant, having received the whole of the bills of parcels, fixed on a vessel, and agreed for the freight, proceeds to make an entry at the Custom-house, and to ship the goods. That done, the next step is to prepare the Invoice, or general account of the shipment, as exhibited in the next page.

This invoice, being sent out by the vessel to Messrs. Allan & Co. conveys to them a number of particulars in a short space; viz. the mark, the numbers, the value, and the contents of each package. In former times it was the practice to make an invoice very long, inserting in it a literal copy of each bill of parcels, but it has now become usual to make each tradesman deliver a duplicate of his account, to be sent abroad with the goods; in which case the invoice may be, like the above, little more than a summary of the bills of parcels. This method has two advantages: it saves time at the counting-house of the exporter, and it affords to his correspondent an assurance that no more is charged to him than has been actually paid for the articles.

An invoice ought to be made out with the utmost care, for it is a document of great importance in several respects: first, between the exporting merchant and his correspondent abroad; and next, when in the hands of the latter, it may and generally does form a voucher for calculating the import duty, as well as for the sales effected to retailers or other dealers.

The sum insured by the exporting merchant generally exceeds the amount of the invoice by 2 per cent., because the recovery of a loss from insurers involves a charge of fully that amount. It is thus necessary to cover not only the price of the goods, and the charges of

shipping, insurance, and freight, but such further sum as may enable the shipper, in case of loss, to carry to the credit of his correspondent the amount of the invoice, clear of any deduction.

Invoice of Goods shipped by HENRY BARCLAY & Co., in the *Rawkins*, J. Thomson, from London to Kingston in Jamaica, on account and risk of Messrs. JAMES ALLAN & Co. of Kingston.

London, 2d of April, 1831.

Errors excepted.

HENRY BARCLAY & Co.

Freight is charged on the weight of the produce only; not of the produce and packages together. This allowance is of old standing, and is to be traced less to the reason of the case, than to the competition prevailing among shipmasters.

JOURNAL ENTRIES resulting from the preceding Accounts of Sale.

Folio of Ledger.	June, 1831.	
4	THOMAS KEMBLE & Co. Dr. to SUNDRIES.	£ s. d.
3	To SUGAR & Ceres.	
	Proceeds of 7 hhds., M. P. 1. to 7., sold by them at one month's credit, from 2d of April	334 0 0
4	To COFFEE & Vitoria.	
	Proceeds of 20 tierces, J. F. 1. to 20., sold at one month's credit, from 2d of April	676 5 6
		910 5 6
2	SUGAR & CERES Dr. to SUNDRIES.	
2	To INSURANCE ACCOUNT; for premium and policy	5 15 6

4	To JAMES FORBES; nett proceeds due 3d of June, 1830	571 13 1
		£3576 5 7

We have thus given an example of the transactions which form a great part of the business of our merchants; the export of manufactured goods, and the import and sale of produce received in return. Our next illustration shall be of a merchant's Cashbook: the following is an example of the entries for a month:—

Folio of Ledger.	SUNDRIES Drs. to CASH—continued.						£ s. d.
	Brought forward						1,064 13 9
1	JOHN WILSON.						
	18th. Paid his bill of parcels	-	-	-	-		43 0 0
1	JOHN MACKENZIE.						
	18th. Paid his bill of parcels	-	-	-	-		367 10 0
3	JAMES BOWREDAILE & Co.						
	18th. Paid their bill of parcels	-	-	-	-		32 2 0
2	MOLLING & Co.						
	18th. Paid their balance of account	-	-	-	-		328 5 4
6	GEORGE AND WILLIAM FOX.						
	24th. Paid their balance of account	-	-	-	-		320 15 0
3	CHARLES.						
	31st. Paid postage, and petty disbursements this month	-	-	-	-		15 2 6
							£2,170 7 7

The above shows, that for all sums received, the account of cash is made debtor, and the parties paying the same are made creditors; while for all sums paid, the cash is credited, and the parties receiving them are made debtors.

We are next to state the mode of entering bill transactions.

BILLS RECEIVABLE.—We have seen by the Balance sheet that several correspondents are indebted to the house. The debts of correspondents abroad may be reduced by remitting either bills, specie, or merchandise for sale: from correspondents in England, bills are almost the only mode of remitting. When bills come to hand, the rule is to enter each in the bill book, with a minute statement of the date, term, sum, and other particulars thus:—

No. Received	From whom.	Drawn by	Date.	Term.	Drawn on	To order of	Due.	Sum.	How disp. of.
630/8 March	Bailey & Co.	W. Adams	Perhit, 1 Mar.	2 mths.	T. Jones, Dublin	A. Williams	1—4 May	£ 360	Rainier & Co.
631/10 do.	Watts & Co.	J. Jacobs	Cork, 3 do.	1 do.	J. Adams, London	G. Wilson	3—6 April	135	Smith & Co.
632/12 do.	Spence & Co.	T. Johnson	Falmo. 5 do.	3 do.	T. Allan, Liverpool	D. Jones	5—8 May	260	Overend & Co.

The JOURNAL ENTRIES for these bills are as follows:—

Folio of Ledger.	BILLS RECEIVABLE Dr. to SUNDRIES.						£ s. d.
	For the following remitted this month:						
7	To JAMES BAILEY & Co.						
	No. 630, on T. Jones, Dublin, due 4th of May	-	-	-	-		360 0 0
7	To T. WATSON & Co.						
	No. 631, on J. Adams, London, due 6th of April	-	-	-	-		135 0 0
7	To WILLIAM SPENCE & Co.						
	No. 632, on T. Allan, Liverpool, due 8th of May	-	-	-	-		260 0 0
							£745 0 0

BILLS PAYABLE.—The entries under this head are, of course, wholly different from the preceding, being for acceptances of the house given on account of sums owing by it to correspondents. Each acceptance is entered in the book of bills payable, thus:—

No.	Drawn by	Place and Date.	To Order of	On Account of	Term.	When accept'd.	Due.	Sum.
151	J. Allen & Co.	London, 15 Jan.	J. Jones	J. Allen & Co.	30 days' sight	19 March	10—13 June	£ 175 10 0
152	G. & W. Fox	Falmouth, 7 Mar.	L. Thompson	G. & W. Fox	15 days' date	14 do.	22—25 March	73 15 0
153	J. Clark	Hull, 5 Mar.	G. Barclay	J. Smith & Sons	1 month's date	16 do.	5—8 April	132 10 0

The Journal entries for these bills are as follows:—

Folio of Ledger.	SUNDRIES Drs. to BILLS PAYABLE.						£ s. d.
	For the following bills accepted.						
2	JAMES ALLAN & Co.	No. 151. their draft, due 13th of June	-	-	-		175 10 0
6	G. & W. FOX.	No. 152. their draft, due 25th of March	-	-	-		73 15 0
1	SIMON FRASER.	J. Clark's draft on his account, due 8th of March	-	-	-		132 10 0
							£381 15 0
	May, 1880.						
	CASH Dr. to THOMAS KEMBLE & Co.						
1	27th.	Received from them proceeds of sugar & Ceres	-	-	-	234 0 0	
		Less their brokerage	-	-	-	2 0 9	
							231 13 3
4	30th.	Received coffee & Pistacia	-	-	-	676 5 6	
		Less brokerage	-	-	-	6 16 7	
							660 8 11
							£991 2 3

The preceding entries, few as they are compared to the monthly transactions of a house of business, are sufficient to show the nature of a Journal as well as of the subsidiary books, (for cash, bills, invoices, and account sales,) from which it is composed. The Journal, being a complete record of the business of the house, is very varied and comprehensive in its nature, and may be termed an index to every book of consequence in the counting-house. But while in the cash book every payment or receipt is entered on the day it takes place, and in the bill books every bill is registered on the day it comes to hand, or is accepted, the Journal entries, being completed only at the end of the month, admit of being combined to a considerable extent, so as to exhibit a number of transactions in collective sums. Thus all the acceptances of the house paid in the course of the month appear in the Journal entry of Bills Payable Dr. to Cash; they are arranged in this entry as they fall due, after which the whole are added into one sum, which sum alone needs be carried to the Ledger. In like manner, all bills receivable, whether discounted, or kept by the house till they fall due, are collected under the head of Bills Receivable Dr. to Cash, summed up together, and carried to the Ledger in one line; a point of great importance, as we shall see presently, in facilitating the balance of the Ledger.

We proceed to give a specimen of the Ledger: the whole of the Journal entries in the preceding pages, when posted into the Ledger, will stand thus:—

The Ledger is thus a register of all the entries in the Journal; and a register so arranged as to exhibit on one side all the sums at Debtor; on the other all those at Creditor. It is kept in the most concise form, the insertions in it hardly ever exceeding a line each, or containing more than the title of the entry in the Journal. On opening a page in the Ledger, a person unacquainted with book-keeping is apt to consider this brevity unsatisfactory; and it was formerly the practice to add in each line a few explanatory words. Thus the entries in the account of Simon Frazer, which in our preceding page are briefly

March 26.	To cash	- - - - -	£ s. d.
31.	To bills payable	- - - - -	334 5 0
			132 10 0

would, at an earlier date in the practice of book-keeping, have been expanded to

March 18.	To cash paid for goods per Rawlins	- - -	£ s. d.
26.	To ditto paid J. Jackson for his account	- - -	236 5 0
31.	To bills payable, paid J. Clarke's draft for his account	- - -	98 0 0
			132 10 0

This method is still followed in some counting-houses, and such explanatory additions are certainly conducive to clearness; but they are practicable only in a house of limited business: wherever the transactions are numerous and varied, they should be left out of the Ledger, for two reasons; they increase greatly the labour of the book-keeper, and they never can be so full or circumstantial as to supersede the account current book.

The same Ledger may continue in use from one to five years, according to the size of the book, or the extent of the transactions of the house. On opening a new Ledger, it is proper to place in succession accounts of the same class or character: thus—Stock account ought to be followed by that of the Three per cent. consols, exchequer bills or other property belonging to the house; and if the business be with the West Indies, it is fit that accounts with Jamaica should be placed near those with Demerara, Trinidad, and other sugar colonies.

Balancing the Ledger.—This important operation is performed by adding up the Debtor and Creditor side of every account in the Ledger, ascertaining the difference or balance in each, and carrying such balance, as the case may be, to the Debtor or Creditor column in the balance sheet. On closing, for example, a few of the preceding Ledger accounts, we find them to stand thus:—

Debtors.				Creditors.			
	£	s.	d.		£	s.	d.
Cash	-	-	-	Simon Frazer	-	-	780 5 0
James Allan & Co.	-	-	-	Freight Account	-	-	107 4 11
	3,587	15	2				
	468	10	0				

And so on with every account except Stock, which, having no entries in the current year, is put in the balance sheet exactly as it was in the beginning of the year. Including Stock, the total at the Debtor side of the balance sheet ought to agree exactly with the total at the Creditor side; and if it do not, it is a rule in all well-regulated counting-houses to follow up the examination perseveringly, until they are made to agree. The apparent difference may not exceed a few shillings or a few pence; still the search is continued, because the smallest discrepancy shows the existence of error, and to an extent perhaps greatly beyond the fraction in question. It often happens, indeed, that, as the examination proceeds, the difference undergoes a change from a smaller to a larger amount, and without increasing the difficulty of discovering the error, which is as likely to have occurred in the case of a large as of a small sum. Differences, when in round sums, such as 10*l.* 100*l.*, or 1,000*l.*, generally lie in the addition; fractional sums frequently in the posting. All this, however, is uncertain; for the error or errors may be in any month in the year, and in any one of the thousand entries and upwards which have been made in the course of it. Hence the necessity of examining the whole; and young book-keepers are often obliged to pass week after week in the tedious labour of revising, adding, and subtracting. On the other hand, there are sometimes examples of the balance being found on the first trial; but such cases are rare, and occur only to careful and experienced book-keepers. The only effectual means of lessening the labour and perplexity of balancing the Ledger, is to exercise great care in every stage of the book-keeping process; as well in making the additions in the Journal, as in posting from the Journal into the Ledger, and casting up the Ledger accounts; and, lastly, in adding up the balance sheet, which is generally of formidable length.

Accuracy in addition is one of the main requisites in a clerk, and particularly in a book-keeper. Of the extent to which it may be attained by continued practice, those only can judge who have experienced it themselves, or have marked the ease and correctness with which clerks in banking-houses perform such operations. They are in the habit of striking a daily balance which comes within small compass; but a merchant's balance, comprising the transactions of a year, extends commonly over a number of folio pages. It is advisable, therefore, to divide each page into portions of ten lines each, adding such portions separately. This lessens the risk of error, as it is evidently easier to add five or six such portions in succession, than to do at once a whole folio containing fifty or sixty sums.

Another important point towards agreeing a balance, is to limit carefully the number of Ledger entries; in other words, to comprise as much as possible in those aggregate sums in the Journal which are posted in the Ledger. Thus, in the case of the monthly entries for bills, whether receivable or payable, while the inner column of the Journal contains the amount of each specific bill—the final column, that which is carried to the Ledger—should, and generally does, comprise a number of bills in one sum. Entries in the cash book, which generally form so large a proportion of the transactions of the month, are carried by some book-keepers directly from the cash book into the Ledger, without an intermediate arrangement in the Journal form. In some lines of business this plan may answer; but as a general rule it is better to take the trouble of journalising the cash, thereby comprising in 30 or 40 Ledger entries the transactions of the month, which, when posted separately, would exceed 100. The time required for re-writing or rather re-casting them, will, in most cases, be amply made good, by exhibiting the cash in a proper form, and by facilitating the balance of the Ledger at the close of the year.

We have said the close of the year, because, in nine mercantile houses out of ten, that is the period for striking a balance. In some branches of trade, however, the case is otherwise. Thus, among West India merchants, the 30th of April is the time of balancing,

because at that season the sales of the preceding crop are, in general, completed, and those of the current year not yet begun.

Arrears in book-keeping ought to be most carefully avoided—calculated as they are to engender mistakes, and to produce loss from delay in adjusting accounts. The practice of balancing the Ledger every six months, and of transmitting as often accounts current to the correspondents and connections of merchants, will, it is to be hoped, become general. It is, however, hardly practicable in cases where, as too often happens in the lesser mercantile establishments, the book-keeper is charged with a share of the active management. Exemption from interruption, and removal from the bustle of current business, are main requisites to accuracy and despatch in accounts. In examining, or, as it is called, collating the books, the book-keeper requires not only a retired apartment, but the assistance of a clerk for the purpose of calling them over. A similar arrangement for another purpose—we mean for composing the Journal, the book-keeper dictating from the subsidiary books to a clerk whose writing forms the draught or rough copy of the Journal, has as yet been seldom adopted; although, when properly applied, it is highly conducive both to accuracy and expedition.

A Ledger must, of course, have an index; but it is very brief, containing merely the titles of the accounts and a reference to the page, as follows:—

				Folio					Folio
Allan & Co., James	-	-	-	2	Bailey & Co., James	-	-	-	7
Amelia, ship	-	-	-	6	Bills payable	-	-	-	6

The Subsidiary Books.—In former times, when business in this country was conducted by most persons on a very limited scale, the accounts of a number of merchants, or rather of those dealers whom we should now think it a compliment to call merchants, were often kept on a plan somewhat like that at present followed by our shopkeepers. The merchant or his chief clerk kept a daily record of transactions, whether sales, purchases, receipts, or payments, in a diary, which was called a Waste-book, from the rude manner in which the entries or rather notices in it were written, being inserted, one by one, soon after the transactions in question took place. From this diary the Journal and Ledger were posted; and book-keeping by double entry being in those days understood by few, one person frequently kept the books of several merchants, passing one or two days in the week at the house of each, and reducing these rough materials into the form of regular entries. In process of time, as transactions multiplied and mercantile business took a wider range, separate books were more generally required for particular departments, such as a bill book for all bills of exchange, and a cash book for all ready money transactions. This had long been the case in the large mercantile towns of Italy and Holland; and above a century ago it became a general practice in London and Bristol, which were then the only places of extensive business in England. But in English, as in foreign counting-houses, the bill book and even the cash book were long considered as little more than memoranda of details; not as books of authority, or as fit documents for Journal entries: for that purpose the diary only was used. In time, however, the mode of keeping these subsidiary books improved, and merchants became aware that, when cash or bill transactions were properly entered in them, the Journal might be posted from them as well as from the diary.

Similar observations are applicable to the other subsidiary books, viz. an invoice book for goods shipped, and an account of sales book for goods received and sold. When from the gradual improvement in the management of counting-houses these books were kept in a manner to supply all that was wanted for Journal entries, the use of the diary was dispensed with for such entries also. And at last it was found, that in all well-regulated counting-houses the books kept for separate departments of the business were sufficient for the composition of the Journal, with the exception of a few transactions out of the regular course, which might be easily noticed in a supplementary book called a Petty Journal, or a book for occasional entries. The consequence was, that the diary or waste book, formerly the groundwork of the Journal and Ledger, became excluded from every well-regulated counting-house. This has long been the case, and the name of waste book would have been forgotten, were it not found in the printed treatises on book-keeping which have appeared from time to time, and have been generally composed by teachers in schools or academies, who, unacquainted with the actual practice of merchants, were content to copy and reprint what they found laid down in old systems of book-keeping.

The subsidiary books required in a counting-house are, the Cash book;

Book of Acceptances of the house, or Bills Payable;

Book of Bills Receivable, or bills on other merchants which are or have been in possession of the house.

Bought book, or book for bills of parcels;

Invoice book, or register of goods sold or exported;

Account of Sales book;

Insurance Policy book, containing copies of all policies of insurance;

Petty Journal, or book for such occasional entries as do not belong to any of the preceding.

Such are the authorities from which it is now customary, in every well-regulated house, to compose the Journal. Their number indicates a repartition or subdivision, to a considerable extent, of counting-house work, and nowhere is such repartition productive of greater advantage. How much better is it to enter all bills receivable in one book, all bills payable in another, and all cash transactions in a third, than in any way to blend these very distinct entries! The effect of this subdivision is to simplify the Journal entries in a manner highly conducive to accuracy and despatch; and to present such means of checking or examining them, that many transactions may be stated, and an account extended over a number of folios, without a single error.

The use of most of the subsidiary books is sufficiently pointed out by their names; but it may be well to add a few remarks on the "Bought book," or receptacle for the accounts of goods purchased. A bill of parcels is the name given to the account of goods supplied by a manufacturer, tradesman, or dealer, to a merchant. Such accounts soon become numerous, and it is evidently of consequence to adopt the best method of keeping them. In former times it was the practice to fold them up in a uniform size, and after writing on the back the names of the respective furnishers, to put them away in bundles. But wherever the purchases of a merchant are extensive, and the bills of parcels numerous, the better mode, after arranging them alphabetically, is to paste them in a large book, generally a folio, made of blue or sugar-loaf paper: this book to have its pages numbered, and to have an alphabetical index. Any single bill of parcels may thus be referred to with the same ease as we turn to an account in a ledger; and one of these folios may be made to hold a very great quantity of bills of parcels; as many as would form a number of large bundles when tied up on the plan of former times.

Book of Bills Payable.—The notice, or, as it is termed, advice of bills payable after sight, generally comes to hand before the bills themselves. As the time of the arrival of the latter is uncertain, the better plan is not to enter them from the advice among the other bills payable, but to appropriate a space of ten or twelve pages at the beginning or end of the book of bills payable, and to insert there the substance of the advice received.

There are a few books in every counting-house which do not form part of the vouchers or materials for the Journal; viz., the Account Current book, containing duplicates of the accounts furnished by the house to their different correspondents and connections;

The Letter-book, containing copies of all letters written to the correspondents or connections of the house;

The Petty Cash book, or account of petty disbursements, the sum of which is entered once a month in the cash book.

The Order book, containing copies of all orders received;

The Debiture book, or register of drawbacks payable by the custom-house.

It was formerly a practice in some houses for the book-keeper to go over the letter book at the end of each month, that he might take note of any entries not supplied by the subsidiary books. This, however, is now unnecessary; these books, when carefully kept, containing, in one shape or other, every transaction of the house.

The Principle of Double Entry.—From these explanations of the practice of book-keeping, we must call the attention of our readers to a topic of more intricacy—the origin of the present system, and the manner in which it was adopted. To record the transactions of a merchant in a Journal or day book was an obvious arrangement, and to keep a Ledger or systematic register of the contents of the Journal was a natural result of his business, particularly when conducted on credit. Such, in a rude form, are the books of our shopkeepers, who enter their sales and purchases in a day book, and in their Ledger carry the former to the Dr. of their customers, the latter to the Cr. of the wholesale dealers who supply them with goods. By making at the end of the year a list of the sums due to him by his customers, and of those due by him to wholesale dealers, a shopkeeper may, after adding to the former the value of his stock on hand, make out an approximative statement of his debts and assets. Now, that which in this manner is done indirectly and imperfectly, it is the object of double entry to do with method and certainty. The shopkeeper makes out a list of debtors on one side and to creditors on the other, but he cannot make them balance, because his entries have been single; that is, they have had no counterpart. On making a purchase of cottons from Messrs. Peel of Manchester, or of woollens from Messrs. Gott of Leeds, he merely enters the amount of their credit, but he makes no one Dr. to them, because the goods are not sold; and to introduce an imaginary account would be too great a refinement for a plain, practical man. But a person accustomed to double entry would, without any effort of thought, make "Printed Calicoes" Dr. to Messrs. Peel, and "Kerseys" Dr. to Messrs. Gott, for the respective amounts; after which, as the sales proceeded, he would make the buyers Drs. to these accounts for the amount of their purchases.

We thus perceive that the intricacy in the application of double entry was not with the personal so much as with the nominal accounts. Let us refer to the country where book

keeping was first studied, and take as an example the case of Doria, a merchant in Genoa, shipping, in a former age, silk, of the value of 200*l.*, bought from Flori, in Piedmont, to Henderson & Co., silk manufacturers, in England, on the terms of charging, not an additional price, but a commission of 5 per cent. with interest until reimbursed his advance. In entering the transaction, Doria's book-keeper would, as a matter of course, make Hendersons debtors to Flori 200*l.* for the cost of the silk; but he might not so readily find a creditor for the 10*l.* commission, or the 7*l.* interest eventually due on the advance. The custom in this primitive era of book-keeping probably was, to introduce the firm of the house into their books, making Hendersons debtors to Doria, for the 10*l.* and 7*l.*; but as the practice of book-keeping improved, it was found preferable to avoid inserting, on any occasion, the firm of the house, and to substitute nominal accounts, such as, commission, interest, bills payable, bills receivable. These, attention and practice rendered in time familiar to the book-keeper, who learned to open his Journal at the beginning of a year by making the parties who owed balances to the house debtors, not to the firm by name, but to Stock; and those to whom the house was indebted, creditors by Stock. As the transactions of the year proceeded, he made those to whom money was paid debtors, not to the firm of the house, but to Cash; and those for whose account bills were accepted debtors to Bills payable; so that book-keeping by double entry assumed its present form gradually and almost imperceptibly.

What are the advantages of this method compared to that of single entry? First, it supplies a test of accuracy; inasmuch as, the entries on the debtor side of the Ledger being equal to those on the creditor side, their respective totals ought, as a matter of course, to balance. After going through this proof, personal accounts of whatever length may be settled with confidence; while in a general account, such as kerseymeres or printed calicoes, the value sold and the value remaining on hand may be ascertained by merely balancing the account in the Ledger, without the repeated references to the sales book that would otherwise be required. Without double entry, a dealer could hardly estimate his property unless he took stock; but with it an extraction of the Ledger balances fulfils that object, and stock-taking, however proper as a test of the honesty of servants, becomes quite unnecessary as a means of calculation. In short, in regard to any person in trade, whether merchant, dealer, or manufacturer, double entry forms the connecting link of his accounts, and affords a ready solution of any inquiry as to the appropriation, increase, or diminution of his capital.

This advantage may fortunately be obtained without any great sacrifice of time or labour. Of the books of dealers, manufacturers, and retailers, nine parts in ten may continue to be kept by single entry; for the addition of a few pages of double entry in the form of a summary, at the end of the month or quarter, will be sufficient to exhibit the result of a great extent of transactions.

Nominal Accounts.—Of these our limits permit us to notice only two; Profit and Loss, and Merchandise. The former contains on the creditor side all the entries of commissions earned, and gains obtained on particular adventures; while the debtor side exhibits the losses incurred, whether by bad debts or by unsuccessful purchases. Every house keeping regular books must have a profit and loss account, but a merchandise account is altogether optional. Those who have such a head in their Ledger are accustomed to make it Dr. to the dealers or furnishers from whom they make purchases, and to credit it in return by the correspondents or connections to whom they make sales. In many houses, however, there is no such intermediate account; the parties to whom the goods are sent being made Drs. at once to the furnishers of the goods, as in the case of the shipment to Jamaica stated in our preceding pages.

A merchant, before estimating his profits, ought to charge interest on each head of investment. His clear profit cannot be ascertained without it; and the practice of charging it, is a lesson to him to hold no property that does not afford, at least, interest on his advances.

Mercantile books and accounts must be kept in the money of the country in which the partners reside. A house in Rotterdam composed of English partners necessarily keep their accounts in Dutch money, although their transactions may be chiefly with England. Further, books, it is obvious, can be kept in only one kind of money; and when a merchant in England, receives from a distant country, accounts which cannot at the time be entered in sterling for want of a fixed exchange, these accounts should be noted in a separate book, until the exchange being ascertained, they can be entered in the Journal in sterling.

A book-keeper will do well to avoid all such puzzling distinctions, as "J. Johnson, my account with him;" and "J. Johnson, his account proper;" on the plain ground that every account in the Ledger ought to be the general account of the person whose name it bears.

Errors excepted.—This expression is merely a proviso, that if any mistakes be discovered in the account in question, they shall be open to correction.

Accounts Current.—An account current generally contains all the transactions of the house with one of its correspondents during a given time, generally six or twelve months. The following is an example:—

Messrs. JAMES ALLAN & Co., Jamaica, in Account Current with HENRY BARCLAY & Co., London.													
	Dr.	£	s.	d.	Days to 31 Dec.	Interest.		Cr.	£	s.	d.	Days to 31 Dec.	Interest.

	To balance of interest this half year, 1,276 divided by 73, is -	17	9	7									
		1,879	8	7		2,160			1,879	8	7		2,460
Errors excepted.													
London, 31st of December, 1831.							HENRY BARCLAY & Co.						

We have here on the Dr. side all the payments made or responsibilities incurred for the correspondents in question, and on the Cr. side the different receipts on their account. The interest for the half year, the commission on receipts and payments, the postage and petty charges, being then added, the account may be closed and the balance carried to next year. Copies of accounts current ought to be sent off as soon as possible after the day to which they are brought down; and with that view they ought to be written out from the Ledger before the close of the year or half year, particularly as the entries for interest and commission can be made only after they are written out. The whole ought then to be copied into the account current book.

But in some counting-houses the account current book, instead of being copied from the Ledger and Journal, is posted, like the latter, from the bill book, the cash book, the invoice book, and the account of sales book. It is then considered a check on the Journal and Ledger; and from the comparative ease with which it is posted, may be completed and made use of before the latter are fully brought up. This is certainly an advantage in houses where, from pressure on the book-keeper, the Journal and Ledger are in arrear, but such ought never to be the case for any length of time; while as to the former point—that of forming a check on the Journal and Ledger—the fact is, that these books, from the mode in which they are kept, are much more likely to be correct than the account current book.

Printed Works on Book-keeping.—To the publications of old date by teachers have succeeded, in the present age, several treatises on book-keeping by accountants. Some of these are of very limited use, being directed more to recommend a favourite practice of the author in some particular branch of book-keeping, than to convey a comprehensive view of the system. The only works on the subject entitled to that character are two: one by the late Benjamin Booth, published above thirty years ago; the other by Mr. Jones, an accountant in London, printed so lately as the year 1831. Booth was a man of ability, who had experience both as a merchant and a book-keeper, having passed one part of his life in London, the other in New York. The reader of his work finds a great deal of information in short compass, without being perplexed either by superfluous detail or by fanciful theory.*

The form of Mr. Booth's Journal and Ledger is similar to what we have given in the preceding pages, and to the practice of our merchants for more than a century: it was by

* The title of the book is "A Complete System of Book-keeping, by Benjamin Booth." London, 1799, thin 4to. Printed for Grosvenor and Chater, and for the late J. Johnson, St. Paul's Church-yard.

Mr. Jones's book is entitled "The Science of Book-keeping exemplified." 4to. London, 1831. 4l. 4s.

much the best work on book-keeping, until Mr. Jones devised several improvements calculated to lessen the risk of error in both Journal and Ledger. One of these improvements is the use of two columns for figures in each page of the Journal, one for the Dra., the other for the Cra.: by inserting each sum twice, the book-keeper obtains the means of proving the Journal additions page by page. The posting from the Journal to the Ledger is also simplified and rendered less subject to error by the use of these columns. In regard to the great task of balancing the Ledger, Mr. Jones's plan is to do it quarter by quarter, making use of a separate book, called a balance book, in which are inserted the totals on each side of the Ledger accounts at the end of three months. By these means, the agreement of the general balance is made a matter of certainty after completing the additions. Other parts of Mr. Jones's book, viz. his *formules* for books on the single entry plan, and for the accounts of bankers, contain suggestions of evident utility. His volume consists of two parts: the printed part (120 pp.) containing the treatise, with directions; and the lithographed part (140 pp.) giving copious examples in two sets of books, one kept by single, the other by double entry. If, on a reimpression, the author were to divide the work, and to sell the single entry part separately from the double entry, the price of each might be moderate, and a great service would be rendered to the mercantile public.

BOOTS AND SHOES, the external covering for the legs and feet, too well known to require any description.—(For an account of the value of the boots and shoes annually produced in Great Britain, see **LEATHER**.)

BORAX, or **TINCAL** (Arab. *Buruk*; Pers. *Tunkar*), one of the salts of soda. This salt is obtained in a crystallised state from the bottom of certain lakes in Thibet. It is found dissolved in many springs in Persia, and may be procured of a superior quality in China. It is also said to be found in Saxony and South America; but it is more abundant in Thibet than any where else. When dug up it is in an impure state, being enveloped in a kind of fatty matter. It is then denominated tincal; and it is not till it has been purified in Europe that it takes the name of borax. The process followed in its purification was for a long time known only to the Venetians and Hollanders. Borax is white, transparent, rather greasy in its fracture, its taste is styptic, and it converts syrup of violets to a green. It readily dissolves in hot water, and swells and bubbles in the fire. It is of great use as a flux for metals.—(*Thomson's Chemistry, Ure's Dictionary, &c.*)

The borax entered for home consumption amounted, at an average of the 3 years ending with 1831, to 151,569 lbs. a year; the total imports during the 3 years ending with 1833 having been 170,398 lbs. a year. Previously to 1833, it was subject, refined, to a duty of 50s., and unrefined, to a duty of 26s. a cwt. In 1833, however, these duties were reduced, the former to 10s., and the latter to 4s. a cwt. Their produce in that year amounted to 8621. 15s. 1d. Borax is worth, in bond, unrefined, 31. 15s. to 41.; refined, 41. 10s. to 51. a cwt.

BORDEAUX, a large and opulent commercial city of France, situated on the Garonne, about 75 miles from its mouth, in lat. 44° 50' N., long. 0° 84' W. Population 110,000. The commerce of Bordeaux is very extensive. The Garonne is a noble river, with depth of water sufficient to enable large ships to come up to the city, laying open, in conjunction with the Dordogne and their tributary streams, a large extent of country. The commerce of Bordeaux is greatly promoted by the famous canal of Languedoc, which communicates with the Mediterranean. By its means Bordeaux is enabled to furnish the south of France with colonial products at nearly as cheap a rate as Marseilles. Wines, brandies, and fruits are the staple articles of export; but the merchants apply themselves more particularly to the wine trade. Most part of their other business is confined to dealing upon commission; but this they conduct almost invariably on their own account. The reason they assign for this is, that the difficulties attending the purchase, racking, fining, and proper care of wines, so as to render them fit for exportation, are so very great, as to make it almost impossible to conduct the business on any thing like the ordinary terms so as to satisfy their employers. Colonial products, cotton, &c. form the principal articles of importation.

Money is the same at Bordeaux as in other parts of France. All accounts are kept in francs, the par of exchange being 25 fr. 20 cent. the pound sterling.—(See **EXCHANGE**.)

Weights and Measures.—With the exception of wines and brandies, the new or decimal system is of general application in Bordeaux, both in wholesale and retail operations.—(See **WEIGHTS AND MEASURES**.)

Wine is still sold by the tun of 4 hogsheads. The hogshead contains 20 veltes.

Brandy by the 50 veltes.

Spirits of wine by the velte.

The velte is an old measure of which 50 are equal to 3.8 hectolitres.

Oil is sold by weight (per 50 kilog.) 50 — 81½ imperial gallons.

Entrance to the River.—This lies between Point de la Coubre on the north, and Point de Grave on the south, bearing from each other nearly S. E. and N. W., distant about 4 leagues. There are lights on both these points, but neither of them is elevated to any great height above the level of the sea. The middle part of the entrance to the river is encumbered with extensive sand banks and rocks. On one of the latter, in lat. 43° 35' N., long. 1° 10' W., stands the Tour de Cordouan, one of the most celebrated light-houses in Europe. It was erected in 1610; but has been materially improved since. It is 206 feet high. The light, which is revolving, exhibits in succession a brilliant light, a feeble light, and an eclipse, the changes following each other every half minute. It may be distinguished at the distance of 6 or 9 leagues. The point de la Coubre is ½ leagues N. ½ W., and the Point de Grave ½ league S. E. by E. ½ E., from the Tour de Cordouan. There are two main channels for entering the

river,—the *Passe du Nord*, and the *Passe de Grave*. The former lies between the north side of the river and the banks in the middle, about 1½ mile south from the Point de la Coubre; the water, where shallowest, being about 4½ fathoms. The course hence is nearly S. E. & E. The other principal passage lies between the Tour de Cordouan and the Point de Grave, nearly in a N. N. E. and S. S. W. direction. In some places it has not more than 13 feet water; and is in all respects very inferior to the other passage, which is always to be preferred, especially with a large ship. The tides, both ebb and flood, set through the channels with great rapidity, so that a good deal of caution is required on making the river; but having once entered, there is no further danger. Spring tides rise from 14 to 15 feet, and neaps from 7 to 8; but they depend a good deal on the direction of the wind. All vessels, except French coasters under 80 tons burden, and small craft from the north of Spain, entering the Garonne, are obliged to take a pilot on board as soon as one offers himself. In summer, pilots are not unfrequently met with 30 or 40 miles west of the Tour de Cordouan; and in winter they seldom venture far beyond the banks, and sometimes cannot proceed even thus far.—(See *Laurie's Plan of the Bay of Biscay*, with the *Sailing Directions*, &c.)

Shipping.—In 1831, the arrivals at Bordeaux were—

	Ships.	Tons.
French from French colonies - - -	163	84,723
— foreign countries - - -	146	37,236
— fishery - - -	234	9,165
— coasting trade - - -	2,341	109,370
Foreign ships from foreign countries - -	114	16,453
Total - - -	2,998	185,936

—(*Administration des Douanes*, p. 342.) It is stated in the *Revue Annuel*, published at Bordeaux, that of the 114 foreign ships entering the port in 1831, 50 were English. In 1832, there were ninety-five arrivals from England; and there was also a considerable increase in the arrivals from the north. The entire produce of the customs duties at Bordeaux in 1831, was 10,415,683 francs.

Port Charges.—Account of Port Charges, Brokerage, and other public Disbursements, payable in Bordeaux on account of a French or English Vessel of 300 Tons Burden, from a Port of England to Bordeaux, or from Bordeaux to a Port of England, or from or to any other British Possession in Europe.

Nature of Charges.	On a Fr. or Brit. Vessel.		On a Foreign Vessel.	
	In French Money.	In Sterling Money.	In French Money.	In Sterling Money.
Report and pilotage from sea to Bordeaux, for a vessel drawing 14 French feet water (16 Fr. 5-6 in. British)	210 00	3 15 2	247 50	9 18 0
Luminate dues	61 0	2 18 10	61 0	2 18 10
Moving vessel up and mooring her	19 0	0 8 0	10 0	0 8 0
Swearing vessel at Customs-house, and brokerage levies	108 0	4 0 0	166 0	4 0 0
Advertisements for freight and passengers, 68 Fr. (8s. 10d.) to each newspaper	485 0	19 16 0	1,230 0	49 11 2
Tonnage money and navigation dues on 300 tons	14 75	0 11 10	14 75	0 11 10
Visiting officers, customs, harbour-master, &c.	15 0	0 12 0	15 0	0 12 0
Wharf and freight tax	200 0	8 10 0	205 34	9 16 2
Ballast taken in and out, 1 fr. 25 c. per ton (1s.)	200 0	28 0 0	200 0	28 0 0
Customs bill. Dredge fee (English vessels), 17 fr. 25 c. (15s.)				
Pilotage from Bordeaux to sea				
Broker's commission outwards, care and attendance for expediting the vessel				
In ballast, 30 c. per ton (6d.), say 150 fr. at most (4l. 18s.)				
Loaded per charter or on cargo account, 1 fr. (10s.) per ton				
Loaded in freight, 1 fr. 50 c. (1s. 6d.) per ton				
	1,484 00	57 7 10	2,252 50	80 6 1

N. B.—No regard paid to the nature of the cargo, as all goods are importable either for consumption or exportation, which does not expose vessels to pay more or less charges.

British vessels are on a perfect equality with French vessels when they come from British ports in Europe, otherwise they pay pilotage and tonnage dues like all other foreign vessels, as stated in the foreign column.

Imports.—The following is a note of the leading articles imported, by the ships not of Europe, in 1837 and 1838, since which they have not materially varied. They are taken from the ship brokers' reports, no official account being published by the Customs.

	1837.	1838.		1837.	1838.	
Sugar - -	18,094	22,748	hogsheads	Indigo - -	1,243	serons

Cigars	170,000	80,000			23	11	boxes or sacks
					1,559,569	3,784,231	dollars

In addition to the articles above specified, there were also received for re-exportation considerable quantities of bar iron, utensils, and tools from England, Spain, and Sweden; zinc from Germany; and linens from England, Holland, and Germany: for consumption, lead, tin plates, coal (as ballast), arsenic, litharge, minium, &c. from England; lead, steel, olive oil, liquorice, paste, saffron, and saffron from Spain; steel from Germany; olive oil from Italy; fish, glue, and tallow from Russia; timber from Baltic ports; cheese, stock-fish, &c. from Holland.

Exports.—It is impossible to procure even approximate information regarding the quantities of the several articles of exportation. No reports are published by the Customs, nor do they allow extracts of the entries outwards to be taken.

The following is a list of the species of articles exported from Bordeaux to the different parts of the world:—

To Martinique and Guadeloupe.—Provisions, flour, wine, brandy, and a small quantity of manufactured goods.

To Bourbon.—Wines, provisions, cattle, furniture, coarse and fine hardwares, perfumery, silk, cotton and linen stuffs, stationery, fashionable articles, &c.

To the United States.—Wines, brandy, almonds, prunes, verdigris, and a trifling quantity of manufactured goods.

To Spanish America, Cuba, &c.—Wines, brandy, silks, cloths, stationery, fashions, jewellery, perfumery, saddlery, &c.

To the South Seas.—Wines, brandy, liqueurs, and all sorts of manufactured articles.

To the East Indies and China.—Wines, brandy, furniture, silver, &c.

To England.—Wines, brandy, liqueurs, fruits, tartar, cream of tartar, plums, chestnuts, walnuts, loaf sugar to Guernsey and Jersey, clover seed, anatto, corn, flour, skins raw and dressed, cork wood and corks, vinegar, turpentine, resins, &c.

To the North of Europe.—Wines, brandy, spirits of wine, tartar, cream of tartar, colonial produce, loaf-sugar, molasses, &c.

Wine.—This forms the great article of export from Bordeaux. The estimated produce of the department of the Gironde in wines of all kinds, and one year with another, is from 220,000 to 250,000 tuns; the disposal of which is, approximately, as follows:—

Consumed in the department	about	50,000 tuns.
Expedit to the different parts of France	—	125,000 —
Converted into brandy	—	25,000 —
Exported to foreign countries	—	50,000 —
		250,000 tuns.

The exports to foreign countries are as follow:—

To England	1,500 to 2,000 tuns.
Holland	12,000 - 15,000 —
The north of Europe	27,000 - 34,000 —
America and India	1,000 - 1,300 —
	41,500 to 50,000 tuns.

The red wines are divided into three great classes, each of which is subdivided into several sorts.

- Class 1. embraces the Medoc wines,
 2. — Grave, and St. Emilion,
 3. — common, or cargo wines.

The first class is composed of the "grands crus," the "crus bourgeois," and the "crus ordinaires."

The "grands crus" are further distinguished as *firsts*, *seconds* and *thirds*.

The *firsts* are the wines of Château Margaux, Lafitte, Latour, and Haut-Brion. The latter is properly a *Grave* wine, but it is always classed amongst the first Medocs.

The *seconds* are the wines of Rauzan, Leoville, Larose, Mouton, Gersé, &c.

The *thirds*, wines which are produced by the vineyards touching those above named, and which differ little in quality from them.

The quantity of "grands crus" wine of the above description does not exceed 2,000 tuns, and sells at from 1,600 fr. to 3,500 fr. per tun on the lees.

The "crus bourgeois" consists of the superior Margaux, St. Julien, Pauillac, St. Estaphe, &c.; quantity estimated about 2,000 tuns, and prices on the lees 600 fr. to 1,500 fr. per tun.

The "crus ordinaires," sell at 300 fr. to 700 fr. according to the year and the quality. Quantity, 25,000 to 35,000 tuns.

The whole produce of *Medoc* is therefore about 40,000 tuns.

The "grands crus" and "crus bourgeois" require 4 years' care and preparation, before delivery for use or for exportation; and this augments their price from 30 to 35 per cent.

The second class is composed of the red wines of *Grave* and *St. Emilion*, which are in greater quantity, and amongst them some of a very superior quality, that are generally bought for mixing with *Medoc*. The first quality of these wines sells from 600 fr. to 1,800 fr. per tun. The second qualities—*Qneyrries*, *Monferrand*, *Basans*, &c.—300 fr. to 600 fr.

The third class consists of the common or cargo wines, the greater part of which is consumed in the country, or converted into brandy. The portion exported is sent off the year of its growth. Prices from 160 fr. to 250 fr. per tun.

The white wines of the first "crus," such as *Haut-Basac*, *Preignac*, *Beaumes*, *Sauterne*, &c., are only fit for use at the end of 4 or 5 years, and for exportation at the end of 1 or 2 years more. Prices on the lees vary from 800 fr. to 1,500 fr. per tun.

The "grand crus," of white *Grave*, *St. Brie*, *Carbonieux*, *Delamont*, &c., sell, in good years, from 500 fr. to 800 fr.

Inferior white wines 130 fr. to 400 fr. per tun.

The expenses of all kinds to the wine-grower of Medoc, for the cultivation, gathering, and making his wine, and the cask, are estimated to amount, in the most favourable years, to 50 fr. per hogshead, or 200 fr. per tun.

The merchants in general purchase up the finest *crus* as soon as sufficiently advanced to judge of their character; or more frequently they are bought up for a series of years, whether good or bad. They are transported to their cellars or "chays," in Bordeaux, so situated and protected by surrounding houses, as to preserve a tolerable equable temperature throughout the year; and in these they ripen, and undergo all the different processes of fining, racking, mixing, &c. considered necessary to adapt them to the different tastes of the foreign consumers.

It is pretty generally the practice to adapt the wines for the English market by a plentiful dose of the strong, full-bodied, and high flavoured wines of the Rhone; such as Hermitage, Côte Rotie, and Croze—especially the first, by which means they are hardly cognisable by the Medoc flavour. Perhaps the principal reason for keeping these wines so long before they are used, is to give them time to acquire a homogeneous flavour, destroyed by the mixture of several different qualities. The wines shipped under the titles of Château Margaux, Lafitte, and Latour, are also mixed with the wines of the surrounding vineyards, which, from the nature of the soil, and proximity, cannot be greatly different. Other good wines are also said to enter largely into the composition of these celebrated *crus*; and those of a superior year are employed to bring up the quality of one or two bad years, so that it is easy to conceive, that the famous wines of 1811 and of the years 1815, 1819, and 1825, are not speedily exhausted. Some houses pretend to keep their wines pure; but the practice of mixing is, at any rate, very general.

The purchase of the wines, whether from the grower or merchant, is always effected through a broker. There are a few of them who have acquired a reputation for accuracy in dissecting the different flavours, and in tracing the results of the wines by certain measures of training, or treatment.

England takes off nearly half the highest priced wines, and very little of any other quality. Except in Bordeaux itself, there is but a very moderate portion of the superior Medoc consumed in France. The Capital even demands only second, third, and fourth rate wines.

The Dutch, who are large consumers of Bordeaux wine, go more economically to work. They send vessels to the river in the wine season, with skilful supercargoes, who go amongst the growers, and purchase the wines themselves, cheaper even than a broker would do. They live on board the ship, take their own time to select, and wait often for months before their cargo is completed; but they attain their object, getting a supply of good sound wine, and at as low a rate, with all charges of shipping included, as the wine merchants can deliver it into their stores in Bordeaux. They never purchase old wine; they take only that newly made, which, being without the support of stronger bodied wines, must be consumed in the course of 2 or 3 years. They follow the same system at Bayonne, where 2 or 3 ships go annually for the white wines of Jurançon, &c.

The cargo wines are so manufactured that it is hardly possible to know of what they are composed. They are put free on board for 2l. per hogshead and upwards, according as they are demanded. They are such as will not bear exposure in a glass when shipping: the tasters have a small flat silver cup expressly for them. These wines are principally shipped to America and India, and some at a higher price to the north of Europe.

The principal wine merchants have agents in London, whose business is more particularly to introduce their wines to family use; and it is to that end they pay them from 300l. to 800l. for travelling expenses and entertainments, besides allowing 3 per cent. or more, on the amount of sales. They generally look out for individuals for their agents of good address, and some connection amongst the upper classes.

Brandy and Spirits of Wine.—The quantity distilled in the neighbourhood of Bordeaux is estimated at about

	18,000 pieces, of 50 veltes each.
Ditto, in the Armagnac	20,000 ditto
Ditto, in the Marmandais	8,000 ditto
	46,000 pieces, ordinary proof.

Of this quantity, France takes off about 23,000 pieces for consumption; England, 3,500; United States, 10,000; India, 2,500; north of Europe, 5,000; in all, 43,000 pieces.

Languedoc produces annually about 40,000 pieces, of 80 veltes each, the greater part of which comes to Bordeaux to be forwarded to the different ports of the north of France, or to foreign countries.

France consumes about two thirds of the above quantity; the remaining one third goes to the north of Europe.

The prices of brandy are from 130 fr. to 150 fr. per 50 veltes, ordinary proof; spirits of wine, from 4 fr. to 5 fr. per velte.

It is at the port of Formy, on the Charente, that the greatest shipments of brandy take place to England. Cognac, from which the brandy takes its name, and where there are large distilleries, is a few leagues up the river. The quantity exported is far greater than what is made at Cognac—the two leading distillers there (Mariel, and Henessey) buying great quantities from the small cultivation. The greater part of the wines made about Angoulême, and thence down toward the sea, are of inferior quality, and fit only for making brandy; and so little do the prices vary, that the proprietors look upon it nearly in the same light as gold. When they augment their capital by savings or profits, it is employed in keeping a larger stock of brandy, which has the further advantage of paying the interest of their capital by its improved value from age. England is said to receive upwards of 6,000 pieces annually from Charente.

At Bordeaux, as at Paris and Marseilles, there is a constant gambling business in time bargains of spirits of wine. It is in the form of spirits of wine that nearly all the brandy consumed in France is credited; as in this form there is a great saving in carriage.—(For an official account of the exports of wine and brandy from France, see WINE.)

The fruits exported consist almost entirely of prunes and almonds. The latter come principally from Languedoc.

The policy of the Spanish government toward her American colonies during the last 10 years has been the cause of a great many very wealthy Spaniards settling in Bordeaux; and their number has been still further increased by the Spaniards expelled from Mexico, who do not choose to employ their fortunes in their native country, or find greater facilities for employing them in Bordeaux. These are in possession of the greater part of the Spanish American trade of this port, and are viewed with a very jealous eye by the old merchants. They have also contributed greatly to beautify the city, by employing their wealth in building, which they have done to a considerable extent. They have also reduced the rate of interest, and contributed to the facilities of discounting bills: the Spanish houses generally discount long bills at 1½ or 2 per cent. lower than the Bank.

Bordeaux possesses some iron foundries, cotton factories, sugar refineries, glass works, &c., but labour and living are too high to admit of its becoming a considerable manufacturing city.

Banking Establishments.—There is only one banking company in Bordeaux—the “Bordeaux Bank.” It has a capital of 3,000,000 fr., in shares of 1,000 fr. each. It issues notes for 1,000 and 500 fr. (40l. and 20l.) payable in specie on demand. Its affairs are managed by a Board of directors, named by the 50 principal shareholders. This Board fixes the rate of discount, and the number of names that ought to guarantee each bill; it being left to the discount committee to judge of the responsibility of the signatures on the bills presented. At present the bank discounts bills on Bordeaux, having 3 months to run, and guaranteed by 3 signatures, at 5 per cent., and those on Paris at 4½ per cent.

When bills are presented, not having the required number of names, or those deemed suspicious, they take, in guarantee, public stock bonds or other effects—advancing to the extent of 9-10ths of their current value.

The bank advances ½ths of the value of gold and silver in ingots, or in foreign money, deposited with them, at the rate of 5 per cent. per annum. It also accepts in deposit, diamonds, plate, and every kind of valuable property, engaging to redeliver the same in the state received, for ½ per cent. per quarter, or 1 per cent. per annum.

Those who have accounts current with the bank may have all their payments made, and money received, by the bank, without fee. It allows no interest on balances, and never makes advances either on personal security or on mortgage.

On the 31st of December, 1853, the bank notes in circulation amounted to 12,550,000 fr. (505,000l.)

The affairs of the bank are subject to the inspection of the Prefect, to whom half yearly reports of its situation are made. These are printed entire, and distributed to the 50 principal shareholders; an abstract being, at the same time, published in the Bordeaux journals.

After the revolution of July, 1830, there was a severe run on the bank; and owing to the difficulty of procuring gold from Paris, the directors were obliged to limit their deliveries in specie to 500 fr. (20l.) in a single payment; but notwithstanding this circumstance, no notes were protested; and the moment supplies of gold could be obtained from Paris, the operations of the bank resumed their usual course; and her affairs have been, during the last 3 years, uncommonly prosperous. Exclusive of the dividend of 5 per cent., the bank accumulated, in 1851, a surplus profit of 75,000 fr.; and, in 1852, her surplus profits were 250,000 fr., or 10,000l.

Brokers.—No one is allowed to act as a mercantile broker in France, who is not 25 years of age, and who has not served 4 years in a commercial house, or with a broker, or a notary public. They are nominated by the king, after their qualifications have been ascertained by the Chamber of Commerce. All brokers must deposit the sum of 6,000 fr. in the treasury, as a guarantee for their conduct, for which they are allowed interest at the rate of 4 per cent. At present there are in Bordeaux 31 ship brokers, 24 merchandise do., 20 wine and spirit do., 7 insurance do., and 20 money and exchange do.: the latter form a separate class.

All foreigners are obliged to employ ship brokers to transact their business at the Custom-house; and although masters and owners of French vessels might sometimes dispense with their services, they never do so, finding it to be, in all cases, most advantageous to use their intervention. All duties outward on vessels and cargoes are paid by the ship brokers, who invariably clear out all vessels, French as well as foreign.

Rates of Commission.—1. Ship brokers:—Vessel in ballast, 50 cents (5d.) per ton; vessel loaded per charter or on owners' account, 1 fr. (10d.) per ton. 2. Merchandise brokers:—½ per cent. on colonial produce, and other goods. 3. Wine and spirit brokers:—3 per cent. on wine, &c. 4. Insurance brokers:—½ per cent. 5. Money brokers:—½ per cent. on Paris and foreign paper; ½ per cent. on Bordeaux do. 6. Merchants:—8 per cent. on all sorts of operations between natives; 3½ per cent. on all sorts of operations between strangers; 5 per cent. on litigious affairs; 1 per cent. on goods in transit, when the consignment is present; ½ per cent. on banking affairs.

Insurance of ships, houses, and lives is effected at Bordeaux. The first is carried on partly by individuals, and partly by companies; the last two by companies only. The partners in these associations are generally liable only to the amount of the shares they respectively hold.

For statements as to the *Warehousing System, Smuggling, &c.*, the reader is referred to the article HAVEN.

Quarantine is performed at Trompeloup, where a spacious lazaretto has been constructed. Bordeaux is a favourable place for repairing and careening ships, and for obtaining supplies of all sorts of stores.

The exchange or money brokers of Bordeaux follow a kind of business pretty similar to the London private bankers. They receive, negotiate, and pay bills and orders, of such houses as have accounts open with them, charging and allowing an interest on balances, which varies from 3½ to 4½ per cent. according to circumstances. They charge ½ per cent. for negotiating bills, and ½ per cent. on all the payments they make.

There are, besides, numerous capitalists who employ their spare funds in discounting bills. They prefer bills at long dates, and take from 3 to 6 per cent. discount, according to the confidence they have in the paper presented.

There are not wanting individuals who guarantee, with their names, every sort of paper presented, taking from 5 to 60 per cent. for the risk.

Customary Mode of Payment, and Length of Credit.—Colonial produce, spices, dye stuffs, and metals are usually sold for cash, with 3 per cent. discount. Corn, flour, brandy, and several other articles, are sold for nett cash, without discount.

Wines are generally bought of the cultivators at 12 and 15 months' credit, or 6 per cent. discount. When they change hands amongst the merchants, the practice is to sell for cash, allowing 3 or 5 per cent. discount.

The usage is generally established in Bordeaux, to consider all paper having less than 30 days to run as cash; and with such all payments are made, where there is not an express stipulation to be paid in coin.

Taxes.—The taxes allowed in Bordeaux are as follows:—

At Custom-house.	In Commerce.	At Custom-house.	In Commerce.
Cotton in bales, 6 per cent.	Large square bales, 6 per cent. Smaller do., 4 per cent. Round do., 4 per cent.	Rice, from all countries free.	There nett, or 12 per cent.
Sugar in bales, 16 per cent.	In bales, 17 per cent. Trot per bhd., 1 kil. (2-24 lbs.)	Coffee in bags, bare nett, or 2 per cent.	In bags weighing 60 kil. (134 lbs.), 1 kil.
Do. in cases, Havannah, &c., 15 per cent.	In cases, Havannah, &c., 14 per cent. Trot per case, 1 kil. (2-24 lbs.)	Corn in bags, bare nett, or 2 per cent.	Do. above 1-4 to 75 kil. (132 to 165 lbs.) 1-2 kil.
Do. in bales from Bourbon, Mauritius, Malacca, &c., nett.	In bales from Bourbon, &c., real. Mauritius, Malacca, &c., 8 per cent.		Do. above 75 kil. (165 lbs.), 2 kil.
Do. clayen, in bales, white and brown, 12 per cent.	Clayen, in bales, white, 12 per cent. Trot per bhd., 1 kil.		In bags weighing 60 kil. (134 lbs.), 1 kil.
	Clayen do., brown, 12 per cent. Trot per bhd., 1 kil.	Pepper in bags, 2 per cent.	Do. above 75 kil. (165 lbs.), 2 kil. In bags weighing 60 kil. (134 lbs.), 1 kil.

At Custom-house.	In Commerce.	At Custom-house.	In Commerce.
Pepper in bags, 5 per cent.	In bags weighing from 60 1-2 to 75 kil. (185 to 198 lbs.), 1 1-2 kil. (101 to 120 lbs.), 5 kil. (81 to 100 lbs.), 8 kil. In sacks, 60 to 65 kil. (112 to 134 lbs.), 2 kil. In chests, real tare.	Peruvia bark, real tare.	In chests, tare net.
Angio, in chests, real tare.	Do. weighing from 45 to 55 kil. (101 to 122 lbs.), 7 kil. Do. 55 1-2 to 65 kil. (108 to 146 lbs.), 9 kil. Do. 65 1-2 to 75 kil. (108 to 168 lbs.), 9 kil. Do. 75 1-2 to 85 kil. (168 to 193 lbs.), 10 kil. Do. 85 1-2 to 107 kil. (214 to 240 lbs.), 11 kil. In chests of 300 kil. and above (448 lbs.), 15 per cent. Do. from 150 1-2 to 300 kil. (337 to 448 lbs.), 10 per cent. Do. from 120 to 150 kil. (268 to 336 lbs.), 20 per cent.	Aches, put and pear, 12 per cent. Cinnamon in chests, 12 per cent. Do. in chests, 8 per cent. Cloves, real tare.	Do. 60 to 75 kil. (134 to 168 lbs.), 10 kil. Pot and pear, 12 per cent. Ceylon, in sacks, or single bales, 3 kil. Do. in chests, bales, 6 kil. Chios, in chests, real tare. In chests, real tare. In bags weighing from 80 1-2 to 85 kil. (185 to 198 lbs.), real tare, or 2 kil. In bags, single, 1 kil. Real tare. Real tare. In chests, 4 per cent. for leaves, and 6 per cent. in bales, 5 kil.
Quercus bark, real tare.		Cochinal, real tare. Gum in chests, do. Mace and nutmegs, do. Annetto, none.	

. The instructive details with respect to the trade of Bordeaux given above, so very superior to what are to be found in any other publication, have been principally derived from a communication of Mr. Buchanan, of the house of James Morrison and Co., who acquired his information on the spot; but some particulars have been learned from the carefully drawn-up answers made by the Consul to the *Circular Queries*.

Operation of the French commercial System on the Trade of Bordeaux, &c.—The trade of this great city has suffered severely from the short-sighted, anti-social policy of the French government. This policy was first broadly laid down, and systematically acted upon, by Napoleon; and we believe it would not be difficult to show that the privations it entailed on the people of the Continent powerfully contributed to accelerate his downfall. But those by whom he has been succeeded, have not hitherto seen the expediency of returning to a sounder system; on the contrary, they have carried, in some respects at least, the “continental system” to an extent not contemplated by Napoleon. Notwithstanding the vast importance to a country like France, of supplies of iron and hardware at a cheap rate, that which is produced by foreigners is excluded, though it might be obtained for half the price of that which is manufactured at home. A similar line of policy has been followed as to cotton yarn, earthenware, &c. And in order to force the manufacture of sugar from the beet-root, oppressive duties have been laid, not only on foreign sugar, but even on that imported from the French colonies. The operation of this system on the commerce and industry of the country has been most mischievous. By forcing France to raise, at home, articles for the production of which she has no natural or acquired capabilities, the exportation, and consequently the growth, of those articles in the production of which she is superior to every other country, has been very greatly narrowed. All commerce being bottomed on a fair principle of reciprocity, a country that refuses to import must cease to export. By excluding foreign produce—by refusing to admit the sugar of Brazil, the cottons and hardware of England, the iron of Sweden, the linens of Germany, and the cattle of Switzerland and Württemberg—France has done all that was in her power to drive the merchants of those countries from her markets. They are not less anxious than formerly to obtain her wines, brandies, and silks; inasmuch, however, as commerce is merely an exchange of products, and as France will accept very few of the products belonging to others, they cannot, how anxious soever, maintain that extensive and mutually beneficial intercourse with her they would otherwise carry on: they sell little to her, and their purchases are of course, proportionally diminished.

This, indeed, is in all cases the necessary and inevitable effect of the prohibitive system. It never fails to lessen exportation to the same extent that it lessens importation; so that, when least injurious, it merely substitutes one sort of industry for another—the production of the article that had been obtained from the foreigner, in the place of the production of that which had been sent to him as an equivalent.—(See COMMERCE.)

France is not only extremely well situated for carrying on an extensive intercourse with foreign countries, but she is largely supplied with several productions, which, were she to adopt a liberal commercial system, would meet with a ready and advantageous sale abroad, and enable her to furnish equivalents for the largest amount of imports. The superiority enjoyed by Amboyna in the production of cloves is not more decided than that enjoyed by France in the production of wine. Her claret, burgundy, champagne, and brandy, are unrivalled; and furnish, of themselves, the materials of a vast commerce. Indeed, the production of wine is, next to the ordinary business of agriculture, by far the most extensive and valuable branch of industry in France. It is estimated by the landholders and merchants of the department of the Gironde, in the admirable *Pétition et Mémoire à l'Appui* presented by them to the Chamber of Deputies in 1838, that the quantity of wine annually produced in France amounts, at an average, to about 40,000,000 hectolitres, or 1,060,000,000 gallons; that its value is not less than from 800,000,000 to 1,000,000,000 francs, or from 32,000,000*l.* to 40,000,000*l.* sterling; and that upwards of three millions of individuals are employed in its production. In some of the southern departments, it is of paramount importance. The population of the Gironde, exclusive of Bordeaux, amounts to 432,899 individuals, of

whom no fewer than 226,000 are supposed to be directly engaged in the cultivation of the vine.

Here, then, is a branch of industry in which France has no competitor, which even now affords employment for about a tenth part of her population, and which is susceptible of indefinite extension. The value of the wines, brandies, vinegars, &c. exported from France, at an average of the 3 years ending with 1780, amounted to about 51,000,000 francs, or upwards of *two millions sterling*. The annual exports of wine from Bordeaux only, exceeded 100,000 tuns; and as the supply of wine might be increased to almost any amount, France has, in this single article, the means of carrying on the most extensive and lucrative commerce. "Le gouvernement Français," says Mr. Chaptal, in his work *Sur l'Industrie Française*, "doit les plus grands encouragements à la culture des vignes, soit qu'il considère ses produits relativement à la consommation intérieure, soit qu'il les envisage sous le rapport de notre commerce avec l'étranger, *donc il est en effet la base essentielle.*"

But instead of labouring to extend this great branch of industry, government has consented to sacrifice it to the interests of the iron-founders, and the planters of Martinique and Guadeloupe! We do not, indeed, imagine that they were at all aware that such would be the effect of their policy. There is only one instance, among myriads that may be specified, to prove that ignorance in a ministry is quite as pernicious as bad intentions. The consideration, apparently, not a very recondite one, that, notwithstanding the bounty of nature, wine was not gratuitously produced in France, and could not, therefore, be exported except for an equivalent, would seem never to have occurred to the ministers of Louis and Charles X. But those whose interests were at stake, did not fail to apprise them of the hollowness of their system of policy. In 1822, when the project for raising the duties on sugar, iron, linens, &c. was under discussion, the merchants of Bordeaux, Nantes, Marseilles, and other great commercial cities, and the wine-growers of the Gironde, and some other departments, presented petitions to the Chambers, in which they truly stated, that it was a contradiction and an absurdity to attempt selling to the foreigner, without, at the same time, buying from him; and expressed their conviction, that the imposition of the duties in question would be fatal to the commerce of France, and would consequently inflict a very serious injury on the winegrowers and silk manufacturers. These representations did not, however, meet with a very courteous reception. They were stigmatised as the work of ignorant and interested persons. The Chambers approved the policy of ministers; and in their ardour to extend and perfect it, did not hesitate deeply to injure branches of industry on which several millions of persons are dependent, in order that a few comparatively insignificant businesses, nowise suited to France, and supporting 100,000 persons, might be bolstered up and protected!

The event has shown that the anticipations of the merchants were but too well founded. There is a discrepancy in the accounts laid before the late *Commission d'Enquête* by government, and those given in the above-mentioned *Pétition et Mémoire à l'Appui* from the Gironde. According to the tables printed by the Commission, the export of wine from France is, at this moment, almost exactly the same as in 1789. It is, however, plain that, had there not been some powerful counteracting cause in operation, the export of wine ought to have been very greatly augmented. The United States, Russia, England, Prussia, and all those countries that have at all times been the great importers of French wines, have made prodigious advances in wealth and population since 1789; and, had the commerce with them not been subjected to injurious restrictions, there is every reason to think that their imports of French wine would have been much greater now than at any former period.

But the truth is, that the accounts laid before the Commission are entitled to extremely little credit. In so far as respects the export of wine from Bordeaux, which has always been the great market for this species of produce, the statements in the *Mémoire à l'Appui* are taken from the Custom-house returns. Their accuracy may, therefore, be depended upon, and they show an extraordinary falling off. Previously to the Revolution, the exports amounted to 100,000 tuns a year—(*Peuchet, Statistique Élémentaire*, p. 138.); but since 1820, they have only been as follows:—

	Tuns.		Tuns.		Tuns.		Tuns.
1820,	61,110	1821,	39,956	1824,	39,025	1826,	48,46
1821,	63,244	1822,	51,539	1825,	46,314	1827,	54,40

It is also stated (*Mémoire*, p. 33.), that a large proportion of these exports has been made on speculation; and that the markets of Russia, the Netherlands, Hamburg, &c. are glutted with French wines, for which there is no demand. "Dans ce moment," (25th April, 1828,) it is said in the *Mémoire*, "il existe en consignment, à Hambourg, 12,000 à 15,000 barriques de vin pour compte des propriétaires du département de la Gironde, qui seroient trop heureux s'ils ne perdoient que leur capital."

This extraordinary decline in the foreign demand has been accompanied by a corresponding glut of the home market, a heavy fall of prices, and the ruin of a great number of merchants and agriculturists. It is estimated, that there were, in April, 1828, no fewer than 600,000 tuns of wine in the Gironde, for which no outlet could be found; and the glut in

the other departments, is said to have been proportionally great. The fall in the price of wine has reacted on the vineyards, most of which have become quite unsaleable; and a total stop has been put to every sort of improvement. Nor have matters been in the least amended during the current year: on the contrary, they seem to be gradually getting worse. Such is the poverty of the proprietors, that wine is now frequently seized, and sold by the revenue officers in payment of arrears of taxes; and it appears, from some late statements in the *Mémorial Bordelais* (a newspaper published at Bordeaux), that the wine so sold has not recently fetched more, at an average, than about two thirds of the cost of its production!

The following official account of the exports of wine from the Gironde, during the 3 years ending with 1831, sets the extraordinary decline of this important trade in the most striking point of view:—

Year.	Litres.	Imp. Gal.	Year.	Litres.	Imp. Gal.	Year.	Litres.	Imp. Gal.
1829	43,832,004	= 9,643,053	1830	28,551,863	= 6,281,412	1831	24,409,604	= 5,370,110

The exports of brandy have declined in about the same degree; and the foreign shipping frequenting the port has been diminished nearly a half.

Such are the effects that the restrictive system of policy has had on the wine trade of France,—on a branch of industry which, as we have already seen, employs *three millions* of people. It is satisfactory, however, to observe, that the landowners and merchants are fully aware of the source of the misery in which they have been involved. They know that they are not suffering from hostile or vindictive measures on the part of foreigners, but from the blind and senseless policy of their own government; that they are victims of an attempt to counteract the most obvious principles—to make France produce articles directly at home, which she might obtain from the foreigner in exchange for wine, brandy, &c. at a third or a fourth part of the expense they now cost. *They cannot export, because they are not allowed to import.* Hence they do not ask for bounties and prohibitions; on the contrary, they disclaim all such quack nostrums; and demand what can alone be useful to them, and beneficial to the country,—a free commercial system.

“Considéré en lui-même,” say the landowners and merchants of the Gironde, “le système prohibitif est la plus déplorable des erreurs. La nature, dans sa variété infinie, a départi à chaque contrée ses attributs particuliers; elle a imprimé sur chaque sol sa véritable destination, et c’est par la diversité des produits et des besoins, qu’elle a voulu unir les hommes par un lien universel, et opérer entre eux ces rapprochements qui ont produit le commerce et la civilisation.

“Quelle est la base du système prohibitif? Une véritable chimère, qui consiste à essayer de vendre à l’étranger sans acheter de lui.

“Quelle est donc la conséquence la plus immédiate du système prohibitif, ou, en d’autres termes, du monopole? C’est que le pays qui est placé sous son empire ne peut vendre ses produits à l’étranger. Le voilà donc refoulé dans lui-même; et à l’impossibilité de vendre ce qu’il a de trop vient se joindre la nécessité de payer plus cher ce qui lui manque.

“Notre industrie ne demandait, pour fructifier, ni la faveur d’un monopole, ni cette foule d’artifices et de secours dont bien d’autres ont imposé le fardeau au pays. Une sage liberté commerciale, une économie politique fondée sur la nature, en rapport avec la civilisation, en harmonie avec tous les intérêts véritables; telle étoit son seul besoin. Livrée à son essor naturel, elle se seroit étendue d’elle-même sur la France de 1814, comme sur celle de 1789; elle auroit formé la plus riche branche de son agriculture; elle auroit fait circuler, et dans son sol natal, et dans tout le sol du royaume, une sève de vie et de richesse; elle auroit encore attiré sur nos plages le commerce du monde; et la France, au lieu de s’ériger avec effort en pays manufacturier, auroit reconquis, par la force des choses, une supériorité incontestable comme pays agricole.

“Le système contraire a prévalu.

“La ruine d’un des plus importants départements de la France; la détresse des départements circonvoisins; le dépeuplement général du Midi; une immense population attaquée dans ses moyens d’existence; un capital énorme compromis; la perspective de ne pouvoir prlever l’impôt sur notre sol appauvri et dépeuplé; un préjudice immense pour tous les départements dont nous sommes tributaires; un décroissement rapide dans celles de nos consommations qui profitent au Nord; la stagnation générale du commerce, avec tous les désastres qu’elle entraîne, toutes les pertes qu’elle produit, et tous les dommages au matériel, ou politiques ou moraux, qui en sont l’inévitable suite; enfin, l’antantissement de plus en plus irréparable de tous nos anciens rapports commerciaux; les autres peuples s’enrichissant de nos pertes et développant leur système commercial sur les débris du nôtre; “Tels sont les fruits amers du système dont nous avons été les principales victimes.”

Such is the well authenticated account, laid before the Chamber of Deputies by 12,563 landowners and merchants of the Gironde, of the *practical* operation and real effect of that very system of policy, which, extraordinary as it may seem, has been held up for imitation to the parliament of England!

The effect of this system upon the silk trade of France, the most important branch of her *manufacturing* industry, and one in which she had long the superiority, is similar, and hardly less destructive. Her prohibitions have forced others to manufacture for themselves, so that the foreign demand for silks is rapidly diminishing. It is stated, in *Observations adressées à la Commission d’Enquête*, by the delegate of the Chamber of Commerce of Lyons, that the silk manufacture is in the worst possible state. “Ce qui doit surtout exciter,” he observes, “la sollicitude du gouvernement, et le décider à entrer dans nos vues, c’est l’état déplorable, alarmant, de la fabrique de Lyon: les quatre années de 1824 à 1827 offrent sur les quatre années précédentes un déficit qui excède 150 mille kilog. pour les seules expéditions d’Allemagne; l’année 1828, et l’année courante, 1829, nous donnent une progression décroissante plus effrayante encore.”—(p. 11.) It is further stated, in a Report by the manufacturers of Lyons, that there were 26,000 looms employed in that city in 1824,

while at present there are not more than 15,000. The competition of Switzerland and England has been chiefly instrumental in producing these effects. At Zurich, where there were only 3,000 looms employed in 1815, there were, in 1830, more than 5,000; and at Eberfeld, where there were none in 1815, there were then above 1,000. Switzerland is said to have, in all, 11,000 looms employed at this moment (1833) in the manufacture of plain broad silks.

Besides the injury done to the wine trade of France by her anti-commercial system, it has been much injured by the *octrois*, and other duties laid on wine when used for home consumption. These, however, have been modified since the accession of Louis Philippe; and it is reasonable to suppose, that the experience that has been afforded of the ruinous effects of the prohibitive system, and the more general diffusion of correct ideas with respect to the real sources of wealth, will at no distant period cause the adoption of such changes in the commercial legislation of France, as may render it more conducive to her interest, and more in accordance with the spirit of the age. If we were hostile to France, we should wish her to continue the present system; but we disclaim being actuated by any such feelings. We are truly anxious for her prosperity, for her sake and our own; for, unless she be surrounded by Bishop Berkeley's wall of brass, whatever contributes to her prosperity must, in some degree, redound to the advantage of her neighbours.

"Were such narrow and malignant politics to meet with success," said Mr. Hume, writing in the middle of the last century, and when the prosperity of others was generally regarded with an evil eye, "we should reduce all our neighbouring nations to the same state of sloth and ignorance that prevails in Morocco and the coast of Barbary. But what would be the consequence? They could send us no commodities; they could take none from us: our domestic commerce itself would languish for want of emulation, example, and instruction; and we ourselves should soon fall into the same abject condition to which we had reduced them. I shall, therefore, venture to acknowledge, that not only as a man, but as a British subject, I pray for the flourishing commerce of Germany, Spain, Italy, and even France itself. I am, at least, certain that Great Britain, and all those nations, would flourish more, did their sovereigns and ministers adopt such enlarged and benevolent sentiments towards each other."—(*Essay on the Jealousy of Trade*.)

For a more ample exposition of the nature and effects of the French commercial system, the reader is referred to an article in the 99th number of the *Edinburgh Review*, contributed by the author of this work. Most of the foregoing statements are taken from that article.

[To one residing in the United States, where the population is so very locomotive that almost every person is occasionally a traveller, it must appear singular that only two diligences should daily leave a city as considerable and important as Bordeaux, for Paris, and only a single diligence should leave it in the opposite direction for Spain. Such is, nevertheless, the fact. Steam navigation has been introduced on the Garonne, both above and below Bordeaux. And since the year 1825, three packets regularly sail between that city and the Havanna, and six others between it and Mexico.

The chief imports from Bordeaux into the United States are wines, white as well as red, brandies, cordials, olive oil, and fruits of various descriptions. But our commerce with that port has very much declined since Havre has grown into importance.—*Am. Ed.*]

BOSTON, a commercial city of the United States, the capital of Massachusetts, and the largest town of New England, in lat. 42° 23' N., long. 71° 4' W. Population, in 1836, 62,000. The city is situated on a peninsula near the bottom of a large and deep bay, being surrounded on all sides by water, except on the south, where it is joined to the main land by the narrow isthmus called Boston Neck. But it communicates, by means of extensive wooden bridges, with Charleston on the north side of the bay, and with Dorchester on the south. Boston Bay is of great extent, and is studded with many islands. The plan on the opposite side, will give a better idea of it than could be derived from any description.

Shipping.—According to the official accounts laid before Congress, 15th of February, 1833, the registered, enrolled, and licensed tonnage belonging to Boston in 1831 amounted to 128,174 tons, of which 21,084 tons were employed in the coasting trade, and 17,784 in the fisheries.*

In 1831, there arrived from foreign parts 766 ships, of the burden of 136,980 tons. Of these were, American, 671 ships, tonnage, 115,780; and British, 86 ships, tonnage 9,350. With the exception of Sweden, which sent 3, there was not more than 1 ship from any other country! In 1832, the foreign arrivals were 1,064 ships, tonnage not stated; of these, 842 were American, and 211 British.

The arrivals coastwise in 1832 were 2,530; of these were 62 ships, 514 brigs, 2,333 schooners, and 628 sloops.

Shipping Charges.—For an account of these, see NEW YORK.

* By comparing this return with that for 1826, given in the former edition of this work, there would appear to have been a considerable falling off in the interim in the amount of shipping; this, however, is not really the case. For an explanation of the discrepancy, see art. NEW YORK.

References to Plan.—A, outer light-house, 65 feet high, having a revolving light, alternately brilliant 40 and obscured 20 seconds. B, buoy on the outward edge of the shoal, off Alderton Point. C, D, E, Great, Middle, and Outward Brewster's Islands. F, George's Island. The passage for ships, lying between this island and the rocks on the opposite side of Lovell's Island (G), being very narrow, it is, in effect, the key of the harbour; and large sums have recently been expended on its fortification. To the south of George's Island, and Rainsford's Island (H), is Nantasket road, where there is good anchorage. The outer harbour lies to the west of Lovell's (G) and George's (F) Islands, being separated from the inner harbour by Castle Island (M), and Governor's Island (N.) On the north end of Long Island (I) is a harbour fixed light, 27 feet high. K, Dyer Island. L, Spectacle Island. O, Middle Ground, dry at $\frac{1}{2}$ ebb. P, Upper and Middle Ground, having, at ebb, only 5 feet water. Q, Thomson's Island. R, Dorchester Point. S, East Boston. T, Charlestown. M, N, and U, are all fortified. The course that a ship ought to steer is marked by the dotted line, leading between the light-house and Alderton Point, and between George's Island (F) and Lovell's Island (G). The soundings are laid down in fathoms at low water.

Vol. L—U

How to enter the Port.—In coming from the Atlantic, a ship should bring the light-house to bear W. by N. to W. N. W., and run direct for it. The largest ships may pass it at within less than a cable's length. If there be no pilot on board, or the master be unacquainted with the harbour, or the wind be north-westerly, which is the most unfavourable for entering, she had better steer W. by S. for Nantasket roads, where she may anchor, and get a pilot.

Moorings, &c.—Generally speaking, there is sufficient depth of water to enable the largest ships to come up to town at all times of the tide. They usually moor alongside quays or wharfs, where they lie in perfect safety. There are in all about 60 wharfs; which, for the most part, are built on piles, with a superstructure of stone and earth. The two principal are "Long Wharf," 550 yards in length; and "Central Wharf," 413 yards long by 50 in breadth, having a range of lofty brick stores and warehouses along its whole length.

Pilotage.—No particular place is specified at which vessels must heave to for a pilot. But all vessels, with the exception of coasters under 900 tons, and American vessels laden with plaster of Paris from British America, if hailed by a pilot within about 1½ mile of the outer light, must take him on board, under a penalty of 50 dollars. If they have got within this distance before being hailed, the obligation to take a pilot on board ceases. This regulation has obviously been dictated by a wish to have the pilots constantly on the alert; it being supposed that masters not well acquainted with the bay will heave to to take one on board, though they have got within the free limits.

Table of the Rates of Pilotage on Outward and Inward bound Vessels in the Port of Boston.

Careening, Stores, &c.—Boston is a very favourable place for careening and repairing ships. All kinds of supplies may be had of the best quality and at moderate prices.

Customs Revenue.—The amount collected at Boston in 1831 was 5,227,592 dollars = 1,176,208l. 4s.—(For an Account of the American warehousing system, see New York.)

Immigration.—The number of immigrants arriving at Boston is not great, seldom exceeding 1,600 in a year. A city ordinance directs that the masters of vessels bringing immigrants shall enter into a bond with sureties to the amount of 200 dollars for each immigrant, that he shall not become a charge upon the state for 3 years, or pay a commutation of five dollars on account of each individual. But this regulation does not apply to immigrants having a reasonable amount of property; the declaration of the foreign consuls as to this point is commonly acted upon.

Trade of Boston, &c.—Boston has a very extensive trade with the southern states and with foreign countries, and is also one of the principal seats of the American fisheries. She is wholly indebted to her southern neighbours, and principally to New York, Maryland, and Pennsylvania, for supplies of flour and wheat, and for large quantities of barley, maize, oatmeal, oats, &c., as well as for cotton, tobacco, staves, rice, &c. Of these, the imports of flour may amount, at an average, to about 400,000 barrels a year; all sorts of grain to about 2,000,000 bushels; cotton, 160,000 bales; staves, 3,000,000, &c. Her returns are made, partly in native raw produce, as beef, pork, lard, &c.; partly and principally in the produce of her manufacturing industry, in which Massachusetts is decidedly superior to every other state in the Union; and partly in the produce of her fisheries and foreign trade. At an average, Boston annually sends to the southern ports of the Union about 45,000 barrels of beef and pork; 165,000 barrels of mackerel, herrings, alewives, &c.; 20,000 quintals of dried and smoked fish; 3,500,000 pairs of boots and shoes; 600,000 bundles of paper; besides a very large amount of cotton and woollen manufactured goods, nails, furniture, cordage, &c.; so as to leave a large balance in her favour. Her exports of native produce to foreign countries consist principally of the same articles she sends to the southern states; but she also exports a large amount of the foreign produce she had previously imported. The imports from abroad consist principally of cotton and woollen goods; linens, canvas, &c.; hardware, silks, sugar, tea, coffee, wines and brandy, spices, hides, indigo, dye woods, &c. The total imports from foreign countries into the state of Massachusetts in the year ending 30th of September, 1832, amounted to 18,118,900 dollars; while the exports of native produce, during the same year, amounted to only 4,656,635 dollars, and of native and foreign produce together, to 11,993,763 dollars; the balance against Massachusetts being paid off by bills upon the southern states, to which she exports much more than she imports. New York alone is, in fact, supposed to be at all times indebted to Boston about 5,000,000 dollars. We subjoin a summary

Account of the Trade of Boston and Massachusetts with Foreign Countries in 1831.

Imports from	Dollars.	Exports to	Dollars.

Total value of imports into } Massachusetts - }	14,269,056	Total value of exports from } Massachusetts - }	7,733,763
14,269,056 dollars = 3,210,527l. 12s. sterling.		7,733,763 dollars = 1,740,096l. 13s. 6d. sterling.	

Banks.—In January, 1833, there were 84 Banks in the state of Massachusetts, of which 34 were in Boston. Of the latter, 4 or 5 were only recently established. We subjoin a detailed statement of the principal circumstances in the condition of the Boston banks in 1830; and for further particulars the reader is referred to the article **BANKS** (FORBIGN).

Banks.	Shares.	Each.	Capital.	Time and Rate of Dividend.	Amount of Dividend.

South - - - - -	7,500	100	750,000	April 3—Oct. 3	45,000
Atlantic - - - - -	5,000	100	500,000	April 2½—Oct. 1½	20,000
Totals - - - - -	140,200		13,900,000		703,500

So that there were in 1830, in Boston, 18 banks with a capital of 13,900,000 dollars. The dividends on this sum for the same year amounted to 703,500 dollars, being at the rate of 5-06 per cent. The paper under discount is estimated to have exceeded 70,000,000 dollars.—(Statement by J. H. Goddard, *New York Advertiser*, 26th of January, 1831.)

Insurance Companies.—Insurance, both fire and marine, is carried on to a great extent by joint stock companies, and to some extent also by individuals. The stocks of the different insurance companies amounted in January, 1833, to 6,675,000 dollars. Only one company is established for insurance upon lives. The stocks of the different insurance companies produced, in 1830, an average dividend of 5-113 per cent.

Credit.—Foreign goods are frequently sold for ready money, but more usually at a credit of from 3 to 12 months: average length of credit, 6 months; but on iron and some other articles, 12 months' credit is given. Discount for ready money at the rate of 6 per cent. per annum.

Commission.—The rates of commission are arbitrary, varying from 2 to 5, and sometimes (*del credere* included) to 7½ per cent. On small accounts, and West India goods, 5 per cent. is usually charged. The ordinary rate may be taken at 2½ per cent.; but competition is so great, that commission merchants may be found who will transact business on almost any terms. Sometimes whole cargoes are sold by brokers on an agreement to receive a specific sum in lieu of commission and brokerage.

Bankruptcy.—The law as to bankruptcy in Massachusetts seems to be in a most disgraceful state. Preferences are very frequently given; and property is in many instances conveyed, for behoof of the bankrupt's family, to persons said to be creditors to a corresponding amount, without their having any real claim to such character. It is true that these conveyances may be cancelled; but the difficulties in the way are so great, that they are seldom set aside. The safest course that a foreigner, or one not thoroughly acquainted with the city, can pursue, is to deal only for ready money; and to employ none but the most respectable agents.

Money.—In Massachusetts, and throughout New England, the dollar passes at 6s.; so that the pound sterling = 1l. 6s. 8d. Boston currency.—(For further particulars as to *Money, Weights, Measures* &c. see *NEW YORK*.)

We have derived these details partly from the authorities referred to, partly from private information, and partly from the elaborate *Answers to the Circular Queries*.

[According to a census taken in May, 1837, the population of Boston was 80,325]

From an abstract of the returns made by the banks of Massachusetts, showing their condition on the 10th of February, 1838, and published under the direction of the Secretary of the Commonwealth, it appears that at that date there were no less than 128 banks in the State. No returns were received from five of these. The aggregate of the amounts returned by the remaining 123, together with those returned by them on the preceding 1st day of October, were as follows:—

	Oct. 1.	Feb. 10.
Circulation - - - - -	\$9,964,110	\$9,100,776
Balances to other banks - - - - -	5,408,012	4,531,813
Deposites not on interest - - - - -	8,231,580	5,436,530
Do. on interest - - - - -	5,318,484	2,650,832
Specie - - - - -	1,474,743	1,701,460
Bills of other banks - - - - -	2,954,804	2,700,375
Balances from other banks - - - - -	5,662,780	4,037,618
Loans - - - - -	56,308,121	52,796,967
Nett profits on hand - - - - -	1,474,487	2,412,578
Amount of last dividend - - - - -	1,038,850	1,041,350

For a later account of the trade of Boston with foreign countries than is given above, the reader is referred to the article Imports and Exports.—*Am. Ed.*]

BOTARGO, called in Provence *Bouargue*, a sausage made on the shores of the Mediterranean and the Black Sea, of the roe of the mullet. The best comes from Tunis and Alexandria.

BOTTLES (Fr. *Bouteilles*; Ger. *Bouteillen*; It. *Bottiglie*; Fiaschi; Rus. *Bukalki*, Sp. *Botellas*), glass vessels for holding liquids, too well known to require any description. They are exported in considerable quantities. The duty of 8s. a cwt. on bottle glass, like the duties on other descriptions of glass, is both oppressive in amount, and is imposed and collected in the most vexatious manner. The manufacture has declined considerably since 1826.—(For further details, see GLASS.)

(**BOTTLES (STONE)**).—In 1812, a duty of 2s. 6d. a cwt., increased in 1817 to 5s., was imposed upon stone bottles. The average nett produce of this duty has not recently exceeded 3,500*l.* a year. But, to collect this insignificant sum, the manufacture had to be placed under the surveillance of the excise, and those engaged in it subjected to various troublesome and vexatious regulations. The duty did not extend to Ireland, so that a drawback had to be granted on bottles exported to that country, and a countervailing duty charged on those imported from it. This unproductive and troublesome duty was imposed at the instance of the glass bottle manufacturers, who contended, that if stone bottles were exempted from duties, they would be used instead of glass bottles, to the injury of those engaged in manufacturing the latter. But the purposes to which stone bottles and glass bottles are applied are so very different, that it would require a much greater reduction of the price of the former than could possibly be occasioned by the abolition of the duty, to make them be substituted, to any extent worth mentioning, in the place of the latter. These views were ably enforced by the Commissioners of Excise Inquiry; and having been adopted by government, the duty has been abolished.—(4 & 5 Will. 4. c. 77.; see also *Fifth Report by Commissioners of Excise Inquiry*.)

It is to be hoped that the duty on glass bottles may, also, be speedily put an end to. It produces about 110,000*l.* a year. We noticed (see art. WINE) the propriety of enacting and enforcing some regulations as to the size of bottles. The bottle is, in fact, a very important measure; a great deal of wine and other liquors being sold by the dozen. But there is, at this moment, the greatest discrepancy in the size of bottles; and it appears to us that it would be highly expedient, in order to obviate the numerous frauds arising from this source, to enact that all bottles be made to contain not less than a certain specified quantity, and to place them under the acts relating to weights and measures.—*Sup.*)

BOTTOMRY AND RESPONDENTIA.—Bottomry, in commercial navigation, is a mortgage of the ship. The owner or captain of a ship is, under certain circumstances, authorised to borrow money, either to fit her out so as to enable her to proceed on her voyage, or to purchase a cargo for the voyage, pledging the keel, or bottom of the ship (a part for the whole), in security for payment. In bottomry contracts it is stipulated, that if the ship be lost in the course of the voyage, the lender shall lose his whole money; but if the ship arrive in safety at her destination, the lender is then entitled to get back his principal, and the interest agreed upon, however much that interest may exceed the legal rate.—(*Black. Com.* book ii. c. 30.) The extraordinary hazard run by the lenders of money on bottomry, who, in fact, become adventurers in the voyage, has been held, in all countries, as justifying them in stipulating for the highest rate of interest.

When the loan is not on the ship, but on the goods laden on board, which, from their nature, must be sold or exchanged in the course of the voyage, the borrower's personal responsibility is then the principal security for the performance of the contract, which is therefore called *respondentia*. In this consists the principal difference between bottomry and respondentia. The one is a loan upon the ship, the other upon the goods. The money

is to be repaid to the lender, with the *marine interest*, upon the safe arrival of the ship, in the one case; and of the goods, in the other. In all other respects, these contracts are nearly the same, and are governed by the same principles. In the former, the ship and tackle, being hypothecated, are liable, as well as the person of the borrower; in the latter, the lender has, in general, only the personal security of the borrower.

This contract, which *must always be in writing*, is sometimes made in the form of a deed poll, called a bill of bottomry, executed by the borrower; sometimes in the form of a bond or obligation, with a penalty. But whatever may be its form, it must contain the names of the lender and the borrower, those of the ship and the master; the sum lent, with the stipulated marine interest; the voyage proposed, with the commencement and duration of the risk which the lender is to run. It must show whether the money is lent upon the ship, or upon goods on board, or on both; and every other stipulation and agreement which the parties may think proper to introduce into the contract.—(See the *Forms* at the end of this article.)

"It is obvious," says Lord Tenterden, "that a loan of money upon bottomry, while it relieves the owner from many of the perils of a maritime adventure, deprives him also of a great part of the profits of a successful voyage; and, therefore, *in the place of the owners' residence*, where they may exercise their own judgment upon the propriety of borrowing money in this manner, the master of the ship is, by the maritime law of all states, precluded from doing it, so as to bind the interest of his owners without their consent. With regard to a *foreign country*, the rule appears to be, that if the master of a vessel has occasion for money to repair or victual his ship, or for any other purpose necessary to enable him to complete the enterprise in which he is engaged; whether the occasion arises from any extraordinary peril or misfortune, or from the ordinary course of the adventure; he may, if he cannot otherwise obtain it, borrow money on bottomry at marine interest, and pledge the ship, and the freight to be earned in the voyage, for repayment at the termination of the voyage. When this is done, the owners are never personally responsible. The remedy of the lender is against the master of the ship."—(*Law of Shipping*, part ii. c. 8.)

In bottomry and respondentia bonds, the lender receives the whole of his principal and interest, or nothing; *he is not answerable for general or particular average**; nor will any loss by capture, if subsequently recaptured, affect his claim. In this respect our law differs from that of France (*Code de Commerce*, art. 330.) and most other countries: the lenders on bottomry bonds being there subject to average, as our underwriters upon policies of insurance. No loss can avoid a bottomry contract, unless a total loss, proceeding from a peril of the sea, during the voyage, and within the time specified by the contract. If the loss happen through any default or act of the owners or master, to which the lender was not privy, he may still recover.

There is no restriction by the law of England as to the persons to whom money may be lent on bottomry or at *respondentia* except in the single case of loans on the ships of foreigners trading to the East Indies, which are forbidden by the 7 Geo. 1. stat. 1. c. 21. § 2.

It does not, however, appear to be necessary, in order to enable the master of a ship in a foreign port to obtain money for her repair, outfit, &c., that the contract pledging the vessel in security of the debt should be in the nature of a bottomry bond. Provided the person who advances the money do not choose to take upon himself the risk of the ship's return, and *do not stipulate for maritime interest*, "there seems," says Lord Tenterden, "to be no reason why the master should not pledge both the ship and the personal credit of the owner." And in the case of money advanced in this way to refit a ship in distress at Jamaica, which was captured on the voyage home, the lender recovered.—(*Law of Shipping*, part ii. c. 3.)

Bottomry contracts were well known to the ancients. At Athens, the rate of interest was not fixed by law; but the customary rate seems to have been about 12 per cent. But when money was lent for a voyage, upon the security of the ship and cargo, the interest on account of the superior risk encountered by the lender, was in most cases much higher. In voyages to the Taurica Chersonesus and Sicily, it was sometimes as high as 30 per cent.—(*Anachorist's Travels*, vol. iv. p. 369. Eng. trans.) By the Rhodian law, the exaction of such high interest as in usual bottomry was declared to be illegal, unless the principal was really exposed to the dangers of the sea.—(*Boeckh's Public Economy of Athens*, vol. i. p. 177. Eng. trans.) The principle was adopted by the Romans who gave to bottomry interest the name of *nauticum fœnus*; and has been transferred from the Roman law into all modern codes.

"Formerly," says Mr. Serjeant Marshall, "the practice of borrowing money on bottomry and respondentia was more general in this country than it is at present. The immense capitals now engaged in every branch of commerce render such loans unnecessary; and money is now seldom borrowed in this manner, but by the masters of foreign ships who put into our ports in need of pecuniary assistance to refit, to pay their men, to purchase provi-

* Mr. Serjeant Marshall doubts this; but it was so decided by the Court of King's Bench in *Joy v. Williamson*, 8. R. Mich. 23 Geo. 2.

sions, &c. Sometimes officers and others belonging to ships engaged in long voyages, who have the liberty of trading to a certain extent, with the prospect of great profit, but without capitals of their own to employ in such trade, take up money on respondentia to make their investments; but even this, as I am informed, is now not very frequently done in this country."

The term bottomry has sometimes been incorrectly applied to designate a contract, by the terms of which the ship is not pledged as a security, but the repayment of money, with a high premium for the risk, is made to depend upon the success of the voyage. This, however, is plainly a loan upon a particular adventure, to be made by a particular ship, and not a loan upon the ship, and of course, the lender has only the personal security of the borrower for the due performance of the contract. And it seems that loans have sometimes been made in this manner, and probably also with a pledge of the ship itself, to an amount exceeding the value of the borrower's interest in the ship; and such a contract is still legal in this country in all cases, except the case of ships belonging to British subjects bound to or from the East Indies, as to which it is enacted (19 Geo. 2. c. 37. § 5.),

"That all sums of money lent on bottomry or at respondentia upon any ship or ships belonging to his Majesty's subjects, bound to or from the East Indies, shall be lent only on the ship, or on the merchandises or effects laden, or to be laden, on board of such ship, and shall be so expressed in the condition of the bond, and the benefit of salvage shall be allowed to the lender, his agents or assigns, who alone shall have a right to make assurance on the money so lent; and no borrower of money on bottomry or at respondentia as aforesaid, shall recover more on any assurance than the value of his interest on the ship, or in the merchandises and effects laden on board of such ship, exclusive of the money so borrowed; and in case it shall appear that the value of his share in the ship, or in the merchandises and effects laden on board, doth not amount to the full sum or sums he hath borrowed as aforesaid, such borrower shall be responsible to the lender for so much of the money borrowed as he hath not laid out on the ship, or merchandises laden thereon, in the proportion the money not laid out shall bear to the whole money lent, notwithstanding the ship and merchandises be totally lost."

Lord Tenterden says that this statute was introduced for the protection of the trade of the East India Company; and its rules must be complied with in the case of bottomry by the masters of ships trading to the East Indies.

For a further discussion of this subject, see *Abbott on the Law of Shipping*, part ii. c. 3; *Marshall on Insurance*, book ii.; and *Park on Insurance*, c. 21.

I. Form of a Bottomry Bond.

KNOW ALL MEN by these presents, That I, *A. B.* commander and two-thirds owner of the ship *Exeter*, for myself and *C. D.*, remaining third owner of the said ship, am held and firmly bound unto *E. F.* in the penal sum of two thousand pounds sterling, for the payment of which well and truly to be made unto the said *E. F.*, his heirs, executors, administrators, or assigns, I hereby bind myself, my heirs, executors, and administrators, firmly by these presents. In witness whereof I have hereunto set my hand and seal, this 14th day of December, in the year of our Lord 1790.

WHEREAS the above bound *A. B.* hath taken up and received of the said *E. F.* the full and just sum of one thousand pounds sterling, which sum is to run at respondentia on the block and freight of the ship *Exeter*, whereof the said *A. B.* is now master, from the port or road of *Bombay* on a voyage to the port of *London*, having permission to touch, stay at, and proceed to all ports and places within the limits of the voyage, at the rate or premium of twenty-five per cent. (25 per cent.) for the voyage. In consideration whereof usual risks of the seas, rivers, enemies, fires, pirates, &c. are to be on account of the said *E. F.* And for the further security of the said *E. F.* the said *A. B.* doth by these presents mortgage and assign over to the said *E. F.* his heirs, executors, administrators, and assigns, the said ship *Exeter* and her freight, together with all her tackle, apparel, &c. And it is hereby declared that the said ship *Exeter* and her freight is thus assigned over for the security of the respondentia taken up by the said *A. B.*, and shall be delivered to no other use or purpose whatever, until payment of this bond is first made, with the premium that may become due thereon.

NOW THE CONDITION of this obligation is such, that if the above bound *A. B.* his heirs, executors, or administrators, shall and do well and truly pay, or cause to be paid, unto the said *E. F.* or his attorneys in *London* legally authorised to receive the same, their executors, administrators, or assigns, the full and just sum of 1,000*l.* sterling, being the principal of this bond, together with the premium which shall become due thereupon, at or before the expiration of ninety days after the safe arrival of the said ship *Exeter* at her moorings in the river *Thames*, or in case of the loss of the said ship *Exeter*, such an average as by custom shall have become due on the salvage, then this obligation to be void and of no effect, otherwise to remain in full force and virtue. Having signed to three bonds of the same tenor and date, the one of which being accomplished, the other two to be void and of no effect.

A. B. for self }
and *C. D.* } (L. s.)

Signed, sealed, and delivered, where no stamped } *G. H.*
paper is to be had, in the presence of } *I. K.*

* In this bond the occasion of borrowing the money is not expressed, but the money was in reality borrowed to refit the ship which being on a voyage from *Bengal* to *London* was obliged to put back to *Bombay* to repair. See *The Exeter*, *Whitford*, 1 Rob. A. R. 176. The occasion therefore of borrowing the money gave the lender the security of the entire interest of the ship. But this bond, although expressed to be executed by the master for himself and the other part-owner, would not bind the other part-owner personally, unless he had by a previous deed authorised the master to execute such a bond for him.—(*Abbott on the Law of Shipping*, part iii. c. 1. § 2.)

II. Form of a Bottomry Bill.

TO ALL MEN TO WHOM THESE PRESENTS SHALL COME. I, *A. B.* of *Bengal*, mariner, part-owner and master of the ship called the *Exeter*, of the burthen of five hundred tons and upwards, now riding at anchor in *Table Bay*, at the *Cape of Good Hope*, send greeting:

WHEREAS I, the said *A. B.*, part-owner and master of the aforesaid ship, called the *Exeter*, now in prosecution of a voyage from *Bengal* to the port of *London*, having put into *Table Bay* for the purpose of procuring provision and other supplies necessary for the continuation and performance of the

voyage aforesaid, am at this time necessitated to take up upon the adventure of the said ship, called the *Esler*, the sum of one thousand pounds sterling monies of Great Britain, for setting the said ship to sea, and furnishing her with provisions and necessities for the said voyage, which sum C. D. of the Cape of Good Hope, master attendant, hath at my request lent unto me, and supplied me with, at the rate of twelve hundred and twenty pounds sterling for the said one thousand pounds, being at the rate of one hundred and twenty-two pounds for every hundred pounds advanced as aforesaid, during the voyage of the said ship from Table Bay to London. Now know ye, that I, the said A. B., by these presents, do, for me, my executors and administrators, covenant and grant to and with the said C. D. that the said ship shall, with the first convey which shall offer for England after the date of these presents, sail and depart for the port of London, there to finish the voyage aforesaid. And I, the said A. B., in consideration of the sum of one thousand pounds sterling to me in hand paid by the said C. D. at and before the sealing and delivery of these presents, do hereby bind myself, my heirs, executors, and administrators, my goods and chattels, and particularly the said ship, the tackle and apparel of the same, and also the freight of the said ship, which is, or shall become due for the aforesaid voyage from Bengal to the port of London, to pay unto the said C. D. his executors, administrators, or assigns, the sum of twelve hundred and twenty pounds of lawful British money, within thirty days next after the safe arrival of the said ship at the port of London from the same intended voyage.

AND I, the said A. B. do, for me, my executors and administrators, covenant and grant to and with the said C. D., his executors and administrators, by these presents, that I, the said A. B., at the time of sealing and delivering of these presents, am a true and lawful part-owner and master of the said ship, and have power and authority to charge and engage the said ship with her freight as aforesaid, and that the said ship, with her freight, shall, at all times after the said voyage, be liable and chargeable for the payment of the said twelve hundred and twenty pounds, according to the true intent and meaning of these presents.

AND lastly, it is hereby declared and agreed by and between the said parties to these presents, that in case the said ship shall be lost, miscarry, or be cast away before her arrival at the said port of London from the said intended voyage, that then the payment of the said twelve hundred and twenty pounds shall not be demanded, or be recoverable by the said C. D., his executors, administrators, or assigns, but shall cease and determine, and the loss thereby be wholly borne and sustained by the said C. D., his executors and administrators, and that then and from thenceforth every act, matter, and thing herein mentioned on the part and behalf of the said A. B. shall be void; any thing herein contained to the contrary notwithstanding.

IN WITNESS whereof the parties have interchangeably set their hands and seals to four bonds of this tenor and date, one of which being paid, the others to be null and void.

At the Cape of Good Hope, this 15th day of November, in the year of our Lord one thousand eight hundred and thirty.

(L. S.)

[Besides the works referred to by the author, the reader may consult with advantage the 49th Lecture of Chancellor Kent's *Commentary on American Law*. It contains a concise and very lucid statement of the subject of maritime loans.—*Am. Ed.*]

BOUNTY, a term used in commerce and the arts, to signify a premium paid by government to the producers, exporters, or importers of certain articles, or to those who employ ships in certain trades.

1. *Bounties on Production* are most commonly given in the view of encouraging the establishment of some new branch of industry; or they are intended to foster and extend a branch that is believed to be of paramount importance. In neither case, however, is their utility very obvious. In all old settled and wealthy countries, numbers of individuals are always ready to embark in every new undertaking, if it promise to be really advantageous without any stimulus from government: and if a branch of industry, already established, be really important and suitable for the country, it will assuredly be prosecuted to the necessary extent, without any encouragement other than the natural demand for its produce.

2. *Bounties on Exportation and Importation*.—It is enacted by the 3 & 4 Will. 4. c. 52., that a merchant or exporter claiming a bounty or drawback on goods exported, must make oath that they have been actually exported, and have not been reloaded, and are not intended to be reloaded, in any part of the United Kingdom, or in the Isle of Man (unless entered for the Isle of Man), or in the islands of Faro or Ferro: and it is further enacted, that if any goods cleared to be exported for a bounty or drawback, shall not be duly exported to parts beyond the seas, or shall be reloaded in any part of the United Kingdom, or in the islands of Faro or Ferro, or shall be carried to the islands of Guernsey, Jersey, Alderney, Sark, or Man, (not having been duly entered, cleared, and shipped for exportation to such islands,) such goods shall be forfeited, together with the ship or ships employed in reloading or carrying them; and any person by whom or by whose orders or means such goods shall have been cleared, reloaded, or carried, shall forfeit a sum equal to treble the value of such goods.—§ 87—85.

3. *Policy of Bounties*.—It was formerly customary to grant bounties on the exportation of various articles; but the impolicy of such practice is now very generally admitted. It is universally allowed that bounties, if they be given at all, should be given only to the exporters of such commodities as could not be exported without them. But it is plain that, by granting a bounty in such cases, we really tax the public, in order to supply the foreigner with commodities at less than they cost. A. has a parcel of goods which he cannot dispose of abroad for less than 110*l.*; but they will fetch only 100*l.* in the foreign market; and he claims and gets a bounty of 10*l.* to enable him to export them. Such is the mode in which bounties on exportation uniformly operate; and to suppose that they can be a means of enriching the public, is equivalent to supposing that a shepherd may be enriched by selling his goods for less than they cost!

But however injurious to the state, it has been pretty generally supposed that bounties on exportation are advantageous to those who produce and export the articles on which they are paid. But the fact is not so. A trade that cannot be carried on without the aid of a

bounty, must be a naturally disadvantageous one. Hence, by granting it, individuals are tempted to engage or continue in businesses which are necessarily very insecure, and are rarely capable of being rendered lucrative; at the same time that they are prevented, by trusting to the bounty, from making those exertions they naturally would have made, had they been obliged to depend entirely on superior skill and industry for the sale of their produce. The history of all businesses carried on in this country by the aid of bounties, proves that they are hardly less disadvantageous to those engaged in them than to the public.

The truth of these remarks has been acknowledged by government. The bounty on the exportation of corn was repealed in 1816; and the bounties on the exportation of linen and several other articles ceased in 1830.

4. *Bounties on Shipping* have principally been paid to the owners of vessels engaged in the fishery, and their influence will be treated of under the articles *HERRING FISHERY* and *WHALE FISHERY*.

For an account of the bounties that still exist, see the article *TARIFF*.

BOX-WOOD (Ger. *Buchsbaum*; Du. *Palmhout*; Fr. *Buis*; It. *Busso, Bosso, Bossole*), the wood of the box tree (*Buxus sempervirens*), growing wild in several places in Great Britain. This tree was greatly admired by the ancient Romans, and has been much cultivated in modern times, on account of the facility with which it is fashioned into different forms. Box is a very valuable wood. It is of a yellowish colour, closegrained, very hard, and heavy; it cuts better than any other wood, is susceptible of a very fine polish, and is very durable. In consequence, it is much used by turners and mathematical and musical instrument makers. It is too heavy for furniture. It is the *only* wood used by the engravers of wood-cuts for books; and provided due care be exercised, the number of impressions that may be taken from a box-wood cut is very great. In France, box-wood is extensively used for combs, knife-handles, and button-moulds; and sometimes, it has been said, as a substitute for hops in the manufacture of beer. The value of the box-wood sent from Spain to Paris is reported to amount to about 10,000 fr. a year. In 1815, the box trees cut down on Box-hill, near Dorking, in Surrey, produced upwards of 10,000l. They are now, however, become very scarce in England. The duty on box-wood is quite oppressive, being 5l. a ton if brought from a foreign country, and 1l. a ton if from a British possession. At an average of the 3 years ending with 1831, the entries of box-wood for home consumption amounted to 382 tons a year. In 1832, the duty produced 1,867l. 17s. 4d. Turkey box-wood sells in the London market for from 7l. to 14l. a ton, duty included.

BRAN, the thin skins or husks of corn, particularly wheat, ground and separated from the corn by a sieve or boulder.

BRANDY (Ger. *Brandewein*; Du. *Brandewyn*; Fr. *Eau de vie, Brandevin*; It. *Aguardente*; Sp. *Aguardiente*; Port. *Aguardente*; Rus. *Wino*; Lat. *Vinum adustum*), a spirituous and inflammable liquor, obtained by distillation from wine and the husks of grapes. It is prepared in most of the wine countries of Europe; but the superiority of French brandy is universally admitted. The latter is principally distilled at Bordeaux, Rochelle, Cognac, the Isle de Rhé, Orleans, Nantes, and in Poitou, Touraine, and Anjou. That of Cognac is in the highest estimation.

Wines of all descriptions, but chiefly those that are strong and harsh (*poussés*), are used in the manufacture of brandy. The superior vintages, and those that have most flavour, are said to make the worst brandy. It is naturally clear and colourless. The different shades of colour which it has in commerce, arise partly from the casks in which it is kept, but chiefly from the burnt sugar, saunders wood, and other colouring matter intentionally added to it by the dealers. It is said that the burnt sugar gives mellowness to the flavour of the liquor, and renders it more palatable.

The art of distillation is believed to have been first discovered by the Arabians. From a passage in the *Testamentum Novissimum* of the famous Raymond Lully, who flourished in the 13th century, it would appear that the production of brandy and alcohol from wine was familiar to his contemporaries.—(p. 2, edit. *Argent*. 157l.) But the practice does not appear to have been introduced into France till 1813.—(*Le Grand d'Auxois Vie priée de François*, t. iii. p. 64.) When first introduced, brandy or burnt wine (*vinum adustum*) appears to have been used principally as an antiseptic and restorative medicine; and the most extravagant panegyrics were bestowed on its virtues. It was described as a sovereign remedy in almost all the disorders of the human frame; it was commended for its efficacy in comforting the memory, and strengthening the reasoning powers; it was extolled, in short, as the elixir of life, and an infallible preservative of youth and beauty!—(*Henderson's Hist. of Wine*, p. 24.) Dr. Henderson says that the experience of later times has shown how little this eulogy was merited; but in this he is contradicted by Burke, who maintains with equal eloquence and ingenuity, that “*the alembic has been a vast benefit and blessing*.”—(*Thoughts and Details on Scarcity*, p. 41.)

Brandy has always formed a very prominent article in the exports of France; few ships sailing from Bordeaux, Rochelle, or Nantes, without taking a certain quantity of it on board. The following is an account of the exportation of brandy from France during

the 3 years ending with 1789, and the 14 years ending with 1828.—(*Enquête sur les Fers*, p. 39.)

Years.	Hectolitres.	Years.	Hectolitres.	Years.	Hectolitres.
1787	-	1817	-	1823	-
1788	-	1818	-	1824	-
1789	-	1819	-	1825	-
		1820	-	1826	-
1815	-	1821	-	1827	-
1816	-	1822	-	1828	-

Which, as the hectolitre is equal to 26.42 wine gallons, shows that the exportation in 1828 was equivalent to 10,322,726 gallons; but it has since declined considerably.

Duties on Brandy in Great Britain and Ireland. Quantities consumed.—In nothing, perhaps, has the injurious operation of oppressive duties been so strikingly exemplified as in the case of brandy. At the latter end of the 17th century, when the duty on brandy did not exceed 8*l.* a tun, the imports into England amounted to about 6,000 tuns, or 1,512,000 gallons.—(*Historical and Political Remarks on the Tariff of the late Treaty*, 1786, p. 113.); whereas at present, notwithstanding our vast increase in wealth and population since the period referred to, we do not import more brandy than we did then! Nor is this extraordinary circumstance to be ascribed to any preference on the part of the public to other beverages, but is wholly owing to the exorbitant duties with which brandy is loaded. The price of brandy in bond varies, at this moment, according to quality, from 3*s.* to 5*s.* a gallon (Imperial measure), while the duty is no less than 22*s.* 6*d.* Had the imposition of such a duty taken away the taste for brandy, it would have been comparatively innocuous. But it has done no such thing. Its only effect has been to convert a trade, that might otherwise have been productive of the most advantageous results, into a most prolific source of crime and demoralisation. The temptation to smuggle, occasioned by the exorbitancy of the duty, is too overpowering to be counteracted by the utmost penalties of the law. All along the coast of Kent and Sussex, and the districts most favourably situated for *running spirits*, almost the whole of the labouring population are every now and then withdrawn from their ordinary employments, to engage in smuggling adventures. The efforts of the revenue officers to seize foreign brandy and geneva have in innumerable instances been repelled by force. Bloody and desperate contests have, in consequence, taken place. Many individuals, who, but for this fiscal scourge, would have been industrious and virtuous, have become idle, predatory, and ferocious; they have learned to despise the law, to execute summary vengeance on its officers; and are influenced by a spirit that has been, and may be, turned to the most dangerous purposes.

Neither can it be truly said that this miserable system is upheld for the sake of revenue. On the contrary, it is easy to show that, besides the other mischievous effects it entails on the public, it occasions the loss of at least 1,000,000*l.* a year. In 1786, Mr. Pitt, by a wise and politic measure, took 50 per cent. from the duty on brandy and geneva; (the duty on the latter has been for a lengthened period the same as that on brandy;) and instead of being diminished, the revenue was increased. In 1790, when the duty on brandy and geneva was 6*s.* the wine gallon, the quantity retained for home consumption was 2,225,590 gallons. During the 3 years ending with 1803, when the duty was 9*s.* 2*d.*, the quantities of brandy and geneva retained for home consumption amounted, at an average, to about 2,700,000 gallons; but during the 3 years ending with 1818, when the duty had been increased to 18*s.* 10*d.* the wine gallon, the quantities retained did not exceed 850,000 gallons, while the quantities actually entered for home consumption were considerably less! Since then the consumption has increased with the increasing wealth of the country; but at this moment, the quantity consumed in Great Britain is fully 635,000 gallons less than in 1790! Nothing, therefore, can be more palpably erroneous than to contend that the revenue is improved by the present system. Have we not seen the revenue derived from coffee trebled by reducing the duty from 1*s.* 7*d.* to 6*d.*? Have we not seen the revenue derived from British spirits greatly increased, by reducing the duty from 5*s.* 6*d.* to 2*s.* the wine gallon? And where is the ground for supposing that the result would be different, were the duties on brandy equally reduced? But the experience afforded by Mr. Pitt's measure in 1786, is decisive as to this point. He quadrupled the consumption and increased the revenue, by taking a half from the duty when it was a good deal less oppressive than now. Were a similar reduction made at present, does any one doubt that a similar result would follow? Smuggling and adulteration would immediately cease; our trade with France would be very greatly extended; and the revenue would gain, not merely by a direct increase of duty but indirectly by a very great diminution of the expense of collection.

But the effect of the increase of the duties on brandy in Ireland has been still more extraordinary. At an average of the 3 years ending with 1802, when the duty was 7*s.* 3½*d.* the wine gallon, the average annual consumption of brandy in Ireland amounted to 208,064 gallons, producing a nett revenue of 77,714*l.* Now, mark the consequence of *trebling* the duties. The consumption during the last 3 years, notwithstanding the population is more than doubled, only amounted, at an average, to 20,199 gallons, producing about 22,500*l.* a

year revenue. Dr. Swift has shrewdly remarked, that in the arithmetic of the customs two and two do not always make four, but sometimes only one. But here we have threefold duties, with little more than a fourth part of the revenue, and less than a tenth part of the consumption!

It is surely impossible that such a system—a system evincing in every part a degree of ignorant rapacity, to be paralleled only by that of the savages, who to get at the fruit cut down the tree—should be permitted for a much longer period to disgrace our fiscal code. Those only who are anxious for the continuance of smuggling, with all its consequent crime and misery, can be hostile to a reduction of the duty on brandy. By fixing it at 10s. the gallon, neither the consumption of British spirits nor rum would be sensibly affected. The middle classes would, however, be able to use brandy, on occasions when, perhaps, at present, they use nothing; its clandestine importation would be prevented; those engaged in smuggling would be obliged to have recourse to industrious pursuits, and the manufacture of the abominable compounds, that are now so frequently substituted in its stead, would be put an end to. It is not easy, indeed, to suggest any measure that would be productive of so much advantage, and be attended with fewer inconveniences.

Regulations as to Importations, &c.—Brandy, geneva, and other foreign spirits, must be imported, if in casks, in casks containing not less than 40 gallons, under penalty of forfeiture.—(3 & 4 Will. 4. c. 52.) They must also be imported in ships of 70 tons burden or upwards, and are not to be exported from a bonded warehouse except in a vessel of like tonnage, under pain of forfeiture.—(*Ibid.*)

Brandy is not to be imported except in British ships, or in ships of the country or place of which it is the product, or from which it is imported, on pain of forfeiture thereof, and 100*l.* by the master of the ship.—(3 & 4 Will. 4. c. 54.)

Brandy may be exported to Mexico, Chili, or Peru, in casks containing not less than 15 gallons each.—(*Treas. Ord.* 17th. of December, 1837.)

Brandy and geneva may be bottled in bonded warehouses, for exportation to British possessions in the East Indies, under the same conditions as wine and rum.—(See *SPICER*.)

In most of the public accounts, the imports of brandy and geneva are blended together. It would appear, too, from the note to the following account, that there are no means of accurately distinguishing them, except since 1814. The reader will find, in the article *SPICER*, an account of the quantities of brandy and geneva entered for home consumption, and the rates of duty upon them, in each year since 1789. The following account shows the consumption of brandy, and rates of duty on it, since 1814:—

An Account of the Number of Gallons (Imperial Measure) of Foreign Brandy entered for Home Consumption in Great Britain and Ireland, the Rates of Duty affecting the same, and the entire nett Produce of the Duty, each year since 1814.—(Obtained from the Custom-house.)

Note.—In consequence of the destruction of the official records by fire, no separate account can be rendered of the consumption of brandy and geneva, or the revenue derived therefrom, for the years prior to 1814.

The trade accounts of Great Britain and Ireland having been incorporated during 1830, the particulars for that year are stated for the United Kingdom only.

[By the act of March 2d 1827, it was enacted

§ 1. That, from and after the passage of this act, brandy may be imported into the United States, in casks of a capacity not less than 15 gallons, any thing in any law to the contrary notwithstanding: *Provided, however,* that all the provisions of existing laws, not inconsistent with this act, relating to the importation of foreign spirits, be complied with: *And provided further,* That all brandy, imported in casks of a capacity less than ninety gallons, shall be deposited, at the expense and risk of the importer, in such public or other warehouses, as shall be designated by the collector or surveyor, for the port where the same shall be landed, and shall be removed therefrom in the manner prescribed by an act, entitled "An act providing for the deposit of wines and distilled spirits in public warehouses, and for other purposes."

§ 2. That brandy, imported in casks of a capacity not less than fifteen gallons, may be exported for the benefit of a drawback of the duties which shall have been paid thereon, and the exporter or ex-

porters of brandy so imported, shall be entitled to receive a debenture or debentures, for the amount of such drawback, agreeably to the existing laws; and all acts now in force regulating the exportation of spirits, and the allowance and payment of drawbacks and debentures, shall be deemed applicable to brandy, the importation of which is permitted by this act."

This act was limited in its duration to three years; but it was re-enacted in February 1830, and is still in force.

See article SPIRITS.—*Am. Ed.*]

BRASS (Ger. *Messing*; Du. *Messing*, *Missing*, *Geelkoper*; Fr. *Cuivre jaune*, *Laiton*; It. *Ottone*; Sp. *Latón*, *Azofar*; Rus. *Selenoi myed*; Lat. *Orichalcum*, *Aurichalcum*) is a fictitious metal, made of copper and zinc in certain proportions. It is of a beautiful yellow colour, more fusible than copper, and not so apt to tarnish. It is malleable, so ductile that it may be drawn out into wire, and is much tougher than copper. Its density is greater than the mean density of the two metals. By calculation it ought to be 7.63 nearly, whereas it is actually 8.39; so that its density is increased by about one tenth. The ancients do not seem to have known accurately the difference between copper, brass, and bronze. They considered brass as only a more valuable kind of copper, and therefore used the word *zēs* to denote either. They called copper *zēs cyprium*, afterwards *cyprium*; and this in process of time was converted into *cuprum*. Dr. Watson has proved that it was to brass they gave the name of *orichalcum*. Brass is malleable when cold, unless the proportion of zinc be excessive; but when heated it becomes brittle. It may be readily turned upon the lathe; and, indeed, works more kindly than any other metal.

There is a vast variety in the proportion of the different species of brass used in commerce; nor is it easy to determine whether the perfection of this alloy depends on any certain proportions of the two metals. In general, the extremes of the highest and lowest proportions of zinc are from 12 to 25 parts in the 100. In some of the British manufactories, the brass made contains one third its weight of zinc. In Germany and Sweden the proportion of zinc varies from one fifth to one fourth of the copper. The ductility of brass is not injured when the proportion of zinc is highest. This metal is much used in the escapement wheels, and other nicer parts of watch-making: and bars of brass, very carefully made, fetch for this purpose a high price.

The use of brass is of very considerable antiquity. Most of the ancient genuine relics are composed of various mixtures of brass with tin and other metals, and are rather to be denominated bronze. The best proportion for brass guns is said to be 1,000 lbs. of copper, 990 lbs. of tin, and 600 lbs. of brass, in 11 or 12 cwt. of metal. The best brass guns are made of malleable metal, not of pure copper and zinc alone; but worse metals are used to make it run closer and sounder, as lead and pot-metal.—(*Thomson's Chemistry, Encyc. Britannica, &c.*)

BRAZILETTO, an inferior species of Brazil wood brought from Jamaica. It is one of the cheapest and least esteemed of the red dye woods.

BRAZIL NUTS, or *Cheemuts of Brazil*, the fruit of the *Juvia* (*Bertholletia excelsa*), a majestic tree growing to the height of 100 or 120 feet, abounding on the banks of the Orinoco, and in the northern parts of Brazil. The nuts are triangular, having a cuneiform appearance, with sutures at each of the angles; the shell is rough and hard, and of a brownish ash colour. The kernel resembles that of an almond, but is larger, and tastes more like a common hazel nut; it contains a great deal of oil, that may be obtained by expression or otherwise. These nuts do not grow separately, or in clusters, but are contained, to the number of from 15 to 50 or more,* in great ligneous pericarps or outer shells, generally of the size of a child's head. This outer shell is very hard and strong, so that it is rather difficult to get at the nuts, which are closely packed in cells inside. The natives are particularly fond of this fruit, and celebrate the harvest of the *juvia* with rejoicings; it is also very much esteemed in Europe. The nuts brought to this country and the Continent are chiefly exported from Para, and form an article of considerable commercial importance.—(*Humboldt's Pers. Nar.* vol. v. p. 538. Eng. trans.)

BRAZIL WOOD (Fr. *Bois de Brésil*; Ger. *Brasilienholz*; Du. *Brasilienhout*; It. *Legno del Brasile*, *Verzino*; Sp. *Madera del Brasil*; Port. *Pao Brasil*). It has been commonly supposed that this wood derived its name from the country in which it is principally produced. But Dr. Bancroft has conclusively shown that woods yielding a red dye were called Brazil woods long previously to the discovery of America; and that the early voyagers gave the name of Brazil to that part of that continent to which it is still applied from their having ascertained that it abounded in such woods.—(See the learned and excellent work, *Philosophy of Colours*, vol. ii. pp. 316—321.)

It is found in the greatest abundance, and is of the best quality, in the province of Pernambuco, where it is called *Pao da rainha*, or Queen's wood; but it is also found in many other parts of the Western Hemisphere. The tree is large, crooked, and knotty; the leaves are of a beautiful red, and exhale an agreeable odour. Its botanical name is *Cesalpinia Brasiletto*; but it is called by the na-

* Humboldt says he had most frequently found from 15 to 23 nuts in each pericarp; but De Laet, who gave the first and most accurate description of this fruit, says that the pericarp is divided into six compartments, each of which encloses from 8 to 12 nuts.—(See *Humboldt in loc. cit.*)

tives *ibiritipazaga*. Notwithstanding its apparent bulk, the bark is so thick, that a tree as large as a man's body with the bark, will not be so thick as the leg when peeled. When cut into chips, it loses the pale colour it before had, and becomes red; and when chewed, has a sweet taste. It is used for various purposes by cabinet-makers, and admits of a beautiful varnish: but its principal use is in dyeing red; and though the colour is liable to decay, yet, by mixing with it alum and tartar, it is easily made permanent; there is also made of it, by means of acids, a sort of liquid lake or carmine, for painting in miniature.

Brazil wood has been for many years past a royal monopoly; its exportation, except on account of government, being prohibited under the severest penalties. Owing to the improvident manner in which it has been cut down by the government agents, it is now rarely found within several leagues of the coast. Indeed, we are assured that many of the planters have privately cut down the trees on their estates, and used the timber as fire-wood, that they might not expose themselves to amercement from the arbitrary and vexatious proceedings of these functionaries. The quantity of Brazil wood imported into this country is but inconsiderable. Its price in the London market, exclusive of the duty (2l. per ton), varies from 60l. to 80l. per ton.—(*Dr. Bancroft in loc. cit. Encyc. Metrop. Modern Traveller*, vol. xxix. p. 87.; *Mallet Brun*, vol. v. p. 525. Eng. ed. &c.)

BREAD, the principal article in the food of most civilised nations, consists of a paste or dough formed of the flour or meal of different sorts of grain mixed with water, and baked. When stale dough or yeast is added to the fresh dough, to make it swell, it is said to be *leavened*; when nothing of this sort is added, it is said to be *unleavened*.

1. *Historical Sketch of Bread*.—The President de Goguet has endeavoured, with his usual sagacity and learning, to trace the successive steps by which it is probable men were led to discover the art of making bread—(*Origin of Laws*, &c. vol. i. pp. 95—105. Eng. trans.); but nothing positive is known on the subject. It is certain, however, from the statements in the sacred writings, that the use of unleavened bread was common in the days of Abraham—(*Gen. xviii. 8.*); and that leavened bread was used in the time of Moses, for he prohibits eating the Paschal lamb with such bread.—(*Exod. xii. 15.*) The Greeks affirmed that Pan had instructed them in the art of making bread; but they, no doubt, were indebted for this art, as well as for their knowledge of agriculture, to the Egyptians and Phœnicians, who had early settled in their country. The method of grinding corn by hand mills was practised in Egypt and Greece from a very remote epoch; but for a lengthened period the Romans had no other method of making flour, than by beating roasted corn in mortars. The Macedonian war helped to make the Romans acquainted with the arts and refinements of Greece; and Pliny mentions, that public bakers were then, for the first time, established in Rome—(*Hist. Nat. lib. xviii. c. 11.*). The conquests of the Romans diffused, amongst many other useful discoveries, a knowledge of the art of preparing bread, as practised in Rome, through the whole south of Europe.

The use of yeast in the raising of bread seems, however, from a passage of Pliny (*lib. xviii. c. 7.*), to have been practised by the Germans and Gauls before it was practised by the Romans; the latter, like the Greeks, having leavened their bread by intermixing the fresh dough with that which had become stale. The Roman practice seems to have superseded that which was previously in use in France and Spain; for the art of raising bread by an admixture of yeast was not practised in France in modern times, till towards the end of the seventeenth century. It deserves to be mentioned, that though the bread made in this way was decidedly superior to that previously in use, it was declared, by the faculty of medicine in Paris, to be prejudicial to health; and the use of yeast was prohibited under the severest penalties! Luckily, however, the taste of the public concurring with the interest of the bakers, proved too powerful for these absurd regulations, which fell gradually into disuse; and yeast has long been, almost every where, used in preference to any thing else in the manufacture of bread, to the wholesomeness and excellence of which it has not a little contributed.

The species of bread in common use in the country depends partly on the taste of the inhabitants, but more on the sort of grain suitable for its soil. But the superiority of wheat to all other farinaceous plants in the manufacture of bread is so very great, that wherever it is easily and successfully cultivated, wheaten bread is used, to the nearly total exclusion of most others. Where, however, the soil or climate is less favourable to its growth, rye, oats, &c. are used in its stead. A very great change for the better has, in this respect, taken place in Great Britain within the last century. It is mentioned by Harrison, in his description of England (p. 168.), that in the reign of Henry VIII, the gentry had wheat sufficient for their own tables, but that their household and poor neighbours were usually obliged to content themselves with rye, barley, and oats. It appears from the household book of Sir Edward Coke, that in 1596, rye bread and oatmeal formed a considerable part of the diet of servants, even in great families, in the southern counties. Barley bread is stated in the grant of a monopoly by Charles I., in 1628, to be the usual food of the ordinary sort of people.—(*Sir F. M. Eden on the Poor*, vol. i. p. 561.) At the Revolution, the wheat produced in England and Wales was estimated by Mr. King and Dr. Davenant to amount to 1,750,000 quarters.—(*Dawson's Works*, vol. ii. p. 217.) Mr. Charles Smith, the very well informed author of the Tracts on the Corn Trade, originally published in 1758, states, that in his time wheat had become much more generally the food of the common people than it had been in 1689, but he adds (2d ed. p. 182. Lond. 1766.), that notwithstanding this increase, some very intelligent inquirers were of opinion that even then not more than *half* the people of England fed on wheat. Mr. Smith's own estimate, which is very carefully drawn up, is a

little higher; for taking the population of England and Wales, in 1760, at 6,000,000, he supposed that 3,750,000 were consumers of wheat; 739,000, of barley; 888,000, of rye; and 623,000, of oats. Mr. Smith further supposed that they individually consumed, the first class, 1 quarter of wheat; the second, 1 quarter and 3 bushels of barley; the third, 1 quarter and 1 bushel of rye; and the fourth, 2 quarters and 7 bushels of oats.

About the middle of last century, hardly any wheat was used in the northern counties of England. In Cumberland, the principal families used only a small quantity about Christmas. The crust of the goose pie, with which almost every table in the county is then supplied, was, at the period referred to, almost uniformly made of barley meal.—(*Eden on the Poor*, vol. i. p. 564.)

Every one knows how inapplicable these statements are to the condition of the people of England at the present time. Wheaten bread is now universally made use of in towns and villages, and almost every where in the country. Barley is no longer used, except in the distilleries and in brewing; oats are employed only in the feeding of horses; and the consumption of rye bread is comparatively inconsiderable. The produce of the wheat crops has been, at the very least, *trebled* since 1760. And if to this immense increase in the supply of wheat, we add the still more extraordinary increase in the supply of butcher's meat—(see art. CATTLE), the fact of a very signal improvement having taken place in the condition of the population, in respect of food, will be obvious.

But great as has been the improvement in the condition of the people of England since 1760, it is but trifling compared to the improvement that has taken place, since the same period, in the condition of the people of Scotland. At the middle of last century, Scotch agriculture was in the most depressed state; the tenants were destitute alike of capital and skill; green crops were almost wholly unknown; and the quantity of wheat that was raised was quite inconsiderable. A field of 8 acres sown with this grain, in the vicinity of Edinburgh, in 1727, was reckoned so great a curiosity that it excited the attention of the whole neighbourhood!—(*Robertson's Rural Recollections*, p. 267.) But even so late as the American war, the wheat raised in the Lothians and Berwickshire did not exceed a third part of what is now grown in them; and taking the whole country at an average, it will be a moderate estimate, to say that the cultivation of wheat has increased in a *tenfold* proportion since 1780. At that period no wheaten bread was to be met with in the country places and villages of Scotland; *oat cakes* and *barley bannocks* being universally made use of. But at present the case is widely different. The upper and also the middle and lower classes in towns and villages use only wheaten bread, and even in farmhouses it is very extensively consumed. There is, at this moment, hardly a village to be met with, however limited its extent, that has not a public baker.

In many parts of England it is the custom for private families to bake their own bread. This is particularly the case in Kent, and in some parts of Lancashire. In 1804, there was not a single public baker in Manchester; and their number is still very limited.

2. *Regulations as to the Manufacture of Bread.*—Owing to the vast importance of bread, its manufacture has been subjected in most countries to various regulations, some of which have had a beneficial and others an injurious operation.

a. *Assize of Bread.*—From the year 1266, in the reign of Henry III., down to our own days, it has been customary to regulate the price at which bread should be sold according to the price of wheat or flour at the time. An interference of this sort was supposed to be necessary, to prevent that monopoly on the part of the bakers which it was feared might otherwise take place. But it is needless, perhaps, to say that this apprehension was of the most futile description. The trade of a baker is one that may be easily learned, and it requires no considerable capital to carry it on; so that were those engaged in the business in any particular town to attempt to force up prices to an artificial elevation, the combination would be immediately defeated by the competition of others; and even though this were not the case, the facility with which bread may be baked at home would of itself serve to nullify the efforts of any combination. But the assize regulations were not merely useless; they were in many respects exceedingly injurious: they rendered the price of flour a matter of comparative indifference to the baker; and they obliged the baker who used the finest flour, and made the best bread, to sell at the same rate as those who used inferior flour, and whose bread was decidedly of a worse quality. But these considerations, how obvious soever they may now appear, were for a long time entirely overlooked. According, however, as the use of wheaten bread was extended, it was found to be impracticable to set assizes in small towns and villages; and notwithstanding the fewness of the bakers in such places gave them greater facilities for combining together, the price of bread was almost uniformly lower in them than in places where assizes were set. In consequence, partly of this circumstance, but still more of the increase of intelligence as to such matters, the practice of setting an assize was gradually relinquished in most places; and in 1815 it was expressly abolished, by an act of the legislature (55 Geo. 3. c. 99.), in London and its environs. In other places, though the power to set an assize still subsists, it is seldom acted upon, and has fallen into comparative disuse.

b. Regulations as to the Weight, and Ingredients to be used in making Bread.—According to the assize acts, a sack of flour weighing 280 lbs. is supposed capable of being baked into 80 quartern loaves; one fifth of the loaf being supposed to consist of water and salt, and four fifths of flour. But the number of loaves that may be made from a sack of flour depends entirely on its goodness. Good flour requires more water than bad flour, and old flour than new flour. Sometimes 82, 83, and even 86 loaves have been made from a sack of flour, and sometimes hardly 80.

Under the assize acts, bakers are restricted to bake only three kinds of bread, viz. wheaten, stand-ard wheaten, and household; the first being made of the finest flour, the second of the whole flour mixed, and the third of the coarser flour. The loaves are divided into peck, half-peck, and quartern loaves; the legal weight of each, when baked, being, the peck loaf 17 lbs. 6 oz., the half peck 8 lbs. 11 oz., and the quartern 4 lbs. 5½ oz. avoirdupois.

Now, however, it is enacted, that within the city of London, and in those places in the country where an assize is not set, it shall be lawful for the bakers to make and sell bread made of wheat, barley, rye, oats, buckwheat, Indian corn, peas, beans, rice, or potatoes, or any of them, along with common salt, pure water, eggs, milk, barm, leaven, potato or other yeast, and mixed in such proportions as they shall think fit.—(3 Geo. 4. c. 106. § 2, and 1 & 2 Geo. 4. c. 50. § 2.)

It is also enacted, by the same statutes, that bakers in London, and in the country, that is, in all places 10 miles from the Royal Exchange where an assize is not set, may make and sell bread of such weight and size as they think fit, any law or assize to the contrary notwithstanding. But it is at the same time enacted, that such bread shall always be sold by avoirdupois weight of 16 ounces to the pound, and in no other manner, under a penalty for every offence of not more than 40s.; except, however, French or fancy bread, or rolls, which may be sold without previously weighing the same.

Bakers or sellers of bread are bound to have fixed, in some conspicuous part of their shop, a beam and scales, with proper weights for weighing bread; and a person purchasing bread may require it to be weighed in his presence. Bakers and others sending out bread in carts, are to supply them with beams, scales, &c., and to weigh the bread if required, under a penalty of not more than 3s.—(3 Geo. 4. c. 106. § 8.)

Bakers, either journeymen or masters, using alum or any other unwholesome ingredient, and convicted on their own confession, or on the oath of one or more witnesses, to forfeit not exceeding 20l. and not less than 5l. if beyond the environs of London, and not exceeding 10l. nor less than 5l. if within London or its environs. Justices are allowed to publish the names of offenders. The adulteration of meal or flour is punishable by a like penalty. Loaves made of any other grain than wheat, without the city and its liberties, or beyond 10 miles of the Royal Exchange, to be marked with a large Roman M; and every person exposing such loaves without such mark shall forfeit not more than 40s. nor less than 10s. for every loaf so exposed.—(1 & 2 Geo. 4. c. 50. § 6.)

Any ingredient or mixture found within the house, mill, stall, shop, &c. of any miller, mealman, or baker, which after due examination shall be adjudged to have been placed there for the purpose of adulteration, shall be forfeited; and the person within whose premises it is found punished, if within the city of London and its environs, by a penalty not exceeding 10l. nor less than 40s. for the first offence, 5l. for the second offence, and 10l. for every subsequent offence.—(3 Geo. 4. c. 106. § 11.) And if without London and its environs, the party in whose house or premises ingredients for adulteration shall be found, shall forfeit for every such offence not less than 3l. and not more than 20l.—(1 & 2 Geo. 4. c. 5. § 8.)

Bakers in London and its environs are not to sell, or expose to sale, any bread, rolls, or cakes, nor bake or deliver any meat, pudding, pie, tart, or victuals of any sort, on Sundays, except between the hours of nine in the morning and one in the afternoon, under penalty of 10s. for the first offence, 20s. for the second offence, and 40s. for every subsequent offence.—(3 Geo. 4. c. 106. § 10.)

Bakers in the country are prohibited from selling, &c. any bread, &c., or baking or delivering any meat, &c., on Sundays, any time after half past 1 o'clock of the afternoon of that day, or during the time of divine service, under penalty of 5s. for the first offence, 10s. for the second, and 20s. for the third and every subsequent offence.—(39 Geo. 3. c. 36. § 12.)

There are several regulations in the acts now in force with respect to the sale, &c. of bread where an assize is set; but as the practice of setting an assize is nearly relinquished, it seems unnecessary to recapitulate them. The weight of the assize bread has already been mentioned, and the principle on which its price is fixed.

Notwithstanding the prohibition against the use of alum, it is believed to be very generally employed, particularly by the bakers of London.—“In the metropolis,” says Dr. Thomson, (*Suppl. to Encyc. Brit.*, Art. *Baking*), “where the goodness of bread is estimated entirely by its whiteness, it is usual with those bakers who employ flour of an inferior quality, to add as much alum as common salt to the dough; or, in other words, the quantity of salt added is diminished a half, and the deficiency supplied by an equal weight of alum. This improves the look of the bread, rendering it much whiter and firmer.”

There are believed to be about 1,700 bakers in London, Westminster, &c. The trade which they carry on is in general but limited, and it is not reckoned a very advantageous line of business.

[Government in our own country, too, has undertaken to regulate the quantity and quality of a loaf of bread. There is a law in Pennsylvania inflicting a penalty of five pounds on any baker who shall mix up or adulterate his bread with any impure or unwholesome ingredient; and he is obliged to make his loaves of a certain weight. The legislation of other States on the subject is of the same character.—*Am. Ed.*]

BREMEN, one of the free Hanseatic cities, situated on the river Weser, about 50 miles from its mouth, in lat. 53° 43' N., long. 8° 48' E. Population about 46,000. Its situation on the Weser renders Bremen the principal emporium of Hanover, Brunswick, Hesse, and other countries traversed by that river. The charges on the buying, selling, and shipping of goods, are very moderate. The principal exports are linens, grain, oak bark, glass, smalls, hams, hides, rapeseed, beef and pork, rags, wool and woollen goods, wine, &c. The wheat and barley shipped here are mostly very inferior; but the oats are useful common feed; beans are good. The linens are mostly the same as those from Hamburg. The imports consist of coffee, sugar, and other colonial products; tobacco, whale oil, iron, rice, hides, wines, raw cotton, cotton stuffs and yarn, earthenware, brandy, butter, tar, tea, dyewoods, timber, hemp, &c.

Entrance to Bremen.—The entrance to the Weser lies between the Mellum and other sands on the south-western, and the Teglers Plaat, &c. on the north-eastern side. Its course from Bremerlehe to its mouth is nearly S. E. and N. W. It is buoyed throughout. The buoys on the right or starboard side when entering, being black and marked with letters, while those on the left or larboard are white and numbered. The first or outer black buoy has a gilt key upon it, and is, therefore, called the *schlüssel* or key buoy; it lies in 10½ fathoms, bearing N. E. 5 miles from Wrangeroog light. This is an intermitting light, having replaced in 1830, the old coal-fire beacon on the island of Wrangeroog, opposite to the northern extremity of East Friesland. It is, according to the most authentic statements, in lat. 53° 47½' N., long. 7° 51' 55" E.; is elevated 63½ feet above high water mark, being alternately visible and invisible for the space of a minute. A light vessel is moored in the fair-way of the Weser, between the black buoys E and F, and the white buoys 2 and 3. She has two masts: during day, a red flag, with a white cross upon it, is kept flying at the mainmast; and at night she exhibits 7 lantern lights, 28 feet above deck. This vessel is on no account to leave her station, unless compelled by the ice. Large vessels do not now generally ascend further than Bremerlehe, on the east side of the river, about 38 miles below Bremen, where a new and spacious harbour, called "Bremen Haven," has been constructed. But vessels not drawing more than 7 feet water come up to town; and those drawing from 13 to 14 feet may come up to Vegesack, about 13 miles from Bremen.—(See the *Sailing Directions for the North Sea*, published by Mr. Norrie.)

A Statement of the Quantities and Value of the principal Articles of Merchandise imported into Bremen, in the year 1835.—(Consular Return).

Exports.—Linen are one of the most important articles of export from Bremen. They are mostly sold by the piece. The dimensions of the pieces, and their prices, are similar to those of Hamburg, which see. The Westphalia hams are mostly shipped from this port.

Duties.—An export duty of ½ per cent., *ad valorem*, is charged on all merchandise shipped from Bremen.

The import duty is ½ per cent., *ad valorem*, on all articles; having been increased a third per cent. by the ordinance of 1830.

The value of the imports is calculated according to the invoice price, adding thereto the freight and the rate of insurance current in Bremen; the value of the exports is estimated from the invoice price only. Should there be no invoice of imports, it is the duty of the importer to make a correct estimate of the value upon his oath as a citizen; but the Custom-house has power to institute a stricter examination, if the estimate appears too low.

Emigration.—Bremen has become the most considerable port on the Continent for the shipment of emigrants to the United States, and other parts in America. In 1832 the number of emigrants amounted to between 9,000 and 10,000; and their conveyance has become an object of much importance, particularly to the American ship-owners. A large proportion of the emigrants are from Hesse.

Ship-brokers are licensed officers, and give security, to the amount of 2,000 rix-dollars, for the faithful discharge of their duties. These are to engage freights, to sell vessels by auction, to enter vessels, and collect freights. They are not permitted to have partners, to transact any commercial business on their own account, to accept commissions or consignments, to sell or purchase bills of exchange, or to engage in any mercantile concerns.

None but appointed brokers of this class can undertake any of the duties assigned to them. Any person employing a non-appointed broker, is deprived of legal redress against the unauthorized agent by whose conduct he may sustain injury.

Ship-brokers are obliged to keep a register of all vessels coming in or going out, of the names of the captains who employed them, to procure manifests of cargoes, and to attend to the payment of duties and other dues chargeable on vessel or cargo.

The fees allowed to them are, for chartering a vessel in bulk, 18 grotes per grain last; of this the owner pays 12 grotes, and the freighter six grotes.

For outward-bound vessels, taking merchandise as it may be offered, 2 per cent. on the freight.

For entering a vessel from sea measuring 50 lasts, 5 rix-dollars; measuring 100 ditto, 7½ rix-dollars; and if she measure above 100 lasts, 10 rix-dollars.

Entry dues are to be paid by the consignees of foreign vessels out of the commission they may charge.

For the collection of freight money, the broker is entitled to receive one per cent., but the consignee of a foreign vessel is to pay this sum.

Regulations of the Harbour of Bremen Haven.—All vessels entering the harbour are subject to the superintendence of the harbour-masters, whose directions are to be obeyed by the captains and crews.

No ballast or rubbish is to be thrown overboard, under a penalty of 10 rix-dollars for the first offence, which is increased in case of repetition; the offender, too, is obliged to remove the articles he may have so cast into the harbour.

It is not permitted to keep gunpowder on board, and any which may be in the vessel must be delivered up within two hours after she has reached her berth: non-compliance with this subjects the party to a fine of from 10 to 50 rix-dollars; nor is it permitted to discharge any fire-arms in port.

The use of all fire on board, from sunset to sunrise, is prohibited; the captain, however, may have a light, in a closed lantern, in his cabin.

The crews are not allowed to carry on shore any fire-arms, dirks, or other weapons.

Vessels passing in and out of the drawbridge, or which may remain in the harbour during two months, are subject to the payment of the following rates, viz. :—

		Rix. D. Gr.				Rix. D. Gr.	
Of	300 lasts and upwards	.	.	Below	60 lasts to 60 lasts	.	.
Below	300 — to 250 lasts	.	.		40 — to 30 —	.	.
	250 — to 200 —
	200 — to 150 —
	150 — to 100 —
	100 — to 100 — square-rigged
	100 — to 100 — galleon, &c.
	100 — to 50 — square-rigged
	100 — to 50 — galleon, &c.
	50 — to 50 — square-rigged
	50 — to 50 — galleon, &c.

Arrivals.—During the year 1834, 1,006 ships entered the port of Bremen. Of these, 194 were from Hanover; 111 from Great Britain; 103 from the United States; 44 from France; and the remainder from the Netherlands, Russia, South America, Spain, Sweden, &c. The shipping charges at Bremen are particularly low.

Money.—Accounts are kept in thalers, or rix-dollars, of 72 grootes or grotes; the grotes being divided into 5 awares. The Bremen rix-dollar current is worth 3s. 2d. sterling; and the par of exchange is 1l. sterling = 6 rix-dollars 23 grotes 4 awares.

Weights and Measures.—The commercial pound = 2 marks = 16 ounces = 32 loths = 7,660 English grains. Hence, 100 lbs. of Bremen = 109.8 avoirdupois, or 49.925 kilog. A load of pfundschwer = 300 lbs., but carriers reckon it at 303 lbs. A centner = 116 lbs.; a shipload = 21 centners, or 300 lbs.; a waage of iron = 120 lbs.; a stone of flax = 30 lbs.; a stone of wool = 10 lbs. A ton of butter great measure = 300 lbs.; and a ton of do. small measure = 330 lbs.

The dry measures are, 4 spints = 1 viertel; 4 viertels = 1 scheffel; 10 scheffels = 1 quart; 4 quarts = 1 last; the last = 80.70 bushels Winchester measure, or 10.087 quarters; that is, 10 quarters and 0.7 bushel. A barrel of salt = 2½ scheffels. A last of coals = 2 chaldrons Newcastle measure.

The liquid measures are 8.8 quarts = 1 viertel; 5 viertels = 1 anker; 4 ankens = 1 tierce; 1½ tierces = oxhoft; the oxhoft = 58 English wine gallons. Wine is sometimes sold by the alm of 4 ankens = 57½ Eng. wine gallons. A barrel of whale oil = 6 stecken, or 216 lbs. nett = 31½ Eng. wine gallons. A ship last of herrings, salt, and coals = 13 barrels.

The Bremen foot = 11.33 Eng. inches: hence, 100 Bremen feet = 94.6 Eng. ditto. The Bremen ell is 2 feet; and 100 ells of Bremen = 63.2 Eng. yards.

Tares.—The usual tares are, on sugar in casks and Brazil chests, 17 per cent.; on Havannah boxes, 70 lbs.; Maryland tobacco, 90 lbs. per hoghead; ditto Virginia and Kentucky, 110 lbs. per hoghead; cotton, round bales, 4 per cent.; square ditto, 6 per cent.; ton (green), 30 lbs. per quarter chest; ditto (black), 23 lbs. per quarter chest. Most other articles, such as East India indigo, rice, coffee, spices, &c. real tare. (Drawn up principally from the communications of Bremen merchants; and from the Digest of Customs' Laws printed by order of the American Congress, vol. i. p. 434. &c.)

[The mercantile marine of Bremen has of late years been very much augmented, and may be now estimated at about 40,000 tons. Since the construction of the harbour of Bremerlehe, above mentioned, ship-building has chiefly been carried on there, instead of at Vegesack, as was formerly the case. And some very fine ships and brigs have been lately constructed on American models.

The commercial intercourse of Bremen with the United States is extensive and important. This small city is the principal market in Europe for American tobacco. The average quantity imported by it approaches to 30,000 hogheads annually; and of this amount the larger portion is Maryland. It is distributed from Bremen all over Germany, Prussia, Austria, and even through Italy and Russia. A considerable number of Bremen vessels resort for it to Baltimore; some to Petersburg and Richmond. The inspection lately established in Philadelphia has already augmented the direct intercourse between it and Bremen; and a regular line of packets is to sail between the two ports.

The quantity of cotton annually shipped to Bremen from the United States does not go beyond six or eight thousand bales. Five or six thousand casks of rice are annually exported thither.

For many years past the Bremen vessels have brought to this country a large number of German emigrants, consisting chiefly of industrious farmers, mechanics, and labourers.

During the years 1836 and 1837, they supplied us with grain; but their cargoes ordinarily consist of goods manufactured in various parts of Germany, such as

Silks, manufactured mostly at Elberfeld and Crevelt, in Prussia.

Cotton goods, principally hosiery, made in Saxony.

Woollens, chiefly merinoes, some coarse woollen hosiery, some light summer cloths, and a small quantity of broad cloth.

Hardware and steel, manufactured at Remscheid, Solingen, and neighbouring places, in the Prussian dominions.

Hollow glassware, such as tumblers of the commonest description, and wine and per-

ter bottles. The importation of these articles is gradually decreasing, as our own glass-works are improving.

Linens. All kinds of German linen goods have been in a great measure superseded by the linens of Ireland and Scotland. Some very coarse linen, however, for bagging, called Hesians and Hoeden rolls, and some burlaps for negro clothing, as also sail cloth of a good quality, made in imitation of the Dutch, together with linen tapes and bobbins, continue to be imported; also damask table linen and napkins, and linen pocket handkerchiefs.

Looking-glass plates of small sizes, low priced toilet and pocket glasses, burning glasses, and spectacle glasses procured from Nuremberg, in the kingdom of Bavaria; as also hooks and eyes, bone buttons, toys, and a great variety of small articles, procured from the same place.

Thread, silk, and cotton lace, lace veils and embroideries, cotton and worsted fringes, brought to Bremen from Saxony.

Slates, slate pencils, marbles, and toys from Sonnenberg in Saxony.

Oil cloth manufactured in Saxony.

Westphalia hams.

We may remark that the consumption of German manufactures in this country is, generally speaking, on the increase; the frugality and industry of the Germans enabling them more and more to compete with the English and French.—*Am. Ed.*

BRIBE. Any person giving or offering a bribe, recompence, or reward, to any officer of the customs, to induce him to neglect his duty, to forfeit 200*l.*—(3 & 4 Will. 4. c. 53. § 38.)

[By the act of the 2d of March, 1799, entitled "An act to regulate the collection of duties on imports and exports," it was enacted,

"That if any officer of the customs shall, directly or indirectly, take or receive any bribe, reward, or recompence, for conniving, or shall connive, at any false entry of any ship or vessel, or of any goods, wares, or merchandise, and shall be convicted thereof, every such officer, or other person, shall forfeit and pay a sum, not less than two hundred, nor more than two thousand dollars, for each offence; and any person giving or offering any bribe, recompence, or reward, for any such deception, collusion, or fraud, shall forfeit and pay a sum, not less than two hundred dollars, nor more than two thousand dollars, for each offence."—*Am. Ed.*]

BRICKS AND TILES, well known articles used in the building and covering of houses. They are made of baked clay and sand. Until last year (1833) an excise duty was charged both on bricks and tiles, their manufacture being, in consequence, placed under surveillance. It is ordered by 17 Geo. 3. c. 42. that all bricks made in England for sale shall be 8½ inches long, 2½ inches thick, and 4 wide; and all pantiles 13½ inches long, 9½ inches wide, and ½ an inch thick; on pain of forfeiting, for bricks or tiles made of less dimensions when burnt, as follows, viz. 20*s.* for every 1,000 of bricks, and 10*s.* for every 1,000 of pantiles, and proportionally for a greater or less number. It is also provided, that the size of the sieves or screens for sifting or screening sea-coal ashes to be mixed with brick earth in making bricks, shall not exceed ½ of an inch between the meshes. Makers of bricks and tiles must give notice, under a penalty of 100*l.*, to the excise, of their intention to begin the manufacture. Tiles used in draining land were exempted from the duties. But in so far as respects tiles, these regulations are no longer of importance, the duty on them having been abolished in 1833. The revenue derived from it was but trifling. It was, however, very prejudicial to the manufacture, particularly after the repeal of the duty on slates. It were to be wished that the state of the revenue was such as to admit of the repeal of the duty on bricks.

Account of the Rates of Duty on, and Quantities of, the different Species of Bricks produced in England and Wales in 1827, 1828, and 1829.

BRIMSTONE. See SULPHUR.

BRISTLES (Fr. *Soies*; Ger. *Borsten*; Du. *Borstels*; It. *Setole*; Sp. *Cerdas*, *Setas*; Pol. *Szczeciny*; Rus. *Schit-chitina*; Lat. *Setæ*), the strong glossy hairs growing on the back of the hog and the wild boar. These are very extensively used by brushmakers, shoemakers, saddlers, &c., and form a considerable article of import. Russia is the great mart for bristles; those of the Ukraine being held in the highest estimation. Of the total quantity imported in 1831, amounting to 2,070,306 lbs., Russia furnished 1,867,096 lbs., and Prussia (Königsberg) 136,721 lbs. At an average of the 3 years ending with 1831, the entries for home consumption amounted to 1,789,801 lbs. a year. The duty, which varies from 2½*d.* to 3½*d.* a pound, produced, in 1832, 25,613*l.* 2*s.* 10*d.* nett.

BROCADE (Du. *Brokade*; Fr. *Brocade*; Ger. *Brokat*; It. *Broccato*; Rus. *Parischa*; Sp. *Brocado*), a stuff made of silk variegated with gold and silver.

BROKERS, persons employed as middlemen to transact business or negotiate bargains between different merchants or individuals. They are sometimes licensed by public authority, and sometimes not.

Brokers are divided into different classes, as bill or exchange brokers, stockholders, ship and insurance brokers, pawnbrokers, and brokers simply so called, or those who sell or appraise household furniture distrained for rent. Exclusive, too, of the classes now mentioned, the brokers who negotiate sales of produce between different merchants usually confine themselves to some one department or line of business; and by attending to it exclusively, they acquire a more intimate knowledge of its various details, and of the credit of those engaged in it, than could be looked for on the part of a general merchant; and are consequently able, for the most part, to buy on cheaper and to sell on dearer terms than those less familiar with the business. It is to these circumstances—to a sense of the advantages to be derived from using their intervention in the transacting of business—that the extensive employment of brokers in London and all other large commercial cities is wholly to be ascribed.

The number of brokers in London is unlimited; but by the statute 8 & 9 Will. 3. c. 20 they are to be licensed by the lord mayor and aldermen, under such restrictions and limitations as they may think fit to enact. By the 57 Geo. 3. c. 60., brokers acting without being duly admitted are made liable in a penalty of 100*l.* The fee on admission is fixed by the same act at 5*l.*; and there is, besides, an annual payment also of 5*l.*

The following are some of the regulations established by the mayor and aldermen pursuant to the act of Will. 3. :—That every person shall, upon his admission, take an oath truly and faithfully to execute and perform the office of broker between party and party, in all

* (Compiled from the Parliamentary Papers, No. 104. Sess. 1830, and No. 354. Sess. 1831.)

things pertaining to the duty of the said office, without fraud or collusion, to the best and utmost of his skill and knowledge; that he shall in all cases reveal the name of his principal; and neither deal in goods on his own account, nor barter and sell again, nor make any gain in goods beyond the usual brokerage; and that he shall regularly register all the contracts, &c. into which he enters.

Brokers grant a bond under a penalty of 500*l.* for the faithful performance of the duties sworn to in the oath of admission.

A medal is delivered to the broker, with his name engraved thereon, which he may produce, if required, as evidence of his qualification.

Twelve persons professing the Jewish religion are permitted to act as brokers within the city, under the same regulations, and receive the silver medal accordingly. This medal is transferable; sold generally at from 800*l.* to 1,500*l.*, exclusive of the expense of transfer, which is uncertain. Upon the decease of any of the holders of the medal without its having been transferred, the appointment falls to the lord mayor for the time being; and for it the sum of 1,500*l.* has not unfrequently been given.—(*Mont-fiore's Com. Dict. art. Brokers.*)

If goods in the city of London be sold by a broker, to be paid for by a bill of exchange, the vendor has a right, *within a reasonable time*, if he be not satisfied with the sufficiency of the purchaser, to annul the contract, provided he intimate his dissent as soon as he has an opportunity of inquiring into the solvency of the purchaser. In a case of this sort (*Hodgson v. Davies*, 2 Camp. N. P. C. 536.), Lord Ellenborough was, at first, rather inclined to think that the contract concluded by a broker must be absolute, unless his authority were limited by writing, of which the purchaser had notice. But the special jury said, that "unless the name of the purchaser has been previously communicated to the seller, if the payment is to be by bill, the seller is always understood to reserve to himself the power of disapproving of the sufficiency of the purchaser, and annulling the contract." Lord Ellenborough allowed that this usage was reasonable and valid. But he clearly thought that the rejection must be intimated as soon as the seller has had time to inquire into the solvency of the purchaser. The jury found, in the case in question, that *five days* was not too long a period for making the necessary inquiries.

Brokers, Bill.—propose and conclude bargains between merchants and others in matters of bills and exchange. They make it their business to know the state of the exchange, and the circumstances likely to elevate or depress it. They sell bills for those *drawing* on foreign countries, and buy bills for those *remitting* to them: and, from their knowledge of the mutual wants of the one class as compared with those of the other, a few of the principal brokers are able to fix the rate of exchange at a fair average, which it would not be possible to do if the merchants directly transacted with each other. Their charge as brokerage is 2*s.* per cent.

"Those," says Mr. Windham Beawes, "who exercise the function of bill brokers, ought to be men of honour and capable of their business; and the more so, as both the credit and fortune of those who employ them may, in some measure, be said to be in their hands; and, therefore, they should avoid babbling, and be prudent in their office, which consists in one sole point, that is, *to hear all and say nothing*; so that they ought never to speak of the negotiations transacted by means of their intervention, or relate any ill report which they have heard against a drawer, nor offer his bills to those who have spread it."

Brokers, Stock.—are employed to buy and sell stock in the public funds, or in the funds of joint stock companies. Their business is regulated by certain acts of parliament, by which, among other things, it is enacted, that contracts in the nature of wagers, or contracts apparently framed for the sale or purchase of stock, but really intended only to enable the parties to speculate on contingent fluctuations of the market, without any stock being actually sold, shall be void, and those engaging in them subjected to a penalty of 500*l.*—(7 Geo. 2. c. 8, made perpetual by 10 Geo. 2. c. 8.) And by the same act, any one contracting to sell stock of which he is not actually possessed, or to which he is not entitled, forfeits 500*l.* Brokers not keeping a book in which all contracts are regularly inserted, are liable in a penalty of 50*l.* for each omission; half to the king and half to those who sue for it. The charge for brokerage on all public funds, except Exchequer bills and India bonds, is 2*s.* 6*d.* per cent.; on these it is 1*s.* per cent. No transaction with respect to the purchase and sale of stock in the public funds can be concluded except by the intervention of a licensed broker, unless by the parties themselves.

Brokers, Ship and Insurance.—The chief employment of this class of brokers is in the buying and selling of ships, in procuring cargoes on freight, and adjusting the terms of charterparties, settling with the master for his salary and disbursements, &c. Their charge as ship brokers is about 2 per cent. on the gross receipts. When they act as insurance brokers, they charge 5 per cent. on the premium, exclusive of a discount allowed them on settling with the underwriter. The merchant looks to the broker for the regularity of the contract, and a proper selection of underwriters. To him also the underwriters look for a fair and candid disclosure of all material circumstances affecting the risk, and for payment of

their premiums. From the importance of their employment, ship and insurance brokers ought to be, and indeed generally are, persons of respectability and honour, in whom full confidence may be reposed. A ship broker is not within the various acts for the regulation and admission of brokers.—(*Gibbons v. Rule*, C. P. 27th of June, 1827.)

Brokers, Custom-house.—It is enacted by the 3 & 4 Will. 4. c. 52., that no person shall be authorised to act as an agent for transacting business at the Custom-house in the port of London, relative to the entry or clearance of any ship, &c., unless authorised by licence of the commissioners of customs, who are to require bond with one surety for 1,000*l.* for the faithful conduct of such person and his clerks. This regulation does not, however, apply to the clerk or servant of any person or persons transacting business at the Custom-house on his or their account. The commissioners may extend this regulation to other ports.—§§ 144. & 148.

Brokers, Pawn. See PAWNBROKERS.

Brokers, simply so called, in their character of appraisers and sellers of goods distrained for rent, are regulated by 57 Geo. 3. c. 93., which enacts, that no *such person* making any distress for rent, where the sum due does not exceed 20*l.*, shall take more than the following sums; viz

	£	s.	d.
For levying	-	0	3 0
For men keeping possession, per day	-	0	2 0
Advertisements, if any	-	0	10 0
Catalogues, sale, commission, &c. in the pound on the nett produce	0	1	0
Stamp duty, lawful amount.			

Appraisements, whether by one broker or more, 6*d.* per pound on the value of the goods, under a penalty of treble the amount of the money unlawfully taken, with costs to be recovered summarily before a justice of the peace.

In France, the brokers who deal in money, exchange, merchandise, insurance, and stock, are called *agents de change*, and their number, at Paris, is limited to sixty. The company of *agents de change* is directed by a chamber of syndics (*chambre syndicale*) chosen annually by the company. They are severally obliged to give bonds to the amount of 125,000 fr. for the prevention of abuses. They are also obliged to keep books; are restricted to a charge of from $\frac{1}{2}$ to $\frac{1}{3}$ per cent.; and are interdicted from carrying on, or having any interest in, any commercial or banking operations.—(See *Code de Commerce*, § 74. &c.; and art. BORDEAUX, in this Dictionary.)

In the United States, brokers are not licensed, nor do they give bonds.

BROKERAGE, the commission, or percentage, paid to brokers on the sale or purchase of bills, funds, goods, &c.—(See FACTORAGE.)

BRONZE (Ger. *Stückgut*, *Stückmetall*; Du. *Stückgoed*; It. *Bronzo*; Sp. *Metal de Canones*; Lat. *Metallum tormentorum*), “a mixed metal, consisting chiefly of copper, with a small proportion of tin, and sometimes other metals. It is used for casting statues, cannon, bells, and other articles, in all of which the proportions of the ingredients vary.”—(*Ure*.)

BROOMS (Ger. *Besen*; Fr. *Balais*; It. *Scope*, *Granate*; Sp. *Escobas*; Rus. *Mella*), are principally made of birch or heath. Vast quantities are manufactured in Southwark, for the supply of the London market.

BRUSHES (Ger. *Bürsten*; Fr. *Brosses*; It. *Setole*, *Spazzole*; Sp. *Brozas*, *Cepillos*, *Escobillas*; Rus. *Schischetki*), well-known implements, made of bristles, and manufactured of various forms.

BUBBLES, a familiar name applied generally to fraudulent or unsubstantial commercial projects, which hold out hopes of rapid gain, for the purpose of enriching the projectors at the expense of sanguine and ignorant adventurers; and particularly used to designate those projects, the funds for which are raised by the sale of shares or subscription to a transferable stock. In consequence of the mischief produced by the gambling in transferable shares of bubble companies at the time of the South Sea project, 1719 and 1720, the stat. 6 Geo. 1. c. 18., reciting that several undertakings or projects had been contrived and practised, which “manifestly tended to the common grievance, prejudice, and inconvenience of great numbers of his Majesty’s subjects in their trade and commerce,” and describing, among other practices of the time, the ordinary mode of raising money by shares and subscriptions to a pretended transferable stock, enacted, that the undertakings and attempts so described, and public subscriptions, assignments, and transfers for furthering them, and particularly the raising or pretending to raise transferable stocks without authority of charter or act of parliament, should be deemed illegal and void, and prohibited them under severe penalties. Some decisions limited the operation of, and finally the stat. 6 Geo. 4. c. 91. altogether repealed, these enactments and prohibitions. The projectors of bubbles, therefore, are now punishable only when they can be deemed guilty of frauds or conspiracies at common law; and there is no other check on the adventurers than the loss and troublesome liabilities under the law of partnership, in which participation in these projects often involves them.

BUCKRAM (Fr. *Bougran*; Ger. *Schiltre*, *Stiefe Leinwand*; It. *Tela collata o gommatata*; Rus. *Kleanka*; Sp. *Bucaran*), a sort of coarse cloth made of hemp, gummed, calendered, and dyed several colours.

BUCKWHEAT (Fr. *Blé Sarrasin*, *Blé noir*; Ger. *Buchweizen*, *Heidekorn*; It. *Grano Saraceno*, *Faggina*, *Fraina*; Sp. *Trigo Saraceno*, *Trigo negro*; Pol. *Tatarca*, *Gryka*, *Pohanka*; Rus. *Gretschu*; Lat. *Fagopyrum*) is principally cultivated in order that it may be cut when young and green, and employed as fodder for cattle; when allowed to ripen, the grain is usually employed to feed pigeons and poultry. When ripe it is of a deep yellow colour, the seeds bearing a great resemblance to beech-mast: it will grow on the poorest soils. Buckwheat has been cultivated in this country from the latter part of the sixteenth century. Its native country is unknown, but supposed to be Asia. Beckmann has a very learned dissertation on its introduction and early culture in Europe.—(See *Hist. of Invent.* vol. i. art. *Buckwheat*.) The average quantity of buckwheat imported, is about 10,000 quarters. The duty is the same as on barley.—(See *COM. LAWS*.)

BUENOS AYRES, a city of South America, on the south side of the La Plata, about 200 miles from its junction with the sea, in lat. 34° 36' S., long. 58° 22' W. Population very differently estimated; but said (*Bulletin des Sciences Géographiques*, vol. xx. p. 152.) to amount to 81,000. The La Plata is one of the largest rivers of the world, traversing a vast extent of country, of which it is the great outlet. Unluckily, however, it is of very difficult navigation, being shallow, infested with rocks and sand-banks, and exposed to sudden and violent gusts of wind. There is no harbour at Buenos Ayres, or none worthy of the name. Ships can only come within 2 or 3 leagues of the town: there they unload their goods into boats; from which they are received at the landing places into carts that convey them to the town, which is about $\frac{1}{2}$ of a league distant. Ships that want careening repair to the bay of Barragon, a kind of port about 10 leagues to the S. E. of the city; and there also the outward bound ships wait for their cargoes. All the timber used in the construction of houses, and in the building and repairing of vessels, come down the river from Paraguay in rafts. The principal articles of export consist of hides and tallow, of which vast quantities are sent to England, the United States, Holland, Germany, &c.; besides these, there are exported bullion and viccunna wool from Peru, copper from Chili, salt beef, nutria skins, &c. The imports principally consists of cotton and woollen goods from England, hardware and earthenware from ditto, linens from Germany, flour from the United States, spices, wines, salt fish, machinery, furniture, &c.: the finest tobacco, sugars, wax, &c. are brought from the interior; as is Paraguay tea, an article in considerable demand in South America. The inland trade carried on between Buenos Ayres, and Peru, and Chili, is very considerable; and its trade by sea with foreign countries is daily becoming of more importance.

During the year 1832, there were exported from Buenos Ayres, dry hides, 877,132; ditto salted 48,573; horse hides, 40,076; jerked beef, 105,780 quintals; horns, 2,049,017; tipes, 101,851; wool, 33,052 arrobas; hair, 31,257 ditto; nutria skins, 14,502 dozen, &c. The trade from this country to Buenos Ayres is confounded in our Custom-house accounts with that to Monte Video, under the general name of the States of the Rio de la Plata; but by far the largest share belongs to Buenos Ayres. In 1831, we imported from these states, exclusive of bullion, of which no account is kept, 429,966 nutria skins.—(See *NUTRIA*), 146,008 cwt. hides, 2,470 cwt. tallow, 12,244 lbs. sheep's wool, &c. The declared value of the articles of British produce and manufacture exported to these states during the same year, was 339,870*l.*; of which cottons, woollens, hardware, and linens made more than three fourths. In 1833, 64 British ships, of the burden of 12,746 tons, entered the port; the total number of foreign vessels that annually enter it being from 300 to 400. The commerce of Buenos Ayres will no doubt continue to increase according as the vast countries situated on the La Plata, now in a great degree unoccupied, are settled.

Monies, Weights, Measures, &c. same as those of Spain; for which, see *CADIZ*.

[We shall only add to what the author has stated concerning the trade of the United States with Buenos Ayres, or the Argentine Republic, of which it is the capital, that the amount of our domestic manufactured *cottons* which we export to that country has become by no means inconsiderable. It was respectively \$263,000, \$101,000, \$400,000, and \$50,000, in the four years ending the 30th of September, 1837.—*Am. Ed.*]

BUFF (Ger. *Büffel*, *Büffelhäute*; Fr. *Buffle*, *Peau de buffles*, et *Peaux passées en buffles*; It. *Bufalo*, *Cuojo di bufalo*), a sort of leather prepared from the skin of the buffalo, dressed with oil, after the manner of chamois. The skin of elks, oxen, and other like animals, when prepared after the same manner as that of the buffalo, is likewise called *buff*. It is used in making sword-belts and other articles, where great thickness and firmness are required.

BUGLES, small glass beads of different colours. They are in considerable demand in Africa, to which they are mostly exported.

BULLION, uncoined gold and silver in the mass. See *GOLD* and *SILVER*.

BUOYS, pieces of wood, cork, or some light substance, moored and floating on the water. Those of wood are sometimes solid, and sometimes hollow, like a cask, and strongly hooped; they are made of various shapes and sizes; and are either private or public.

Subjoined is an

Account specifying the Buoy and Beacons under the Control of the Trinity-House, Deptford Strond, with the Rates of Charge on account of the same on British and Foreign Ships, and the Produce of the Rates in each of the Three Years ending with 1833.—(*Parl. Paper*, No. 315. *Seas*. 1833.)

	Rates of Charge.			Amounts collected.		
	Coasters.	British and Foreign privileged Vessels Overseas, per Tonn.	Foreign Vessels not privileged Overseas, per Tonn.	1830.	1831.	1832.
For the buoys and beacons in the channels leading to the river Thames and port of London, including loads, unmanage and primage, also including cargoes, and the dues for-merly return-ed under the head of Tri-nity House duties from stranger's ships.	In the port of London the following rates are payable for the inward pas-sage only; viz.— The rates vary from 1 penny to 1 far-thing per ton, according to the description of the vessels' cargoes, and the places from whence they arrive. 1 penny - 2 pence -			£ s. d.	£ s. d.	£ s. d.
	These dues are also received at the ports of Gravesend, Sheerness, Rochester, Faver-sham, Leigh, Maldon, Colchester, Ipswich, Wood-bridge, Harwich, and Aldborough, at which they are payable for the inward passage only. The rate on foreign vessels not privileged, is 2 pence per ton, but in other respects the rates are determined by the ancient usage of the respective places, and are generally one half the amount of those in the port of London.					
Buoys off Yar-mouth -	1 farthing per ton.	1 farthing	1 farthing	1,806 10 2½	1,835 11 4½	1,802 8 1½
Buoys and beacons in the river Tees	4 pence per vessel under 40 tons, 6 pence on all others.			469 7 8	452 17 2	463 7 6
Exeter buoys	Stone boats, 5 shillings per annum.	1 penny -	2 pence -	305 14 0	296 5 10	350 19 7
Conway buoys	3 farthings per ton, each and every time of passing.			48 18 2½	40 2 11½	45 8 4½
Carmarthen buoys	3 farthings per ton, each time of pass-ing.			110 12 0½	105 14 11½	107 7 3
Aberdovey buoys	1 half-penny per ton.	1 penny -	1 penny -	—	31 14 10½	40 9 2
Total -				£ 11,397 10 3½	12,085 3 7½	11,261 16 0½

Trinity House, London, 9th of March, 1833.

(Errors excepted.)

J. HERBERT, Secretary.

Private Buoys are so called from their belonging to private individuals. They are principally employed to mark the place of the ship's anchor, being fastened to it by a rope or chain, so that the men who go in the boat to weigh it may readily find out where it is.

By the 1 & 2 Geo. 4. c. 75. § 11. it is enacted, that if any person or persons shall wilfully cut away, cast adrift, remove, alter, deface, sink, or destroy, or in any way injure or conceal, any buoy, buoy-rope, or mark belonging to any ship or vessel, or which may be attached to any anchor or cable be-longing to any ship or vessel, whether in distress or otherwise, such person or persons so offending shall upon conviction be adjudged guilty of felony, and shall be liable to be transported for any term not exceeding 7 years, or to be imprisoned for any number of years, at the discretion of the court.

Public Buoys, being intended for the public service, cannot be placed, altered, or removed, except by competent authority. They are generally of a pretty large size; and are firmly moored by chains or cables to rocks, large stones, anchors, &c. By floating on the surface of the water, they serve at once to mark the channels through which it is safe to steer, and to point out dangers to be avoided, such as sunken rocks, shoals, wrecks of vessels, &c. The places in, and the purposes for, which buoys are exhibited, are always specified in good charts: and as the leading buoys are generally of a peculiar figure or colour, which is also indicated in the chart, the navigator, as soon as he recognises them, shapes his course accordingly. Hence the great importance of having buoys properly placed, and of their being carefully marked in charts.

The 6 Geo. 4. c. 125. § 91, enacts, that every person who shall ride by, make fast to, remove, or wilfully run down or run foul of any vessel placed to exhibit lights, or any buoy or beacon belonging to the corporation of the Trinity House of Deptford Strand, or to any other corporation having authority to place such vessel, buoy, or beacon, shall, besides making good all damage occasioned thereby, forfeit, for every such offence, any sum not exceeding 50*l*. nor less than 10*l*.

BURDEN of a ship. See **Tonnage**.

BURGUNDY. See **Wine**.

BURGUNDY PITCH, a resin, the produce of the *Pinus Abies*, or spruce fir. It is obtained by making incisions in the bark down to the wood, whence it flows thickly and languidly, immediately concreting into flakes that adhere firmly to the tree. These being taken off are melted in boiling water, and strained through coarse cloths. It is of a close consistence, rather soft, has a reddish brown colour, and a not unpleasant smell; it is very adhesive. The greatest quantity is collected in the neighbourhood of Neuchâtel, whence it is brought to us packed in casks. A fictitious sort is made in England, and found in the shops under the title of *common Burgundy pitch*; it may be distinguished by its friability, want of viscosity and of the odour which characterises the genuine sort.

A species of Burgundy pitch exudes spontaneously from the Norway spruce fir. This, which undergoes no preparation, is the *resin* or *thus* of the old London Pharmacopœias. It is imported in the form of tears or small masses, packed in casks, each containing from 1 to 2 cwt. It fetches about half the price of that which is strained.—(*Gray's Supplement to the Pharmacopœias, Thomson's Dispensatory.*)

BUSHEL, a measure of capacity for dry goods, as grain, fruit, dry pulse, &c. containing 4 pecks, or 8 gallons, or $\frac{1}{4}$ of a quarter.

The Winchester bushel contains 2150.42 cubic inches, while the Imperial bushel contains 2218.192. Hence to convert Winchester bushels into imperial, multiply by the fraction $\frac{2150.42}{2218.192}$, or '969447, or approximately deduct $\frac{1}{32}$ th, and $\frac{1}{128}$ th; and if great accuracy be required, $\frac{1}{32}$ th and $\frac{1}{128}$ th more. To convert prices per Winchester bushel into prices per Imperial bushel, multiply by the fraction $\frac{2218.192}{2150.42}$, or 1.0315157.

By the 6 Geo. 4. c. 74. § 7, the bushel shall be the standard measure of capacity for *coals, culm, lime, fish, potatoes, or fruit*, and all other goods and things commonly sold by heaped measure. The bushel shall contain 80 lbs. avoirdupois of distilled water, being made round, with a plain and even bottom, and being 19 $\frac{1}{2}$ inches from outside to outside. Sections 7 and 8 direct the mode in which the bushel shall be used for heaped measure.—(See **WEIGHTS AND MEASURES**.)

The standard measure of capacity, by this act, as well for liquids as for dry goods not measured by heaped measure, shall be the *gallon*, containing 10 lbs. avoirdupois weight of distilled water weighed in air at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches; and such measure shall be the Imperial standard gallon (containing 277.274 cubic inches); and all measures shall be taken in parts or multiples, or certain proportions, of the said Imperial standard gallon; and the quart shall be the fourth part, and the pint shall be an eighth of such standard gallon; and 2 such gallons shall be a peck, and 8 such gallons shall be a bushel, and 8 such bushels a quarter of corn or other dry goods not measured by heaped measure.

BUSHIRE or **ABUSHIRE**, a sea-port town of Persia, in the province of Fars, on the north-east coast of the Persian Gulf, in lat. 29° N., long. 50° 50' E. Population uncertain, but estimated by Major Wilson at from 15,000 to 20,000. Bushire is situated at the northern extremity of a sandy peninsula, to the north and east of which is the bay. There is a convenient anchorage for large ships due west from the town, 3 or 4 miles distant, in from 25 to 28 feet water; but ships of 300 tons burden or thereby lie in the inner roads, to the north, about 6 miles from shore; the anchorage is pretty good; but during violent north-westerly gales, they are sometimes obliged to cut their cables, and bear up for Karak, a small island about 15 leagues W. N. W. of Bushire. The water immediately to the east of the town is deep, but the passage to it is obstructed by a bar, which cannot be passed by vessels drawing more than 8 or 9 feet water, except at spring tides, when there is a rise of from 8 to 10 feet. The variation in 1811 was 4° 43' W.—(*Chart of the Persian Gulf, by Captain Ritchie, &c.*) The climate here, as in all the other ports of the Persian Gulf, is extremely hot, particularly in June, July, and August. The unhealthy season is in the fall of the year.

Trade, &c.—Bushire has a good deal of trade, particularly with Calcutta, Bombay, and Madras. Its merchants supply almost all Persia with Indian commodities; as, also, with a good many of those brought from Europe. Of the imports from India, indigo, sugar, sugar candy, and spices are the most important; the steel of India is preferred in Persia to every other, and is made into excellent sabres: tin is brought from Banca; and coffee is principally supplied by Mocha and other ports on the Arabian Gulf. English cotton goods, notwithstanding the admitted inferiority of our red dyes,—a colour in great esteem in Persia,—have already gone far to supersede those that were formerly brought from Hindostan; and the demand for them is rapidly extending, and is susceptible of an almost indefinite increase. Besides those imported at Bushire, a good many are introduced through Bussorah, and

some through Turkey and Russia; the latter by way of the Black Sea, the former of Smyrna and Constantinople. Hitherto, indeed, a considerable part of the cottons imported through the last mentioned channels have been supplied by Switzerland and Germany,—their fabrics having been, in some respects, better fitted than ours for the Turkish and Persian markets; but they seem to have lost this advantage, as our exports of cottons to Turkey are now rapidly increasing. Woollen goods, cutlery, watches, &c., sent to India from England, are thence exported to Bushire. Imitation shawls, of the proper size and pattern, are said to meet with a fair sale. The exports principally consist of raw silk, Kerman wool, Kerman and Cashmere shawls, carpets, horses, silk goods, dried fruits, wine, grain, copper, turquoises, asafoetida, gall-nuts, pearls, and other articles of minor importance. Turkey annually supplies Persia with a very considerable amount of bullion, most part of which is sent to India.

Of the Persian exports, raw silk is the most important. It is produced to some extent in every province; but Gheelan and Mazanderan are those which are most celebrated for its growth. In the former, about 800,000 lbs. are annually raised. Russia is a large customer for this article. Dried fruits and dates are sent in considerable quantities to India. Horses are largely exported to India both by sea and land; they serve for mounting our Indian cavalry, and for supplying the large private demand that always obtains in Hindostan for this noble animal. Though neither so swift nor so beautiful as those of Arabia, the Persian horses are large, more powerful, and, all things considered, better for cavalry. They are capable of supporting an extraordinary degree of fatigue. Wine of Shiraz enjoys a degree of celebrity, to which, judging from the few samples we have seen, it seems but ill entitled. Mr. Frazer says, that it is made in so careless a manner, that, in choosing it, not more than 1 bottle in 4 or 5 can be made use of. Persian tobacco and yellow dye berries are highly esteemed; the former enters to a considerable extent into the trade to Turkey as well as to India; the berries bring a very high price in our markets, but the imports hitherto have been inconsiderable. Turquoises, asafoetida, and various sorts of drugs, rose water, with other minor articles, form part of the exports. Sheep's and goats' wool is also exported. The best is that of Kerman. The down furnished by the goats of this province is almost as fine as that of the Thibet or shawl goats. Cotton is extensively produced in Persia; the Russians carry away some, but the greater part is used in the country. Grain is sent to Muscat, but not in large quantities. The pearl trade is now principally centered at Muscat. The imports of copper into Calcutta from Bushire, Bussorah, and other ports of the Persian Gulf, during the 7 years ending with 1827-28, were valued at about 30,000*l.* a year. This copper is principally the produce of the Persian mines, mixed, however, with some Russian copper from Georgia. Of manufactured articles, the principal are carpets of the most beautiful fabric; shawls, partly native, and partly brought from Cashmere; velvets, silk goods, gold and silver brocades, and a few other articles. The trade between Persia and Russia by the Caspian Sea is very considerable. Most part of the paper used in the former is supplied by the latter. The furs of Russia find a ready market in Persia; but it is a fact worth mentioning, that Persian merchants have recently been seen at the Leipzig fair, carrying gold thither for American furs!—(*Urquhart on the Resources of Turkey*, p. 155.) The Russian provinces on the Caspian derive their supplies of indigo from Persia by way of Bushire.

The official returns show that the total value of the entire trade, imports as well as exports, carried on between British India and the Persian Gulf, at an average of the 7 years ending with 1823, was (taking the rupee at $\frac{1}{2}$.) 1,337,163*l.* a year. Of this amount, Calcutta participated to the extent of 559,686*l.*, Madras of 51,951*l.*, and Bombay of 722,471*l.* This, however, includes the trade to Muscat and Bussorah, as well as to Bushire, and we have no means of discriminating the separate amount of each. It appears, indeed, from an account in the same paper whence these statements are taken, that of 34 ships belonging to the Persian Gulf that arrived at Bombay during the 7 years referred to, 23 belonged to Muscat, and only 7 to Bushire. But it must not be supposed that the trade to these places is in this proportion, inasmuch as most of the Arabian ships trading to Bussorah belong to Muscat. It may, however, be fairly presumed, that the arrivals of Gulf ships at Calcutta and Madras would be in about the same proportion as those at Bombay; but the destination of the British ships trading to the Gulf not being given, and it being customary for most ships to visit both Bushire and Bussorah, it is impossible to say whether the value of the trade to the former, as compared with that to the latter and Muscat, corresponds with the number of ships they respectively send to India.

Water at Bushire is excessively bad and dear; but excellent water, and in great abundance, may be had at Karak. The anchorage at this island is safe at all times; and ships may lie close to the beach. Sir John Malcolm suggested, that the permanent possession of Karak would be an object of considerable importance; and we are rather inclined to agree with him. It is of no value to the Persians, and there seems little doubt that they would be glad to cede it for a trifling consideration. Its possession would not only enable us to command the navigation of the Persian Gulf; but it would form a depot where goods destined for Bushire, Bussorah, &c. might be kept in perfect safety, and in a situation the most convenient, being readily accessible to all sorts of Arabian vessels. A taste for British cottons and woollens is now forming in all the vast countries watered by the Euphrates and the Tigris, or which derive their supplies from the emporia erected on their banks: and it is of the greatest consequence that nothing be omitted that may serve to facilitate the diffusion of this taste, and the means of gratifying it.

Money.—Accounts are kept in toman of 50 abasses, or 100 mamoodis. The toman is a Persian gold coin, containing, according to the report of the Bombay mint, from 71·5 to 67 gr. pure metal, being consequently equal to from 1*l.* 7*sh.* to 1*l.* 11*sh.* sterling. The toman of Bussorah is worth about 3*s.*, and that of Gombroon about 2*s.* These, with Persian and foreign silver coin of all denominations,

are found at Bushire; but the rates of the foreign coins are perpetually varying, and the weight of the native coins is also subject to frequent changes.

Weights and Measures.—Gold and silver are weighed by the miscal of 9 dwt. 23 7-12 gr., or 3 dwt. very nearly.

The commercial weights vary according to the commodities sold, and the places where they are used. The maund tabree weighs 6½ lbs. avoirdupois at the Custom-house, but only 6½ lbs. at the bazaar. This weight is used by dealers in sugar, coffee, copper, and all sorts of drugs. The maund copra is 7½ lbs. at the Custom-house, and from 7½ to 7½ lbs. at the bazaar. Dealers in rice and other articles of provision use this weight. The maund shaw is double the maund tabree, or 13½ lbs.

Pearls are weighed by the abbas = 2 25 gr. Troy.

There are various sorts of gux's or cubits. One called the royal gux = 37½ Eng. inches; the common gux is two thirds of the former, or 25 inches.

The Persian league or parasang is 1-20th of a degree of the equator, and should, therefore, be equal to 3 miles 3 furlongs and 25 poles English.

The artaba, or principal corn measure, is equivalent to about 9 Winchester quarters.

For further particulars, see Niebuhr, *Voyage en Arabie*, tome ii. p. 75; Kinneir's *Memoir of the Persian Empire*, p. 70; Fraser's *Traffic on the Shores of the Caspian*, Appen. pp. 352-384; Parl. Paper, No. 735.—II. Sess. 1832. pp. 632-636; Kelly's *Oriental Metrology*; Thornton's *East Indian Calculator*, &c.

BUSS, a small sea-vessel, used by us and the Dutch in the herring fishery, commonly from 60 to 60 tons burden, and sometimes more. A buss has two small sheds or cabins; one at the prow, and the other at the stern: that at the prow serves for a kitchen.—(See **FISHERY**.)

BUSSORAH or **BASRAH**, a city of Arabia, on the western bank of the Shat-el-Arab (the name given to the river formed by the junction of the Tigris and the Euphrates), above 70 miles from its mouth, lat. 30° 30' N., long. 47° 32' E. Population about 60,000, consisting of Arabs, Turks, Persians, Armenians, Jews, &c. The houses and streets are mean and filthy. There is a vast area within the walls, occupied principally by gardens and plantations of date trees, and intersected by canals, on which are numerous small craft.

The bar at the mouth of the Shat-el-Arab has only about 12 feet water, but the channel within is deep, so that ships of 500 tons burden, provided they cross the bar at the springs, may without difficulty ascend the river as far as the city; and both its grand branches may be navigated to a great distance by smaller vessels. Bussorah is the principal inlet on the east, through which Indian and other Eastern products find their way into the Turkish empire. Its commerce is, therefore, even at present, pretty considerable; and were the rich and extensive countries traversed by the Tigris and the Euphrates occupied by a civilized and industrious people, it would be very great. Its imports from India and Europe are similar to those at **BUSRAH** (which see); from Persia it imports shawls, pearls from Bahrein, &c., and coffee from Mocha. At an average, 6 or 8 British ships arrive in the course of the year from India; but the principal part of the trade is carried on in Arabian bottoms, the merchants of Muscat being the owners of some of the finest ships that are to be met with in the Indian seas. Its exports are principally bullion, pearls, dates, copper, raw silk, horses, gall nuts, and drugs. Captain Hamilton mentions, that in the early part of last century, the exports of dates from Bussorah exceeded 10,000 tons a year.—(*New account of the East Indies*, vol. i. p. 78.) The commerce with the interior is conducted by means of caravans to Aleppo and Bagdad; but it might be carried on to much more advantage by means of steam-boats. It has been proposed to forward mails from India by steam by the Shat-el-Arab and the Euphrates to Bir, thence by land to Scanderoon, and again by steam to Gibraltar and England.

Money.—All sorts of coins circulate here, but their values are constantly fluctuating. Accounts are kept in *maneddis* of 10 *danims*, or 100 *fooses*; 100 *maneddis* make a *toman*, which may be valued at about 15 *sterca* rupees, or 2½ sterling.

Weights and Measures.—Gold and silver are weighed by the *sheki* of 100 *micicals*, or 7,200 Eng. grains. The commercial weights are the *maund atteree*, the *maund safi* or *sees*, and the *she* of Bagdad. 1 *sheki* = 19 oz. avoirdupois; ¼ *vahkas* = 1 *she* of Bagdad = 47½ oz. avoird.; 1 *maund atteree* = 38 lbs. 8 oz. avoird.; 1 *maund safi* = 90 lbs. 4 oz. avoird.; 1 *curra* of indigo = 136 lbs. 15 oz. avoird.

These are the weights used by the Europeans settled at Bussorah; those used by the Arabians differ a little from the above, and frequently also among themselves,—a circumstance to which the merchant must pay particular attention.

The long measures are the Aleppo yard for silks and woollens = 2 feet 2 4 inches; the Hadded do. for cottons and linens = 2 feet 10 4 inches; the Bagdad do. for all purposes = 2 feet 7 6 inches.

For further details as to the commerce of Bussorah, see Kinneir's *Memoir on the Persian Empire*, p. 253; the art. **BUSRAH** in this Dictionary; Kelly's *Oriental Metrology*; Thornton's *East Indian Calculator*, p. 494. Niebuhr has given a plan of Bussorah, *Voyage en Arabie*, tome ii. p. 170.

BUTLERAGE. See **PRISAGE**.

BUTT, a vessel or measure for wine, containing 2 hogsheads, or 126 wine gallons.

BUTTER (Du. *Smôr*; Du. *Boter*; Fr. *Beurre*; Ger. *Butter*; It. *Burro*, *Butiro*; Lat. *Butyrum*; Pol. *Masło*; Port. *Manteiga*; Rus. *Masslo Korowe*; Sp. *Manteica*; Sw. *Smôr*), as every one knows, is a fat, unctuous, and, in temperate climates, a pretty firm substance, obtained from milk, or rather from cream, by the process of churning.

The various circumstances attending the introduction and use of butter in antiquity have been investigated by Beckmann with great learning and industry. The conclusion at which he arrives is, "that butter was not used either by the Greeks or Romans in cooking

Voz. L—Y.

An Account of the Total Quantity (in Hundred Weights) of Butter imported into Great Britain from Foreign Countries and Ireland, in each Year, from 5th of January, 1801, to 5th of January, 1832; distinguishing the Quantity from Ireland, from the Isles of Jersey, Guernsey, and Man, from Holland and the Netherlands, and from all other Foreign Countries; and stating the Rate and Amount of Duty in each Year paid thereon.

N. B.—We have omitted *grs.* and *lbs.* from this account; but they are allowed for in the column of totals.

Custom House, London, 5th of October, 1832.

[There is no butter superior to what is made in our own country. Of this, too, the fresh butter with which the Philadelphia market is supplied, has the character of being as good as any other of the same description; while the best butter which is put up, so as to keep for a considerable time, is that made at Goshen, in the State of New York. The *glades' butter* from Somerset county, Pennsylvania, although perhaps inferior generally to the Goshen, is also of an excellent quality.

During a period of four years, upwards of 600,000 pounds of butter have been, on the average, exported annually from the United States, mostly to the West Indies and South America.—*Am. Ed.*]

BUTTONS (*Du. Knoopen*; *Fr. Bouton*; *Ger. Knöpfe*; *It. Bottoni*; *Rus. Pogonish*; *Sp. Botones*) are well known articles, serving to fasten clothes, &c. They are manufactured of an endless variety of materials and forms.

It might have been supposed, that the manufacture of such an article as this would have been left to be carried on according to the views and interests of those concerned, individuals being allowed to select any sort of button they pleased. Such, however, has not been the case; and various statutes have been passed, pointing out the kind of buttons to be worn, and the way in which they are to be

* Butter imported in British shipping, or in shipping of states in amity with his Majesty, was admitted free of duty under the authority of Orders in Council, by virtue of the act 30 Geo. 3. c. 57., from 12th of July, 1799, continued by subsequent acts until 6 months after the ratification of the definitive treaty of peace, and further continued, by Order in Council, until 25th of September, 1814.

† No account can be furnished of the quantities of butter imported from Ireland for the years subsequent to 1825, the records of the trade between Great Britain and Ireland having been discontinued, in consequence of the regulations adopted for the purpose of giving effect to the law which placed the intercourse between the two countries on the footing of a coasting traffic.

made! Most of these regulations have luckily fallen into disuse, but they still occupy a place in the statute book, and may be enforced. The following are amongst the more prominent of these regulations:—

No person shall make, sell, or set upon any clothes, or wearing garments whatsoever, any buttons made of cloth, serge, druggot, frieze, camblet, or any other stuff of which clothes or wearing garments are made, or any buttons made of wood only, and turned in limitation of other buttons, on pain of forfeiting 40s. per dozen for all such buttons.—(4 Geo. 1. c. 7.)

No tailor shall set on any buttons, or button-holes, of serge, druggot, &c., under penalty of 40s. for every dozen of buttons or button-holes so made or set on.

No person shall use or wear, on any clothes, garments, or apparel whatsoever, except velvet, any buttons or button-holes made of or bound with cloth, serge, druggot, frieze, camblet, or other stuffs whereof clothes or woollen garments are usually made, on penalty of forfeiting 40s. per dozen, under a similar penalty.—(7 Geo. 1. c. 23.)

To prevent the frauds which it is alleged had taken place in the manufacture of gilt and plated buttons, an act, 36 Geo. 3. c. 6., was passed, which regulates what shall be deemed gilt and what plated buttons; and imposes penalties on those who order as well as on those who make any buttons with the words "gilt" or "plated" marked upon them, except they be gilt and plated as the act directs. Inasmuch as this statute goes to obviate a fraud, it is, perhaps, expedient; but no apology can be made for the regulations previously alluded to, which are at once vexatious and absurd.

The importation of buttons from abroad was prohibited in the reign of Charles II. But the 6 Geo. 4. c. 107. § 53. repealed this prohibition, and they may now be imported, for home consumption, on paying an *ad valorem* duty.

[Buttons constitute an article of exportation from the United States, chiefly to South America.—*Am. Ed.*]

C.

CABBAGE, a biennial plant (*Brassica* Lin.), of which there are many varieties. It is too well known to require any particular description; it is extensively cultivated in the vicinity of London. Sour crout, or properly *sauer kraut*, is a very favourite dish in Germany; it consist of a fermented mass of salted cabbage.

CABLES are strong ropes or chains, principally used in the anchoring or mooring of ships.

1. *Rope Cables* are in Europe principally manufactured of hemp; but in the East they are very frequently made of *coco*, or of the fibrous part of the coco nut, and in some places, particularly on the Red Sea, of the coating of the branches of the date-tree. Hemp cables are formed of three principal strands, every strand of three ropes, and every rope of three twists. The twists have more or fewer threads according to the greater or less thickness of the cable. All vessels have ready for service three cables which are usually designated the *sheet* cable, the *best bower* cable, and the *small bower* cable; but besides these, most ships have some spare cables. The ordinary length of a cable is from 100 to 120 fathoms. The following are the existing regulations as to the manufacture of hemp cables and cordage:—

No person shall make or sell any cordage for shipping in which any hemp is used, called short chocking, half clean, whole line, or other toppings, codilla, or any damaged hemp, on pain of forfeiting the same, and also treble the value thereof.

Cables, hawsers, or ropes, made of materials not prohibited by this act, and whose quality shall be inferior to clean Petersburg hemp, shall be deemed inferior cordage, and the same shall be distinguished by marking on the tally, *staple* or *inferior*. Manufacturers making default herein forfeit for every hundred weight of cordage, 10s.

Manufacturers are to affix their names and manufactory to new cordage before sold, under the like forfeiture; and putting a false name is a forfeiture of 20l.

Persons making cables of old and overworn stuff, containing above 7 inches in compass, shall forfeit four times the value.

Vessels belonging to British subjects, having on board foreign-made cordage, are to make entry thereof, on entering into any British port, on penalty of 50s. for every hundred weight. But this is not to extend to cordage brought from the East Indies, nor to materials at present used by any vessels built abroad before this act.—(35 Geo. 3. c. 56.)

2. *Iron Cables*.—The application of strong iron chains or cables to the purposes of navigation is a late and an important discovery, for which we are indebted to Captain Samuel Brown, R. N. It is singular, indeed, that this application should not have been made at a much earlier period. On rocky bottoms or where coral is abundant, a hempen cable speedily chafes, and is often quite destroyed in a few months, or perhaps days. A striking instance of this occurred in the voyage of discovery under the orders of M. Bougainville, who lost six anchors in the space of nine days, and narrowly escaped shipwreck; a result, says that able seaman, which would not have happened, "*si nous eussions été munis des quelques chaînes de fer. C'est une précaution que ne doivent jamais oublier tous les navigateurs destinés à de pareils voyages.*"—(*Voyage autour du Monde*, p. 207. 4to ed.) The work from which this extract is taken was published in 1771; and yet it was not till nearly forty years after, that any attempt was made practically to profit by so judicious a suggestion. The difficulties in the way of importing hemp from 1808 to 1814, and its consequent high price, gave the first great stimulus to the manufacture of iron cables.

Iron cables are constructed in different ways—(see *Encyc. Métrop.*); but they are uniformly tried by a machine, which strains them by a force greater than the absolute strength of the hempen cable they are intended to replace. By this means the risk of accident from

defective links is effectually obviated; and there are exceedingly few instances in which an iron cable has broken at sea. Their great weight also contributes to their strength, inasmuch as the impulse of the ship is checked before the cable is brought nearly to a straight line, or that the strain approaches to a maximum. Bolts and shackles are provided at every fathom or two fathoms, by striking out which the ship may, if necessary, be detached from her anchors with less difficulty than a hempen cable can be cut.

Even in their most defective form, iron cables are a great deal stronger than those of hemp; and as to durability, no sort of comparison can be made. No wonder, therefore, that they should be rapidly superseding the latter; which are now almost wholly laid aside in the navy, and, to a great extent, also, in the merchant service.

[We import cables and cordage for the most part from Russia, and export these articles to the South American States and the West Indies.—*Am. Ed.*]

CACAO, or, as it is commonly, but incorrectly written in this country, *Cocoa* (Fr. and Sp. *Cacao*; Ger. *Kakao*), the seed, or nuts of the cacao tree (*Theobroma cacao*), growing in the West Indies, and in many parts of South America. It is said, by Mr. Bryan Edwards, to bear some resemblance, both in size and shape, to a young *blackheart cherry*. The nuts are contained in pods, much like a cucumber, that proceed immediately from all parts of the body and larger branches; each pod contains from 20 to 30 nuts, of the size of large almonds, very compactly set. The shell of the nut is of a dark brown colour, brittle, and thin; the kernel is both internally and externally brownish, divided into several unequal portions, adhering together, but separating without much difficulty; it has a light agreeable smell, and an unctuous, bitterish, rather rough and peculiar, but not ungrateful taste. The nuts should be chosen full, plump, and shining, without any mustiness, and not worm-eaten. They yield, by expression, a great deal of oil; but they are cultivated only that they may be employed in the preparation of the excellent beverage cacao, and the manufacture of chocolate, of which they form the principal ingredient. The finest cacao is said to be that of Socomusco. The principal importations are, however, derived from the Caraccas and Guayaquil, particularly the former. The price of the cacao of the Caraccas is, also, at an average, from 30 to 40 per cent. higher than that of Guayaquil.

M. Humboldt estimated the consumption of cacao in Europe, in 1806, at 23,000,000 lbs., of which from 6,000,000 to 9,000,000 were supposed to be consumed in Spain. The production of cacao had been languishing in the Caraccas for several years previously to the commencement of the disturbances in South America; and lately the cultivation of one or other of the great staples of cotton, sugar, and coffee, seems to have been every where gaining the ascendancy.—(*Humboldt Pers. Narrative*, vol. iv. pp. 236—247. Eng. trans.)

Duties.—Very little cacao is consumed in England; a result which we are inclined to ascribe to the oppressiveness of the duties with which it has hitherto been loaded, and not to its being unsuitable to the public taste. It is now many years since Mr. Bryan Edwards declared that the ruin of the cacao plantations, with which Jamaica once abounded, was the effect of "the heavy hand of ministerial exaction."—(*Hist. of West Indies*, vol. ii. p. 263.) And, unaccountable as it may seem, this pressure was not materially abated till 1832, when the duties on cacao from a British plantation were reduced from 56s. to 18s. 8d. a cwt. Foreign cacao is still subject to the oppressive duty of 56s. a cwt. The entries of cacao for home consumption, at an average of the three years ending with 1831, were 440,578 lbs. a year. In 1832, the entries were 502,817 lbs.; and there can be little doubt that the reduction in the rate of duty will occasion a considerable increase of consumption. Exclusive of the above, 470,000 lbs. of cacao were taken off in 1833 for the use of the navy; this, not being liable to the duty, was entirely foreign. The high discriminating duty on the latter is the greatest defect in the new arrangements. Had the duty on foreign cacao been fixed at 25s. per cwt., it is pretty certain that a good deal of it would have been taken for consumption. Even on this footing, there would have been a discriminating duty of no less than 50 per cent. in favour of British cacao; and, unless our object be to exclude the foreign article altogether, this is surely an ample preference. The duties on cacao produced, in 1832, 13, 22 1/2, 12s. British cacao is worth, at present (August, 1832), from 6s. to 76s. a cwt. in bond.

Cacao nut *husks and shells* are allowed to be imported under a duty of 9s. 4d. a cwt. None of them are imported into Great Britain; but, in 1832, 336,551 lbs. were imported into Ireland. They are brought not only from the West Indies, but from Gibraltar and other places, being the refuse of the chocolate manufactories carried on in them.

Cacao cannot be entered as being the produce of some British possession in America, or of the Mauritius, until the master of the ship by which it is imported delivers to the collector or comptroller a certificate, and makes oath that the goods are the produce of such places.—(3 and 4 Will. 4. c. 52. § 37.) Neither shall they be deemed to be the produce of such places, unless imported direct from thence.—(7 Geo. 4. c. 48.) Permits are no longer required for the removal of cacao.—(9 Geo. 4. c. 44. § 5.)

CADIZ, the principal commercial city and sea-port of Spain. It is situated on its south-western coast, on the rocky and elevated extremity of a narrow, low peninsula, or tongue of land, projecting from the Isla de Leon, N. N. W. about 4 1/2 nautical miles. It is surrounded on all sides, except the south, where it joins the land, by the sea, and is very strongly fortified. Population from 60,000 to 70,000. It is well built, and has, at a distance, a very striking appearance. The tower or lighthouse of St. Sebastian stands on the western side of the city, being, according to Tofiño, in lat. 36° 31' 7" N., long. 6° 18' 52" W. It is a most conspicuous object to vessels approaching from the Atlantic. The light, which is 172 feet high, is of great brilliancy, revolves once a minute, and in fair weather may be seen more than 6 leagues off.

Bay of Cadiz.—The entrance to this noble basin lies between the city and the town and promontory of Rota, bearing N. W. by N., distant about $\frac{1}{2}$ league. The bay is of very great extent, affording, in most places, good anchorage. The port is on the eastern side of the city, where a mole of considerable dimensions has been constructed; but the water is not sufficiently deep to allow large vessels to approach nearer than within about $\frac{1}{2}$ of a mile, where they anchor in from 5 to 7 fathoms. The rocks called the Cochinos, the Puercas, and the Diamante, lie to the north of the city in the entrance to the bay; the first two at about 3-5ths of a mile distant, and the Diamante at rather more than $\frac{1}{2}$ mile from the city. Vessels may enter between the Puercas and the Diamante; but none, except those not drawing more than 15 feet water, and well acquainted with the channel, ought to attempt entering between the Cochinos and Puercas and the city. The town of St. Mary's, on the opposite side of the bay, is famous for being the depôt of the wines of Xeres. The outer bay, or that of Cadiz properly so called, is separated from the inner bay by the promontory having at its extremity the castle of Matagorda, which approaches within about $\frac{1}{2}$ of a mile of the Puntales castle on the Isla de Leon. Within the inner bay is the famous arsenal of the Carracas, the town of San Carlos, the canal of Trocadero, &c. At spring tides the water in the bay rises 10 or 11 feet, but at neaps the rise does not exceed 6 feet.—(For further particulars see the excellent *Chart of the Bay of Cadiz*, by Tufino; *Matham's Naval Gazetteer*; and *Purdy's Sailing Directions for the Bay of Biscay*, &c.)

History, Trade, &c.—Cadiz is a very ancient city, having been founded by the Phenicians about 1,200 years before the Christian era. The temple which they erected in it in honour of Hercules was one of the most celebrated in antiquity.—(*Sainte Croix, Des Antiquités Coloniales*, p. 14.; *Pomp. Mela*, lib. iii. cap. 6.) Its excellent port, and its situation, favourable alike for commerce and security, have made it, whether possessed by Carthaginians, Romans, Moors, or Christians, and under every vicissitude, a place of considerable commercial and political importance. It has long been one of the principal stations of the Spanish naval force. In 1720, the commerce with Spanish America, which had previously been exclusively carried on from Seville, was transferred to Cadiz. It enjoyed this valuable monopoly till 1765, when it was partially relaxed by the trade to Cuba, St. Domingo, Porto Rico, and the other islands being opened to all the greater ports of Spain. The benefits resulting from this relaxation were so very great, that in 1778 the trade to all parts of America was opened to ships from every considerable Spanish port, except those of Biscay, which, not being subject to the general laws of the kingdom, were not allowed to participate in this privilege. In consequence, however, of her situation, the great capital of her merchants, and their established connections, Cadiz continued, notwithstanding the abolition of the monopoly, to preserve the largest share of the American trade. But since the colonies achieved their independence, her commerce has been contracted within comparatively narrow limits; nor is there much prospect of its being materially improved, without a total change of policy on the part of the Spanish government.—(*Robertson's America*, b. viii. passim; *Townsend's Travels in Spain*, vol. ii. pp. 395—401. 2d edit.)

The white wines of Xeres in its vicinity form by far the principal article of export from Cadiz. The quantity exported may amount to about 20,000 pipes a year. The prices vary from 12*l.* to 65*l.* per pipe; but, as the lower qualities predominate, the price may be taken, at a medium, at about 25*l.*, making the total value of the exports 500,000*l.* More than $\frac{2}{3}$ ths of the whole comes to England. The other articles of export are brandy, oranges, and other fruits, olive oil, wool, quicksilver, &c. The imports consist principally of sugar and coffee from the Havannah and Porto Rico, cacao, hemp, flax, linens, dried fish, hides, cotton wool, and cotton manufactures, rice, spices, indigo, &c.

In 1896, the Spanish government published what they termed the *Balanza Mercantil*, or an account of the commodities imported into, and exported from, Spain during that year. It is a very defective document; but as it is the best that can be obtained, it is subjoined. The values of the articles only are given. We have converted the sums into English money.

Note of the most considerable Articles of Importation into Spain in 1896.

Shipping.—In 1831 there arrived at Cadiz from foreign countries 475 ships, of the burden of 38,583 tons; and from the Spanish colonies, that is, from Cuba, Porto Rico, the Philippine Islands, &c., 163 ships, of the burden of 17,512 tons. The arrivals from England are not specified; but, in 1828, 184 British ships entered Cadiz. The coasting trade is very considerable.

Money.—The monies, weights, and measures, used at Cadiz, are those of Castile. Accounts are kept by the *real* (of old plate), of which there are 10½ in the *peso duro*, or hard dollar; and as the dollar = 4s. 3½d. the *real* = 4½d. A *real* is divided into 16 *quintos*, or 24 *maravedis*. The *duedo de plata*, or duet of plate, is worth 11 reals.

Weights and Measures.—The ordinary quintal is divided into 4 *arrobas*, or 100 lbs. of 2 marcs each: 100 lbs. Castile = 101½ lbs. avoirdupois. The yard, or *cava* = 937 English yard, or 100 varas = 936 English yards. The *cahiz*, or measure for corn, is divided into 12 *fanegas*, or 144 *calemas*, or 576 *quartillas*; 100 *cahiz*'s = 197 Winchester quarters, and 5 fanegas = 1 quarter. The *centaro*, or *arroba*, the measure for liquids, is divided into 8 *azumbres*, and 32 *quartillos*. There are two sorts of *arrobas*, the greater and the lesser: they are to each other as 23 to 25; the former being equal to 4½ English wine gallons, the latter to 3½ do. A *maga* of wine = 16 *arrobas*. The *botta* = 20 *arrobas* of wine, or 3½ of oil. A *pipe* = 27 *arrobas* of wine, or 84 of oil. Hence the *botta* = 12½ English wine gallons, and the *pipe* 114½ do.

British trade with Spain.—Notwithstanding the anti-commercial influence of prohibitions and oppressive duties, we carry on a very considerable trade with Spain. In 1831 we imported from her 61,921 cwt. barilla, 78,007 cwt. oak and cork bark, 146,234 quarters wheat—(see BILLARD), 760 cwt. figs, 972 tons lead, about 38,000 packages oranges and lemons, 1,213,686 gallons olive oil, 269,558 lbs. quicksilver, 105,066 cwt. raisins, 3,700 cwt. sumach, 14,184 lbs. silk, 69,319 gallons brandy, 3,474,523 lbs. wool, and 5,537,968 gallons wine. No account of the declared or *real* value of the imports is kept at the Custom-house; but the *official* value of the imports from Spain in 1831, exclusive of those from the Canaries, was above 1,000,000. sterling.

During the same year the *real* value of the various articles of British produce and manufactures cleared out from our ports for Spain was 597,948*l*. Of these articles linen was the principal, its value being estimated at 222,334*l*. Cottons amounted to above 118,000*l*. The other articles were hardware, iron and steel, tin, &c.—(*Parl. Paper*, No. 550. Sess. 1833.)

Smuggling, &c.—In 1829 Cadiz was made a free port, that is, a port where goods may be consumed and bonded without paying duty. This boon would have been of comparatively little consequence but for the opportunity of smuggling afforded by the oppressively high duties laid on most foreign articles imported into Spain. These, as such duties wherever imposed never fail to do, have given birth to a very extensive contraband trade; and under the free regime Cadiz became the grand focus of this traffic. The government having seen this effect of the franchise, it was withdrawn on the 22d of December, 1832. This, however, is but a very trifling inconvenience to the smuggler. Nothing, fortunately, but the repeal of prohibitions, and the reduction of oppressive duties to a reasonable amount, can ever materially diminish the field of his exertions. It would appear, however, that the experience of a couple of centuries has been as unable to impress the Spanish government with a conviction of this unquestionable truth, as it has been to open their eyes to the enormous abuses that infect every part of the public administration.

Mr. Townsend, the author of by far the best English work on Spain, which he visited in 1786 and 1787, has the following admirable remarks on this subject, in his chapter on Cadiz:—

“The Spanish government has never yet acquired any liberal ideas respecting trade; and even at the present moment, some of their best political writers resemble *lax hounds* hunting the state account, whilst the fleetest are already in possession of the game. Instead of throwing down every obstacle to commerce, they labour to contract its limits, under the vain hope of establishing a monopoly, without considering either their own want of capital, of industry, and of an enterprising spirit, or the utter impossibility of preventing smuggling, whilst other nations, with greater advantages for trade, can undersell them in the market. Until they shall be more enlightened, until they shall have banished their inquisitors, and until the happy period shall arrive when, under the protection of a free government, they shall have restored public credit, and placed it on a firm foundation; all their prohibitions, all their severities exercised on the property and persons of the illicit traders, all their commercial treaties, and all their commercial wars, into which ambition may betray them, will be frivolous and vain; because no efforts will ever prevail against the united interests of their own subjects, and of all surrounding nations.

"Even at home, the watchfulness and energy of every government have never been able to enforce its prohibitions; for, notwithstanding these, when I was travelling through Spain, all the men appeared in Manchester cotton goods, and no woman was seen without her muslin veil. In Spain, as throughout Europe, it is found that when the price of insurance is less than the duties imposed on the commodity, no laws are sufficient to control the operations of illicit traders."—(Vol. II. p. 391.)

But the Spanish government has been proof against such considerations. Instead of diminishing, they have materially increased, the number of prohibitions and the pressure of the duties; and the consequence is, that in many extensive provinces there is no regular trade, and that every thing is carried on by the agency of the smugglers, partly in defiance, but principally through the connivance, of the revenue officers. Notwithstanding their exclusion, English cotton goods may, at this moment, be bought in Madrid, and generally throughout Spain, at from 20 to 30 per cent. above their price in Gibraltar, where they are about as cheap as in Manchester! While Cadiz was a free port, about 6,000 persons are said to have been employed in it twisting cigars, which, as soon as finished, were forthwith smuggled into the interior. Three fourths of the foreign trade of Spain may, in fact, be said to be carried on in defiance of the law. And where such is the case, need we wonder at the low state of industry, or at the prevalence of those predatory and ferocious habits that uniformly mark the character of the smuggler?

In the valuable work of Mr. Inglis, entitled "Spain in 1830," we find the following statement under the head Cadiz. Though written more than 40 years after the paragraph previously quoted from Mr. Townsend, it shows that not one of the flagrant abuses denounced by the latter has been eradicated; but that, on the contrary, they all continue to flourish in still ranker luxuriance.

"The whole commercial system of Spain is most erroneously conceived. The prohibitory system is carried to a length absolutely ruinous to the fair trader, and highly injurious to the revenue. The immense duties upon admissible articles, and the total prohibition of others, has occasioned a most extensive contraband trade, both externally with the various ports, along the coast of Spain, and internally, throughout the whole of the kingdom; and by this trade admissible articles are introduced into the interior, at from 100 to 300 per cent. below the duties imposed. Government could not fail to be benefited by permitting the importation of articles of general use, upon payment of such a duty as would allow the sale of the article at a lower price than is now paid by the consumer to the smuggler. As one example of the impolicy of the system, I may cite a fact respecting the trade in salted fish, the returns of which I have before me. The import of this article into Cadiz in one year, before that city was made a free port, amounted to 4 vessels, whose cargoes reached 4,092 cwt.; while at the free port of Gibraltar, in the same year, 41 vessels entered with 89,106 cwt., the whole of which was intended for the illicit trade, and passed into Spain through the hands of the smugglers. The duty upon this article is more than 100 per cent.; the smuggler considers himself remunerated by a gain of twenty-five per cent.; so that the article which finds its way into the market through the contraband trade is sold 75 per cent. cheaper than that which is admitted upon payment of the regular duties.

"The duties upon British manufactured goods amount almost to a prohibition; they often reach 100 per cent., and this trade is therefore also in the hands of the smugglers, who obtain the profit which, under a more wholesome system, might go into the treasury of the kingdom. The fraudulent dealer is also greatly assisted by the custom of granting a royal licence to individuals to import a certain limited quantity of prohibited goods; an expedient resorted to in order to meet the exigencies of the state; and under the licence to enter 100 tons of merchandise, the merchant enters perhaps 1,000 tons; a deception easily practised in a country where, among the public officers, a scale of bribery is perfectly understood and acted upon."—(Vol. II. pp. 132—136.)

But for the system of misrule to which Spain has been subjected, there can be no reasonable doubt that her commerce would have been about the most extensive of any European state. Her natural advantages, superior to most, and not inferior to those enjoyed by any other kingdom; her wines, brandies, fruits, &c.; her wheat, of which she might produce the largest supplies; her wool; her iron, which is of the best quality; her lead and quicksilver mines, respectively the most productive in the world; the number and excellence of her harbours; the enterprising and adventurous character of her inhabitants, and her favourable situation; would, were she permitted to avail herself of them, raise her to a very high rank among commercial nations. Let the government cease to counteract the intentions of nature; let moderate duties take the place of prohibitions, and freedom of regulation; and all sorts of industrious pursuits will speedily revive from the deadly lethargy in which they have been so long sunk.

[The trade of the United States with Cadiz is not of much importance. Wines and salt are the principal commodities we get from them. See the article MALAGA.—*Am. Ed.*]

CAGLIARI, the capital of Sardinia, situated on the north-east shore of a spacious bay on the south coast of the island, lat. 39° 12' 13" N., long. 9° 6' 44" E. Population 28,000. The city stands on a rising ground, and has an imposing effect from the sea. The public buildings and churches are numerous, and some of them splendid; but the streets are, for the most part, narrow, steep, and filthy.

The Gulf of Cagliari extends from Pula on the west to Cape Carbonaro on the east, a distance of about 21 miles across, and about 12 in depth, with good anchorage every where after getting into soundings. A mole projects from the Pratique office, and ships usually lie about 1 mile S. W. by S. from it, in 6 or 8 fathoms water, on an excellent bottom of mud. There is a very convenient pier harbour at the south angle of the tower wall, capable of containing 14 or 16 vessels of a tolerable size, besides small craft. Altogether, Cagliari is one of the best and safest ports in the Mediterranean.

Imports and Exports.—Almost all the trade of Sardinia is carried on by strangers; and even the fish on its coast and in its harbours is caught by Sicilians, Neapolitans, Tuscans, and Genoese. Corn is the principal article of export. In good years, the exports from the whole island may amount to

400,000 starelli, or about 500,000 bushels, of wheat, 200,000 starelli of barley, 6,000 ditto of maize, 100,000 ditto of beans, 200,000 of peas, and 1,000 ditto of lentils. The culture of vines is gradually becoming of more importance; and about 3,500 Catalan pipes are exported, principally from Alghero and Ogliastra. Cheese is an important object in the rural economy of Sardinia, and considerable quantities are exported. Salt is a royal monopoly, and affords a considerable revenue. Until recently Sweden drew almost all her supplies of this important necessary from Sardinia, and it continues to be exported in considerable quantities. Flax, linseed, hides, oil, saffron, rags, alquifoux, &c. are among the articles of export. The tunny and coral fisheries employ a good many hands; but, as already observed, they are almost wholly managed by foreigners.

Almost every article of dress, whether for the gentry or the peasantry, is imported. Soap, stationery, glass, earthenware, and furniture, as well as sugar, coffee, drugs, spices, &c., are also supplied by foreigners; and notwithstanding the Sards possess many rich mines, several of which were successfully wrought in antiquity, they import all their iron and steel. The only manufactures carried on in the island are those of gunpowder, salt, tobacco, and woollen caps. In 1831, there entered the ports of Sardinia 166 foreign vessels, of the burden of 6,925 tons. Of these, the greater number were French; and next to them were Neapolitans, Austrians, Tuscans, &c.

Money, Weights, and Measures.—Accounts are kept in lire, reali, and soldi. 5 soldi = 1 reale = 4½d.; 4 reali = 1 lira = 1s. 6d.; 19 reali = 1 scudo = 3s. 6d. The paper money consists of notes for 5, 10, and 20 scudi.

Farm produce and the coarser metals are weighed by the *pesi di ferro*: 12 Sard. oz. = 1 lb. = 14 oz. 5 dr. avoirdupois; 26 lbs. = 1 rubbo; 4 rubbi = 1 cantaro = 93 lbs. 6 oz. 8 dr. avoirdupois.

The starello, or corn measure, is equivalent to 1 bush. 1½ peck Eng. The palm = 10½ Eng. inches.

Causes of the depressed state of Sardinia.—The above statements sufficiently show that the commerce of Sardinia is very far from being what might naturally be expected from its extent, fertility, admirable situation, and the excellence of its many harbours. It contains an area of about 9,500 square miles, being, in point of size, but little inferior to Sicily; and in antiquity it was hardly less celebrated for its productiveness:—

“Non opimas
Sardinia: segetes feracia.”—*Hor. lib. 1. Od. 31.*

But a long series of wars and revolutions, followed by the establishment of the feudal system in its worst form, and the subjection of the island, first to Spain, and more recently to the house of Savoy, have been attended by the most ruinous consequences. The Romans encouraged the exportation of corn and other produce from the provinces to Rome, where it always met with a ready and advantageous sale. But the modern rulers of Sardinia have followed quite an opposite policy; they have prevented the occupiers of the land from carrying their productions abroad; and as, owing to the want of a commercial and manufacturing population, there was little or no demand for it at home, no surplus was raised; so that the wish, as well as the means, of emerging from poverty and barbarism has been well nigh eradicated. It is to this impolitic conduct on the part of government, and to the insecurity arising from the want of police and of occupation under the worst sort of feudal tenures, that we are inclined principally to attribute that habitual illiness, and indifference to the future, that distinguish the modern Sarda.

We are glad, however, to have to state, that some improvements have been made within these few years. A good road has been formed from Cagliari to Sassari, and cross roads are being carried from it to some of the most considerable places in the island. The population, which, in 1816, amounted to only 352,000, is now estimated at 480,000 or 500,000*; and some meliorations have been introduced into various departments of industry. But without the establishment of an effective system for the administration of justice and the prevention and punishment of crime, the introduction of a better system of letting land, and the total abolition of the existing restraints on the exportation of corn and other produce from the island, it will be in vain to expect that its capacities should ever be fully developed. At present, it is usual to hire land, for the purposes of tillage, by the year; no corn can be exported if its price exceed 30 reals the starello; and a heavy duty is laid on all that is exported, as a substitute for a general land-tax. Nothing can be more preposterously absurd than such regulations. They have paralysed the exertions of the husbandman to such an extent, that this “*benignant nurse*” of ancient Rome† is sometimes, notwithstanding its scanty population, under the necessity of importing a portion of its supplies! Most other articles of export have been loaded with similar duties; so that the industry of the island has been, in effect, completely sacrificed to a short-sighted rapacity, of which, fortunately, there are not many examples. Let this disgraceful system, which, if possible, is even more injurious to the government than to the people, be put an end to,—let the freedom of exportation, with reasonable duties on imports, and the security of property, be established,—and we venture to predict that Sardinia will, at no very remote period, recover her ancient prosperity; that the revenues of the crown will be increased in a tenfold proportion; and that the population will cease to be conspicuous only for ferocity, illiness, and contempt of innovation.

In compiling this article, we have consulted Captain Smyth’s valuable work on Sardinia, particularly pp. 106—125. But the most complete work on the island is that of Marmara, already referred to.

* See *Marmara, Voyage en Sardaigne*, p. 176., and the *Foreign Quarterly Review*, No. 23. p. 256. Captain Smyth reckons the population, at an average of the 10 years ending with 1825, at about 400,000;—(p. 123.)

† “*Siciliam et Sardiniam, benignissimas urbis nostrae nutrices.*”—Val. Maximus, lib. vii. c. 6.

It, however, touches very gently on the gross and scandalous abuses that infect every part of the administration. We have borrowed some details from the *Annales du Commerce Maritime* for 1833, p. 302, &c.

CAJEPUT OIL, the volatile oil obtained from the leaves of the cajeput tree (*Melaleuca Leucadendron* Lin.). The name is a corruption of the native term *cayu-puti*, that is, white-wood oil; because the bark of the tree which yields it has a whitish appearance, like our birch. This tree is common in Amboyna and other Eastern islands. The oil is obtained by distillation from the dried leaves of the smaller of two varieties. It is prepared in great quantities in Banda, and sent to Holland in copper flasks. As it comes to us it is of a green colour, very limpid, lighter than water, of a strong smell resembling camphor, and a strong pungent taste. It burns entirely away without leaving any residuum. It is often adulterated with other essential oils, coloured with resin of milfoil. In the genuine oil, the green colour depends on the presence of copper; for, when rectified, it is colourless.—(*Thomson's Dispensatory*.)

Cajeput oil not being used except in the *materia medica*, only small quantities are imported. In July, 1831, it sold in bond at about *1d.* an ounce; but an idea having then got abroad that it was one of the most efficient remedies in cases of cholera, its price rose in November, 1831, to no less than *11s.* an ounce! But it soon after fell into discredit with the faculty, and additional supplies having been obtained from Holland, its price declined almost as fast as it had risen. It is not at present (September, 1833) worth more in bond, than from *1d.* to *2d.* an ounce.

CALABAR SKIN (Fr. *Petit-gris*; Ger. *Grauwerk*; It. *Vaor*, *Vajo*; Rus. *Rjelka*; Sp. *Gris pequeno*), the Siberian squirrel skin, of various colours, used in making muffs, tippets, and trimmings for clothes.

CALABASH, a light kind of vessel formed of the shell of a gourd, emptied and dried. The Indians both of the North and South Sea put the pearls they have fished in calabashes, and the natives of Africa do the same by their gold dust. They also are used as a measure in Africa.

CALAMANCO (Du. *Kallemink*, *Kalmink*; Fr. *Calmande*, *Culmandre*; It. *Durante*; Rus. *Kolomenka*; Sp. *Calmaco*; Sw. *Kalmink*), a sort of woollen stuff, manufactured in England and the Netherlands; it has a fine gloss; and being chequered in the warp, the checks appear only on the right side.

CALAMANDER WOOD, a beautiful species of timber brought from Ceylon.

It is so hard that common edge-tools cannot work it, so that it must be rasped and almost ground into shape. It is singularly remarkable for the variety and admixture of colours. The most prevailing is a fine chocolate, now deepening almost into absolute black, now fading into a medium between fawn and cream colours. It arrests the eye from the rich beauty of the intermingled tints, not from any undue showiness. It takes a very high polish; and is wrought into chairs, and particularly into tables. Sir Robert Brownrigg, late governor of Ceylon, had the doors of the dining-room of his seat in Monmouthshire made of calamander. It is scarce in Ceylon, and is not regularly imported; all that is in Great Britain has been imported by private gentlemen, returning from the colony, for their own use. It is by far the most beautiful of all the fancy woods. The nearer it is taken from the root of the tree, the finer it is.—(*Millars's Orient. Com.*; *Lib. of Entertaining Knowledge*, Vegetable Substances, p. 179.)

CALCUTTA, the principal city of the province of Bengal, the capital of the British dominions in India, and, with the exception perhaps of Canton, the greatest emporium to the eastward of the Cape of Good Hope. Its citadel is in lat. 22° 33' 54" N., long. 88° 20' 17" E. It is about 100 miles distant from the sea, being situated on the eastern bank of the western branch of the Ganges, denominated by Europeans the Hooghly River, which is the only arm of the Ganges navigable to any considerable distance by large ships. At high water the river opposite to the town is about a mile in breadth; but during the ebb the side opposite to Calcutta exposes a long range of dry sand banks. Owing to the length and intricacy of the navigation from the sea, it cannot be undertaken without a pilot; so that, even if it did not exceed our limits, it would be useless to attempt any description of it in this place.—(See the reduced *Plan of the Mouths of the Hooghly River*, in the *Mercator's Chart* in this work.)

In 1717, Calcutta was a petty native village of paltry huts, with a few hundred inhabitants. Little more than a century later, or in 1822, the following were the returns of the population; viz. Christians, 13,138; Mohammedans, 48,103; Hindoos, 118,203; Chinese, 414, making in all, 179,917.

A great part, however, of what may be fairly considered the population of Calcutta, consisting of labourers, mechanics, and persons engaged in trade, reside at night in the suburbs, or neighbouring villages; coming into town early in the morning to their respective employments. These have been estimated by the magistrates, on tolerably good data, at 100,000; and allowing for the increase of inhabitants which is admitted to have taken place within the last dozen years, the existing population may be estimated at about 300,000. The town, excluding suburbs, extends to about 4½ miles along the bank of the river, with an average breadth inland of about 1½ mile. Fort William, the citadel, lies on the same side of the river, a little lower down. It is a strong regular fortification; but so extensive that it would require a garrison of 10,000 men for its effectual defence. Calcutta possesses great natural advantages for inland navigation; all sorts of foreign produce being transported with great facility on the Ganges and its subsidiary streams to the north-western quarters of Hindostan, over a distance of at least 1,000 miles, while the productions of the interior are received by the same easy channels.

The principal merchants and traders of Calcutta consist of the following classes; viz. British and other Europeans, Portuguese born in India, Armenians, Greeks, Jews, Persians from the coast of the Persian Gulf, commonly called Parsees, Moguls, Mohammedans of Hindostan, and Hindoos; the latter usually either of the Brahminical or mercantile castes, and natives of Bengal. In 1813, the total number of adult male British subjects, in the Bengal provinces (the great majority being in Calcutta),

engaged in trade or agriculture, was 1,225; in 1830, it was 1,707. This is the statement given by the printed register; but it is probably much underrated, particularly for the last year. The native Portuguese and Armenian merchants have of late greatly declined in wealth and importance. On the other hand, the Persian merchants have increased in numbers and wealth, several of them being worth 250,000l. sterling. The large fortunes of the Hindoo merchants have been much broken down of late years by litigation in the courts, and naturally through the law of equal coparcenary among brothers. To counterbalance this, there has been, since the opening of the free trade in 1814, a vast augmentation of the number of inferior merchants, worth from 20,000l. to 50,000l. sterling. There are but few Hindoo merchants at present whose wealth exceeds 200,000l. sterling.

The principal foreign business is conducted by the English merchants; but the other parties also, either in partnership with the English, or on their own account, speculate largely to Europe, America, and especially to China. The brokers known under the name of Sircars and Baboos are all Hindoos. The general rates of agency commission are as follow:—

1. On the sale or purchase of ships, vessels, houses and lands 2 1/2 per cent.
2. On the sale, purchase, or shipment of bullion Do. of jewellery, diamonds, or other precious stones 1-3 do.
3. Do. of indigo, lac-dye, country piece goods, silk, opium, cochineal, coral, spices, coffee, copper, tin, and tutenage 2 do.
4. Do. of all other kinds of goods 1-4 do.
5. On goods or treasure, &c. consigned, and afterwards withdrawn or sent to auction; and on goods consigned for conditional delivery to others 6 do.
6. On all advances of money for the purposes of trade, whether the goods are consigned to the agent or not, and where a commission of 5 per cent. is not charged 1-2 commission
7. On ordering goods, or superintending the fulfilment of contracts, where no other commission is derived 1-2 1/2 per cent.
8. On guaranteeing bills, bonds, other acceptances, and on becoming security for administrators of estates, or to government or individuals for contracts, agreements, &c. 1-2 1/2 do.
9. On del credere, or guaranteeing the responsibility of persons in whom goods are sold 1-2 per cent.
10. On acting for the estates of persons deceased, as executors or administrators 5 per cent.
11. On the management of estates for others, on the amount received 1-2 1/2 do.
12. On procuring freight, or acting as the agent of owners or commanders: on the amount of freight, whether the same passes through the hands of the agent or not 1-2 1/2 do.
13. On chartering ships for other parties 1-2 do.
14. On making insurance, or writing orders for insurance 1-2 do.
15. On settling insurance losses, total or partial, and on procuring re-insurance of premium 1 do.
16. On effecting realizations by bills of the agent or otherwise, or purchasing, selling, or negotiating bills of exchange 1 do.
17. On debts, when a process at law or arbitration is necessary 1-2 1/2 do.
18. And if recovered by such means 5 do.
19. On bills of exchange returned, noted, or protested 1 do.
20. On the collecting of house-rent 1-2 1/2 do.
21. On ship's disbursements 1-2 do.
22. On negotiating loans on respondentia 2 do.
23. On letters of credit granted for mercantile purposes 1 do.
24. On purchasing or selling government securities, and on each exchange of the same, in the transfer from one loan to another 1-2 do.
25. On delivering up government securities, or depositing the same in the treasury 1-2 do.
26. On all advances not punctually liquidated, the agent to have the option of charging a second commission, as upon a fresh advance, provided the charge does not occur twice in the same year 1 do.
27. At the option of the agent, on the amount debited or credited within the year, including interest, and excepting only items on which a commission of 5 per cent. has been charged 1 do.

N. B.—This charge not to apply to paying over a balance due on an account made up to a particular period, unless when such balance is in arrears without reasonable notice.

Money.—Accounts are kept here in imaginary money called rupees, either current or sicca, with their subdivisions, annas and pice; 12 pice make 1 anna; 16 annas 1 rupee; and 16 rupees 1 gold mohur. To this currency must all the real specie be converted, before any sum can be regularly entered in a merchant's books. The Company keep their accounts in sicca rupees, which bear a value (premium) of 16 per cent. over the current. The coins current are gold mohurs, with their subdivisions—halves and quarters; sicca rupees, halves and quarters; annas, pice, and half pice. The two last are of copper. There are two mints under the Bengal presidency: that at Calcutta; and that of Ferruckabad, in the north-western provinces. The first is probably the most splendid establishment of the kind in the world; the rest of the machinery, supplied by Messrs. Bolton and Watt of Birmingham, having cost 500,000l. Gold money is coined at Calcutta only; but silver, which is now, and has always been, the standard of India, equally at both mints. The following statement shows the present weight, fineness, and sterling value of the gold and silver coins of India at 34 1/2 1/2 1/2 per standard ounce, and silver at 5s. 2d.:

Coins.	Grains pure.	Grains Alloy.	Grains Gross Weight.	Value.
				<i>l. s. d.</i>
Gold Mohur	187.651	17.450	204.710	1 13 2-3/4
Sicca Rupee	175.525	15.965	191.416	0 8 0-1/2
Ferruckabad rupee	165.215	15.018	180.234	0 1 11-1/2

The charge for coining silver at the Calcutta mint is 2 per cent. If the bullion be the standard fineness; but where it differs, a proportional charge of from 1-4 to 1-2 per cent. is made for refining.

The course of exchange by which the customs of Calcutta are at present regulated is as follows:—

	Pound sterling	Sic. rup.	An.	Pice.
Great Britain	100	10	0	0
Cape of Good Hope	R x-dollar (2s.)	1	0	0
Nialras	100 rupees	95	1	8
Bombay	100	94	12	0
Ceylon	Rs-dollars	9	14	0
China	1 taël	3	5	4
Burmah	125 tichals	100	0	0
Manilla	Spanish dollar	2	4	0
Portugal	1,000 rees	2	12	0
France	24 francs	10	0	0
Holland	24 florins	2	4	0
Hamburgh and Co.	14 marc banco	1	0	0
penhagen	100	208	8	0
Lisbon	100 pence	208	8	0

Other sorts of rupees are met with in Bengal, differing in fineness and weight, though their denominations be the same. From this, and from the natives frequently punching holes in the rupees, and filling them up with base metal, and their fraudulently diminishing the weight of the coin after coming from the mint, the currencies at the different provinces are of different values. This defect has introduced the custom of employing shroffs, or money-changers, whose business is to set a value upon the different currencies, according to every circumstance, either in their favour or their prejudice. When a sum of rupees is brought in one of these shroffs, he examines them piece by piece, and arranges them according to their fineness; then, by their weight; he then allows for the different legal rates upon sicca and annas; and thus does, he values in green, by the rupee current, what the whole are worth; so that the rupee current is the only thing fixed, by which coin is valued.

A current rupc is reckoned at 2s. and a sicca rupee of account commonly at 2s. 6d. A lac means 100,000; and a crore 100 lacs, or 10,000,000. The following are the mounds of account, premising that the lowest denomination is represented by a small moon's shell, a species of copper, chiefly imported as an article of trade from the Laccadive and Maldiva islands, and current as long as they continue entire:

4 Cowries	= 1 Gonda.
3,680 do.	= 1 Current rupee.
30 Gondas	= 1 Penn.
100 Penns, or 12 pice	= 1 Annas.
4 Annas	= 1 Chattru.
4 Chattrus	= 1 Sicca rupee.
16 Sicca rupees	= 1 Gold mohur.

Weights.—The great weights are mounds, seers, chittacks, and sicca or rupee weights, thus divided:—

5 Siccas	= 1 Chittack.
16 Chittacks	= 1 Seer.
60 Seers	= 1 Maud.

There are two mounds in use, viz. the factory mound, which is 74 lbs. 10 oz. 17-60 grs. avoirdupois; and the lazam mound, which is 10 per cent. better, viz. 82 lbs. 2 oz. 2-45 grs.

20 Sicca weight	= 1 Calcutta lazam seer.
60 Ditto	= 1 Serampore seer.
120 Ditto	= 1 Hooghly seer.
144 Ditto	= 1 Bechara M. ruzpur seer.
168 Ditto	= 1 Allahabad and Lucknow seer.

A Calcutta factory seer is equal to 72 sicca weight, 11 annas, 8 pice, 10 gondas, 5 63 cowries.

Gold and Silver.

4 Pankhos	= 1 Dhan, or grala.
4 Dhan	= 1 Ruty.
16 Rutties	= 1 Talah.
8 Rutties	= 1 Mawa.
10 Mawas	= 1 Sicca weight= 179-7 grs. Troy
100 Rutties	= 1 Talah, or 5-5703 drs. avoirdupois.
12 1/2 Mawas	= 1 Talah.
16 Annas	= 1 Talah.
166 1/4 Rutties	= 1 Mohur.
13 1/2 Mawas	= 1 Mohur.
17 1/2 Annas	= 1 Mohur.
The Talah is equal to 234-389 grs. Troy.	

Liquid Measures.

5 Sicca weight	= 1 Chittack.
4 Chittacks	= 1 Fouah, or pice.
4 Fouahs	= 1 Seer.
40 Seers	= 1 Annas.
5 Seers	= 1 Pussure, or measure.
8 Measures	= 1 Bazar mound.

Green Measures.

4 Kharabks	= 1 Bak.
4 Ratts	= 1 Palle= 9-00 lbs. avoird.
20 Sautils	= 1 Annas.
16 Sautils	= 1 Kharab= 20 lbs. mds.

Square Measures.

6 Cubits, or hands, in length	{	1 Chittack, or 45 Goot (Eng. square.
4 in breadth		
12 Chittacks	{	1 Cotah.
20 Cubits		
3 1/2 Bighas	{	1 Bigha = 14,400 sq. ft.
	{	1 English statute acre.

Cloth Measures.

3 Ardes	= 1 Angula.
3 Angulas	= 1 Gherla.
3 Gherlas	= 1 Hast or cubit = 18 inches.
3 Hasts	= 1 Gun = 1 yard.

Long Measure.

3 Barleycorn, or jows (barley)	= 1 Finger.
4 Fingers	= 1 Hand.
3 Hands	= 1 Span.
2 Spans	= 1 Cubit, or arm = 18 inches.
4 Cubits	= 1 Fathom.
1,000 Fathoms.	= { 1 Com = 1 mile 1 furlong 3 poms 3 1/2 yards.

For Goods reckoned by Tola.

5 Particulars	= 1 Guada.
4 Guadas, or 20 particulars	= 1 Koorje, or 1 corpa.

Commercial Weights and Measures of India, with their equivalents in English Avoirdupois, Bengal Factory, Madras, and Bombay Weights.

Banks, Banking.—The paper currency of Calcutta is supplied by the following banks:—

Bank of Bengal.—This is the only bank in Calcutta that has a charter. Its capital is 50 lacs, divided into 500 shares of 10,000 sicca rupees each, of which the East India Company hold 100 shares. The shares are now at a premium of 5,000 to 6,000 rupees. It is managed by nine directors; three appointed by government, and six elected by the proprietors: time of service, for the latter, three years. The secretary to government in the financial department, the accountant-general, and the sub-treasurer, are the *ex officio* government directors. The bank secretary and treasurer is also a civil servant. This bank possesses peculiar advantages, but has not been so useful to the public as it might have been. Its notes are received at all the public offices, in payment of revenue, by the collectors in all the districts below Benares; and, consequently, its circulation, averaging 80 to 100 lacs, extends over a very large and the wealthiest portion of our Indian territory. The government being such considerable shareholders, too, it is generally supposed by the natives that the Bengal Bank is part and parcel thereof; and it enjoys, therefore, the same credit. But other circumstances have operated against the usefulness which, with the advantages alluded to, it might have been supposed would have certainly attended it.

1. The government required a deposit in their treasury of 20 lacs of rupees in Company's paper, as security for the notes received at the public offices and the district treasuries. To this extent, therefore, their means applicable to commercial purposes, or rather to the assistance of the commercial community, were crippled.

2. By their charter, they were required to issue their notes in the proportion of one third of specie to two thirds of paper,—in other words, for every 90 rupees of notes issued, they kept 30 rupees of cash in their strong box.

3. Their rules for granting accommodation on personal credit were so severe, that the public rather avoided applications to them, if they could obtain discounts elsewhere; and, consequently, the business of the Bengal Bank was almost entirely confined to the granting of loans on the security of the Company's paper. In 1826, 1827, and 1828, when the Burmese war, and the financial arrangements of the government, occasioned a great demand for money, the amount of discounts of mercantile paper in Calcutta did not exceed 10 or 12 lacs of rupees, whilst loans secured by Company's paper rose to 60 and 70 lacs.

The inconvenience of this system having been felt, the government of Calcutta has recommended an alteration: and we understand the capital is to be increased to 75 lacs; the proportion of a third specie to be reduced to a fourth; the deposit of 20 lacs of Company's paper at the treasury to be done away; and greater facilities to be afforded to the mercantile community in obtaining accommodation.

As soon as this alteration is carried into effect, there will unquestionably be a great improvement in the money market in Calcutta.

The Union Bank.—This establishment was founded in 1829. It is the only private bank at present (1831) existing in Bengal; for the Bank of Hindoostan, the Commercial Bank, and the Calcutta Bank, noticed in the former edition of this work, have all, though solvent, been discontinued. The capital of the Union Bank is 50 lacs of rupees, consisting of 1,000 shares of 5,000 each, held by all classes of the community. Its notes circulate only in Calcutta and its immediate neighbourhood; no private notes being received at the collectors' treasuries in the provinces. The main object of this establishment was to fill up the space in the money market, occasioned by the restrictions imposed on the Bank of Bengal by its charter; but it has not yet been able to effect its intentions to their full extent, from its notes not being generally circulated; and it is possible that the proposed alterations in the Bengal Bank may, in some measure, limit its operations. There is no doubt, however, but that it will be a favourite establishment; and should it obtain a charter, it will probably get most of the banking business of Calcutta; its rules being well adapted for facilitating commercial transactions, and sustaining commercial credit and confidence.

The rates of discount vary, from time to time, with the state of the money market. The last rates quoted were, at the Union Bank, 6 per cent. per annum on notes at 3 months, 5 ditto, at 2 ditto; 4

engaged in trade or agriculture, was 1,225; in 1830, it was 1,707. This is the statement given by the printed register; but it is probably much underrated, particularly for the last year. The native Portuguese and Armenian merchants have of late greatly declined in wealth and importance. On the other hand, the Persian merchants have increased in numbers and wealth, several of them being worth 250,000l. sterling. The large fortunes of the Hindoo merchants have been much broken down of late years by litigation in the courts, and naturally through the law of equal coparcenary among brothers. To counterbalance this, there has been, since the opening of the free trade in 1814, a vast augmentation of the number of inferior merchants, worth from 20,000l. to 50,000l. sterling. There are but few Hindoo merchants at present whose wealth exceeds 200,000l. sterling.

The principal foreign business is conducted by the English merchants; but the other parties also, either in partnership with the English, or on their own account, speculate largely to Europe, America, and especially to China. The brokers known under the name of Sircars and Baboos are all Hindoos. The general rates of ships, vessels, and houses are as follow:—

1. On the sale or purchase of ships, vessels, houses and lands - 2 1/2 per cent.
2. On the sale, purchase, or shipment of bullion - 1 1/2 do.
3. Do. of jewellery, diamonds, or other precious stones - 2 do.
4. Do. of indigo, lac-dye, country piece goods, silk, opium, cochineal, coral, spices, coffee, copper, tin, and tins - 2 1/2 do.
5. Do. of all other kinds of goods - 6 do.
6. On goods or treasure, &c. consigned, and afterwards withdrawn or sent to auction; and on goods consigned for conditional delivery to others - 1 1/2 commission
7. On all advances of money for the purpose of trade, whether the goods are consigned to the agent or not, and where a commission of 5 per cent. is not charged - 2 1/2 per cent.
8. On ordering goods, or superintending the fulfilment of contracts, where no other commission is derived - 1 1/2 do.
9. On guaranteeing bills, bonds, or other engagements, and on becoming security for administrations of estates, or to government or individuals for contracts, agreements, &c. - 2 1/2 do.
10. On del credere, or guaranteeing the responsibility of persons in whom goods are sold - 1 1/2 per cent.
11. On acting for the estates of persons deceased, as executors or administrators - 5 per cent.
12. On the management of estates for others, on the amount received - 2 1/2 do.
13. On procuring freight, or advertising as the agent of owners or consignees: on the amount of freight, whether the same passes through the hands of the agent or not - 5 do.
14. On chartering ships for other parties - 2 1/2 do.
15. On making insurance, or writing orders for insurance - 1 do.
16. On settling insurance losses, total or partial, and on procuring return of premium - 1 do.
17. On effecting remittances, by bills of the agent on otherwise, or purchasing, selling, or negotiating bills of exchange - 1 do.
18. On debts, when a process at law or arbitration is necessary - 2 1/2 do.
19. And if recovered by such means - 5 do.
20. On bills of exchange returned, noted, or protested - 1 do.
21. On the collecting of house-rent - 2 1/2 do.
22. On ships' disbursements - 2 1/2 do.
23. On negotiating loans on respondents - 2 do.
24. On letters of credit granted for mercantile purposes - 2 1/2 do.
25. On purchasing or selling government securities, and on each exchange of the same, in the transfer from one loan to another - 1 1/2 do.
26. On delivering up government securities, or depositing the same in the treasury - 1 1/2 do.
27. On all advances not punctually liquidated, the agent to have the option of charging a second commission, as upon a fresh advance, provided the charge does not occur twice in the same year - 1 do.

N. B.—This charge not to apply in paying over a balance due on an account made up to a particular period, unless where such balance is withdrawn without reasonable notice.

Money.—Accounts are kept here in imaginary money called rupees, either current or sicca, with their subdivisions, annas and pice: 12 pice make 1 anna; 16 annas 1 rupee; and 16 rupees 1 gold mohur. To this currency must all the real specie be converted, before any sum can be regularly entered in a merchant's books. The Company keep their accounts in sicca rupees, which bear a value (premium) of 16 per cent. over the current. The coins current are gold mohur, with their subdivisions—halves and quarters; sicca rupees, halves and quarters; annas, pice, and half pice. The two last are copper. There are two mints under the Bengal presidency: that at Calcutta; and that of Fort St. George, in the north-western provinces. The first is probably the most splendid establishment of the kind in the world; the cost of the machinery, supplied by Messrs. Bolton and Watt of Birmingham, having exceeded 300,000l. Gold money is coined at Calcutta only; but silver, which is now, and has always been, the standard of India, equally at both mints. The following statement shows the present weight, fineness, and sterling value of the coins, reckoning the value of gold at 34. 17. 10 1/2d. per standard ounce, and silver at 5s. 2d.:

Coins.	Grains pure.	Grains Alloy.	Grains Gross Weight.	£.	s.	d.
Gold mohur	187.651	17.050	204.701	1	13	2 1/2
Sicca Rupee	175.425	15.993	191.418	0	8	0 1/2
Fort St. George rupee	165.215	15.019	180.234	0	1	11 1/2

The charge for refining silver at the Calcutta mint is 2 per cent. If the bullion be the standard fineness; but where it differs, a proportional charge of from 1-4 to 1-8 per cent. is made for refining.

The course of exchange by which the customs of Calcutta are at present regulated is as follows:—

	Pound sterling	Sic. rup.	An.	Pice.
Great Britain	£ 10	0	0	0
India	£ 10	0	0	0
China	£ 10	0	0	0
Bombay	£ 10	0	0	0
Ceylon	£ 10	0	0	0
China	£ 10	0	0	0
Bombay	£ 10	0	0	0
Manila	£ 10	0	0	0
Portugal	£ 10	0	0	0
France	£ 10	0	0	0
Holland	£ 10	0	0	0
Amsterdam and Co.	£ 10	0	0	0
Penang	£ 10	0	0	0
Laguna	£ 10	0	0	0

Other sorts of rupees are met with in Bengal, differing in fineness and weight, though their denomination be the same. From this, and from the natives frequently unbinding both in the rupees, and filling them up with base metal, and their fraudulently diminishing the weight of the coin after coming from the mint, the currencies of the different provinces are of different values. This defect has introduced the custom of employing shroffs, or money-changers, whose business is to set a value upon the different currencies, according to every circumstance, either in their favour or their prejudice. When a sum of rupees is brought to one of these shroffs, he examines them piece by piece, and arranges them according to their fineness; then, by their weight; he then, allowing for the different legal losses upon sicca and annas; and thus, after he values in rupees, by the rupees current, what the whole are worth; so that the rupee current is the only thing fixed, by which coin is valued.

A current rupee is reckoned at 3s. and a sicca rupee of account commonly at 2s. 6d. A sicca rupee is worth 100 annas, or 10,000 pice. The following are the moneys of account, prevailing that the lowest denomination is represented by a small anna, about a species of copper, chiefly imported as an article of trade from the Laccadive and Maldiva islands, and current as long as they continue entire:

4 Cowries	= 1 Genda.
2,500 do.	= 1 Current rupee.
90 Gendas	= 1 Penn.
4 Penns, or 12 pice	= 1 Anna.
4 Annas	= 1 Cabasa.
1 Cabasa	= 1 Sicca rupee.
16 Sicca rupees	= 1 Gold mohur.

Weights.—The great weights are maunds, seers, chittacks, and sicca or rupee weights, thus divided:—

5 Siccas	= 1 Chittack.
16 Chittacks	= 1 Seer.
40 Seers	= 1 Maund.

There are two maunds in use, viz. the factory maund, which is 74 lbs. 10 oz. 10-688 grs. avoirdupois; and the bazaar maund, which is 10 per cent. better, viz. 82 lbs. 9 oz. 2-153 drs.

60 Sicca weight	= 1 Calcutta bazaar seer.
60 Dittos	= 1 Serampore seer.
90 Dittos	= 1 Rangoon seer.
84 Dittos	= 1 Benares M. ranyore seer.
84 Dittos	= 1 Allahabad and Lucknow seer.

A Calcutta factory seer is equal to 72 sicca weight, 11 annas, 8 pice, 10 gundas, 8 63 cowries.

Gold and Silver.

4 Phankos	= 1 Dhan, or grain.
4 Dhans	= 1 Rutty.
6 1/4 Rutties	= 1 Anna.
8 Rutties	= 1 Manna.
10 Mannas	= 1 Sicca weight= 179 1/2 grs. Troy.
100 Rutties	= 1 Talah.
12 1/2 Mannas	= 1 Talah.
16 Talahs	= 1 Mohur.
166 1/4 Rutties	= 1 Mohur.
13 1/2 Mannas	= 1 Mohur.
17 Annas	= 1 Mohur.
The talah is equal to 224-588 grs. Troy.	

Liquid Measure.

5 Sicca weight	= 1 Chittack.
4 Chittacks	= 1 Foush, or pice.
4 Foushs	= 1 Seer.
40 Seers	= 1 Maund.
5 Seers	= 1 Pussaree, or measure.
8 Measures	= 1 Bazar maund.

Grain Measure.

4 Kharabals	= 1 Bail.
4 Bailis	= 1 Palfis= 9-08 lbs. avoird.
20 Palfis	= 1 Sealtie.
16 Sealties	= 1 Kharab= 30 lbs. mds.

SQUARE MEASURE.

1 Cubit, or hand, in length	= 1 Chittack, or 45 foot (Eng. square).
1 K 4 in breadth	= 1 Cotah.
10 Chittacks	= 1 Bigha = 14,400 sq. ft.
10 Cotahs	= 1 English statute acre.
1 1/2 Bighas	

CLOTH MEASURE.

3 Arhas	= 1 Angul.
3 Angulas	= 1 Gherah.
3 Gherahs	= 1 Mast or cubit = 18 inches.
3 Elaks	= 1 Gun = 1 yard.

LONG MEASURE.

3 Barleycorn, or jaws (barley)	= 1 Finger.
4 Fingers	= 1 Hand.
3 Hands	= 1 Span.
2 Spans	= 1 Cubit, or arm = 18 inches.
4 Cubits	= 1 Fathom.
1,000 Fathoms.	= 1 Gun = 1 mile 1 furlong 8 paces 1 1/2 yards.

FOR GOODS reckoned by Tola.

5 Particulars	= 1 Guca.
4 Guca, or 20 particulars	= 1 Koope, or 1 corpa.

Bank, Banking.—The paper currency of Calcutta is supplied by the following banks:—

Bank of Bengal.—This is the only bank in Calcutta that has a charter. Its capital is 50 lacs, divided into 500 shares of 10,000 sicca rupees each, of which the East India Company hold 100 shares. The shares are now at a premium of 5,000 to 6,000 rupees. It is managed by nine directors; three appointed by government, and six elected by the proprietors: time of service, for the latter, three years. The secretary to government in the financial department, the accountant-general, and the sub-treasurer, are the *ex officio* government directors. The bank secretary and treasurer is also a civil servant. This bank possesses peculiar advantages, but has not been so useful to the public as it might have been. Its notes are received at all the public offices, in payment of revenue, by the collectors in all the districts below Benares; and, consequently, its circulation, averaging 80 to 100 lacs, extends over a very large and the wealthiest portion of our Indian territory. The government being such considerable shareholders, too, it is generally supposed by the natives that the Bengal Bank is part and parcel thereof; and it enjoys, therefore, the same credit. But other circumstances have operated against the usefulness which, with the advantages alluded to, it might have been supposed would have certainly attended it.

1. The government required a deposit in their treasury of 20 lacs of rupees in Company's paper, as security for the notes received at the public offices and the district treasuries. To this extent, therefore, their means applicable to commercial purposes, or rather to the assistance of the commercial community, were crippled.

2. By their charter, they were required to issue their notes in the proportion of one third of specie to two thirds of paper,—in other words, for every 90 rupees of notes issued, they kept 30 rupees of cash in their strong box.

3. Their rules for granting accommodation on personal credit were so severe, that the public rather avoided applications to them, if they could obtain discounts elsewhere; and, consequently, the business of the Bengal Bank was almost entirely confined to the granting of loans on the security of the Company's paper. In 1826, 1827, and 1828, when the Burmese war, and the financial arrangements of the government, occasioned a great demand for money, the amount of discounts of mercantile paper in Calcutta did not exceed 10 or 12 lacs of rupees, whilst loans secured by Company's paper rose to 60 and 70 lacs.

The inconvenience of this system having been felt, the government of Calcutta has recommended an alteration: and we understand the capital is to be increased to 75 lacs; the proportion of a third specie to be reduced to a fourth; the deposit of 20 lacs of Company's paper at the treasury to be done away; and greater facilities to be afforded to the mercantile community in obtaining accommodation.

As soon as this alteration is carried into effect, there will unquestionably be a great improvement in the money market in Calcutta.

The Union Bank.—This establishment was founded in 1829. It is the only private bank at present (1831) existing in Bengal; for the Bank of Hindostan, the Commercial Bank, and the Calcutta Bank, acted in the former edition of this work, have all, though solvent, been discontinued. The capital of the Union Bank is 50 lacs of rupees, consisting of 1,000 shares of 5,000 each, held by all classes of the community. Its notes circulate only in Calcutta and its immediate neighbourhood; no private notes being received at the collectors' treasuries in the provinces. The main object of this establishment was to fill up the space in the money market, occasioned by the restrictions imposed on the Bank of Bengal by its charter; but it has not yet been able to effect its intentions to their full extent, from its notes not being generally circulated; and it is possible that the proposed alterations in the Bengal Bank may, in some measure, limit its operations. There is no doubt, however, but that it will be a favourite establishment; and should it obtain a charter, it will probably get most of the banking business of Calcutta; its rules being well adapted for facilitating commercial transactions, and sustaining commercial credit and confidence.

The rates of discount vary, from time to time, with the state of the money market. The last rates quoted were, at the Union Bank, 6 per cent. per annum on notes at 3 months, 5 ditto, at 2 ditto; 4

ditto, at 1 ditto: the Bank of Bengal, discount on private bills at 3 months, 6 per cent. per annum; ditto government bills*, ditto, 4 ditto; interest on loans, on deposit, ditto, 5 ditto.

Indian Funds.—The public debt contracted by the Indian government, on the security of the territory, is under the management of the treasury department at Calcutta. This debt is of two descriptions; that bearing no interest, and that which bears interest. The last is again divided into three parts; viz. monies deposited by public bodies for specific purposes; treasury notes, of the same character as our Exchequer bills; and the actual funded or registered debt. The latter, on the 30th of April, 1830, was as follows; for Bengal.

Statement of the Amount standing on the general Registers of the Presidency of Bengal, in the Name of Europeans and Natives.

Debt.	Europeans.	Natives.	Total.
6 per cent. loan of 1822	Sicca rupees. 703,43,500	Sicca rupees. 43,66,700	Sicca rupees. 747,12,200
5 — — 1823	709,87,800	806,39,700	916,27,500
5 — — 1825-26	532,74,800	405,79,500	941,54,200
5 — — 1829-30	19,51,700	7,01,300	26,53,000
4 — — 1831-32	3,13,000	5,56,200	8,69,200
4 — — 1825-29	6,63,000	5,84,100	12,47,100
Sicca rupees	1,975,34,400	677,59,500	2,652,93,900

The 6 per cent. loan of 1822 is irredeemable until the expiration of the Company's present charter, and then 15 months' notice to be given previously to discharge: the interest on this loan is payable either half-yearly in India, or, if the proprietor be resident in Europe, he has the option, as a matter of right, of demanding a bill upon the court of directors for the interest, payable at 12 months' date, at 2s. 1d. the sicca rupee. The 5 per cent. loan of 1823 was not payable, in any part, until after the 31st of March, 1825, and then only 1½ crores in any one year, after 60 days' notice; the interest is payable upon the same terms as that on the 6 per cent. loan, with this important difference, that the privilege which the residents in Europe possess of receiving interest in England belongs as of right to the holders of the 6 per cent. loan, and is only enjoyed by the holders of this loan *during the pleasure* of the home authorities. Of the 5 per cent. loan of 1825, no part was dischargeable till after the 30th of April, 1832, and then previous notice of 3 months to be given; the interest upon this loan is payable to all the holders, whether resident in Europe or not, either in cash in India, or by bills upon England, at 2s. the rupee. In this case, also, the option of remittance to England may be withdrawn by the home authorities at pleasure. Of the two 4 per cent. loans, no part of the first was dischargeable till after the 30th of April, 1830, nor of the second till the 30th of April, 1832; and, in both cases, previous notice of 3 months to be given. From the favourable conditions of the 6 per cent. loan, it has, of late years, borne a premium of from 30 to 40 per cent. The 5 per cent. loans have generally borne a premium of about 5 per cent.; and even the 4 per cent. securities have been at little more than a nominal discount. We have been thus particular in describing the nature of the Indian national funds, because in a country where Europeans have been hitherto precluded from holding property in land beyond the narrow boundaries of the principal cities, and where the principal holders reside in Europe, they have been justly considered as a very desirable security.

Pilotage.—The navigation of the river Hooghly from the Sand Heads to Calcutta, a distance of about 130 miles, is naturally dangerous and intricate; but rendered comparatively safe by a skilful and excellent, though very costly, pilot establishment. This consists of twelve vessels, being brigs of between 150 and 300 tons burthen, capable of maintaining their stations in the most boisterous seasons,

which extends from April to October inclusive; 12 brigs pilot, 24 masters, 24 first mates, 24 second mates, and between 70 and 80 volunteers. Each branch pilot has a salary of 7000 a month; each master 271; first mates 152; and second mates and volunteers 8. The following table exhibits the rates of pilotage:

Table of Rates of full and broken Pilotage, chargeable to Ships and Vessels inward and outward of the River Hooghly.

Draught of Water.	Full Pilotage inward.	Additional Pilotage outward.	Inward Proportion.	Outward Proportion.
Feet.	L.	L.	From Sea.	From Calcutta.
9 to 10	10	1	To Sangre - - - 4 12hrs	To Mysore or Fulta - - - 3 12hrs
10 11	12		To Kedgeree - - - 6 12hrs	To Fulta harbour - - - 3 12hrs

12 13	16		To Culpoos harbour - 9 12hrs	To Kedgeree - - - 6 12hrs
13 14	18	2	To Fulta, or Mysore - 10 12hrs	To Suagor - - - 8 12hrs
14 15	21		To Calcutta, full pilotage	To Sea, full pilotage.
15 16	25	4		
16 17	30			
17 18	35			
18 19	40	6		
19 20	45			
20 21	50			
21 22	55			
22 23	60			

Note.—All foreign vessels pay the same pilotage as those under British colours. By broken pilotage is meant the proportion of full pilotage between the different stages or places of anchorage. All ships, the property of foreigners, as well Asiatic as European, are subject to the charge termed "lead money;" it being indispensably necessary that the pilot should have with him a leadman in whom he can confide.

Detention money, at the rate of 4s. per diem, from British and foreign vessels, is charged by persons of the pilot service kept on board ships at anchor by desire of the commander or owner.

In the river before Calcutta, and in other parts, there are chain moorings, of which the charges are as follow:

Burthen of Ships.	April to October, 7 months.	November to March, 6 months.
500 tons and upwards	Per diem - - - L. s. d. 0 16 0	Per diem - - - L. s. d. 0 12 0
Under 500 tons	Ditto - - - 0 14 0	Ditto - - - 0 10 0

Hire of the chain moorings at Diamond Harbour, 12. per diem. The lowest charge to a ship requiring the accommodation of the chain moorings at either of the places above mentioned, is for 10 days; and using them longer, a further charge is made at the established rate per diem for every day exceeding 10. The charge for transporting a ship from her moorings into any of the docks at Kidderpore, Howrah, or Sultia, or from any of the docks to her moorings, is fixed at 60 rupees; and no higher charge for such service is

permitted. The charge for every day exceeding 10. The charge for transporting a ship from her moorings into any of the docks at Kidderpore, Howrah, or Sultia, or from any of the docks to her moorings, is fixed at 60 rupees; and no higher charge for such service is

* This partiality to the government bills is objected to. The Union Bank makes no distinction.

authorized. Besides pilotage, every ship is chargeable with the hire of a row-boat to accompany her; viz. for a boat of the first class, 24s.; of the second class, 18s.; and of the third class, 14s. Of late years a light-house has been erected at Kidgry for which the charge on British or American flags is at the rate of 3d. per ton per annum. Ships proceeding to Calcutta must land their respowder at the powder magazine at Moyapore; the charge is at the rate of 1-1-2d. per ton for each voyage. The whole pilot establishment and the care of the navigation of the Hooghly is under the management of government, and is directed by a marine board, with a master attendant and harbour master.

There are several dry docks at Calcutta, in which vessels of any size may be built or repaired. Ships built at Calcutta, are of inferior durability to those constructed at Bombay, in consequence of the framework being always of the inferior woods of the country; and the planks, sheathing, upper works, and decks, alone, of teak; which last is furnished almost entirely from Pegu.

In 1824, the number of registered ships belonging to the port of Calcutta was 120, of the burthen of 44,366 tons; being at an average of about 370 tons for each. The largest class of vessels carry nearly 800 tons; but ships drawing so much water are unfit for the navigation of the Hooghly. Not being able to find at Calcutta, they are obliged to receive part of their cargo at Diamond Harbour, about 84 miles farther down the river. The most convenient sized ship for trade between Calcutta, and Europe, and America, is from 300 to 400 tons.

Duties, &c.—At Calcutta there are two distinct Custom-houses; the one for the sea, and the other for the inland duties. Our business

is with the first only. The export and import duties and drawbacks are regulated by an ordinance of the year 1825, and are the same for every port under the government of Bengal; or, as it is technically called, the Presidency of Fort William. The tariff is regulated by three schedules, stating respectively the rates of duty chargeable on goods imported by sea, the drawbacks allowed on re-exports, and the rates of duty chargeable and drawbacks allowed on exported articles being the produce and manufacture of the country. The duty on goods and merchandise imported by sea is imposed *ad valorem*, or according to their market value at the time of importation, except when otherwise specially provided. The value of all such goods and merchandise must be stated on the face of the application to clear the same from the Custom-house presented by the importer, consignee, or proprietor of such goods, or his known agent or factor, who must subjoin to such application a declaration of the truth of the same, according to a prescribed form.

The following table contains the import duties on goods produced or manufactured in the United Kingdom, foreign Europe, or the United States. No duty is charged on any article the produce or manufacture of the country, if exported in a British vessel, and very rarely when exported in a foreign vessel. The inland duties vary from 10 to 2 1/2 per cent., a drawback of two thirds of which is usually allowed when the articles on which they are charged are exported in British vessels, and of one third when they are exported in foreign vessels. The drawbacks allowed on re-exports of foreign articles imported in British vessels vary from half to two thirds and three fourths of the import duty; on re-exports in a foreign vessel, they are commonly from half to two thirds and seven eighths.

Rates of Duty chargeable on Goods, the Produce or Manufacture of the United Kingdom, Foreign Europe, and the United States, imported by Sea into Calcutta, or any Port or Place belonging to the Presidency of Fort William.

97. Red lead, or minium	10 ditto	20 ditto.	133. Articles not enumerated above	5 ditto	10 ditto.
98. Rose-water	7 1/2 ditto	15 ditto.			

Trade of Calcutta.—Exports.—During the last 20 years the trade of Calcutta has experienced some very striking vicissitudes. Previously to the opening of the trade in 1814-15, cotton piece goods formed the principal article of export from India; the value of those exported from Calcutta, at an average of the 5 years from 1814-15 to 1818-19, being (at 2s. per sicca rupee) 1,900,736*l.* a year. The extreme cheapness of labour in India, and the excellence to which the natives had long attained in several departments of the manufacture, would, it might have been supposed, have sufficed to place this important department beyond the reach of foreign competition. But the wonderful genius of our mechanists, the admirable skill of our workmen, and our immense capital, have far more than counterbalanced the apparently insuperable drawback of high wages, and the expense of bringing the raw material of the manufacture from America, and even India itself; and have enabled our manufacturers to bear down all opposition, and to triumph over the cheaper labour, contiguous material, and traditional art of the Hindoos. The imports of British cottons and twist into India have increased since 1814-15, with a rapidity unexampled in the annals of commerce; and the native manufacture has sustained a shock from which it is not very likely it will ever recover.—(See art. EAST INDIES.) The influence of these circumstances on the trade in piece goods has been very striking. During the year 1833-34, the value of those exported from Bengal was no more than 77,175*l.*, being only about one sixteenth or one seventeenth part of what it amounted to 16 or 18 years previously!

An extraordinary change has also taken place in the trade in bullion at Calcutta. At no distant period it was one of the principal articles of export from Europe to India; and in 1818-19, there were imported into Calcutta from England only 1,216,113*l.* of gold and silver! But the current began soon after to change; and now sets so strongly in the opposite direction, that in 1832-33 the exports of the precious metals from Calcutta for England amounted to 516,418*l.*

The export of bullion from England to India at the former period, though influenced by other causes, was mainly occasioned by the difficulty under which we were then placed, of providing articles of merchandise suitable for the Indian markets, sufficient to balance our imports. The astonishing increase of our exports of cotton goods, besides completely obviating this difficulty, has actually, as we have just seen, produced an importation of large quantities of bullion from India. But it should be observed, that India derives most part of the bullion sent to Europe from China and Singapore, in payment of opium and other articles, so that the drain upon her is by no means so heavy as has been represented; and it may well be doubted, notwithstanding the numerous allegations to the contrary, whether it has had any injurious influence. Undoubtedly, however, it were such to be wished that the returns made by India to Europe in articles of native produce and manufacture, should be materially increased. The taste for British produce is already widely diffused over most parts of Hindostan; and it will, no doubt, continue to gain ground according as the natives become better acquainted with

our language, arts, and habits. The difficulty of procuring return cargoes is now, in fact, almost the only obstacle to the rapid and indefinite extension of the trade with India. And it may be reasonably presumed, that this difficulty will progressively diminish, by the adoption of a course of policy and of measures calculated to develop the vast resources and dormant energies of the country. The repeal of the injudicious restrictions that formerly hindered Europeans from acquiring land, and from applying their capital and skill to most sorts of industry, carried on in the interior, with the exception of the culture of indigo, will doubtless be of considerable advantage. But the exorbitant amount of the land revenue, and the restrictions and duties imposed on the transit trade and internal commerce of the country, are unquestionably the principal causes of the depressed state of agriculture, as well as of the poverty of the inhabitants, and their inability to furnish equivalents for foreign products. The former should, if possible, be materially reduced; and it is not easy to see why the latter should not be wholly abolished. The soil and climate of Bengal are both admirably suited for the production of grain, indigo, sugar, opium, silk, cotton, saltpetre, and a vast variety of other desirable articles: the inhabitants are not deficient in industry, nor in a desire to improve their condition; and there wants only the adoption of a sound and liberal system, to render the country prosperous and flourishing, and to lay the foundations of an immense commerce.

At present the principal articles of export from Calcutta are, opium, indigo, rice, and other species of grain, silk and silk goods, sugar, saltpetre, cotton and cotton piece goods, lac-dye and shell lac, gunnies and gunny bags, &c. We subjoin a statement of the

Quantity and Value (taking the Sicca Rupee at 2s.) of the principal Articles of native Produce, exported from Calcutta during the Years 1832-33, and 1833-34.

It appears from the following table that the total value of the merchandise exported from Calcutta by private traders in 1833-34 was 4,015,790½, and of treasure, 242,573½. The value of the Company's exports of merchandise during the same year was 552,252½; but their exports of treasure have not been stated. In these statements indigo and raw silk are valued at the Custom-house rates, which are considerably below their real value. Altogether, the exports from Calcutta in 1833-34 cannot have been much under 5,500,000.

Destination of Exports.—From 40 to 50 per cent. of the exports from Calcutta are for the United Kingdom, from 20 to 25 for China, 6 or 7 for Singapore and Penang, 7 for France, 4½ for North and South America, the residue being for the coasts of Malabar and Coromandel, Pegu, the Arabian and Persian Gulfs, the Mauritius, &c. We subjoin a

Statement exhibiting the Value of the Merchandise, and the Value of the Treasure, exported from Calcutta on private Account, in 1832-33 and 1833-34, specifying the Shipments for each Country.

The Company's exports, in 1832-33, were, merchandise and treasure together, 1,001,430 sicca rupees, or 1,001,433.

Remarks on Exports.—The reader will elsewhere find (see articles CANTON and OPIUM) pretty ample information in relation to the trade in Opium. It is sufficient here to state, that it is rapidly growing in magnitude and importance. At an average of the 5 years ending with 1829-30, the exports from Calcutta were 6,369 chests, worth 944,071*l.* a year; but at an average of the 5 years ending with 1833-34, the exports had increased to 9,014 chests, worth 1,163,604*l.* a year, being an annual increase of 2,645½ chests, and of 219,738*l.* of value. China is not the principal merely, but almost the only market for opium; so that the trade between Calcutta and her, is now second only to that between the former and England. Some opium is shipped for Singapore, but China is its ultimate destination.—(*Bell's Review* for 1833-34, p. 45.)

Previously to the close of the American war, the exports of indigo from Calcutta were comparatively trifling. But about that period Europeans began to engage in the business; and the culture of the plant has since been so much extended, and the preparation of the drug so much improved, that it has now become an article of primary commercial importance—(See INDIGO.) Next to Great Britain, France is the principal market for indigo.

The crop of indigo in Bengal, which had, at an average of the 4 years ending with 1829-33, amounted to about 126,000 maunds a year, fell off in 1833-34 to 93,802 maunds. This great decline was occasioned partly by the unfavourableness of the season, but more by the diminished cultivation occasioned by the previous low prices, and the failure of some of the principal parties engaged in the trade.—(See post.) But notwithstanding this decrease of the crop, and the great reduction in the imports into England in 1834 as compared with previous years, prices have not sustained any very material advance. The consumption of indigo in England has fallen off considerably since 1830, the effect, as is supposed, of the decreasing use of blue cloth. Subjoined is a statement of the

Exports of Indigo from Calcutta during the Five Years ending with 1833-34, specifying the Countries for which it has been exported, and the Quantities sent to each.

Of the various articles exported from Bengal, sugar is that of which a large increase may, perhaps, be most reasonably anticipated. The processes followed in its culture and production have hitherto been of the rudest description; but, now that Europeans may engage in the business, it is probable they will be materially improved. The excess of 5*l.* a cwt. of duty laid on East India sugar, imported for home consumption, over that which is laid on West India sugar, ought to be repealed. There neither is nor can be any good reason why similar products, from different dependencies of the empire, should not be allowed to come into our markets on the same footing. Should any considerable decline take place in the production of sugar in our West India colonies, the expediency of equalising the duties on sugars of the East and West Indies, would be as obvious as its justice.

Cotton is another article of export which might, it is believed, be very greatly increased in quantity, and, probably also, improved in quality, by giving greater attention to its culture and preparation. Recently, however, the trade has been declining. The exports of cotton from Calcutta, at an average of the 3 years ending with 1833-34, did not exceed half the quantity exported during the 3 years ending with 1826-27. Bombay and Surat are, however, the great shipping ports for Indian cotton.

The exports of rice from Bengal fluctuate very greatly. This is not caused so much by variations in the crops of the country, as by variations in those of other countries; for, when a scarcity occurs in most parts of continental Asia, or in any of its islands, recourse is almost invariably had to Bengal to supply the deficiency; and the demands thence arising have been sometimes enormous. In 1831-32, for example, the exports of rice from Calcutta to the coast of Coromandel amounted to only 16,545 maunds, whereas in 1833-34, they amounted to 1,352,056 maunds.—(*Bell's Comparative View* of 1832-33, and 1833-34, p. 41.) It is worthy of remark, that while Bengal is shipping immense supplies of rice and other grain to distant parts, a large part of her own population is frequently in a state of great want and suffering. Ireland is not, therefore, the only country in which the most abject poverty and wretchedness on the part of the inhabitants, are found combined with great fertility of soil, and a large exportation of food.

The exports of saltpetre from Calcutta have increased materially during the last dozen years, and were greater in 1833-34 than they have been for a lengthened period. It is doubtful, however, owing to the competition of *nitrate of soda* from South America, whether this increase will be maintained. France is now principally supplied from America.—(See SALTPETRE.)

Besides the articles of native Indian produce exported from Calcutta, she re-exports pretty considerable quantities of various articles brought from other parts. The value of the British cotton goods re-exported, amounts to about 90,000*l.* a year. They are principally bartered with the Burmese for silver. The conveyance of the latter out of the Burmese dominions is strictly prohibited; but in Burma, as in England and elsewhere, the ingenuity of the smuggler is too much for the vigilance of the government, and the trade is carried on without much difficulty.

Imports.—The great articles of import into Calcutta are, British cotton manufactures and cotton twist; bullion; copper with spelter, tin, lead, iron, and other metals; woollens; wines and spirits; ale and beer; haberdashery, millinery, &c.; coffee; hardware and cutlery; pepper; coral, glass, and bottles; plate, jewellery, watches, &c.; books and stationery; tea, &c.

The total amount of all sorts of merchandise imported into Calcutta by private traders in 1833-34 was 1,954,6371, exclusive of 586,3941 of treasure. The Company's imports, during the same year, amounted to 90,3954.

Sources of Imports.—These differ in different years, but, speaking generally, Great Britain furnishes about 60 per cent. of the whole; France, about 3 per cent.; North America, 24; China, from 12 to 15; Singapore, from 6 to 8; coast of Coromandel, from 3 to 4; Malabar, from 3 to 4; Pegu, from 3 to 4, &c.

We subjoin a

Statement exhibiting the Value of the Merchandise, and the Value of the Treasure, imported into Calcutta on private Account, in 1832-33 and 1833-34, specifying the Imports from each Country.

Failures at Calcutta.—Within the 3 years ending with 1833, some of the principal mercantile establishments in this city failed for immense sums. To examine minutely into the origin of these disasters would lead us into inquiries foreign to the object of this work, and with respect to which it is difficult to acquire accurate information. We believe, however, that the main source of the evil was the combination, by most of the principal houses, of the business of merchants with that of bankers. Their credit being high, at the end of the war large sums were deposited in their hands, for which they engaged to pay a high rate of interest. But instead of employing these deposits, as bankers in England would have done, in the discount of bills at short dates, or in the purchase of government securities readily convertible into money, they employed them, probably because they could with difficulty dispose of them otherwise, in all manner of mercantile speculations,—advancing very large sums to the indigo planters, exporting goods to Europe, either directly on their own account, or indirectly by lending to those who did,—becoming owners of Indian shipping, &c. Most of these speculations turned out exceedingly ill. The production of indigo was so much increased, partly in consequence of the large capitals turned to the business, and partly of the high prices in England, that “fine blue violet,” which had brought, in the London market, at an average of the 3 years ending with 1832, from 12s. 10d. to 13s. 4d. per lb., fell, at an average of the 3 years ending with 1833, to from 6s. 8d. to 6s. 4d. per lb., and other sorts in proportion. At these prices the production would not pay; and very heavy losses were sustained, and much capital sunk, by the planters and those who had supplied them with funds to extend their undertakings. The investments in Indian shipping turned out even worse than those in the indigo plantations, the shipping of England having nearly driven that of India out of the field. The embarrassment occasioned by this locking up of their capital, and by the ruinous nature of the adventures in which they were embarked, began to manifest itself simultaneously with the scarcity of money occasioned by the drains on account of the Burmese war. The great mercantile houses began then to find that they were entangled in difficulties from which they have been wholly unable to extricate themselves. After struggling on, some for a longer and some for a shorter period, most of them have since failed, the greater number for very large sums.

But, however distressing in the mean time, the embarrassment and want of confidence arising from the failures alluded to could not be of long continuance. In the end they will, no doubt, be productive of a better order of things. It is of the utmost consequence that the vicious combination of the business of a merchant with that of a banker should be put an end to. It is singular, indeed, that individuals should be found willing to intrust large sums in the hands of those who, they are aware, are employing them in the most hazardous adventures. The higher the interest promised by such persons, the greater ought to be the caution of the public in dealing with them.

Some, perhaps most, branches of the import trade of Calcutta seem also to have been completely overdone. That of cotton twist is an instance. In 1820–30, the imports were 1,525,333 lbs.; in 1830–31, they were 3,449,044 lbs.; and in 1831–32, 5,433,323 lbs. Such a supply was far beyond the wants of the country; and the returns were so very inadequate, that the imports were reduced in 1832–33 to 2,296,715 lbs. In 1833–34, the imports amounted to 3,036,691 lbs., and the trade is now comparatively steady. The imports of copper were also carried to an excess; but the greatest excess was in the article spelter, which has for some time past been almost unsaleable at Calcutta.—(See *SPELTER*.) For further details as to the points now touched upon, the reader is referred to the clear and able evidence of G. G. de H. Larpet, Esq. before the Committee of the House of Commons on Manufactures, Commerce, &c.)

This article has been compiled from the following authorities:—*Müller's Oriental Commerce*; *A Review of the External Commerce of Bengal*, by Horace Hayman Wilson, Esq., 1850; *Beil's Comparative View of the External Commerce of Bengal*, for the years 1832–33, and 1833–34; *The Bengal Directory*; *Thornton's East Indian Calculator*; *Parliamentary Papers relating to the Finances of India and the Trade of India and China, 1830–1833*; and private communications.

Internal Transit Duties.—A very great improvement has recently been effected in the domestic economy of our Indian empire, by the abolition of the duties on the transit of goods from one part of the country to another.* These duties have existed in India from a very remote period; and, by obstructing the intercourse between its different districts, have been singularly pernicious. After the East India Company began to acquire a footing in India, they availed themselves of a favourable opportunity to procure an exemption from the transit-duties in favour of their own trade; “the goods which they imported being allowed to pass into the interior, and those which they purchased for exportation in the interior being allowed to pass to the sea, without either stoppage or duties.”—(*Mill's India*, 8vo ed. vol. iii. p. 289.) They were not, however, long permitted to monopolise this privilege. Immediately after the victories of Clive had raised the Company to the situation of a great territorial power, their servants engaged largely in the inland trade, and endeavoured, partly by fraud and partly by force, to extend to their own goods the exemption from transit duties established in favour of those belonging to the Company. Every reader of Indian history is aware of the multiplied abuses and disturbances that grew out of this attempt of the Company's servants to release themselves from duties and charges that pressed with grinding severity on the natives, and, by consequence, to engross (for such was their object) the whole internal trade of the country. The Company endeavoured to obviate the evil by strictly forbidding its servants from engaging in internal traffic. But its orders to this effect were long either totally disregarded, or but very imperfectly obeyed. At length, in 1788, Lord Cornwallis adopted the decisive and judicious measure of abolishing the duties. They were, however, again renewed in 1801. The exclusion of Englishmen from all participation in the interior traffic of the country having been gradually carried into complete effect for a lengthened period, they were less alive than they would otherwise have been to the injurious influence of the duties, so that their re-establishment met with comparatively little

* This important measure was preceded, and, we believe, principally brought about, by the publication of an elaborate and very valuable report on the inland customs of Bengal, by Mr. Trevelyan, one of the Secretaries to Government. We avail ourselves of this opportunity to state, that the most ample details as to the foreign trade of Bengal are embodied in the *Comparative Reviews* thereof, published annually by Mr. Bell, of the customs' establishment at Calcutta. They contain a greater fund of information, combined with sound remarks, than are to be met with respecting the trade of any other empire with which we are acquainted.

opposition. In 1810, a new tariff was introduced by which the duties "were frightfully augmented;" and they have continued from that epoch down to their recent abolition seriously to obstruct all sorts of internal traffic, and to oppose the most formidable obstacle to the improvement of the country.

Had the inland transit duties been productive of a large amount of revenue, that would have been some set-off against the enormous evils of which they have been productive. But such has not been the case. The expense of collection, and the interruption of communication, have been so very great, that the nett produce of the inland transit duties has been quite insignificant; so much so that, according to Mr. Trevelyan, it has not exceeded, in the extensive province of Bengal, the miserable pittance of 27,800*l.* a year. (*Report*, p. 153.) We have no reason to doubt the accuracy of this statement; and assuming it to be correct, we are warranted in affirming that there is not another instance to be found, in the history of taxation, of a tax so fruitful of mischievous results, and so barren of revenue.

Town Duties.—These were charged on the principal articles of consumption in 23 of the chief towns of Bengal. They were in many respects similar to the *octrois* in France; and, though not nearly so injurious as the internal transit duties, were productive of much inconvenience. We are glad, however, to have to state that they, as well as the transit duties, have recently been abolished; and that the internal trade of Bengal is now as free, in so far at least as statutory regulations can make it, as the internal trade of England. This emancipation will undoubtedly be productive of the most beneficial results. "When," says Mr. Bell, "the transit duties shall have been abolished, an impulse will be given to every sinew of commerce, which will cause us only to wonder how such an execrable system should have been permitted to exist for a day."—(*Review of the Commerce of Bengal*, 1833-34 and 1834-35.)

New Customs Duties.—There are no good grounds for thinking that the revenue would have lost anything by the abolition of the transit and town duties, even though no new taxes had been imposed in their stead. But some small additions have been made to the customs duties, or to the duties charged on the importation and exportation of certain articles. The present customs law, enacted in May 1836, and the duties charged under it, are subjoined:—

ACT No. XIV. of 1836.

I. It is hereby enacted, that from the 1st June next, such parts of Regulations IX. and X. 1810, Regulations XV. 1825, and of any other regulations of the Bengal Presidency as prescribe the levy of transit or inland customs duties, or of town duties; and likewise the schedules of duties and provisions of any kind contained in these or any other regulations for fixing the amount of duty to be levied upon goods imported into or exported from the said Presidency by sea, shall be repealed.

II. And it is hereby enacted, that duties of customs shall be levied on goods imported by sea into Calcutta, or into any other place within the provinces of Bengal and Orissa, according to the rates specified in Schedule A. annexed to this Act, with the exceptions specified therein, and the said schedule, with the notes attached thereto, shall be taken to be a part of this Act.

III. And it is hereby further enacted, that duties of customs shall be levied upon country goods exported by sea from any port of Bengal or Orissa, according to the rates specified in Schedule B. annexed to this Act, with the exceptions therein specified, and the said schedule, with the notes attached thereto, shall also be taken to be a part of this Act.

N. B.—These duties are to be collected under the same regulations as former duties: and all baggage is to be passed to the collector of customs as heretofore.

The remainder of the Act relates to regulations respecting ships' manifests, &c.

SCHEDULE A.

Rates of Duty to be charged on Goods Imported by Sea into any Port of the Presidency of Fort-William in Bengal.

Enumeration of Goods.	When imported on British Bottoms.	When imported on Foreign Bottoms.
Bullion and coin	Free	Free.
Precious stones and pearls	Do.	Do.
Grain and pulse	Do.	Do.
Horses and other living animals	Do.	Do.
Cash, coins, bricks, chalk, and stones	Do.	Do.
Books printed in the United Kingdom, or in any British possession	Do.	3 per cent.
Foreign books	3 per cent.	6 per cent.
Marine stores, the produce or manufacture of the United Kingdom, or of any British possession	3 per cent.	6 per cent.
Do. do., the produce or manufacture of any other place or country	6 per cent.	12 per cent.
Metals, wrought or unwrought, the produce or manufacture of the United Kingdom, or any British possession	3 per cent.	6 per cent.
Metals, do. do., excepting tin, the produce or manufacture of any other place	6 per cent.	12 per cent.
Tin, the produce of any other place than the United Kingdom, or any British possession	10 per cent.	20 per cent.
Woolens, the produce or manufacture of the United Kingdom, or any British possession	8 per cent.	4 per cent.

SCHEDULE A.—continued.

Enumeration of Goods.	When imported on British Bottoms.	When imported on Foreign Bottoms.
Woolens, the produce of any other place or country	4 per cent.	6 per cent.
Cotton and silk piece goods, cotton twist and yarn, the produce of the United Kingdom, or of any British possession	3 1/4 per cent.	7 per cent.
Do., the produce of any other place	7 per cent.	14 per cent.
Opium	84 <i>rs.</i> per <i>seer</i> of 80 <i>toles</i>	24 <i>rs.</i> per <i>seer</i> of 80 <i>toles</i>
Salt	Rs. 3-4 per <i>md.</i> of 80 <i>toles</i> per <i>seer</i>	Rs. 5-4 per <i>md.</i> of 80 <i>toles</i> per <i>seer</i>
Alum	10 per cent.	20 per cent.
Camphor	10 per cent.	20 per cent.
Cassia	10 per cent.	20 per cent.
Cloves	10 per cent.	20 per cent.
Coffee	7 1/2 per cent.	15 per cent.
Coral	10 per cent.	20 per cent.
Gulmoga and mace	10 per cent.	20 per cent.
Pepper	10 per cent.	20 per cent.
Rattans	7 1/2 per cent.	15 per cent.
Tin	10 per cent.	20 per cent.
Vanilla	10 per cent.	20 per cent.
Wines and liquors	10 per cent.	20 per cent.
Spirits, consolidated duty, including that levied heretofore through the police of Calcutta.	9 <i>sa.</i> p. <i>imp.</i> <i>gal.</i>	16 <i>sa.</i> p. <i>imp.</i> <i>gal.</i>
And the duty on spirits shall be re-levied if the strength exceeds of London proof, and when imported in bottles, five quart bottles shall be deemed equal to the imperial gallon.		
All articles not included in the above enumeration	3 1/4 per cent.	7 per cent.

And when the duty is declared to be *ad valorem*, it shall be levied on the market value without deduction; and if the collector of customs shall see reason to doubt whether the goods come from the country from which they are declared to come by the importer, it shall be lawful for the collector of customs to call on the importer to furnish evidence as to the place of manufacture or production, and if such evidence shall not satisfy the said collector of the truth of the declaration, the goods shall be charged with the highest rates of duty, subject always to an appeal to the Board of Customs, salt and opium excepted.

And, upon the re-export by sea of goods imported, excepting opium and salt, provided the re-export be made within two years of the date of import as per custom-house register, and the goods be identified to the satisfaction of the collector of customs, there shall be retained one-eighth of the amount of duty levied, and the remainder shall be repaid as drawback. And if goods be re-exported in the same ship without being landed, (always excepting opium and salt, in regard to which the special rules in force shall continue to apply) there shall be no import duty levied thereon.

SCHEDULE B.

Rate of Duty to be charged upon Goods exported by Sea from any Port or Place in the Presidency of Fort William in Bengal.

Enumeration of Goods.	Exported on British Bottoms.	Exported on Foreign Bottoms.
Bullion and coin	Free	Free.
Prevalent stones and pearls	Ditto	Ditto.
Books printed in India	Ditto	Ditto.
Horses and living animals	Ditto	Ditto.
Opium purchased at government sale in Calcutta	Ditto	Ditto.
Cotton wool exported to Europe, the United States of America, or any British possession in America	Ditto	8 s. a. p. md. of 80 tolas to the seer.
Do. do. exported to places other than above	As. 8 p. md. of 80 tolas to the seer.	As. 16 p. md. of 80 tolas to the seer.
Sugar and rum exported to the United Kingdom, or to any British possession	Free	3 per cent.
Do. exported to any other place	3 per cent.	6 per cent.
Grain and pulse of all sorts	1 anna per bag not exceeding 2 mds. of 80 tolas to the seer, or if exported otherwise than in bags 1 2 s. a. p. md. of 80 tolas to the seer.	2 s. a. p. bag not exceeding 2 mds. of 80 tolas to the seer, or if exported otherwise than in bags, 1 anna per mds. of 80 tolas to the seer.
Indigo	Rs. 3 p. md. of 80 tolas to the seer.	Rs. 6 p. md. of 80 tolas to the seer.

Remarks on the above Duties.—The policy of charging duties on exported articles, and of making so great a distinction between the duties on articles imported and exported in British and in foreign ships, seems very questionable. The great difficulty under which India labours, in a commercial point of view, consists principally in her inability to furnish equivalents for foreign imported goods, and to make the necessary payments abroad; and when such is the case, it is certainly not a little contradictory to lay duties on exports. The most obvious considerations of expediency and common sense would suggest that they should be allowed to be exported duty-free. There can be no doubt that the stimulus this would give to their production, would, by increasing the public wealth, infinitely more than compensate the government for the loss of the inconsiderable sum produced by the duties with which they are charged.

The duties on most articles of importation do not appear to be at all excessive, provided they were equally distributed. But it seems quite inconsistent, seeing that we have admitted the reciprocity principle into the trade of Britain, that we should exclude it from that of India. The best informed parties concur in opinion, that the effect of the discriminating duties is to diminish trade, without promoting, in any material degree, the employment of British shipping, and to provoke retaliatory measures on the part of the foreigner. The sooner, consequently, that this distinction is abolished, the better will it be for all parties. Regulations of this sort are never productive of any real advantage.

Pilotage, &c.—The Marine Board at Calcutta have recently issued the following regulations, with respect to pilotage, &c.

1. Commanders are requested, prior to quitting their vessels, on arrival off Calcutta, to fill up and certify, or cause to be filled up and certified, a form of certificate, showing the actual registered tonnage, the draft of water, and whether the vessel has or has not been tugged by a steamer any part of the way, or has or has not had the use of a view boat; which forms will be furnished to the pilot, in order to the bills of the vessel being correctly made out.

2. Commanders are further requested, as early after their arrival as possible, to notify in writing to the Master Attendant, the name and residence of the reference for the payment of his vessel's bills.

3. On the receipt by the Master Attendant of the above certificate, and written reference for payment, a single bill will be prepared, including inward pilotage, light-house duty, Moysore magazine duty, and row-boat hire (if any), which together with the certificate, will be forwarded to the marine paymaster, for collection within 15 days of the arrival of the vessel, and lying on at the name and residence of the party referred to for payment, which commanders are requested to furnish to the Master Attendant, in writing, as early after their arrival as practicable, that officer will more readily be enabled to present it. By this arrangement, all the charges connected with the vessel, up to her arrival off Calcutta, will be embodied in one bill, instead of, as hitherto, being made up in separate bills.

4. In the event of wrecking, or being transported at the desire of the command, it is requested that a certificate may be given by the commanding officer of the operation having been performed, in order to its accompanying the bill when presented for payment to the reference.

5. The practice of charging for hauling to the chain-moorings for their monthly hire, and for hauling from the moorings in separate bills, is discontinued, and henceforward one bill will be prepared, including the charges for hauling to the moorings, that for occupying them, and that for hauling from them; and commanders are requested to give, or cause their commanding officers to give to the Master Attendant, or the harbour-master, certificate of the date of hauling to and from the moorings, which certificate, as before, will accompany the bill when presented for payment. The hire of the moorings will be charged for the day on which the vessel is hauled thereto, without reference to the period of the day; and, in like manner, no charge will be made for the day on which she heels from her moorings, however late in the day she may quit them. The charges connected with the chain-moorings will thus be embodied in one bill, and be discharged in one payment instead of three or more, according to the number of moorings the vessel occupied the moorings.

6. The system of charging outward pilotage on an estimated draught of water, with an addition of 10 per cent., subject to adjustment after the vessel has sailed, and of charging a certain number of days for a row-boat, subject to a like adjustment, is abolished; and in future the outward pilotage and charge for row-boat hire on outward-bound vessels will be made as follows:—

SCHEDULE B.—continued.

Enumeration of Goods.	Exported on British Bottoms.	Exported on Foreign Bottoms.
Lac dye and shell lac	4 per cent.	8 per cent.
Silk raw, shiraz	3 1/2 s. a. p. seer of 80 tolas	7 s. a. p. seer of 80 tolas
Silk, Bengal wound	3 s. a. p. seer of 80 tolas	6 s. a. p. seer of 80 tolas
Tobacco	4 s. a. p. mds. of 80 tolas	8 s. a. p. mds. of 80 tolas
All country articles not enumerated or named above	4 per cent.	6 per cent.

And when the duty is declared to be ad valorem, the same shall be levied on the market value of the article at the place of export, without deduction.

And in settling for the duties on exports by sea, credit shall be given for payment of inland customs duty, and drawback shall be allowed of any excess of duty paid upon production of revenues under the following conditions, until the 1st April, 1837:—

First, That the goods shall be identified, and destination to the port of export proved in the usual manner.

Second, That the revenues shall have date before the 1st April, 1836, and the goods shall not have been protected thereby, or by the original thereof, more than two years.

And after the said 1st April, 1837, credit shall not be given, nor shall drawback be allowed of any inland customs or land frontier duty paid at any custom-house or choke of the Jumna frontier line, or of Benares, except only upon the article of cotton wool, covered by ruwanas taken out at the custom-houses of the western provinces, and proved to have been destined for export by sea, when passed out of those provinces.

W. H. MACNAGHTEN,
Secy. to the Govt. of India.

When the vessel is finally laden, the commander is to give notice thereof to the Master Attendant, when the draft of water is to be ascertained and certified by the commander or commanding officer on the part of the vessel, and by the harbour-master on the part of government; subject, in case of dispute, to the decision of the Master Attendant. On receipt of the certificate, the Master Attendant will cause a bill to be made out for the regular amount of pilotage, and for the row-boat hire, according to an average rate, with reference to the size of the vessel and the season of the year, fixed by a marine committee which lately sat at the Banks, the majority of which was composed of members of houses of agency and commanders of ships. The bill and certificate will be presented in due course for payment.

7. As, however, it frequently happens that vessels are taking in cargo or filling their water up to the last day of their departure, or that from other causes the bills for the chain-moorings and outward pilotage cannot be made out till the eve of departure, owners, agents, and commanders, are in such cases particularly requested, with a view to despatch, to cause an individual to attend at the Banks, and expedite the transmission of the bill and certificate to the board for registry, and to the Pay Office for collection; at each of which offices they may in such cases depend upon the most ready and special attention.

8. In the event of a vessel being tugged any part of the way down by steam, or not having the use of a row-boat, commanders are to obtain from the pilot at Kaituma a certificate to that effect, which they should forward by Dik to their agents. On receipt thereof, agents are requested to make out a bill against the honourable company for the quarter deduction from the pilotage allowed if tugged by steam, or for the row-boat hire paid, as the case may be; and to forward it, together with the certificate, to the marine board for audit and payment.

9. In cases where a vessel leaves Calcutta averredly intended to fill up cargo at some place below, the pilotage will be charged at the draft at which she leaves Calcutta in the manner, though at the reduced amount, as if she had proceeded to sea; and, with respect to the subsequent pilotage charge, from the place at which the vessel takes up the additional cargo to sea, owners or agents of vessels will be required to furnish a special guarantee to pay the amount chargeable according to a certificate of the draft of water to be signed by the commander or commanding officer and pilot.

10. Six sets of moorings at Diamond Harbour having been fitted specially to enable vessels arriving in distress from loss of anchors and cables to be readily moored, the charge will be Rs. 50 for mooring and unmooring, and the daily hire the same as for the moorings at Calcutta. The moorings will, of course, be available to vessels not in distress from loss of anchors and cables, but the harbour-master will be instructed at all times to keep two sets vacant during the S. W. monsoon, to meet casualties.

(Sigs.)

CALICO (Ger. *Kattun* ; Du. *Katoen* ; Dan. *Kattun* ; Sw. *Cattun* ; Fr. *Coton*, *Toile de Coton* ; It. *Tela Bambagina*, *Tela dipinta* ; Sp. *Tela de Algodon* ; Port. *Pano de Algodao* ; Rus. *Wubolka* ; Pol. *Bawolnika*), cloth made of cotton ; so called from Calicut, on the Malabar coast, whence it was first imported. In England, all white or unprinted cotton cloths are denominated calicoes ; but in the United States this term is applied to those only that are printed.

Historical Notice of the Art of Calico Printing.—This art, though apparently one of the most difficult, has been practised from a very remote era. Herodotus mentions (lib. 1. § 202), that a nation on the shores of the Caspian were in the habit of painting the figures of animals on their clothes, with a colour formed from the leaves of trees bruised and soaked in water ; and he adds, that this colour was not effaceable, and was as durable as the clothes themselves. It is difficult to imagine that the colours could have been so permanent, had not those using them been acquainted with the use of mordants. There is, however, a passage in Pliny (*Hist. Nat.* lib. xxxv. § 11), which, though in some respects obscure, shows that the ancient Egyptians were fully acquainted with the principle of calico printing. "They paint," says he, "the clothes, not with colours, but with drugs (*sorbentibus medicamentis*) that have no colour." This being done, they immerse them in a vat full of boiling dye, and leave them there for a little ; when they take them out, they are painted of various colours. It is extraordinary, seeing that there is only one colour in the vat (*unus in cortina color*), that a variety of colours should be produced by the operation of the drugs." Pliny further states, that the colours were so adhesive they could not be washed out ; and that clothes were the stronger for being dyed. A similar process is known to have been followed in India from the earliest times. The chemical and mechanical inventions of modern ages have been the cause of vast improvements in this ingenious and beautiful art ; but the passage now quoted shows distinctly that we have, in this instance, been only perfecting and improving processes practised in the remotest antiquity.

Calico Printing in this Country. Duties on Calicoes.—In Great Britain the printing of cottons has formed, for a considerable period, a very important and valuable business. It has been calculated that there are not less than 230,000 individuals employed in, and dependent upon, the print trade for subsistence, receiving the annual sum of 2,400,000*l.* in wages.

This important and valuable business may be truly said to have grown up amongst us in despite of repeated efforts for its suppression. To prevent the use of calicoes from interfering with the demand for linen and woollen stuffs, a statute was passed in 1721, imposing a penalty of 5*l.* upon the weaver, and of 20*l.* upon the seller, of a piece of calico ! Fifteen years after, this extraordinary statute was so far modified, that calicoes manufactured in Great Britain were allowed to be worn, "provided the warp thereof was entirely of linen yarn." This was the law with respect to calicoes till after the invention of Sir Richard Arkwright introduced a new era into the history of the cotton manufacture, when its impolicy became obvious to every one. In 1774, a statute was passed, allowing printed goods, wholly made of cotton, to be used, after paying a duty of 3*d.* a yard (raised to 3*½d.* in 1806) ; and enacting some regulations as to the marks to be affixed to the ends of the pieces, the stripes, &c.

This act continued in force down to 1831 ; but, though an improvement upon the old law, it was much, and justly, complained of. Its injustice and injurious operation were very forcibly pointed out by Mr. Poulett Thompson, in his excellent speech on taxation. "It is a matter of surprise to me," said the Right Hon. gent. "that this most impolitic impost should have been allowed to continue, especially when it was declared by the committee of 1818 to be '*partial and oppressive*, and that its repeal was most desirable : ' who, indeed, can examine it, and not feel the truth of this observation ? Is it credible, that in order to raise a nett revenue of 599,660*l.* a gross tax should be imposed of 2,019,737*l.* and yet this was the return, according to the paper on your table, for 1828. And these figures are still far from showing the real cost of the collection of this tax :—that must be taken upon the gross produce ; and supposing the rate of the collection for the excise to be 5 per cent., which is less than it really is, you have a cost of 20 per cent. on the nett produce of this tax, for charges. In addition to this, from all the inquiry I have been able to make, the increased cost to the manufacturer is fully 5 per cent. upon the whole quantity made ; so that you have thus two sums, each of 100,000*l.*, levied on the public, for the sake of exacting a duty of 600,000*l.* But the revenue is again, in this case, far from being the measure of the injury you inflict. The inequality of the tax constitutes its chief objection. The duty is levied upon the square yard, at 3*½d.* per yard. Thus, the piece of calico which sells for 6*d.*, duty paid, contributes equally with that which is worth 5*s.* a yard. You levy an onerous and oppressive tax of 100 or 150 per cent. upon the poor, who are the purchasers of inferior cottons ; whilst the rich, who buy only the finest kinds, pay but 10 or 15 per cent."

It is due to Mr. Thompson to state, that, not satisfied with giving this forcible exposition of the inequality and injurious operation of the duty on printed goods, one of his first measures, on coming into office, was to propose its repeal.

By the 34 Geo. 3. c. 32. it is enacted, that the inventor, designer, or printer of any new and original pattern for printing linens, cottons, calicoes, or muslins, shall have the sole right of printing and reprinting the same for three months, to commence from the day of first publishing.

The following tables exhibit the quantity of printed cloths produced in Great Britain, the quantity exported, and the amount of revenue and drawback thereon, during the year ended 5th of January, 1832.

I. Return of the Number of Square Yards of Calicoes, Muslins, Linens, and Stuffs, made either of Cotton or Linen, printed, painted, stained, or dyed, in Great Britain (except such as shall have been dyed of one Colour throughout), with the Amount of Excise Duties collected thereon in England and Scotland, in the Year ended 5th of January, 1830; distinguishing the Number of Square Yards and Amount of Duty collected thereon.—(Parl. Paper, No. 335. Sess. 1830.)

	Number of yards.			Amount of duty.		
	Foreign calicoes.	Linens and stuffs.	Calicoes and Muslins.			
England - - -	22,336	1,761,761	192,234,454	£	s.	d.
Scotland - - -	—	8,755	26,103,550	1,516,431	14	10
				380,833	12	3
Year ended 5th Jan. 1830	22,336	1,770,516	122,340,004	1,897,265	7	1

II. Return of the Total Number of Square Yards of printed Calicoes, Muslins, Linens, and Stuffs, exported from England and Scotland, in the Year ended 5th of January, 1830; the Amount of Drawbacks paid or allowed thereon; distinguishing the Quantities and Amount of Drawbacks allowed to Foreign Parts from the Quantities and Drawbacks paid or allowed on the like Articles on the Removal coastwise to Ireland.

	Exported to Foreign Countries.			Exported to Ireland.		
	Number of Yards.		Amount of Drawback.	Number of Yards.	Amount of Drawback.	
	Foreign Calicoes.	Linens, Stuffs, Calicoes, and Muslins.		Linens, Stuffs, Calicoes, and Muslins.

CALOMEL. Chloride of mercury; frequently called mild muriate of mercury; and sometimes, but less properly, submuriate of mercury.

CAMBRIC, or CAMBRICK (Ger. *Kammertuch*; Du. *Kamerykdoek*; Fr. *Cambray Batiste*; It. *Cambraja*; Sp. *Cambray*; Port. *Cambray*; Rus. *Kamertug*), a species of very fine white linen, first made at Cambray, in French Flanders, whence it derives its appellation. It is now produced, of an equally good quality, in Great Britain.

CAMEL (Fr. *Chameau*; It. and Sp. *Camelo*; Ger. *Kamel*; Arab. *Djamel*; Lat. *Camelus*; Greek, *καμηλος*) is indigenous to Arabia, and we only mention it in this place on account of its extreme importance in the commerce of the East.

The camel is one of the most useful of the animals over which the inhabitants of Asia and Africa have acquired dominion. These continents are intersected by vast tracts of burning sand, the seats of desolation and drought, so as, apparently, to exclude the possibility of any intercourse taking place between the countries that they separate. "But as the ocean, which appears at first view to be placed as an insuperable barrier between different regions of the earth, has been rendered, by navigation, subservient to their mutual intercourse; so, by means of the camel, which the Arabians emphatically call *the Ship of the Desert*, the most dreary wastes are traversed, and the nations which they disjoin are enabled to trade with one another. Those painful journeys, impracticable by any other animal, the camel performs with astonishing despatch. Under heavy burdens of 600, 700, and 800 lbs. weight, they can continue their march during a long period of time, with little food or rest, and sometimes without tasting water for 8 or 9 days. By the wise economy of Providence, the camel seems formed of purpose to be the beast of burden in those regions where he is placed and where his service is most wanted. In all the districts of Asia and Africa, where deserts are most frequent and extensive, the camel abounds. 'This is his proper station, and beyond this the sphere of his activity does not extend far. He dreads alike the excesses of heat and cold, and does not agree even with the mild climate of our temperate zone.'—(*Robertson's Disquisition on Ancient India*, Note 53.)

The first trade in Indian commodities of which we have any account (Genesis xxxvi. 25.) was carried on by camels; and they still continue to be the instruments employed in the conveyance of merchants and merchandise throughout Turkey, Persia, Arabia, Egypt, Barbary, and many contiguous countries. The merchants assemble in considerable numbers, forming themselves into an association or *caravan*—(see *CARAVAN*), for their mutual protection against the attacks of robbers, and the dangers incident to a journey through such rude and inhospitable countries. These caravans are often very large and usually consist of more camels than men. The capacity of the camel to endure fatigue, and the small supply of provisions that he requires, is almost incredible. "His ordinary burden," says Volney, "is 750 lbs.; his food, whatever is given him—straw, thistles, the stones of dates, beans, barley, &c. With a pound of food a day, and as much water, he will travel for

weeks. In the journey from Cairo to Suez, which is 40 or 46 hours, they neither eat nor drink; but these long fasts, if often repeated, wear them out. Their usual rate of travelling is very slow, hardly above two miles an hour: it is in vain to push them; they will not quicken their pace; but, if allowed some short rest, they will travel 15 or 18 hours a day."—(*Voyage en Syrie*, tom. ii. p. 383.)

The Arabians regard the camel as a sacred animal, the gift of Heaven, without whose aid they could neither subsist, nor trade, nor travel. Its milk is their ordinary food; they also eat its flesh, especially that of the young camel, which they reckon excellent; its hair, which is renewed every year, is partly manufactured into stuffs for their clothes and furniture, and partly sent abroad as a valuable article of merchandise; and even its faeces serve them for fuel. Blest with their camels, the Arabs want nothing, and fear nothing. In a single day they can traverse 40 or 50 miles of the desert, and interpose its trackless sands as an impenetrable rampart between them and their foes.—(See the admirable description of the camel, in Buffon.)

But, however useful to the inhabitants of parched, sandy deserts, it may be worth while, perhaps, to observe, that the camel is of very little service elsewhere. He cannot walk 100 yards on wet or slippery ground without stumbling. He is totally unknown in all hilly or woody countries; and, with few exceptions, may be said to be as great a stranger in the Eastern Islands, Japan, the southern parts of China, the whole country lying between China and India, and all the southern parts of the latter, including Bengal, as he is in Europe. In all those vast countries the ox is the most useful of the lower animals. It is used for draught (for which the camel is totally unfit), in the cart and plough, in the carrying of burdens, in treading corn, in the oil press, &c., and finally as food.

CAMELS' HAIR (Ger. *Kameelhaar*; Fr. *Poil de chameau*, *Laine de chevron*; It. *Pelo di camello*; Sp. *Pelo ó lana de camello*). The hair of the camel imported into this country is principally used in the manufacture of fine pencils for drawing and painting. In the East, however, it is an important article of commerce, and is extensively used in the arts. It serves for the fabrication of the tents and carpets of the Arabs, and for their wearing apparel. Cloth is also manufactured of it in Persia and other places. The most esteemed hair comes from Persia. It is divided into three qualities; black, red, and grey. The black is the dearest, and the grey is only worth half the red. Considerable quantities of camels' hair are exported from Smyrna, Constantinople, and Alexandria. It is used in the manufacture of hats, particularly by the French.—(*Rees's Cyclopædia*, art. *Camelus*.)

CAMELET, or **CAMBLET** (Ger. and Du. *Kamelot*; Fr. *Camelot*; It. *Ciambellotto*; Sp. *Camelote*; Rus. *Kamlot*), a plain stuff, manufactured on a loom, with two treadles, as linens are. There are camelots of various colours and sorts: some wholly of goats' hair; others, in which the warp is of hair, and the woof half hair and half silk; others, again, in which both the warp and the woof are of wool; and, lastly, some, of which the warp is of wool and the woof of thread: some are striped, some watered, and some figured.

CAMOMILE (Fr. *Camomille*; It. *Camomilla*; Sp. *Manzanilla*; Lat. *Chamomilla*), a well-known plant, whose flowers are used for medical purposes. Most of what is brought to the London market is grown about Mitcham, in Surrey.

CAMPBOR, or **CAMPPIRE** (Ger. *Kampfer*; Du. *Kamfer*; Fr. *Camphre*; It. *Canfora*; Sp. *Acanfor*; Rus. *Kamfora*; Lat. *Camphora*; Arab. and Pers. *Kufoor*; Mal. *Kuafur*). There are two descriptions of this valuable article, which must not not be confounded.

1. *Camphor of Commerce*, or that met with in Europe, is obtained by boiling the timber of a species of laurel (*Laurus Camphora*), a tree found in the forests of Fokien, in China, near the city of Chinchew, where there is annually produced from 2,500 to 3,000, and sometimes as much as 4,000 piculs. Most of the camphor imported into Europe comes from China; but a small quantity, considered of superior quality, comes from Japan by way of Batavia. The exports from Canton in 1830 and 1831 were respectively 3,452 and 2,043 piculs, being, at an average, 366,266 lbs.; if to this we add the exports from Batavia of Japan camphor, amounting to 489 piculs, the total annual produce of China and Japan for exportation will be 432,770 lbs. It is brought to this country in chests, drums, and casks; and is in small, granular, friable masses, of a dirty white or greyish colour, very much resembling half-refined sugar. When pure, the camphor of commerce has a strong, peculiar, fragrant, penetrating odour, and a bitter, pungent, aromatic taste. It is in reality a concrete essential oil. Camphor, when refined, is in thin hollow cakes of a beautiful virgin whiteness, and, if exposed to the air, totally evaporates. Great care is therefore requisite in packing camphor, to prevent serious loss.

2. *Camphor, Malay*, commonly called, to distinguish it from the last, camphor of Barus, from the port of Sumatra, where it is mostly shipped. It is a product of the *Dryobalanops Camphora*, a forest tree confined to Sumatra, Borneo, and the Malay peninsula. It is found in concrete masses in the fissures of the wood; there are, however, but very few trees that afford it; and those that do, only in small quantities. This species of camphor is more fragrant and less biting and pungent than that yielded by the laurel, and is in high repute

among the Chinese, by whom it is almost wholly consumed. There is an immense disparity in the prices of the two species in China. In a price current recently published at Canton, the finest Chinese camphor is quoted at 30 dollars per picul, while the Malay camphor is quoted at 30 dollars per catty, making the price of the latter 100 times greater than that of the former! Malay camphor is wholly unknown in Europe as an article of trade.—(*Private information*.)

[The quantity of camphor imported into the United States has of late years been rapidly increasing. It used to be procured mostly by way of England and Holland. But it now comes to us directly from China; and is in part subsequently re-exported to Europe.—*Am. Ed.*]

CAMPHOR OIL (Malay, *Minyak*), a fragrant essential oil, obtained in large quantities by heating the wood of the *Dryobalanops Camphora*. It is nearly as cheap as spirits of turpentine, but is not held in any esteem by the Chinese. It might, perhaps, be profitably imported into England as a substitute for spirits of turpentine in the arts, and for medicinal purposes. We may add, that the timber of the *Dryobalanops Camphora* is not inferior to any produced in the countries where it grows, for the purposes of house and ship building.—(*Private information*, and *Crawford's Indian Archipelago*, vol. i. p. 516.)

CAMWOOD, a red dye wood, first brought to Europe from Africa by the Portuguese. It is principally obtained from the vicinity of Sierra Leone. The colouring matter which it affords differs but little from that of ordinary Nicaragua wood, either in quality or quantity; and it may be employed with similar mordants.—(*Bancroft on Colours*. See also *Dampier*, vol. ii. part ii. p. 58.) Camwood is at present worth, in the London market, from 16*l.* to 18*l.* a ton, duty (5*s.* a ton) included. In 1828, 475 tons of camwood were imported; but the imports in 1829 only amounted to 119 tons.—(*Parl. Paper*, No. 661. Sess. 1830.)

CANAL, CANALS. A canal is an artificial channel, filled with water kept at the desired level by means of locks or sluices, forming a communication between two or more places.

(1.) *Historical Sketch of Canals. Ancient Canals.*—The comparative cheapness and facility with which goods may be conveyed by sea, or by means of navigable rivers, seem to have suggested, at a very early period, the formation of canals. The best authenticated accounts of ancient Egypt represent that country as intersected by canals conveying the waters of the Nile to the more distant parts of the country, partly for the purpose of irrigation, and partly for that of internal navigation. The efforts made by the old Egyptian monarchs, and by the Ptolemies, to construct a canal between the Red Sea and the Nile are well known; and evince the high sense which they entertained of the importance of this species of communication.—(*Ameilhon, Commerce des Egyptiens*, p. 76.)

Greece was too small a territory, too much intersected by arms of the sea, and sub-divided into too many independent states, to afford much scope for inland navigation. Attempts were, however, made to cut a canal across the Isthmus of Corinth; but they did not succeed.

The Romans did not distinguish themselves in canal navigation. Their aqueducts, the stupendous ruins of which attest the wealth and power of their founders, were intended to furnish supplies of water to some adjoining city, and not for the conveyance of vessels or produce.

(2.) *Chinese Canals.*—In China, canals, partly for irrigation, and partly for navigation, have existed from a very early period. The most celebrated amongst them is the Imperial or Grand Canal, forming a communication between Pekin and Canton, said to be about 1,660 miles long. But there can be no doubt that this is a very great exaggeration; and that it includes the various rivers which really form the greater part of the navigation, the excavated portion being of comparatively limited dimensions. The canal is said not to have, at any time, more than from 5 to 6 feet water; and in dry seasons, its depth is frequently reduced to 3 feet. (*De la Lande, Canaux de Navigation*, p. 529.) The locks are constructed with very little skill; and as the vessels are generally dragged by men, the navigation is extremely slow. The canals are mostly faced with stone; and the bridges across them are said to be very ingeniously contrived.

(3.) *Italian Canals.*—The Italians were the first people in modern Europe that attempted to plan and execute canals. They were principally, however, undertaken for the purpose of irrigation; and the works of this sort executed in the Milanese and other parts of Lombardy, in the eleventh, twelfth, and thirteenth centuries, are still regarded as models, and excite the warm admiration of every one capable of appreciating them. In 1271, the Naviglio Grande, or canal leading from Milan to Abbiate Grasso and the Tesino, was rendered navigable.—(*Young's Travels in France, &c.* vol. ii. p. 170.)

(4.) *Dutch Canals.*—No country in Europe contains, in proportion to its size, so many navigable canals as the kingdom of the Netherlands, and particularly the province of Holland. The construction of these canals commenced as early as the twelfth century, when, owing to its central and convenient situation, Flanders began to be the *entrepôt* of the commerce between the north and south of Europe. Their number has since been astonishingly increased. "Holland," says Mr. Phillips, in his *History of Inland Navigation*, "is intersected by innumerable canals. They may be compared in number and size to our public roads and highways: and as the latter with us are continually full of coaches, chaises,

wagons, carts, and horsemen, going from and to the different cities, towns, and villages; so, on the former, the Hollanders, in their boats and pleasure barges, their treckschuyts and vessels of burden, are continually journeying and conveying commodities for consumption or exportation from the interior of the country to the great cities and rivers. An inhabitant of Rotterdam may, by means of these canals, breakfast at Delft or the Hague, dine at Leyden, and sup at Amsterdam, or return home again before night. By them, also, a most prodigious inland trade is carried on between Holland and every part of France, Flanders, and Germany. When the canals are frozen over, they travel on them with skais, and perform long journeys in a very short time; while heavy burdens are conveyed in carts and sledges, which are then as much used on the canals as on our streets.

"The yearly profits produced by these canals are almost beyond belief; but it is certain, and has been proved, that they amount to more than 250,000*l.* for about 400 miles of inland navigation, which is 625*l.* per mile, the square surface of which mile does not exceed two acres of ground; a profit so amazing, that it is no wonder other nations should imitate what has been found so advantageous.

"The canals of Holland are generally 60 feet wide and 6 deep, and are carefully kept clean; the mud, as manure, is very profitable; the canals are generally levels; of course, locks are not wanted. From Rotterdam to Delft, the Hague, and Leyden, the canal is quite level, but is sometimes affected by strong winds. For the most part the canals are elevated above the fields or the country, to enable them to carry off the water, which in winter inundates the land. To drain the water from Delfland, a province not more than 60 miles long, they employ 200 windmills in spring time to raise it into the canals. All the canals of Holland are bordered with dams or banks of immense thickness, and on these depends the security of the country from inundation; of course it is of great moment to keep them in the best repair; to effect which there is a kind of militia, and in every village is a magazine of proper stores and men, whose business it is to convey stones and rubbish in carts to any damaged place. When a certain bell rings, or the waters are at a fixed height, every man repairs to his post. To every house or family there is assigned a certain part of the bank, in the repair of which they are to assist. When a breach is apprehended, they cover the banks all over with cloth and stones."

(5.) *Canal from Amsterdam to Nieuwdirp, near the Helder.*—The object of this canal, which is the greatest work of its kind in Holland, and probably in the world, is to afford a safe and easy passage for large vessels from Amsterdam to the German Ocean. This city has 40 feet of water in the road in front of its port, but the pampus or bar at the junction of the Y with the Zuyder Zee, 7 miles below, has only a depth of 10 feet; and hence all ships of any considerable burden entering or leaving the port must unload and load part of their cargoes without the bar. As the Zuyder Zee is every where full of shallows, all ordinary means of improving the access to Amsterdam were necessarily ineffectual; and the resolution was, therefore, at length adopted, of cutting a canal from the city to the Helder, the most northern point of the province of Holland. The distance between these extreme points is 41 English miles, but the length of the canal is about 50½. The breadth at the surface of the water is 124½ English feet (120 Rhinland feet); the breadth at bottom 36; the depth 20 feet 9 inches. Like the Dutch canals generally, its level is that of the highest tides, and it receives its supply of water from the sea. The only locks it requires are of course, two tide-locks at the extremities; but there are, besides, two sluices with floodgates in the intermediate space. It is crossed by about 18 drawbridges. The locks and sluices are double,—that is, there are two in the breadth of the canal; and their construction and workmanship are said to be excellent. They are built of brick, for economy; but bands of limestone are interposed at intervals, and these project about an inch beyond the brick, to protect it from abrasion by the sides of vessels. There is a broad towing path on each side, and the canal is wide enough to admit of two frigates passing.—(For the expense of towing, see AMSTERDAM.)

The line which the canal follows may be easily traced on a map of Holland. From the Y at Amsterdam it proceeds north to Purmerend; thence west to Alkmaar Lake; again north by Alkmaar to a point within 2 miles of the coast, near Petten, whence it runs nearly parallel to the coast till it joins the sea a little to the east of the Helder, at the fine harbour of Nieuwdirp, formed within the last 30 years. At the latter place there is a powerful steam-engine for supplying the canal with water during neap tides, and other purposes. The time spent in towing vessels from Nieuwdirp to Amsterdam is 18 hours. The Helder is the only spot on the shores of Holland that has deep water; and it owes this advantage to its being opposite to the Texel, which, by contracting the communication between the German Ocean and the Zuyder Zee to a breadth of about a mile, produces a current which scours and deepens the channel. Immediately opposite the Helder there are 100 feet water at high tides, and at the shallowest part of the bar to the westward there are 27 feet. In the same way, the artificial mound which runs into the Y opposite Amsterdam, by contracting the water-way to about 1,000 feet, keeps a depth of 40 feet in the port (at high water), while above and below there is only 10 or 12.

The canal was begun in 1819, and finished in 1825. The cost was estimated at 10,000,000 or 12,000,000 florins, or about 1,000,000*l.* sterling. If we compute the magnitude of this canal by the cubic contents of its bed, it is the greatest, we believe, in the world, unless some of the Chinese canals be exceptions. The volume of water which it contains, or the *prime de remplissage*, is twice as great as that of the New York Canal, or the Canal of Languedoc, and two and a half times as great as that of the artificial part of the Caledonian Canal. In consequence, however, of the facility with which the Dutch canal was dug, and of the evenness of the ground through which it passes, the difficulties with which the engineer had to contend in making it were trifling compared to those which had to be overcome in constructing the canals now mentioned. We have not learned what returns this canal yields; most probably it is not, at least in a direct point of view, a profitable concern. Even in Holland, notwithstanding the lowness of interest, it would require tolls to the amount of 40,000*l.* a year to cover interest and expenses; and so large a sum can hardly, we should think, be raised by the very moderate tolls laid on the ships passing through it.—(See AMSTERDAM.) This, however, is not the only consideration to be attended to in estimating the value of a work of this sort. Its influence in promoting the trade of Amsterdam, and, indeed, of Holland, may far more than compensate for its cost. It is evident, too, that the imposition of oppressive tolls would have effectually counteracted this advantage; that is, they would have defeated the very object for which the canal was constructed.—(We have derived these details, partly from an able article in the *Scotsman*, and partly from *private information*.)

(6.) *Danish Canals*.—The Holstein Canal, in Denmark, is of very considerable importance. It joins the river Eyder with Kiel Bay on the north-east coast of Holstein, forming a navigable communication between the North Sea, a little to the north of Heligoland, and the Baltic; enabling vessels to pass from the one to the other by a short cut of about 100 miles, instead of the lengthened and difficult voyage round Jutland, and through the Cattegat and the Sound. The Eyder is navigable for vessels not drawing more than 9 feet water, from Tonningen, near its mouth, to Rendsburg, where it is joined by the canal, which communicates with the Baltic at Holtenau, about 3 miles north of Kiel. The canal is about 26 English miles in length, including about 6 miles of what is principally river navigation. The excavated portion is 95 feet wide at top, 51 feet 6 inches at bottom, and 9 feet 6 inches deep (Eng. meas.). Its highest elevation above the level of the sea is 24 feet 4 inches; to which height vessels are raised and let down by 6 locks or sluices. It is navigable by vessels of 120 tons burden, or more provided they are constructed in that view. The total cost of the canal was about 500,000*l.* It was opened in 1785, and has so far realised the views of its projectors, as to enable coasting vessels from the Danish islands in the Baltic and the east coast of Holstein, Jutland, &c., to proceed to Hamburg, Holland, England, &c. in less time and with much less risk, than, in the ordinary course of navigation, they could have cleared the point of the Skaw; and conversely with ships from the west. The smaller class of foreign vessels, particularly those under the Dutch and Hanseatic flags, navigating the Baltic and North Seas, have largely availed themselves of the facilities afforded by this canal. During the 5 years ending with 1831, no fewer than 2,786 vessels passed each year, at an average, through the canal. This is a sufficient evidence of its utility. It would, however, be much more frequented, were it not for the difficult navigation of the Eyder from the sea to Rendsburg. The dues are moderate.—(*Coxe's Travels in the North of Europe*, 9th ed. vol. v. p. 239, where there is a plan of the canal; *Calteau, Tableau des Etats Danois*, tom. ii. pp. 300—304.; and *private information*.)

(7.) *Swedish Canals*.—The formation of an internal navigation connecting the Cattegat and the Baltic has long engaged the attention, and occupied the efforts, of the people and government of Sweden. Various motives conspired to make them embark in this arduous undertaking. The Sound and other channels to the Baltic being commanded by the Danes, they were able, when at war with the Swedes, greatly to annoy the latter, by cutting off all communication by sea between the eastern and western provinces of the kingdom. And hence, in the view, partly of obviating this annoyance and partly of facilitating the conveyance of iron, timber, and other bulky products, from the interior to the coast, it was determined to attempt forming an internal navigation, by means of the river Gotha, and the lakes Wenner, Wetter, &c. from Gottenburgh to Soderköping on the Baltic. The first and most difficult part of this enterprise was the perfecting of the communication from Gottenburgh to the lake Wenner. The Gotha, which flows from the latter to the former, is navigable, though by far the greater part of its course, for vessels of considerable burden; but, besides others less difficult to overcome, the navigation at the point called Tröllhætta is interrupted by a series of cataracts about 112 feet in height. Owing to the rapidity of the river, and the stubborn red granite rocks over which it flows, and by perpendicular banks of which it is bounded, the attempt to cut a lateral canal, and still more to render it directly navigable, presented the most formidable obstacles. But, undismayed by these, on which it is, indeed, most probable he had not sufficiently reflected, Polhem, a native engineer, undertook, about the middle of last century, the Herculean task of constructing locks in the channel of the

river, and rendering it navigable! Whether, however, it were owing to the all but insuperable obstacles opposed to such a plan, to the defective execution, or deficient strength of the works, they were wholly swept away, after being considerably advanced, and after vast sums had been expended upon them. From this period, down to 1793, the undertaking was abandoned; but in that year, the plan was proposed, which should have been adopted at first, of cutting a lateral canal through the solid rock, about $1\frac{1}{2}$ mile from the river. This new enterprise was begun under the auspices of a company incorporated for the purpose in 1794, and was successfully completed in 1800. The canal is about 3 miles in length, and has about $6\frac{1}{2}$ feet water.* It has 8 sluices, and admits vessels of about 100 tons. In one part it is cut through the solid rock to the depth of 72 feet. The expense was a good deal less than might have been expected, being only about 80,000*l*. The lake Wenor, the navigation of which was thus opened with Gottenburgh, is very large, deep, and encircled by some of the richest of the Swedish provinces, which now possess the inestimable advantage of a convenient and ready outlet for their products.

As soon as the Tröllhätta canal had been completed, there could be no room for doubt as to the practicability of extending the navigation to Soderköping. In furtherance of this object, the lake Wenor has been joined to the lake Wetter by the Gotha Canal, which admits vessels of the same size as that of Tröllhätta; and the prolongation of the navigation to the Baltic from the Wetter, partly by 2 canals of equal magnitude with the above, and partly by lakes, is now, we believe, about completed. The entire undertaking is called the Gotha Navigation, and deservedly ranks among the very first of the kind in Europe.

Besides the above, the canal of Arboga unites the lake Hielmar to the lake Maelar; and since 1819, a canal has been constructed from the latter to the Baltic at Södertelge. The canal of Strömsholm, so called from its passing near the castle of that name, has effected a navigable communication between the province of Dalecarlia and the lake Maelar, &c.—(For further details see, besides the authorities already referred to, *Cocce's Travels in the North of Europe*, 5th ed. vol. iv. pp. 253—266., and vol. v. pp. 58—66.; *Thomson's Travels in Sweden*, p. 35, &c.)

(8.) *French Canals*.—The first canal executed in France was that of Briare, $34\frac{1}{2}$ English miles in length, intended to form a communication between the Seine and Loire. It was commenced in 1605, in the reign of Henry IV., and was completed in 1642, under his successor, Louis XIII. The canal of Orleans, which joins the above, was commenced in 1675. But the most stupendous undertaking of this sort that has been executed in France, or indeed on the Continent, is the canal of Languedoc. It was projected under Francis I.; but was begun and completed in the reign of Louis XIV. It reaches from Narbonne to Toulouse; and was intended to form a safe and speedy means of communication between the Atlantic Ocean and the Mediterranean. It is 64 French leagues long, and 6 feet deep; and has, in all, 114 locks and sluices. In its highest part it is 600 feet above the level of the sea. In some places it is conveyed by bridges of great length and strength, over large rivers. It cost upwards of 1,800,000*l*.; and reflects infinite credit on the engineer, Riquet, by whom it was planned and executed.

Besides this great work, France possesses several magnificent canals, such as that of The Centre, connecting the Loire with the Saone; of St. Quentin, joining the Scheldt and the Somme; of Besançon, joining the Saone, and consequently the Rhone, to the Rhine; of Burgundy, joining the Rhone to the Seine, &c. Some of these are of very considerable magnitude. The canal of the Centre is about 72 English miles in length. It was completed in 1791, at an expense of about 11,000,000 francs. Its summit level is about 240 feet above the level of the Loire at Digoin; the breadth at the water's edge is about 48 feet, and at bottom 30 feet; depth of water $6\frac{1}{2}$ feet; number of locks 81. The canal of St. Quentin, 28 English miles in length, was completed in 1810. The canal joining the Rhone to the Rhine is the most extensive of any. It stretches from the Saone, a little above St. Jean de Losne, by Dole, Besançon, and Mulhouse, to Strasburg, where it joins the Rhine,—a distance of about 200 English miles. From Dole to Vogaucourt, near Montbéliard, the canal is principally excavated in the bed of the Doubs. It is not quite finished. The canal of Burgundy will, when completed, be about 242 kilom., or 150 English miles in length; but at present it is only navigable to the distance of about 95 kilom. In addition to these, a great many other canals have been finished, while several are in progress, and others projected. There is an excellent account of the French canals completed, in progress, and projected, in the work of M. Dutens, entitled *Histoire de la Navigation Intérieure de la France*, 2 vols. 4to, and to it we beg to refer the reader for further details. He will find, at the end of the second volume, a very beautiful map of the rivers and canals of France.

It is probable, however, that the railroad projects now set on foot in France may tend, for a while at least, to check the progress of canalisation. We may observe, too, that the state of the law in France is very unfavourable to the undertaking and success of all great public works; and we are inclined to attribute the comparative fewness of canals in France, and

* This is the statement of Catteau, *Tableau de la Mer Baltique*, tome ii. p. 77.; Oddy, in his *European Commerce*, p. 300., and Balbi, *Abriégé de la Géographie*, p. 385., say that the depth of water is 10 feet.

the recent period at which most of them have been constructed, to its influence. In that country, canals, docks, and such like works, are mostly carried on at the expense and for behoof of government, under the control of its agents. No scope has been given to the enterprise of individuals or associations. Before either a road or a canal can be constructed, plans and estimates must be made out and laid before the minister of the interior, by whom they are referred to the prefect of the department, and then to the *Bureau des Ponts et des Chaussées*; and supposing the project to be approved by these, and the other functionaries consulted with respect to it, the work must after all be carried on under the superintendence of some public officer. In consequence of this preposterous system, very few works of this description have been undertaken as private speculations. And while not a few of those begun by government remain unfinished and comparatively useless, those that are completed have, as was to be expected, rarely proved profitable. There are some good remarks on this subject in the useful work of M. Dupin, on the *Forces Commerciales* of Great Britain.

(9.) *Prussian Canals*.—The Prussian states are traversed by the great navigable rivers the Elbe, the Oder, and the Vistula; the first having its embouchure in the North Sea, and the others in the Baltic. The formation of an internal navigation, that should join those great *water-ways*, excited the attention of government at a distant period; and this object has been successfully accomplished, partly by the aid of the secondary rivers falling into the above, and partly by canals. In 1662, the canal of Muhlrose was undertaken, uniting the Oder and the Spree; the latter being a navigable river falling into the Havel, also a navigable river joining the Elbe near Havelburg. But the navigation from the Oder to the Elbe by this channel was difficult and liable to frequent interruption; and to obviate these defects Frederick the Great constructed, towards the middle of last century, the Finnow Canal, stretching from the Oder at Oderberg to the Havel, near Leibenwalle; the communication is thence continued by the latter and a chain of lakes to Plauen; from which point a canal has been opened, joining the Elbe near Magdeburg. The Elbe being in this way connected with the Oder by a comparatively easy navigation, the latter has been united to the Vistula, partly by the river Netze, and partly by a canal joining that river to the Brabe, which falls into the Vistula near Bromberg. A vast inland navigation has thus been completed; barks passing freely through the whole extent of country from Hamburg to Dantzic; affording the means of shipping the products of the interior, and of importing those of foreign countries, either by the North Sea or the Baltic, as may be found most advantageous.—(*Catteau, Tableau de la Mer Baltique*, tome ii. p. 11—18.)

(10.) *Russian Canals*.—The inland navigation of Russia is of vast extent, and very considerable importance. The reader will find some details with respect to it under the article *PETERSBURG*.

(11.) *Austrian Canals*.—The Austrian empire is traversed in its whole extent by the Danube; but the advantages that might result to the foreign trade of the empire from so great a command of river navigation, have been materially abridged by the jealousy of the Turks, who command the embouchure of the river, and by the difficulties that are in some places incident to its navigation. Two pretty extensive canals have been constructed in Hungary. That called the Bega Canal is 73 English miles in length: it stretches from Fascet through the Banat by Temeswar to Beokerek, whence vessels pass by the Bega into the Theiss, a little above its junction with the Danube. The other Hungarian canal is called after the Emperor Francis. It stretches from the Danube by Zamber to the Theiss, which it joins near Földvar, being 62 English miles in length: its elevation, where highest, does not exceed 27 feet. Besides the above, the canal of Vienna establishes a communication between that city and Neustadt. It is said to be the intention to continue this canal to Trieste; but, however desirable, we doubt much whether this be practicable. A railroad is at present being made from Munthausen on the Danube to Buiweis on the Moldau, a navigable river that falls into the Elbe. This promises to be a highly useful communication.—(*Bright's Travels in Hungary*, p. 246.; *Balbi, Abrégé de la Géographie*, p. 216.)

(12.) *Spanish Canals*.—No where are canals more necessary, both for the purposes of navigation and irrigation, than in Spain; but the nature of the soil and the poverty and ignorance of the government as well as of the people, oppose formidable obstacles to their construction. During the reign of Charles II., a company of Dutch contractors offered to render the Mançanares navigable from Madrid to where it falls into the Tagus, and the latter from that point to Lisbon, provided they were allowed to levy a duty for a certain number of years on the goods conveyed by this channel. The Council of Castile took this proposal into their serious consideration, and after maturely weighing it, pronounced the singular decision—"That if it had pleased God that these two rivers should have been navigable, he would not have wanted human assistance to have made them such; but that, as he has not done it, it is plain that he did not think it proper that it should be done. To attempt it, therefore, would be to violate the decrees of his providence, and to mend the imperfections which he designedly left in his works!"—(*Clarke's Letters on the Spanish Nation*, p. 284.) But such undertakings are no longer looked upon as sinful; and many have been projected since

the accession of the Bourbon dynasty, though few have been perfected. The canal of the Ebro, begun under the Emperor Charles V., is the most important of the Spanish canals; but it is only partially completed, and during dry seasons it suffers from want of water. It runs parallel to the right bank of the Ebro, from Tudela in Navarre to below Saragossa; the intention being to carry it to Sastago, where it is to unite with the Ebro. The canal of Castile is intended to lay open the country between the Deuro and Reynosa, and to facilitate the conveyance of grain from the interior to Santander and Bilbao. It passes by Valladolid, Palencia, and Aguilar del Campos; a small part has been executed, and is now in operation. A company has recently undertaken, what the Dutch contractors formerly offered, to render the Tagus navigable from Aranjuez to Lisbon; the free navigation of the river having been stipulated at the Congress of Vienna. A project for deepening the Guadalquivir, and some others, are also on foot.—(*Foreign Quarterly Review*, No. 9. p. 85.; *Bulbi, Abrégé de la Géographie*, p. 349.)

(13.) *British Canals*.—Owing partly to the late rise of extensive manufactures and commerce in Great Britain, but more, perhaps, to the insular situation of the country, no part of which is very distant from the sea or from a navigable river, no attempt was made in England, to construct canals till a comparatively recent period. The efforts of those who first began to improve the means of internal navigation, were limited to attempts to deepen the beds of rivers, and to render them better fitted for the conveyance of vessels. So early as 1635, a Mr. Sandys of Flatbury, Worcestershire, formed a project for rendering the Avon navigable from the Severn, near Tewkesbury, through the counties of Warwick, Worcester, and Gloucester, "that the towns and country might be better supplied with wood, iron, pit-coal, and other commodities." This scheme was approved by the principal nobility and landowners in the adjoining counties; but the civil war having broken out soon after, the project was abandoned, and does not seem to have been revived. After the restoration, and during the earlier part of last century, various acts were at different times obtained for cheapening and improving river navigation. For the most part, however, these attempts were not very successful. The current of the rivers gradually changed the form of their channels; the dykes and other artificial constructions were apt to be destroyed by inundations; alluvial sand banks were formed below the weirs; in summer, the channels were frequently too dry to admit of being navigated, while at other periods the current was so strong as to render it quite impossible to ascend the river, which at all times, indeed, was a laborious and expensive undertaking. These difficulties in the way of river navigation seem to have suggested the expediency of abandoning the channels of most rivers, and of digging parallel to them artificial channels, in which the water might be kept at the proper level by means of locks. The act passed by the legislature in 1755, for improving the navigation of Sankey Brook on the Mersey, gave rise to a lateral canal of this description, about 1½ miles in length, which deserves to be mentioned as the earliest effort of the sort in England.

But before this canal had been completed, the celebrated Duke of Bridgewater*, and his equally celebrated engineer, the self-instructed James Brindley, had conceived a plan of canalisation independent altogether of natural channels, and intended to afford the greatest facilities to commerce, by carrying canals across rivers and through mountains, wherever it was practicable to construct them.†

The Duke was proprietor of a large estate at Worsley, 7 miles from Manchester, in which were some very rich coal-mines, that had hitherto been in a great measure useless, owing to the cost of carrying coal to market. Being desirous of turning his mines to some account, it occurred to his Grace that his purpose would be best accomplished by cutting a canal from Worsley to Manchester. Mr. Brindley, having been consulted, declared that the scheme was practicable; and an act having been obtained, the work was immediately commenced. "The principle," says Mr. Phillips, "laid down at the commencement of this business, reflects as much honour on the noble undertaker as it does upon his engineer. It was resolved that the canal should be perfect in its kind; and that, in order to preserve the level of the water, it should be free from the usual construction of locks. But in accomplishing this end many difficulties were deemed insurmountable. It was necessary that the canal should be carried over rivers, and many large and deep valleys, where it was evident that such stupendous mounds of earth must be raised, as would scarcely, it was thought by numbers, be completed by the labour of ages; and, above all, it was not known from what source so large a supply of water could be drawn, even on this improved plan, as would supply the navigation. But Mr. Brindley, with a strength of mind peculiar to himself, and being possessed of the confidence of his great patron, contrived such admirable machines, and took

* This truly noble person expended a princely fortune in the prosecution of his great designs; and to increase his resources, is said to have restricted his own personal expenses to 400*l.* a year! But his projects were productive of great wealth to himself and his successors; and have promoted, in no ordinary degree, the wealth and prosperity of his country. He died in 1763.

† There is a good account of Brindley in *Aikin's Biographical Dictionary*. His intense application, and the anxiety of mind inseparable from the great enterprises in which he was engaged, terminated his valuable life at the early age of 36.

such methods to facilitate the progress of the work, that the world soon began to wonder how it could be thought so difficult.

"When the canal was completed as far as Barton, where the Irwell is navigable for large vessels, Mr. Brindley proposed to carry it over that river by an aqueduct 39 feet above the surface of the water in the river. This, however, being considered as a wild and extravagant project, he desired, in order to justify his conduct towards his noble employer, that the opinion of another engineer might be taken, believing that he could easily convince an intelligent person of the practicability of the design. A gentleman of eminence was accordingly called, who, being conducted to the place where it was intended that the aqueduct should be made, ridiculed the attempt; and, when the height and dimensions were communicated to him, he exclaimed—'I have often heard of castles in the air, but never was shown before where any of them were to be erected.' This unfavourable verdict did not deter the Duke from following the opinion of his own engineer. The aqueduct was immediately begun; and it was carried on with such rapidity and success as astonished those who, but a little before, thought it impossible."

Before the canal from Worsley to Manchester had been completed, it occurred to the Duke and his engineer that it might be practicable to extend it by a branch, which, running through Chester parallel to the river Mersey, should at length terminate in that river, below the limits of its artificial navigation; and thus afford a new, safer, and cheaper means of communication between Manchester and its vicinity and Liverpool. The execution of this plan was authorised by an act passed in 1761. This canal, which is above 29 miles in length, was finished in about 5 years. It was constructed in the best manner, and has proved equally advantageous to its noble proprietor and the public.

"When the Duke of Bridgewater," says Dr. Aikin, "undertook this great design, the price of carriage on the river navigation was 12s. the ton from Manchester to Liverpool, while that of land carriage was 40s. the ton. The Duke's charge on this canal was limited, by statute, to *six* shillings; and together with this vast superiority in cheapness, it had all the speed and regularity of land carriage. The articles conveyed by it were, likewise, much more numerous than those by the river navigation; besides manufactured goods and their raw materials, coals from the Duke's own pits were deposited in yards at various parts of the canal, for the supply of Cheshire; lime, manure, and building materials were carried from place to place; and the markets of Manchester obtained a supply of provisions from districts too remote for the ordinary land conveyances. A branch of useful and profitable carriage, hitherto scarcely known in England, was also undertaken, which was that of passengers. Boats, on the model of the Dutch *treckschuyts*, but more agreeable and capacious, were set up, which, at very reasonable rates, and with great convenience, carried numbers of persons daily to and from Manchester along the line of the canal."—(*Aikin's Description of the Country round Manchester*, p. 116.)

The success that attended the Duke of Bridgewater's canals stimulated public-spirited individuals in other districts to undertake similar works. Mr. Brindley had early formed the magnificent scheme of joining the great ports of London, Liverpool, Bristol, and Hull, by a system of internal navigation: and, though he died in 1772, at the early age of 56, he had the satisfaction to see his grand project in a fair way of being realised. The Trent and Mersey, or, as it has been more commonly termed, the Grand Trunk Canal, 96 miles in length, was begun in 1766 and completed in 1777. It stretches from near Runcorn on the Mersey, where it communicates with the Duke of Bridgewater's Canal, to Newcastle-under-Lyme; thence southwards to near Titchfield; and then north-westerly, till it joins the Trent at Wilden Ferry, at the north-western extremity of Leicestershire. A water communication between Hull and Liverpool was thus completed; and by means of the Staffordshire and Worcestershire Canal, which joins the Grand Trunk near Haywood in the former, and the Severn near Stourport in the latter, the same means of communication was extended to Bristol. During the time that the Grand Trunk Canal was being made, a canal was undertaken from Liverpool to Leeds, 130 miles in length; another from Birmingham to the Staffordshire and Worcestershire Canal, joining it near Wolverhampton; and one from Birmingham to Fazeley and thence to Coventry. By canals subsequently undertaken, a communication was formed between the Grand Trunk Canal and Oxford, and consequently with London, completing Brindley's magnificent scheme. In 1792, the Grand Junction Canal was begun, which runs in a pretty straight line from Brentford, on the Thames, a little above the metropolis, to Braunston in Northamptonshire, where it unites with the Oxford and other central canals. It is about 90 miles in length. There is also a direct water communication, by means of the river Lea navigation, the Cambridge Junction Canal, &c., between London and the Wash. In addition to these, an immense number of other canals, some of them of very great magnitude and importance, have been constructed in different parts of the country; so that a command of internal navigation has been obtained, unparalleled in any European country, with the exception of Holland.

In Scotland, the great canal to join the Forth and Clyde was begun in 1768, but it was

suspended in 1777, and was not resumed till after the close of the American war. It was finally completed in 1790. Its total length, including the collateral cuts to Glasgow and the Monkland Canal, is 18½ miles. Where highest it is 150 feet above the level of the sea. It is on a larger scale than any of the English canals. Its medium width at the surface is 56, and at the bottom 27 feet. Originally it was about 8 feet 6 inches deep; but recently its banks have been raised so that the depth of water is now about 10 feet. It has, in all, 39 locks. In completing this canal, many serious difficulties had to be encountered. These, however, were all successfully overcome; and though unprofitable for a while, it has, for many years past, yielded a handsome return to its proprietors. Swift boats, on the plan of those subsequently described, were established on this canal in 1832.—(See *Cleland's Statistics of Glasgow*, p. 170. &c.)

The Union Canal joins the Forth and Clyde Canal near Falkirk, and stretches thence to Edinburgh, being 31½ miles in length. It is 40 feet wide at the top, 20 at bottom, and 6 deep. It was completed in 1822; but has been, in all respects, a most unprofitable undertaking. Hitherto the proprietors have not received any dividend; and their prospects, we understand, are little, if any thing, improved.

A canal intended to form a communication between Glasgow, Paisley, and Ardrossan, was commenced in 1807; but only that portion connecting Glasgow with Paisley and the village of Johnstown, has hitherto been finished. This part is about 12 miles long; the canal being 30 feet broad at top, 18 at bottom, and 4½ deep. It was here that the important experiments were originally made on quick travelling by canals, which demonstrated that it was quite practicable to impel a properly constructed boat, carrying passengers and goods, along a canal at the rate of 9 or 10 miles an hour, without injury to the banks!—(See *post*.)

The Crihan Canal, across the peninsula of Kintyre, is 9 miles long, and 12 feet deep, admitting vessels of 160 tons burden.

The Caledonian Canal is the greatest undertaking of the sort attempted in the empire. It stretches S. W. and N. E. across the island from a point near Inverness to another near Fort William. It is chiefly formed by Loch Ness, Loch Oich, and Loch Lochy. The total length of the canal, including the lakes, is 58½ miles; but the excavated part is only 21½ miles. At the summit it is 96½ feet above the level of the Western Ocean. It has been constructed upon a very grand scale, being 20 feet deep, 50 feet wide at bottom, and 122 at top; the locks are 20 feet deep, 172 long, and 40 broad. Frigates of 32 guns and merchant ships of 1,000 tons burden may pass through it. This canal was opened in 1822. It was executed entirely at the expense of government, from the designs and under the superintendence of Thomas Telford, Esq., on whose skill and talents as an engineer it reflects the highest credit. The entire cost has been 986,924*l*. It would, however, appear to have been projected without due consideration, and promises to be a very unprofitable speculation. During the year 1829, the total revenue of the canal, arising from tonnage dues and all other sources, amounted to only 2,575*l*. 6*s*. 4*d*., while the ordinary expenditure, during the same year, amounted to 4,573*l*. 0*s*. 1½*d*.! It is, therefore, very doubtful whether the revenue derived from it will ever be able to defray the expenses of keeping it in repair, without allowing anything for interest or capital.

The following is a detailed account of the various items of expenditure on account of the Caledonian Canal, from 20th of October, 1803, to 1st of May, 1830:—

	£	s.	d.
Management and travelling expenses	-	-	36,601 18 10½
Timber, and carriage thereof	-	-	72,317 1 10½
Machinery, cast-iron works, tools, and materials	-	-	193,866 4 7½
Quarries and masonry	-	-	200,014 4 10½
Shipping	-	-	11,719 1 6
Houses and other buildings	-	-	5,539 10 6
Labour and workmanship (day-work)	-	-	51,209 1 11½
Labour and workmanship (measure work)	-	-	418,551 16 8½
Purchase of land, and payments on account of damages	-	-	47,956 18 0½
Purchase and hire of horses and provender	-	-	2,638 12 2½
Incidental expenses	-	-	2,620 18 10
Roadmaking	-	-	4,579 8 6½
Total cost	-	-	£986,924 1 6½

Some other canals have been projected and completed in different parts of Scotland. Of these the Monkland Canal, for the supply of Glasgow with coal, has been the most successful.

The following extract from the share list of Mr. Edmunds, Broker, (9. Change Alley, Cornhill, 12th of October, 1833,) gives an account of the number of shares in the principal British canals, the cost or sum actually expended upon each share, the dividend payable upon it, its selling price at the abovementioned date, and the periods when the dividends are payable:—

Number of Shares.	Names of Canals.	Amount of Shares.	Average Cost per Share.	Price per Share.	Div. per Annum.	Dividend Payable.
		£ s.	£ s. d.	£ s.	£ s. d.	
1,492	Ashby-de-la-Zouch -	100 0	113 0 0	74 0	4 0 0	Ap. Oct.

(14.) *Irish Canals.*—Various canals have been undertaken in Ireland, of which the Grand Canal and the Royal Canal are the principal. The Grand Canal was begun in 1756, by a body of subscribers; but they could not have completed the work without very large advances from government. The canal commences at Dublin, and stretches in a westerly direction, inclining a little to the south, to the Shannon, with which it unites near Banagher, a distance of 87 statute miles. But, exclusive of the main trunk, there is a branch to Athy, where it joins the Barrow, a distance of about 26 miles; and there are branches to Portarlinton, Mount Mellick, and some other places. There is also a westerly branch, recently constructed, from the Shannon to Ballinasloe, about 14 miles in length. The total length of the canal, with its various branches, is about 156 Eng. miles. Its summit elevation is 278 feet above the level of the sea at Dublin. It is 40 feet wide at the surface, from 24 to 20 feet at bottom, and has 6 feet water. It cost, in all, above 2,000,000*l.* In 1829, 191,774 tons of commodities were conveyed along the canal to and from Dublin, and about 67,000 passengers. The tonnage dues on the former amounted to 31,436*l.*, and the fares of the latter to 10,575*l.* In 1831, the produce conveyed by the canal had increased to 237,889 tons, and the tonnage dues to 36,736*l.* We have not learned the number of passengers for this year.

Two capital errors seem to have been committed in the formation of this canal,—it was framed on too large a scale, and was carried too far north. Had it been 4 or 4½ instead of 6 feet deep, its utility would have been but little impaired, while its expense would have been very materially diminished. But the great error was in its direction. Instead of joining the Shannon about 15 miles above Lough Derg, it would have joined it below Limerick. By this means, barges and other vessels passing from Dublin to Limerick, and conversely, would have avoided the difficult and dangerous navigation of the upper Shannon; the canal would have passed through a comparatively fertile country; and it would not have been necessary to carry it across the bog of Allen, in which, says Mr. Wakefield, “the company have buried more money than would have cut a spacious canal from Dublin to Limerick.”—(*Account of Ireland*, vol. i. p. 642.)

The Royal Canal was undertaken in 1789. It stretches westward from Dublin to the Shannon, which it joins at Tormanbury. Its entire length is about 83 miles; its highest elevation is 322 feet above the level of the sea. At bottom it is 24 feet wide, having 6 feet depth of water. It has cost, exclusive of interest on stock, loans, &c. advanced by government, 1,421,954*l.* The tolls produced, in 1831, 12,729*l.* 6*s.* 1*d.*—a sum hardly adequate to defray the ordinary wear and tear of the canal, and the wages of the persons employed upon it, without leaving any thing for interest of capital!

This canal seems to have been planned in the most injudicious manner. It has the same defect as the Grand Canal, of being extravagantly large; and throughout its whole course it is nearly parallel to, and not very distant from, the latter. There are consequently two immense canals, where there ought, perhaps, to be none. At all events, it is abundantly certain that one canal of comparatively moderate dimensions would have been quite enough for all the business of the district, though it were much greater than it is at this moment, or than it is ever likely to become.

Besides the above, there are some other canals, as well as various river excavations, in Ireland; but hardly one of them yields a reasonable return for the capital expended upon it; they have almost all been liberally assisted by grants of public money; and their history, and that of the two great canals now adverted to, strikingly corroborates the caustic remark of Arthur Young, that “a history of public works in Ireland would be a history of jobs.”—(*Tour in Ireland*, part ii. p. 66. 4to ed.) Those who wish to make themselves fully acquainted with the history and state of the canals of Ireland, may consult the valuable Report by Messrs. Henry, Mullins, and McMahon, in the Appendix to the Report of the Select Committee of 1830 on the State of Ireland. The previous statements have been derived principally from it, and from the evidence of Nicholas Fleming, Esq. before the same committee.

(15.) *American Canals.*—The United States are pre-eminently distinguished by the spirit with which they have undertaken, and the perseverance they have displayed in executing the most magnificent plans for improving and extending internal navigation. Besides many others of great, though inferior, magnitude, a canal has been formed connecting the Hudson with Lake Erie. This immense work is 363 miles long, 40 feet wide at the surface, 28 feet wide at the bottom, and 4 feet deep. The locks, 81 in number, exclusive of guard

locks, are 90 feet long and 14 feet wide, the average lift of each being $8\frac{1}{2}$ feet; they are constructed of stone, and finished, like the rest of the canal, in a substantial and handsome manner. The rise and fall along the entire line is 661 feet. This great work was opened on the 8th of October 1823, but was not finally completed till 1825. It cost nearly 1,800,000*l.* sterling, and was executed at the expense of the state of New York. It has completely answered the views of the projectors; and will remain an example to the other states; fully justifying the encomiums that have been bestowed upon it.

Besides Erie Canal, the state of New York has completed Champlain Canal, stretching from the Hudson, near Albany, to the lake of that name, and two smaller ones. The length, cost, and revenue of these canals are as follow:—

Canals.	Length. <i>Miles.</i>	Cost. <i>Dollars.</i>	Tolls, 1820.	Tolls, 1830.	Tolls, 1841.
			<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>

The *Chesapeake and Ohio Canal* is the largest by far of those now in progress. This truly gigantic work was commenced in 1828. It begins at the tide water of the Potomac River above Georgetown, in the District of Columbia, and is to terminate at Pittsburgh, in Pennsylvania, a distance of $341\frac{1}{2}$ miles. Its dimensions considerably exceed those of the Erie Canal; its breadth at the surface of the water being from 60 to 80 feet, do. at bottom 80 feet, with a depth of water varying from 6 to 7 feet. The locks are of stone, 100 feet by 15;—amount of lockage required in the whole line, 3,215 feet. At the summit level on the Alleghany mountains, there is a tunnel 4 miles and 80 yards in length. The estimated cost of this vast work was 22,375,000 dollars; but it is believed that it will be finished for less.—(*American Almanac for 1833.*)

A great number of other canals have been completed in different parts of the Union, and many new ones are now in progress.

(16.) *Canada Canals.*—The British government has expended a very large sum upon the Rideau River and Canal, stretching from Kingston, on Lake Ontario, to the Ottawa, or Grand River; but this work was undertaken as much in the view of improving the military defences of Canada, as of promoting its commerce. The expense has been enormous, while the benefits are contingent and doubtful.

(17.) *Utility of Canals.*—The utility of canals, when judiciously contrived, and opening an easy communication between places capable of maintaining an extensive intercourse with each other, has never been better set forth than in a work published in 1765, entitled “A View of the advantages of Inland Navigation,” &c. But the following extract from *Macpherson’s Annals of Commerce* (anno 1760) contains a brief, and at the same time eloquent, summary of the principal advantages resulting from their construction.—“They give fresh life to established manufactures, and they encourage the establishment of new ones, by the ease of transporting the materials of manufacture and provisions; and thence we see new villages start up upon the borders of canals in places formerly condemned to sterility and solitude. They invigorate, and in many places create internal trade, which, for its extent and value, is an object of still more importance than foreign commerce, and is exempted from the many hardships and dangers of a maritime life and changes of climate. And they greatly promote foreign trade; and consequently enrich the merchants of the ports where they, or the navigable rivers they are connected with, terminate, by facilitating the exportation of produce from, and the introduction of foreign merchandise into the interior parts of the country, which are thus placed nearly on a level with the maritime parts; or, in other words, the interior parts become coasts, and enjoy the accommodations of shipping. The price of provisions is nearly equalised through the whole country; the blessings of Providence are more uniformly distributed; and the monopolist is disappointed in his schemes of iniquity and oppression, by the ease wherewith provisions are transported from a considerable distance. The advantages to agriculture, which provides a great part of the materials, and almost the whole of the subsistence, required in carrying on manufactures and commerce, are pre-eminently great. Manure, marl, lime, and all other bulky articles, which could not possibly bear the great expense of cartage, and also corn and other produce, can be carried at a very light expense on canals; whereby poor lands are enriched, and barren lands are brought into cultivation, to the great emolument of the farmer and landholder, and the general advantage of the community, in an augmented supply of the necessaries of life and materials of manufactures; coals (the importance of which to a manufacturing country, few people, not actually concerned in manufactures, are capable of duly

appreciating), stone, lime, iron ore, and minerals in general, as well as many other articles of great bulk in proportion to their value, which had hitherto lain useless to their proprietors by reason of the expense, and, in many cases, impossibility, of carriage, are called into life, and rendered a fund of wealth, by the vicinity of a canal; which thus gives birth to a trade, whereby, in return, it is maintained. The cheap, certain, and pleasant conveyance of travellers by the treckachuyts in Holland, has been admired by all who have been in that country; and it must be owing to the universal desire in this country of flying over the ground with the greatest possible rapidity, that a mode of travelling so exceedingly easy to the purse and the person is so little used here. Neither ought we entirely to forget, among the advantages of canals, the pleasure afforded to the eye and the mind by a beautiful moving landscape of boats, men, horses, &c. busied in procuring subsistence to themselves, and in diffusing opulence and conveniences through the country. And, in a word, we have now the experience of about 40 years to establish as a certain truth, what was long ago said by Dr. Adam Smith, that '*navigable canals are among the greatest of all improvements.*'"

(18.) *Increased Speed of Travelling by Canals.*—Great, however, as have been the advantages derived from the formation of canals, it is not improbable that their further progress may be in some degree checked by the formation of RAILROADS (which see). We believe, however, that the proprietors of most of the existing canals have very little to fear from this cause. The recent improvements in the art of constructing and propelling canal vessels promise to be of very great national importance, and will enable the canal owners still better to withstand the competition of the railroad companies. The new system was introduced on the Paisley and Glasgow Canal, by Mr. Houston, in June 1831. The results are described in the following statements, to which it is unnecessary to call the reader's attention.

Mr. Thomas Grahame, civil engineer, in his "Letter to Canal Proprietors and Traders" says, "The experiments of great velocity have been tried and proved on the *narrowest, shallowest, and most curved canal in Scotland*, viz. the Ardrossan or Paisley Canal, connecting the city of Glasgow with the town of Paisley and village of Johnstown, a distance of 12 miles." The result has disproved every previous theory as to difficulty and expense of attaining great velocity on canals; and as to the danger or damage to their banks by great velocity in moving vessels along them.

"The ordinary speed for the conveyance of passengers on the Ardrossan Canal has, for nearly 2 years, been from nine to ten miles an hour; and, although there are fourteen journeys along the canal per day, at this rapid speed, its banks have sustained no injury. The boats are 70 feet in length, about 5 feet 6 inches broad, and, but for the extreme narrowness of the canal, might be made broader. They carry easily from 70 to 80 passengers; and when required, can and have carried upwards of 110 passengers. The entire cost of a boat and fittings is about 125*l*. The hulls are formed of light iron plates and ribs, and the covering is of wood and light oiled cloth. They are more airy, light, and comfortable than any coach. They permit the passengers to move about from the outer to the inner cabin, and the fares per mile are one penny in the first, and three farthings in the second cabin. The passengers are all carried under cover, having the privilege also of an uncovered space. These boats are drawn by 2 horses (the prices of which may be from 50*l*. to 60*l*. per pair), in stages of 4 miles in length, which are done in from 22 to 25 minutes, including stoppages to let out and take in passengers, each set of horses doing 3 or 4 stages alternately each day. In fact, the boats are drawn through this narrow and shallow canal, at a velocity which many celebrated engineers had demonstrated, and which the public believed to be impossible.

"The entire amount of the whole expenses of attendants and horses, and of running one of these boats 4 trips of 12 miles each (the length of the canal), or 48 miles daily, including interest on the capital, and 20 per cent. laid aside annually for replacement of the boats, or loss on the capital therein vested, and a considerable sum laid aside for accidents and replacement of the horses, is 700*l*. some odd shillings; or, taking the number of working days to be 312 annually, something under 2*l*. 2*s*. 6*d*. per day, or about 1*l*. 6*d*. per mile. The actual cost of carrying from 80 to 100 persons a distance of 30 miles (the length of the Liverpool railway), at a velocity of nearly 10 miles an hour, on the Paisley Canal, one of the most curved, narrow, and shallow in Britain, is therefore just 1*l*. 7*s*. 6*d*. sterling. Such are the facts, and, incredible as they may appear, they are facts which no one who inquires can possibly doubt."

The following statement by Mr. Macneill shows the gross expense of running old heavy boats on the Paisley Canal at the rate of 4 miles per hour, and new light boats, on the same canal, at the rate of 10 miles per hour, and the comparative expense per mile; also the number of passengers carried before and after the introduction of the new system.

	1830.*	1831.†	1832.‡
Speed, 10 hours - - - miles -	4	10	10
Number of passengers carried - - -	32,831	79,455	148,561
Number of miles run each day - - -	49	varying	152
	£ s. d.	£ s. d.	£ s. d.
Gross expense in the year - - -	700 4 7	1,316 17 5	218 5 11
Cost per mile, year taken at 312 days - -	0 0 11	-	0 0 10½

The power of conveyance thus established on the Paisley canal may be judged of from the fact, that on the 31st of December, 1832, and 31st of January, 1833, there were conveyed in these boats nearly 2,500 passengers. The increase still continues. The number carried in April, 1833, being 20,000,* or at the rate of 240,000 a year.—(Macneill on the Resistance of Water, &c. p. 5.)

(19.) *Profits of Canals.*—It is a well-known fact, that canals, at an average, and allowing for the length of time that must elapse from the first outlay of capital before they yield

* These charges are the bare outlays.

† These charges include loss on purchase and sale of additional horses, and 10 per cent. on cost of horses and boats, deposited in a contingent fund.

any return, are not very productive. When, indeed, they connect places that have an extensive intercourse, and when no very extraordinary difficulties have to be surmounted in their construction, they most commonly yield very large profits; but, generally speaking, this does not appear to be the case; and, on the whole, they seem to have been more beneficial to the public than to their projectors.

It is customary to insert clauses in the acts authorising canals to be cut, limiting the charge which the proprietors shall be entitled to impose upon the goods conveyed by them. But we think that the dividend ought also to be limited; and that it should be stipulated that whatever a moderate toll yielded over and above defraying this dividend, and providing for the repair of the canal, should be accumulated as a fund in order to buy up the stock of the canal, so that the toll may ultimately be reduced to such a sum as may suffice merely to meet the necessary repairs. We are not aware that any good objection could be made to a plan of this sort; and had it been adopted in this country, there are several instances in which it would have been very advantageous for the public.

When the canal of Languedoc was completed, the most likely method, it was found, of keeping it in constant repair, was to make a present of the tolls to Riquet the engineer. "These tolls constitute," says Dr. Smith, "a very large estate to the different branches of the family of that gentleman; who have, therefore, a great interest to keep the work in constant repair. But had these tolls been put under the management of commissioners, who had no such interest, they might, perhaps, have been dissipated in ornamental and unnecessary expenses, while the most essential parts of the work were allowed to go to ruin." Dr. Smith ought, however, to have mentioned that Riquet advanced a fourth part of the entire sum laid out upon the canal (*Dutens, Navigation Intérieure de la France*, tom. i. p. 119. &c.); and that officers were appointed by the crown to see that the tolls were not rendered oppressive, and the canal kept in good order. At the Revolution, most part of the property of the canal was confiscated; but at the restoration of the Bourbons in 1814, such parts of the confiscated property as had not been sold were restored to the successors of M. Riquet, who have at this moment the principal management of the canal.

* For a map of the canals, railroads, &c. of Great Britain and Ireland, the reader is referred to the magnificent six sheet map, published by J. Walker, Esq. of Wakefield. This map, which is equally correct and beautiful, is a truly national work, and well deserves the public patronage. "An Historical Account of the Navigable Rivers and Canals, &c., of Great Britain," in 4to, attached to it by way of Index, is both an accurate and a useful publication.

[To avoid unnecessary repetitions, it is deemed expedient to treat of the ordinary roads, the railroads, and the canals of the United States, or, in other words, of our "internal improvements," as we choose to style them, under one head, to wit, under that of Roads; to which article the reader is accordingly referred.—*Am. Ed.*]

CANARY SEED. See SEED.

CANDLE (Ger. *Lichter*, *Kerzen*; Du. *Katzen*; Fr. *Chandelle*; It. *Candelle*; Sp. and Port. *Velas*; Rus. *Surjetschi*; Lat. *Candela*;) a taper of tallow, wax, or spermaceti, the wick of which is commonly of several threads of cotton spun and twisted together.

Dr. Ure gives the following table, as containing the result of certain experiments he had made, in order to determine the relative intensity of the light, and the duration of different sorts of tallow candles:—

Number in a Pound.	Duration of a Candle.	Weight in Grains.	Consumption per Hour in Grains.	Proportion of Light.	Economy of Light.	Candles equal one Argand.
10 mould,	5 h. 9 m.	682	132	12½	89	5·7
10 dipped,	4 36	678	150	13	85½	5·25
8 mould,	6 31	856	132	10½	59½	6·6
6 do.	7 2½	1,160	163	11½	46	5·0
4 do.	9 36	1,787	186	20½	36	3·5
Argand oil same.			512	60½	100	

"A Scotch mutchkin," says Dr. Ure, "or ⅓ of a gallon of good seal oil, weighs 6,010 gr., or 13½ oz. avoirdupois, and lasts in a bright Argand lamp 11 hours 44 minutes. The weight of oil it consumes per hour is equal to 4 times the weight of tallow in candles 8 to the pound, and 3½ times the weight of tallow in candles 6 to the pound. But its light being equal to that of 5 of the latter candles, it appears from the above table, that 2 lbs. weight of oil, value 9d., in an Argand, are equivalent in illuminating power to 3 lbs. of tallow candles, which cost about 2s. The larger the flame in the above candles, the greater the economy of light."

Until 1831, when it was repealed, candles were, for a lengthened period, subject to an excise duty; and their consumption was, in consequence, pretty exactly ascertained.

An Account of the Rates of Duty separately charged on Tallow, Wax, and Spermaceti Candles, the Number of Pounds' Weight of each Sort produced, and the Total annual Net Revenue derived from Candles, in Great Britain, in each Year since 1820.—(Parl. Paper, No. 468. Sess. 1830.)

Years.	Pounds' Weight of Candles.						Nett Revenue.	
	Tallow.	Rate of Duty per lb.	Wax.	Rate of Duty per lb.	Spermaceti.	Rate of Duty per lb.		
1820	89,352,461	d. 1	692,703	d. 3½	192,463	d. 3½	£ 373,455	s. d. 14 5
1821	93,816,346	—	667,196	—	185,647	—	395,911	8 7
1822	98,311,801	—	692,241	—	179,308	—	415,609	15 3
1823	102,461,879	—	691,194	—	180,401	—	428,537	15 8
1824	109,810,906	—	759,751	—	179,454	—	466,042	16 1
1825	114,187,560	—	851,370	—	208,377	—	483,014	8 9
1826	110,102,643	—	765,615	—	201,790	—	467,069	12 1
1827	114,939,578	—	713,665	—	226,277	—	487,318	3 4
1828	117,342,157	—	743,293	—	270,263	—	497,770	2 9
1829	115,156,808	—	746,032	—	326,693	—	469,069	1 9

[Both spermaceti and tallow candles are exported to a very considerable amount from the United States to the West Indies, Mexico, and South America. New Bedford, in Massachusetts, is the principal place where the former description of them are made; although Judd's candles, from New York, are those which are in the highest repute.—*Am. Ed.*]

CANDLE, *Sale or Auction by Inch of*, is when a small piece of candle being lighted, the bystanders are allowed to bid for the merchandises that is selling: but the moment the candle is out, the commodity is adjudged to the last bidder.

CANDLESTICKS (Ger. *Leuchter*; Du. *Kandelaars*; Fr. *Chandeliers*; It. *Candelieri*; Sp. *Candeleros*; Rus. *Podveschniki*) are of silver, brass, iron, bronze, tin japanned, or copper plated, made of different patterns and sorts. The best plated candlesticks are manufactured at Sheffield; the common sort of plated ones, as also brass, japanned, &c. are made at Birmingham.

CANELLA ALBA (Fr. *Canelle blanche*; Ger. *Weisser Zimmet*; It. *Canella bianca*; Sp. *Canella blanca*; Lat. *Canella alba*), the inner bark of the *Canelia alba*, a tree growing in the West Indies. It is brought to this country packed in casks and cases, in long pieces, some rolled in quills and others flat; the quilled sort is considerably thicker than cinnamon, and the flat nearly $\frac{1}{2}$ of an inch in thickness. The quilled pieces are yellow on both sides; the flat pieces are yellow on the outside and pale brown within. The odour of both kinds, when fresh broken, is aromatic, something like a mixture of cloves and cinnamon; and the taste slightly bitter, and extremely warm and pungent.

CANES. See BAMBOO, RATTANS.

CANNON, CANNONS (Du. *Kanonen*; Fr. *Canons*; Ger. *Kanonen*; It. *Cannoni*; Pol. *Dziatla*; Por. *Canhoes*; Rus. *Puschki*; Sp. *Canonas*; Sw. *Kanon*), a kind of long hollow engines for throwing iron, lead, or stone balls by the force of gunpowder. They are commonly made of iron, but frequently also of a mixture of copper, tin, and brass. They are either cast hollow, or solid and then bored; those made in the latter way being very superior. Brass cannons, or cannons made of mixed metal, are said not to be so well calculated for hard service, or quick and continued firing, as those made of iron. The proportions of the ingredients used in making the former do not differ materially in different countries, though they rarely coincide. To 240 lbs. of metal fit for casting, we commonly put 68 lbs. of copper, 52 lbs. of brass, and 19 lbs. of tin. To 4,300 lbs. of metal fit for casting, the Germans put 3,687 $\frac{1}{4}$ lbs. of copper, 204 $\frac{1}{4}$ lbs. of brass, and 307 $\frac{1}{4}$ lbs. of tin. Others, again, use 100 lbs. of copper, 6 lbs. of brass, and 9 lbs. of tin; and others, 100 lbs. of copper, 10 lbs. of brass, and 15 lbs. of tin.

It seems to be the general opinion that cannon were first made use of in 1336 or 1338; but Don Antonio de Capmany has produced some statements, which render it almost certain that some sort of artillery was used by the Moors in Spain so early as 1312.—(*Questiones Criticas*, p. 181. &c.) Cannons were certainly used by the English in 1347 at the siege of Calais, and by the Venetians at Chioggia in 1366, and in their wars with the Genoese in 1379 and 1380. The Turks employed them at the sieges of Constantinople, in 1394 and 1453. When first introduced, they were for the most part very heavy and unwieldy, and threw balls of an enormous size; they were, however, owing to their frequently bursting, about as dangerous to those using them as to their opponents. There is a valuable article on the construction and history of cannons in *Rees's Cyclopædia*; but it was published previously to the appearance of Capmany's work referred to above.

CANTHARIDES, or SPANISH FLY (Fr. *Cantharides*, *Mouches d'Espagne*; Ger. *Spanische Fliegen*; It. *Canterelle*; Lat. *Cantharis*; Rus. *Mischpanskie muchi*; Sp. *Cantharidas*). This insect is found on a variety of shrubs in Spain, Italy, France, &c. Those used in this country are imported partly from Sicily, but principally from Astracan, packed in casks and small chests. The best are of a lively flesh colour, a small size, and not mouldy. They are frequently adulterated with the *Melolontha vitis*; but this is distin-

guishable by its form, which is squarer than the cantharis, and by its black feet. If they be properly dried and protected from the air, they may be kept for a very long period. —(*Thomson's Dispensatory.*)

CANTON, one of the greatest emporiums in the East, ranking, as a port of trade, either before, or immediately after Calcutta, situated in the province of Quantong, in China; being the only place in that empire frequented by European traders: lat. $23^{\circ} 7' 10''$ N., lon. $113^{\circ} 14'$ E.

Canton stands on the eastern bank of the Peking River, which flows from the interior in a navigable stream of 300 miles to this city, where it is rather broader than the Thames at London Bridge; falling, after an additional course of 80 miles, into the southern sea of China. Near its junction with the sea, it is called by foreigners Bocca Tigris. The town is surrounded by a thick wall, built partly of stone and partly of brick, and is divided into 2 parts by another wall running east and west. The northern division is called the Old, and the southern part the New City. In the old city is the Mantchou or Tartar general, with a garrison of Manichou troops under his command. The lieutenant-governor or Foo-yuen's office is also in the old city, but the governor and Hoppe (principal customs officer) reside in the new city, not far from the river.

All foreign commerce is conducted in the south-west suburb, where the foreign factories are situated; and which, with the other suburbs, is probably not less populous than the city itself. The residence of Europeans is confined to a very small space, on the banks of the river; which might, however, be as pleasant as a crowded mercantile place can well be, were it not for the great number of small *dwelling boats*, which cover the face of the river. The people who occupy the larger portion of these boats are said to have come originally from the south; and being a foreign and despised race, were not, at first, allowed to dwell on shore; but most of the distinctions between them and the rest of the people have been abolished.

Although Canton is situated nearly in the same parallel of latitude as Calcutta, there is a considerable difference in their temperature; the former being much the coolest, and requiring fires during the winter months. The streets of Canton are very narrow, paved with little round stones, and flagged close to the sides of the houses. The front of every house is a shop, and those of particular streets are laid out for the supply of strangers; China-street is appropriated to Europeans; and here the productions of almost every part of the globe are to be found. One of the shopkeepers is always to be found sitting on the counter, writing with a camel's hair brush, or calculating with his swanpan, on which instrument a Chinese will perform operations in numbers with as much celerity as the most expert European arithmetician. This part of Canton being much frequented by the seamen, every artifice is used by the Chinese retailers to attract their attention; each of them having an English name for himself painted on the outside of his shop, besides a number of advertisements composed for them by the sailors in their own peculiar idiom. The latter, it may be supposed, are often duped by their Chinese friends, who have, in general, picked up a few sea phrases, by which the seamen are induced to enter their shops; but they suit each other extremely well; as the Chinese dealers possess an imperturbable command of temper, laugh heartily at their jokes without understanding them, and humour the seamen in all their sallies.

Ships only ascend the river as far as Whampoa, about 15 miles below Canton; loading and unloading by means of native boats.

The Chinese, considered as traders, are eminently active, persevering, and intelligent. They are, in fact, a highly commercial people; and the notion that was once very generally entertained, of their being peculiarly characterised by a contempt of commerce and of strangers, is as utterly unfounded as any notion can possibly be. Business is transacted at Canton with great despatch; and it is affirmed, by Mr. Milburn, and by most of the witnesses examined before the late parliamentary committee, that there is no port in the world, where cargoes may be sold and bought, unloaded and loaded, with more business-like speed and activity.

The fears, whether real or pretended, of disturbances arising from a want of discipline in the crews of private ships, have been proved to be in a great degree futile; the Americans and other private traders having rarely experienced the slightest inconvenience from any tumults between their sailors and the natives.

Provisions and refreshments of all sorts are abundant at Canton, and, in general, of an excellent quality; nor is the price exorbitant. Every description of them, dead or alive, is sold by weight. It is a curious fact, that the Chinese make no use of milk, either in its liquid state, or in the shape of curds, butter, or cheese. Among the delicacies of a Chinese market are to be seen horse flesh, dogs, cats, hawks, and owls. The country is well supplied with fish from the numerous canals and rivers by which it is intersected.

Foreign Factories.—These extend for a considerable way along the banks of the river, at the distance of about 100 yards. They are named, by the Chinese, *hong*s, and resemble long courts, or closes, without a thoroughfare, which generally contain 4 or 5 separate houses. They are built on a broad quay, and have a parade in front. This promenade is railed in, and is generally called *Respondentia Walk*; and here the European merchants, commanders, and officers of the ships, meet after dinner and enjoy the cool of the evening.

The English hong, or factory, far surpasses the others in elegance and extent. This, with the American and Dutch honges, are the only ones that keep their national flags flying. The neighbourhood of the factories is occupied with warehouses for the reception of European goods, or of Chinese productions, until they are shipped. In 1822, during a dreadful conflagration that took place at Canton, the British factories, and above 10,000 other houses were destroyed; on which occasion the East India Company's loss was estimated at 500,000*l.* sterling, three fifths in woollens.

For the space of 4 or 5 miles opposite to Canton, the river resembles an extensive floating city, consisting of boats and vessels ranged parallel to each other, leaving a narrow passage for others to pass and repass. In these the owners reside with their families; the latter rarely visiting the shore.

All the business at Canton with Europeans is transacted in a jargon of the English language. The sounds of such letters as B, D, R, and X, are utterly unknown in China. Instead of these they substitute some other letter, such as L for R, which occasions a Chinese dealer in rice to offer for sale in English a rather unmarketable commodity. The name mandarin is unknown among the Chinese; the word used by them to denote a person in authority being *quan*. Mandarin is a Portuguese word derived from the verb *mandar*, to command.—(*Hamilton's East India Gazetteer*; *Milburn's Orient. Commerce*; *Companion to Anglo-Chinese Calendar, Macao, 1832, &c.*)

Conduct of Chinese Government.—The only real difficulty in trading with China originates in the despotism, pride, and jealousy of the government, and in the general corruption of its officers. The former affects to treat all foreigners with contempt, and is always exposing them to insult; while the latter endeavour to multiply and enforce vexatious regulations and demands, that they may profit by the douceurs given for their evasion. Hitherto we have submitted with exemplary forbearance to every annoyance the Chinese authorities have chosen to inflict; but it is questioned by some whether this be the most politic course. The imbecility and powerlessness of the government is at least equal to its pride and presumption; and in the event of its attempting to stop the trade, or to subject those engaged in it to unmerited ill treatment, it is contended that we ought, in the event of redress being refused on the presentation of a remonstrance, to vindicate our rights by force. We are rather disposed to concur in this opinion. We believe that little more than a demonstration would be necessary; and that the appearance of a single ship of the line in the Chinese seas would have more influence over the court of Peking than a dozen ambassadors. But it is essential, before employing this sort of negotiators, that we be well assured that we have justice on our side, and that our own misconduct has not occasioned the interruptions and annoyances complained of. The superintendents about to be sent to Canton—(see *post*)—should be vested with full powers to prevent, if possible, and, at all events, suitably to punish, any British subject who may act so as to give just cause of offence to the Chinese. We have a right to claim fair treatment from them, as we have a right to claim it from the Americans, or any other people; but we have no right to expect that our claim should be regarded, unless we respect the prejudices of the people, and the equitable rules and regulations of the government.

Trade to the North of China.—At present, all foreign trade with China is confined to the port of Canton; but this was not the case for a long time after China was visited by British ships, and it appears highly probable that it will be again extended towards the north. The interesting details given in the account of the voyage of the ship *Amberst* along the Chinese coasts show that the people are every where most anxious for an intercourse with foreigners, and that the law is the only obstacle to its being carried on to a very great extent. But, where the people are so well disposed to trade, the officers so corrupt, and the government so imbecile, it may, we think, be fairly anticipated that the unalterable laws of the "Celestial Empire" will not prove a very serious obstacle to such private individuals as may choose to engage in a clandestine trade with the northern provinces. The smuggler is even more omnipotent in China than in Spain. The extent and perfect regularity with which the trade in opium is carried on, in defiance of all the efforts of government for its suppression, shows how unable it is to contend against the inclinations of its subjects, which, fortunately, are all in favour of a free and liberal intercourse with foreigners.

Monies.—Accounts are kept at Canton in taels, mace, candarines, and cash; the tael being divided into 10 mace, 100 candarines, or 1,000 cash. There is but one kind of money made in China, called cash, which is not coined but cast, and which is only used for small payments; it is composed of six parts of copper and 4 of lead; it is round, marked on one side, and rather raised at the edges, with a square hole in the middle. These pieces are commonly carried, like beads, on a string of wire. A tael of fine silver should be worth 1,000 cash; but, on account of their convenience for common use, their price is sometimes so much raised that only 750 cash are given for the tael.

Foreign coins, however, circulate here, particularly Spanish dollars; and for small change they are cut into very exact proportions, but afterwards weighed; for which purpose merchants generally carry scales, called *dotchin*, made somewhat after the plan of the English steelyards.

The tael is reckoned at 6*s.* 8*d.* sterling in the books of the East India Company; but its value varies, and is generally computed according to the price paid per ounce for Spanish dollars in London. The tables given for this proportional value may be calculated in pence sterling, by the multiplier 1.208. Thus, if the price of the Spanish dollar be 60*s.* per ounce, the value of the tael will be 60 multiplied by 1.208 = 72.48*d.*; if at 66*s.*, the value of the tael will be 79.72*d.*; and for any other price in the same proportion.

Fineness of Gold and Silver.—The fineness of gold and silver is expressed by dividing the weight into 100 parts, called toques or touch; similar to the modern practice of France. Thus, if an ingot be 93 touch, it is understood to contain 7 parts of alloy and 93 of pure metal, making in the whole 100.

The fineness of the precious metals, expressed in these decimal proportions, may be converted into English proportions by the following analogies:—Suppose gold is 91.66 touch, say, as 100:91.66::12:11, the standard, and *vice versa*; and to convert standard silver into touch, say, as 240:222::100:92.5, the touch of sterling silver. Pure gold or silver without alloy is called by the Chinese *sycee*; and sometimes, when of less purity, the metal is accepted as *sycee*.

Silver Ingots are used as money, and weigh from $\frac{1}{2}$ a tael to 100 taels, their value being determined by their weight. These ingots are of the best sort of silver: that is, about 94 touch.

Gold Ingots.—Gold is not considered as money, but as merchandise: it is about in regular ingots of a determined weight, which the English call shoes of gold; the largest of these weigh 10 taels each; and the gold is reckoned 94 touch, though it may be only 92 or 93.

Weights.—Gold and silver are weighed by the catty of 16 taels; the tael is divided into 10 mace, 100 candarines, or 1,000 cash. 160 taels are reckoned to weigh 120 oz. 16 dwts. Troy, which makes the tael equal to 379.8 English grains, or 37.566 grammes.

The principal weights for merchandise are the picul, the catty, and the tael; the picul being divided into 100 catties, or 1,600 taels.

	Lbs.	oz.	dwt.	
1 Tael weighs, avoirdupois	-	0	1	5.323 = $1\frac{1}{2}$ oz.
16 Taels, or 1 catty	-	1	5	5.333 = $1\frac{1}{2}$ lb.
100 Catties, or 1 picul	-	133	5	5.333 = 133 $\frac{1}{2}$ lbs.

Hence the picul weighs 60.473 kilogrammes, or 133 lbs. 0 oz. 8 dwts. 13 grs. Troy.

The above weights are sometimes otherwise denominated, especially by the natives: thus, the catty is called gin; the tael, *lyanx*; the mace, *tchen*; the candarine, *fyvan*; and the cash, *lis*.

There are no commercial measures in China, as all dry goods and liquids are sold by weight. In delivering a cargo, English weights are used, and afterwards turned into Chinese piculs and catties.

Long Measure.—That used in China is the *covid* or *cobre*; it is divided into 10 punts, and is equal to 6.3713 metres, or 14.625 English inches.

The Chinese have 4 different measures answering to the foot, viz.

	Metres.	Eng. inches.
The foot of the mathematical tribunal	= 0.323	= 13.125
The builder's foot, called <i>congpu</i>	= 0.3228	= 12.7
The tailors' and tradesmen's foot	= 0.3263	= 13.33
The foot used by engineers	= 0.3211	= 12.65

The li contains 180 fathoms, each 10 feet of the last mentioned length; therefore the li = 1,897 $\frac{1}{2}$ English feet; and 192 $\frac{1}{2}$ li measure a mean degree of the meridian nearly; but European missionaries in China have divided the degree into 200 li, each li making 1,826 English feet; which gives the degree 69.166 English miles, or 11.131 French myriamètres.

European Trade at Canton.—As soon as a vessel arrives among the islands which form the entrance to the Canton river, she is generally boarded by a pilot, who conducts her into Macao roads. The entrance is, however, so safe, that ships push on without waiting for the pilot, who, if the weather be bad, is sometimes long in coming on board. The pilots' names are registered at the Keun-min-foo's office, near Macao; and for a licence to act, the sum of 600 dollars is paid. The person who takes out the licence sometimes knows nothing about ships or the river; but employs fishermen to do the duty. On the vessel's arrival at Macao roads, the pilot goes on shore, to report her at the office of the Keun-min-foo, who, when he has received answers to his inquiries, gives a *pernak* for her to pass through the Bogue, and orders a river pilot on board. This pilot seldom repairs on board the vessel before 24 hours have elapsed. When arrived, the vessel proceeds through the Bogue, and up the Canton river to Whampoa.

Every ship that enters the port is required to have a hong merchant as security for the duties, and a linguist, and comprador, before she can commence unloading. The master is required to give a written declaration, in duplicate, solemnly affirming that the ship has brought no opium. The East India Company's ships alone are excused giving this declaration.

The hong or security merchants (at present 10 in number) are the only individuals legally permitted to trade with foreigners. To obtain this privilege, they have to pay largely; and when once become merchants, they are rarely allowed to retire, and are at all times subject to severe exactions from the local government. The linguists are government interpreters, who procure permits for delivering and taking in cargo, transact all the Custom-house business, and keep accounts of the duties. All the minor charges of the government, also, are paid by them; in consideration of which they receive a fee of about 175 dollars, previously to the vessel's departure.

When a vessel wishes to discharge or receive cargo, the linguist is informed, a day or two previously, what kind of goods are to be received or discharged, and in what quantities. He then applies for a permit, which being issued, the lighters or chop-boats proceed to Whampoa, where they usually arrive on the evening of the second or morning of the third day. For a single boat the linguist receives a fee of 33 dollars; but if a permit be obtained for from 2 to 6 boats at a time, the fee for each boat is only 11 taels 2 mace 6 cand., or about 15 $\frac{1}{2}$ dollars.

When the goods are ready to be landed from or sent to the ship, the *hoppo* (principal Custom-house officer) sends a domestic, a writer, and a police runner; the hong merchant who has secured the ship sends a domestic, called a court going man (one who attends at the public offices, on ordinary occasions, in behalf of his master); and the linguist sends an accountant and interpreter, to attend at the examination of the goods. The hong merchants are always held responsible by the government for paying all duties, whether on imports or exports in foreign vessels; and, therefore, when goods are purchased, it is customary for the parties, before fixing the price, to arrange between themselves who is actually to pay the duties. The hong merchants are required to consider the duties payable to government as the most important part of their affairs. If a merchant fail to pay at the proper period, his hong, house, and all his property are seized, and sold to pay the amount; and if all that he possesses be inadequate, he is sent into banishment at Ele, in Western Tartary, which the Chinese call the "cold country;" and the body of hong merchants are commanded to pay in his stead.

Of an import cargo, each chop-boat, according to rule, which, however, is not rigidly enforced, should contain,—of woollens, camlets, and long-ells, 140 bales; tin, 500 bars; lead, 600 pigs; Bombay cotton, 55 bales; Bengal cotton, 80 bales; betel-nut, pepper, &c. 300 piculs.

Of export goods, a chop-boat should take,—of tea, 600 chests; of other sorts of goods, 500 piculs. If more than this, the hong merchant gives to the chop-boat, for each additional pi ul, 64 dollars.

In calculating the duties on export goods, 80 catties are considered 100. The woollens, long-ells, and camlets, are measured by the *chang* of 10 covids, without any deduction; and single articles are numbered.

Each ship may export, of silk, 88 piculs; the duty on each picul is 10 $\frac{1}{2}$ dollars. Those ships that want more, avail themselves of the names of ships which have exported none; and the Custom-house collects at this, on receiving a fee of 15 $\frac{1}{2}$ dollars per picul.

If, after entering the port, any persons tranship goods, it is considered that the one ship sold them to the other; and, in that case, the same duty has to be paid as if the goods were brought up to Canton. Provisions are not included in this regulation.

Ships' boats are not allowed to carry up or down any thing chargeable with duty.

Gold, silver, copper, and iron are prohibited to be exported; a few culinary utensils are the only exception. When it is desired to export treasure, the hong merchant must make an estimate of the value of the import and export cargoes; and whatever balance there may be in favour of the ship, may then be shipped off as treasure.

The whole amount of tutenague that is allowed to be exported by foreign ships, including the Portuguese at Macao, is 100,000 catties; but regulations of this sort may be easily evaded.

If more cargo be sent to a ship than she can take on board, and she wishes it to be shipped on board another, it must be done within three days after announcing the goods at the Custom-house, and a hong merchant must state it to government; if granted, a hong merchant and linguist are ordered to go to Whampoa and take an account of such goods; all which, with the expense of boats, runners, &c. at Whampoa, costs 40 or 50 dollars.—(*Companion to Anglo-Chinese Calendar for 1833*, pp. 99—101.)

Hong, or Security Merchants.—It may be supposed, perhaps, from the previous statements, that difficulties are occasionally experienced before a hong merchant can be prevailed upon to become security for a ship; but such is not the case. None of them has ever evinced any hesitation in this respect. The Americans, who have had as many as forty ships in one year at Canton, have never met with a refusal. The captain of a merchant ship may resort to any hong merchant he pleases, and, by way of making him some return for his becoming security, he generally buys from him 100*l*. or 200*l*. worth of goods. Individuals are, however, at perfect liberty to deal with any hong merchant, whether he has secured their ship or not, or with any *outside merchant*; that is, with any *Chinese merchant not belonging to the hong*. So that, though there are only 10 hong merchants at Canton, there is, notwithstanding, quite as extensive a choice of merchants with whom to deal in that city, as in either Liverpool or New York.

Duties.—It is very difficult, or rather, perhaps, impossible, to get any accurate account of the duties on goods exported and imported. They are almost always paid by the Chinese, though they must, of course, frequently be borne by the foreigner. Imported goods are weighed on board, and the duty paid by the purchaser; the duty on those exported is paid by the seller. The officers are notoriously corrupt; and it is a common practice to give them a *douceur* to under-rate the weight of the goods.

Foreign Merchants.—These consist of British, American, French, Dutch, Danish, Swedish, Spanish, and Portuguese, with Persee and Indian Mohammedan British subjects, and in 1832 amounted in number to above 110. The principal mercantile firms consisted of 8 British establishments, 7 American establishments, and 1 joint French and Dutch establishment. The Americans, French, and Dutch have each a consular agent; and though these functionaries be not publicly recognised by the Imperial government, all public business is conducted with them by the provincial government, through the agency of the hong merchants.

Newspapers and Public Accommodations.—At Canton, there are 2 English newspapers; viz. the "Canton Register," once a fortnight, with a Price Current; and the "Chinese Courier," once a week. There are 3 hotels, a billiard room, and 2 European shops or warehouses upon a large scale, with surgeons, apothecaries, watch-makers, and boat-builders.

General Rates of Agency Commission in China, agreed upon the 1st of November, 1831; in confirmation of those fixed by a meeting of merchants on the 1st of March, 1835.

1. On all sales or purchases of goods except the following	5 per cent.	17. Effecting remittances by bills of the agent or otherwise, on purchasing or negotiating bills of exchange	1 per cent.
2. On all sales or purchases of opium, cotton, cochineal, quicksilver, camphor-barres, birds' nests, diamonds and other precious stones, or pearls, ships, and houses	8 ditto.	18. Bills of exchange returned, noted, or protested	1 ditto.
3. On returns, if in goods	2-3 ditto.	19. Negotiating loans on respondents	2 ditto.
4. On ditto, if in treasure, bullion, or bills	1 ditto.	20. Debts, where a process at law or arbitration is necessary, 1-1/2 per cent.; and if recovered	5 ditto.
5. On sale, purchase, or shipment of bullion	1 ditto.	21. Collecting house-rent	1-1/2 ditto.
6. On all goods, treasure, &c. consigned, and afterwards withdrawn or sent to auction, and on goods consigned for conditional delivery to others	1-2 commission.	22. Letters of credit granted for mercantile purposes	2-1/2 ditto.
7. Ordering goods, or superintending the fulfilment of contracts, where no other commission is derived	2-1/2 per cent.	23. Acting for the estate of persons deceased, as executors, or administrators	5 ditto.
8. On all advances of money for the purposes of trade, whether the goods are consigned to the agent or not, and where a commission of 5 per cent is not charged	2-1/2 ditto.	24. The management of the estates of others, on the amount received	2-1/2 ditto.
9. <i>Dalcedora</i> , or guaranteeing sales, when especially required	2-1/2 ditto.	25. All cash receipts, not serving for the payment of debts, and not otherwise specified above	1 ditto.
10. Guaranteeing bills, bonds, or other engagements	2-1/2 ditto.	26. Sharebroker	1-2 per mill.
11. Procuring freight, or advertising as agent of owners or commanders, on the amount of freight, whether the goods pass through the hands of agents or not	5 ditto.	27. Transhipping goods	1 per cent.
12. Receiving inward freight	1 ditto.	28. Upon all advances not punctually liquidated, the agent to have the option of charging a second commission as upon a fresh advance, provided the charge do not occur twice in the same year.	
13. Ship's disbursements	2-1/2 ditto.	29. At the option of the agent, on the amount debited or credited within the year, including interest, and excepting only items on which a commission of 5 per cent. has been charged	1 ditto.
14. Chartering ships for other parties	2-1/2 ditto.		
15. Effecting insurance or writing orders for insurance	1-2 ditto.		
16. Settling insurance losses, total or partial, and on procuring return of premium	1 ditto.		

Port Charges.—All foreign vessels trading to Canton have to pay a measurement charge, varying according to the size of the vessel. For this purpose they are divided into 3 classes; viz.

1st. Vessels of 160 covids and upwards, pay	-	-	-	-	7-874,755 per covid.
2d. — above 120 and under 160 covids	-	-	-	-	7-221,091 —
3d. — of 120 covids and under	-	-	-	-	5-003,341 —

The dimensions are taken from the mizen to the foremast for the length, and between the gangways for the breadth; these two numbers multiplied together, and divided by 10, give the measurement in covids; and the quotient multiplied by the sum to be paid per covid, according to the vessel's size, gives the whole amount of measurement charge. Of this amount, only 10-11ths are, properly speaking, the measurement charge, the other 11th part being a fee of 10 per cent. on the Imperial dues.

Once a year the hoppo goes in person to superintend the measurement of vessels, on which occasion he goes on board a Company's ship. At other times an officer is sent to represent him.

The item next in importance to the measurement charge, is what is called the cumshaw or present, amounting, according to the reduced rate, to the sum of 1,600 683 taels, or 2,933 dollars, except on French, Austrian, and Prussian vessels, which are required to pay 80 taels more. This charge does not vary with the size of the ship; but is the same whether she carry 100 or 1,000 tons. The cumshaw is made up of the following sums: viz.

The entrepôt fees	-	-	-	-	-	-	-	Taels	810 691
Port clearance fee	-	-	-	-	-	-	-	-	480 490
Difference of scales, carriage to Peking, &c., 6.75 per cent. on the above	-	-	-	-	-	-	-	-	87 150
Fee to the leang-taou, or superintendent of grain	-	-	-	-	-	-	-	-	116 484
For difference in the leang-taou's scales, 1.1 per cent. on the last named fee	-	-	-	-	-	-	-	-	1 281
For making it into sycee, 1 per cent. on the whole	-	-	-	-	-	-	-	-	104 717
								Taels	1,600 683

Vessels loaded with rice are exempted from the entrepôt and leang-taou's fees, as also from the measurement charge; the latter by command of the reigning sovereign, in 1823; and the two former by previous orders of the local government. They are likewise exempted from certain small monthly and daily fees, so long as they are engaged in discharging the imported rice; but these charges commence as soon as the vessel begins to take in an export cargo; and the port clearance fee, with the double percentage of 54 and 7 per cent., is levied alike on all vessels. A vessel importing rice, in common with other vessels, is required either to receive an export cargo, or to pay about 300 dollars in default thereof.

Until the measurement charge, present, &c. have all been duly paid, no vessel can obtain her grand chop, or port clearance from the hoppo's office.

The other fixed charges besides the above are, 120 dollars for pilotage, in and out; fees paid to boats at second bar, and linguist's and comprador's fees. These last are intended to remunerate the expenses incurred on account of various daily and monthly charges, and other petty fees, besides several unauthorised sums exacted by the inferior local officers. Lists of these charges have been printed; but they vary so much in particular instances, that it is next to impossible to attain any certainty with respect to them.

The following is an example of a vessel of the 1st class subject to the highest rate of measurement charge, from which an idea of the amount of port charges on other vessels may be obtained:—

The Glenelg, 867 tons.									
Length from mizen to foremast, covids	-	-	-	-	-	-	-	-	83.1
Which multiplied by the breadth, from gangway to gangway	-	-	-	-	-	-	-	-	26.0
And divided by 10, gives the dimensions	-	-	-	-	-	-	-	-	216.06
Multiply that sum by	-	-	-	-	-	-	-	Taels	7 374 755

The measurement charge will be 1,701.418 taels, which, at 73 taels per 100 dollars, =									
Spanish dollars	-	-	-	-	-	-	-	-	2,338
Cumshaw, or present, taels 1,600 683, at 73 per 100 =	-	-	-	-	-	-	-	-	2,332
Pilotage in and out	-	-	-	-	-	-	-	-	150
Bar boats and other small charges, about	-	-	-	-	-	-	-	-	30
Linguist's fees, about	-	-	-	-	-	-	-	-	173
Comprador's fees, about	-	-	-	-	-	-	-	-	50
								Spanish dollars	4,959

Vessels of the 2d class are charged in measurement from 1,200 to 1,600 dollars, and those of the 3d size from 600 to 800 dollars. The covid employed is equal to about 14½ inches.

The consequence of this mode of imposing the port duties is, that while they are very moderate on ships of 400 or 500 tons burden and upwards, they are very heavy on small ships: and hence small country ships frequently lie off Linting Flora, or Large Bay, till some of the large European ships come in sight, when they shift their cargoes on board the latter. They are commonly carried up to Canton for 1 per cent., by which means the duties and cumshaw are both saved. Chinese junks are exempted from the port dues.

Captain Coffin, the commander of an American ship of about 400 tons register trading to China, informed the late committee of the House of Commons, that the whole charges of every description falling upon his ship, in entering and clearing out from Canton, including measurement duty, cumshaw, pilotage, victualling of the ship, and consul's fee, amounted to between 7,000 and 8,000 dollars. — (*Companion to Anglo-Chinese Calendar*, pp. 101—102.; *First Report, Evidence*, p. 121.)

British Trade with Canton.—The trade between Great Britain and Canton has hitherto been entirely monopolised by the East India Company and its officers. Tea has always been by far the principal article of import; and it is mainly owing to the diffusion of the taste for this article, and its consumption by all ranks and orders of the community, that the trade has increased, notwithstanding the pernicious influence of the monopoly, to the extent that it has done. Besides tea, the Company formerly imported from China raw silk, silk piece goods, nankeens, mother-of-pearl shells, sandal wood, and a few other articles; but of late years the value of these articles has been quite inconsiderable.

The articles exported in the East India Company's ships from England to China consisted principally of woollens, copper, iron and lead, glass, earthenware, and jewellery. Bullion used, formerly, to be largely exported; but recently the current has begun to set in the opposite direction, and bullion has been imported from China into England.

The invoice value of the Company's trade between China and England in the under-mentioned years has been—

Years.	Imports into China from England.			Exports from China to England.	Total Imports and Exports.
	Merchandise.	Treasure.	Total.	Merchandise.	
1814-15	£ 860,093	£ 127,695	£ 987,788	£ 1,967,978	£ 2,953,766
1815-16	926,920	1,127,518	2,054,438	2,231,366	4,285,799
1830-31	593,755	—	593,755	1,661,980	2,255,735
1831-32	396,475*	—	396,475	1,814,043	2,212,518

* *Mem.*—There is an apparent reduction in the value of exports of merchandise from England, arising from cargoes to the amount of 192,310*l.* of this season having been despatched after the 1st of May, 1832: allowing for the consignments so deferred, the imports into China from England would be augmented to 599,785*l.*, and the total of imports and exports to 2,404,828*l.*

East India House, 25th of April, 1833.

It appears from this account, that the merchandise exported from England to China during the years 1814-15 and 1815-16 amounted, at an average, to 893,506*l.* a year, exclusive of above 600,000*l.* a year in treasure; whereas, the exports of merchandise during the years 1830-31 and 1831-32 only amounted to 592,370*l.* a year, without any treasure! This extraordinary decline strikingly contrasts with the results of the free trade between Great Britain and India in the same years.

The following is a detailed Account of the Value of the Exports by the East India Company from Great Britain to China during the Five Years ending the 5th of January, 1828.

					27,517,938		28,617,280	
Whole exports to Britain and America in the year 1824-25.					28,697,088	In 1828-29 29,947,231		

In 1831-32 the total exports of tea by the East India Company were, to England, 20,203,098 lbs.; to North American colonies 1,270,856 lbs.; being together 21,473,954 lbs. The aggregate prime cost (particulars not stated) was 1,907,648*l.*—(*N. E.*—For full details as to the tea trade, see art. TEA.)

The Company's business in China has been carried on by an establishment of public officers, consisting of 12 supercargoes and as many writers, promoted according to seniority; the former were paid by a commission chiefly derived from the monopoly sales of tea in England, and the latter by fixed salaries; both being supplied with lodging and a public table at the Company's expense. The 3 senior supercargoes, called the select committee, constituted the governing body, and had the whole control, not only of the Company's trade, but politically of all British interests in China. The entire charges of the Company's China establishment in 1825-29 were 138,526*l.*; being

	£
Twelve supercargoes	53,121
Twelve writers	10,226
Persons filling professional and other distinct offices	8,857
Rents and repairs of private apartments	16,782
Rent of factory, port charges, and other expenses	49,440

The Company's business was wholly conducted with the hong merchants, to the exclusion of the unlicensed or outside merchants, as they are called. The select committee divided amongst such of the solvent hong merchants as it pleased, the whole amount of the Company's export and import cargoes, and the business was done by a kind of barter; a system long banished among the free traders. The ships employed by the East India Company in the China trade were commonly from 1,000 to between 1,400 and 1,500 tons burden, the greater proportion being from 1,300 to 1,400 tons.

Trade between British India and China.—The trade is of decidedly more value and importance than that carried on between Great Britain and China; a result which seems mainly ascribable to the circumstance of its being principally in the hands of private individuals. The greatest article of export from India to Canton used to be cotton wool, principally from Bombay; but it is now far surpassed by opium, the imports of which into China have *sixfold* since 1816-17, and are worth, at present, about 13,500,000 dollars! This increase is the more extraordinary, seeing that opium is contraband in China; but the edicts of the emperors are as unable to prevent its introduction, as the proclamations of James and Charles were to hinder the use of tobacco in England. It is every where smuggled with ease and safety. The trade was at first principally conducted at Whampoa; but the exactions of the Chinese authorities drove it to Macao, where it increased, but whence it was subsequently driven by the exactions of the Portuguese. It is now principally carried on in the Bay of Lintin. Here the opium is kept on board receiving ships, of which there are frequently not less than 12 quietly lying at anchor, without danger or molestation of any sort.

The exports from China to India consist of sugar for Western India, tea, porcelain, nankeens, cassia, camphor, &c.; but the amount of these is not very considerable, and the returns are principally made in bills and bullion.

Opium is sold by the resident European or American agents; and, on an order from these for its delivery, it is handed over to the smugglers, who come alongside the ships at night to receive it; putting the naval force, Custom-house establishment, and police of the empire at defiance. We subjoin an

In 1831-32, the total import of opium into China was 21,062 chests, of the value of 13,917,426 dollars. The stock on hand, 1st of January, 1833, was 5,110 chests. Nine tenths of the opium trade is in the hands of the British Indians.

The following tables exhibit the general results of our trade with China from 1814-15 downwards:—

Account of the Annual Value of the Trade between the Subjects of Great Britain and China, from 1814-15 to 1830-31, both inclusive, distinguishing the Trade of the East India Company from that of individuals.

Years.	Value of Exports and Imports between India and China.		Total.	Value of Exports and Imports between England and China on Account of the Company.	Total Value of the British Trade with China.	Value of Trade of Individuals with China.	Value of Trade of the Company with China.

The following tables give very full details as to the trade between Great Britain and Canton, and the trade between the latter and British India, carried on under the British flag, during the years ended the 31st of March, 1831 and 1832.

Most part of the trade between India and Canton is conducted by the outside merchants. The hong merchants rarely adventure upon transactions in opium, of which this trade principally consists.

We have obtained from Canton the following corrected account of the British trade at that city, in 1831-32. It corresponds pretty closely with the succeeding account, derived from the *Parl. Paper*, No. 229. Sess. 1833; but it is drawn up in a different form, and more in detail. Being anxious to afford all the information in our power with respect to this great emporium, we did not think we should be warranted in withholding it.

East India House, 25th of April, 1833.

New Regulations as to the British Trade with Canton.—Notwithstanding the opposition made by the East India Company, the trade to China has at length been thrown open to all classes of his Majesty's subjects; and British merchants may now freely trade to all places, accessible to Europeans, to the east of the Straits of Malacca. We congratulate our readers on the opening of this new and almost boundless field for the display of commercial enterprise. It is not, indeed, a channel in which it would be prudent for any one not possessed of adequate capital and the necessary skill to embark. But the example of the Americans, and of the free traders from India to China, shows conclusively that there is nothing in the nature of the trade to prevent its being as successfully prosecuted by individuals as that to any other country. We are satisfied that the intercourse between the Eastern and Western worlds is as yet quite inconsiderable, compared with what it is destined to become, now that the incubus of monopoly is removed. The opening of the ports of Hindostan, in 1814, has more than trebled our trade with India; and a similar result may be fairly anticipated in the case of China. In making these remarks, we are very far from meaning to throw any reflections on the conduct of the East India Company. It is due to its directors to state that they have always evinced the greatest anxiety to extend the trade with India and China, and to carry it on in the most economical manner. But it was not in the nature of things that they could succeed. The affairs of all great associations must necessarily be managed according to a system of routine, by the intervention of salaried officers. And it were an insult to common sense to suppose that such persons should display the same enterprise, or that they should manage the affairs intrusted to their care with the same watchful attention to details, and the same regard to economy, as private individuals trading on their own account, and reaping all the advantage of successful, as they must abide all the loss resulting from unsuccessful, adventures. Speculations may be eminently profitable to the latter, that would have been highly injurious had they been attempted by the former. It is true that the too great ardour of competitors may occasionally render even the best business unprofitable to those engaged in it; but if this be an evil, it is one that is inseparable from all commercial undertakings; and there is no reason whatever for supposing that it will be oftener or more severely felt in the trade to Canton, than in that to Petersburg or any other port.

In conducting an intercourse with the Chinese,—a people whose institutions and habits differ so very widely from those of Europeans,—it is essential that due circumspection should be used, and that nothing should be done by any one to give them reasonable grounds of offence. The experience of the Americans, and of the other foreigners, besides the English, resorting to Canton, shows, we think, pretty clearly, that the amount of danger from the circumstances just adverted to is not very considerable. It is right, however, as already stated, that effectual measures should be taken for preventing any interruption to the trade from the ignorance or misconduct of any individual. To accomplish this object there are provisions in the act opening the trade, enabling his Majesty to appoint superintendents of the trade to China, who are to be authorised to issue regulations in regard to it, to which all individuals engaged therein are to be obliged to submit. These regulations will, no doubt, be framed so as to prevent any just offence being given to the natives, without unnecessarily interfering with the free action of the traders. There is one very questionable clause in the act—that which authorises the imposition of a tonnage duty on the shipping employed in the trade, for defraying the cost of the establishments in China. We subjoin a full abstract of this important statute.

ACT 3 & 4 WILL. 4. C. 93. FOR REGULATING THE TRADE TO CHINA AND INDIA.

Repeal of the Act 4 Geo. 4. c. 80. &c.—Having stated that it is expedient that the trade to China should be opened to all classes of his Majesty's subjects, it is enacted, that the act 4 Geo. 4. c. 80. should be repealed, except such parts thereof as relate to Asiatic sailers, Lascars, being natives of the territories under the government of the East India Company; and except also as to such voyages and adventures as shall have been actually commenced under the authority of the said act; and as to any suits and proceedings which may have been commenced, and shall be depending on the 23d day of April, 1834; and from and after the said 23d day of April, 1834, the enactments herein-after contained shall come into operation.—1.

Repeal of Prohibitions upon the Importation of Tea and Goods from China, imposed by 6 Geo. 4. c. 107. and 6 Geo. 4. c. 114.—So much of the act 6 Geo. 4. c. 107., intitled "An Act for the general Regulation of the Customs," as prohibits the importation of tea, unless from the place of its growth, and by the East India Company, and into the port of London; and also so much of the said act as prohibits the importation into the United Kingdom of goods from China, unless by the East India Company, and into the port of London; and also so much of the said act as requires that the manifests of ships departing from places in China shall be authenticated by the chief supercargo of the East India Com-

pany; and also that so much of the act 6 Geo. 4. c. 114., intitled "An Act to regulate the Trade of the British Possessions abroad," as prohibits the importation of Tea into any of the British Possessions in America, and into the island of Mauritius, except from the United Kingdom, or from some other British possessions in America, and unless by the East India Company, or with their licence; shall be, from and after the 22d day of April, 1834, repealed; and thenceforth (notwithstanding any provision, enactment, &c. to the contrary) it shall be lawful for any of his Majesty's subjects to carry on trade with any countries beyond the Cape of Good Hope to the Straits of Magellan.—§ 2.

List of Persons on board any Ship arriving in India to be delivered to Officers of Customs.—The person in command of any ship or vessel arriving at any place in the possession of or under the government of the said Company shall make out, sign, and deliver to the principal officer of the customs, or other person lawfully authorised, a true and perfect list, specifying the names, capacities, and descriptions of all persons who shall have been on board such ship or vessel at the time of its arrival; and if any person having the command of such ship or vessel shall not make out, sign, and deliver such list, he shall forfeit 100*l.*, half to such person or persons as shall inform or sue for the same, and the other half to the Company; and if the Company shall inform or sue for the same, then the whole penalty shall belong to the Company.—§ 3.

Penalties how recoverable.—The penalties and forfeitures aforesaid to be recoverable by action of debt, bill, &c. in any court of record in the United Kingdom, or in India, or elsewhere, to which jurisdiction shall be afterwards given.—§ 4.

Three Superintendents to the China Trade to be appointed.—Whereas it is expedient for the objects of trade and amicable intercourse with the dominions of the emperor of China, that provision be made for the establishment of a British authority in them; be it enacted, that it shall be lawful for his Majesty by any commission or warrant under his royal sign manual, to appoint 3 superintendents of the trade of his Majesty's subjects to and from the said dominions, for the purpose of protecting and promoting such trade, and to appoint such officers to assist them in the execution of their duties, and to grant such salaries to such superintendents and officers as his Majesty shall from time to time deem expedient.—§ 5.

His Majesty may issue Orders and Commissions to his Majesty's subjects in China.—It shall be lawful for his Majesty, by any such order or commission as to his Majesty in council shall appear expedient and salutary, to give to the said superintendents, or any of them, powers and authorities over and in respect of the trade and commerce of his Majesty's subjects within any part of the said dominions; and to issue directions and regulations touching the said trade and commerce, and for the government of his Majesty's subjects within the said dominions; and to impose penalties, forfeitures, or imprisonments, for the breach of any such directions or regulations, to be enforced in such manner as in the said order shall be specified; and to create a court of justice with criminal and admiralty jurisdiction for the trial of offences committed by his Majesty's subjects within the said dominions, and the ports and havens thereof, and on the high seas within 100 miles of the coast of China; and to appoint one of the superintendents herein-before mentioned to be the officer to hold such court, and other officers for executing the process thereof; and to grant such salaries to such officers as may appear reasonable.—§ 6.

Superintendents, &c. not to accept Gifts.—No superintendent or commissioner appointed under this act shall accept in regard to the discharge of his duties any gift, gratuity, or reward, other than the salary granted to him as aforesaid, or be engaged in any trade or traffic for his own benefit, or for the benefit of any other person or persons.—§ 7.

A Tonnage Duty to be imposed, to defray the Expense of Establishments in China.—It shall be lawful for his Majesty in council, by any order or orders to be issued from time to time, to impose and to empower such persons as his Majesty in council shall think fit to collect and levy from or on account of any ship or vessels belonging to any of the subjects of his Majesty entering any port or place where the said superintendents or any of them shall be stationed, such duty on tonnage and goods as shall from time to time be specified in such order or orders, not exceeding in respect of tonnage the sum of 5*s.* for every ton, and not exceeding in respect of goods the sum of 1*0s.* for every 100*l.* of the value of the same, the fund arising from the collection of which duties shall be appropriated, in such manner as his Majesty shall direct, towards defraying the expenses of the establishments by this act authorised within the said dominions: provided always, that every order in council issued by authority of this act shall be published in the London Gazette; and that every such order in council, and the amount of expense incurred, and of duties raised under this act, shall be annually laid before both houses of parliament.—§ 8.

Limitation of Actions.—The next and last clause contains the usual provisions as to the limitation of actions, &c.—§ 9.

American Trade with China.—The American intercourse with China commenced shortly after the termination of the revolutionary war, and speedily became one of the most valuable branches of the trade of the United States.

The following statement shows the amount of the American trade from 1820–30 to 1831–32, according to the returns furnished to parliament by the East India Company.

An Account of the Value of Imports into, and Exports from, the Port of Canton by the Subjects of the United States of America, in the Years 1820–30 to 1831–32.

Years.	Imports into China.			Exports from China.		Total Value Imports and Exports.
	Sale Value Merchandise.	Dollars.	Total Value.	Total Value.		
	<i>Dollars.</i>	<i>D. Hare.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	
1820–30	2,703,988	1,123,614	3,817,633	4,108,611	8,026,343	
1830–31	2,871,390	123,655	3,054,973	4,263,551	7,318,526	
1831–32	2,363,686	667,253	3,050,937	5,837,733	8,908,669	

Bills of exchange negotiated by the Americans in 1820–30, 283,660 dollars; ditto in 1830–31, 1,108,606 dollars; ditto in 1831–32, 4,490,671 dollars.—(*Parl. Paper*, No. 220, Sess. 1833, p. 13.)

We have obtained from the United States the subjoined account of the American trade at Canton in 1831–32. This interesting document exhibits in detail the quantity and value of each article imported by the Americans into Canton, and of those exported; the latter are divided according to their destination.

Statement of the American Import and Export Trade at the Port of Canton, during the Season of 1831-32.

It results from this statement, that the American trade at Canton, in 1831-32, amounted to about 12,000,000 dollars, being equal to *three fourths* of that carried on at Canton during the same year on account of the East India Company. It is of importance to observe that the dealings of the Americans are principally carried on with the outside merchants. Captain Coffin, and other American gentlemen examined by the late committee of the House of Commons on the China trade, speak in strong terms of the facility and expedition with which business may be conducted at Canton.

Trade of Portuguese, Spaniards, &c. at Canton.—Respecting the extent of the Portuguese, Spanish, French, Swedish, Danish, and Dutch trades, we have no data to lay before the reader on which reliance could be placed; but they are inconsiderable and fluctuating, compared with the branches already described. The Dutch trade is probably the largest; but even with the assistance of protecting duties in Holland, the Dutch are unable to withstand the enterprise and activity of the Americans. The

Portuguese trade, particularly that with the possessions of Portugal on the continent of India, was considerable during the war, but has since greatly declined. A nation of more spirit than the Portuguese would, with the advantage they enjoy in the possession of the convenient station of Macao, be able to carry on the Chinese trade with superior success. There is a considerable intercourse, carried on in Spanish ships, between Canton and Manila. The Philippine Islands afford many commodities in demand in the Chinese markets; and the Spaniards are the only European people allowed openly to trade with the busy and commercial port of Amoy, in the province of Fokien; unfortunately, however, they are deficient in the skill and enterprise required fully to avail themselves of these advantages. It appears from the official accounts, published by the French government, that in 1831, only 3 ships, of the burden of 535 tons, cleared out from French ports for China. This, we believe, is principally to be ascribed to the trifling extent to which the great article of Chinese produce, tea, is consumed in France.

Trade with the Indian Islands, &c.—In his evidence before the select committee of the House of Commons, Mr. Crawford gave the following instructive details with respect to the native foreign trade of China:—

Native Foreign Trade of China.—"The principal part of the junk trade is carried on by the four contiguous provinces of Canton, Fokien, Chekiang, and Kiannan.

"No foreign trade is permitted with the island of Formosa; and I have no means of describing the extent of the traffic which may be conducted between China, Corea, and the Leechew Islands. The following are the countries with which China carries on a trade in junks: viz. Japan, the Philippines, the Soo-loo islands, Celebes, the Moluccas, Borneo, Java, Sumatra, Singapore, Rhio, the east coast of the Malayan peninsula, Siam, Cochinchina, Cambodia, and Tonquin. The ports of China at which this trade is conducted are Canton, Tchaou-tcheou, Nomhong, Hoelitchoon, Suheeng, Kongmoon, Chang-lin, and Hainan in the province of Canton; Amoy and Chinchew, in the province of Fokien; Ningpo and Siang-hai, in the province of Chekiang; and Soucheou, in the province of Kiannan. The following may be looked upon as an approximation to the number of junks carrying on trade with the different places already enumerated, viz.

	Junks.		Junks.
Japan 10 junks, two voyages -	20	Singapore 8, Rhio 1 -	9
Philippine Islands -	13	East coast of Malay peninsula -	6
Soo-loo Islands -	4	Siam -	89
Borneo 13, Celebes 3 -	15	Cochin China -	30
Java -	7	Cambodia -	9
Sumatra -	10	Tonquin -	30
		— Total 228.	

"This statement does not include a great number of small junks belonging to the island of Hainan, which carry on trade with Tonquin, Cochinchina, Cambodia, Siam, and Singapore. Those for Siam amount yearly to about 50, and for the Cochinchina dominions to about 43; these alone would bring the total number of vessels carrying on a direct trade between China and foreign countries to 307. The trade with Japan is confined to the port of Ningpo, in Chekiang, and expressly limited to 10 vessels; but as the distance from Nangasaki is a voyage of no more than 4 days, it is performed twice a year.

"With the exception of this branch of trade, the foreign intercourse of the two provinces Chekiang and Kiannan, which are famous for the production of raw silk, teas, and nankeens, is confined to the Philippine islands, Tonquin, Cochinchina, Cambodia, and Siam; and none of this class of vessels, that I am aware of, have ever found their way to the western parts of the Indian Archipelago. The number of these trading with Siam is 24, all of considerable size; those trading with the Cochinchina dominions 16, also of considerable size; and those trading with the Philippines 5; making in all 45, of which the average burden does not fall short of 17,000 tons. I am the more particular in describing this branch of the Chinese commerce, as we do not ourselves at present partake of it, and as we possess no direct means of obtaining information in regard to it. All the junks carrying on this trade with Siam are owned in the latter country and not in China; and I am not sure how far it may not also be so in the other cases. I do not doubt but that a similar commerce will, in the event of a free trade, extend to Singapore; and that through this channel may eventually be obtained the green teas of Kiannan, and the raw silks of Chekiang.

"Besides the junks now described, there is another numerous class, which may be denominated the colonial shipping of the Chinese. Wherever the Chinese are settled in any numbers, junks of this description are to be found; such as in Java, Sumatra, the Straits of Malacca, &c.; but the largest commerce of this description is conducted from the Cochinchina dominions, especially from Siam, where the number was estimated to me at 200. Several junks of this description from the latter country come annually to Singapore, of which the burden is not less than from 300 to 400 tons.

"The junks which trade between China and the adjacent countries are some of them owned and built in China; but a considerable number also in the latter countries, particularly in Siam and Cochinchina. Of those carrying on the Siamese trade, indeed, no less than 81 out of the 89, of considerable size, were represented to me as being built and owned in Siam. The small junks, however, carrying on the trade of Hainan, are all built and owned in China.

"The junks, whether colonial or trading direct with China, vary in burden from 2,000 piculs to 15,000, or carry dead weight from 120 to 900 tons. Of those of the last size I have only seen 3 or 4, and these were at Siam, and the same which were commonly employed in carrying a mission and tribute yearly from Siam to Canton. Of the whole of the large class of junks, I should think the average burden will not be overrated at 300 tons each, which would make the total tonnage employed in the native foreign trade of China between 60,000 and 70,000 tons, exclusive of the small junks of Hainan, which, estimated at 160 tons each, would make in all about 80,000 tons.

"The junks built in China are usually constructed of fir and other inferior woods. When they arrive in Cambodia, Siam, and the Malayan islands, they commonly furnish themselves with masts, rudders, and wooden anchors, of the superior timber of these countries. The junks built in Siam are a superior class of vessels, the planks and upper works being invariably teak. The cost of ship building is highest at the port of Amoy in Fokien, and lowest in Siam. At these places, and at Chang-lin in Canton, the cost of a junk of 8,000 piculs, or 476 tons burden, was stated to me, by several commanders of junks, to be as follows:—

At Siam -	7,460 dollars.
Chang-lin -	16,000 —
Amoy -	21,000 —

A junk of the size just named has commonly a crew of 90 hands, consisting of the following officers, besides the crew: a commander, a pilot, an accountant, a captain of the helm, a captain of the anchor, and a captain of the hold. The commander receives no pay, but has the advantage of the cabin accommodation for passengers, reckoned on the voyage between Canton and Singapore worth 150 Spanish dollars. He is also the agent of the owners, and receives a commission, commonly of 10 per

cent. on the *profits* of such share of the adventure, generally a considerable one, in which they are concerned. The pilot receives for the voyage 200 dollars of wages, and 50 piculs of freight out and home. The helmsman has 15 piculs of freight and no wages. The captains of the anchor and the hold have 9 piculs of freight each; and the seamen 7 piculs each. None of these have any wages. The officers and seamen of the colonial junks are differently rewarded. In a Siamese junk, for example, trading between the Siamese capital and Singapore, of 6,000 piculs burden, the commander and pilot had each 100 dollars for the voyage, with 12 piculs of freight apiece. The accountant and helmsman had half of this allowance, and each seaman had 13 dollars, with 5 piculs of freight.

"In construction and outfit, Chinese junks are clumsy and awkward in the extreme. The Chinese are quite unacquainted with navigation, saving the knowledge of the compass: notwithstanding this, as their pilots are expert, their voyages short, and as they hardly ever sail except at the height of the monsoons, when a fair and steady 7 or 8 knots' breeze carries them directly from port to port, the sea risk is very small. During 13 years' acquaintance with this branch of trade, I can recollect hearing of but 4 shipwrecks; and in all these instances the crews were saved.

"The construction and rigging of a Chinese junk may be looked upon as her proper registry, and they are a very effectual one; for the least deviation from them would subject her at once to foreign charges and foreign duties, and to all kinds of suspicion. The colonial junks, which are of a more commodious form and outfit, if visiting China, are subjected to the same duties as foreign vessels. Junks, built in Siam, or any other adjacent country, if constructed and fitted out after the customary model, are admitted to trade to China upon the same terms as those built and owned in the country. If any part of the crew consist of Siamese, Cochinchinese, or other foreigners, the latter are admitted only at the port of Canton; and if found in any other part of China, would be seized and taken up by the police exactly in the same manner as if they were Europeans. The native trade of China conducted with foreign countries is not a clandestine commerce, unacknowledged by the Chinese laws, but has in every case at least the express sanction of the viceroy or governor of the province, who, on petition, decides the number of junks that shall be allowed to engage in it; and even enumerates the articles which it shall be legal to export and import. At every port, also, where such a foreign trade is sanctioned, there is a long or body of security merchants as at Canton; a fact which shows clearly enough that this importation is parcel of the laws or customs of China, and not a peculiar restraint imposed upon the intercourse with Europeans.

"The Chinese junks properly constructed pay no measurement duty, and no cumshaw or present; duties, however, are paid upon goods exported and imported, which seem to differ at the different provinces. They are highest at Amoy, and lowest in the island of Hainan. The Chinese traders of Siam informed me that they carried on the fairest and easiest trade, subject to the fewest restrictions, in the ports of Ningpo and Siang-hai in Chekiang, and Soucheon in Kiannan. Great dexterity seems every where to be exercised by the Chinese in evading the duties. One practice, which is very often followed, will afford a good example of this. The coasting trade of China is nearly free from all duties and other imposts. The merchant takes advantage of this; and intending in reality to proceed to Siam or Cochinchina, for example, clears a junk out for the island of Hainan, and thus avoids the payment of duties. When she returns she will lie 4 or 5 days off the mouth of the port, until a regular bargain be made with the Custom-house officers for the reduction of duties. The threat held out in such cases is to proceed to another port, and thus deprive the public officers of their customary perquisites. I was assured of the frequency of this practice by Chinese merchants of Cochinchina, as well as by several commanders of junks at Singapore. From the last-named persons I had another fact of some consequence, as connected with the Chinese trade; viz. that a good many of the junks, carrying on trade with foreign ports to the westward of China, often proceeded on voyages to the northward in the same season. In this manner they stated that about 20 considerable junks, besides a great many small ones, proceeded annually from Canton to Soucheon, one of the capitals of Kiannan, and in weak and commerce the rival of Canton, where they sold about 300 chests of opium at an advance of 50 per cent. beyond the Canton prices. Another place where the Canton junks, to the number of 5 or 6, repair annually, is Chintchow, in the province of Canton, within the Gulf of Pecheley, or Yellow Sea, and as far north as the 37th degree of latitude."—(*Appendix, Report of 1830, p. 296.*)

A Chinese ship or junk is seldom the property of one individual. Sometimes 40, 50, or even 100 different merchants purchase a vessel, and divide her into as many different compartments as there are partners; so that each knows his own particular part in the ship, which he is at liberty to fit up and secure as he pleases. The bulk-heads, by which these divisions are formed, consist of stout planks, so well caulked as to be completely water-tight. A ship thus formed may strike on a rock, and yet sustain no serious injury; a leak, springing in one division of the hold will not be attended with any damage to articles placed in another; and, from her firmness, she is qualified to resist a more than ordinary shock. A considerable loss of stowage is, of course, sustained; but the Chinese exports generally contain a considerable value in small bulk. It is only the very largest class of junks that have so many owners; but even in the smallest class the number is very considerable.

Population of China.—The most conflicting accounts have been given of the population of the Chinese empire. According to the statement of the Chinese authorities, it was found, by a census taken in 1813, to amount, for China Proper, to 367,821,000! Vast as this number must certainly appear, it does not, taking the prodigious extent of territory over which it is spread into account, give more than 268 individuals to a square mile,—a density inferior to that of several European countries. It is said that the inhabitants are in the practice of under-rating their numbers in their returns to government.—(*Companion to Anglo-Chinese Calendar, p. 156.*) We are, however, wholly without the means of coming to any positive conclusion as to the degree of credit to be attached to the census.

Price Current.—A perusal of the subjoined Price Current, published at Canton, the 1st of December, 1832, will give the reader a tolerable notion of the various articles and their prices in the Canton market, at the very height of the shipping season.

CANTON, 1st of December, 1832.

The above amount of teas is stated to be about 10,000 chests less than the average of the six years preceding.—*Am. Ed.*

CANVAS (Fr. *Toile à voile*; Ger. *Segeltuch*; It. *Canevazza*, *Lona*; Rus. *Parusnoe polotno*, *Parussina*; Sp. *Lona*), unbleached cloth of hemp or flax, chiefly used for sails for shipping. Masters of ships are required to make entry of all foreign-made sails and cordage, not being standing or running rigging, in use on board their respective ships, under a penalty of 100*l*. Sails in actual use, and fit and necessary for such ship, are imported free; but when otherwise disposed of, they are liable to an *ad valorem* duty of 20 per cent.—3 & 4 Will. 4. c. 56.) It had been the practice for a considerable period to grant bounties on the exportation of canvas or sail-cloth; these, however, finally ceased on the 1st of January, 1832. By an act passed in the reign of Geo. 2., new sails were ordered to be stamped with the maker's name and place of abode; but this regulation was repealed by the 10 Geo. 4. c. 43. § 9.

CAOUTCHOUC. "This substance, which has been improperly termed elastic gum, and vulgarly, from its common application to rub out pencil marks on paper, *India rubber*, is obtained from the milky juice of different plants in hot countries. The chief of these are the *Jatropha elastica*, and *Urceola elastica*. The juice is applied in successive coatings on a mould of clay, and dried by the fire or in the sun; and when of a sufficient thickness, the mould is crushed, and the pieces shaken out. Acids separate the caoutchouc from the thinner part of the juice at once, by coagulating it. The juice of old plants yields nearly two thirds of its weight; that of younger plants less. Its colour, when fresh, is yellowish white, but it grows darker by exposure to the air. The elasticity of this substance is its most remarkable property; when warmed, as by immersion in hot water, slips of it may be drawn out to 7 or 8 times their original length, and will return to their former dimensions nearly. Cold renders it stiff and rigid, but warmth restores its original elasticity. Exposed to the fire, it softens, swells up, and burns with a bright flame. In Cayenne it is used to give light as a candle."—(*Ure's Dictionary*.)

Caoutchouc promises to become an article of very considerable importance. M. de la Condamine, who was one of the first to communicate authentic information with respect to it, mentions, that, owing to its being impervious to water, it was made into boots by the Indians.—(*Voyage de la Rivière des Amazones*, p. 76.) It is now employed in a similar way here. Means have, within these few years, been discovered of reducing it to a state of solution; and when thin filaments of it are spread over cloth, or any other substance, it is rendered impervious alike to air and water. Air cushions and pillows are manufactured in this way; as are water-proof cloaks, hats, boots, shoes, &c. It is also extensively used in the manufacture of braces and other articles which it is desirable should possess considerable elasticity; and there can be little doubt that it will be employed still more extensively, and in a still greater variety of ways.

Previously to 1830, the importations of caoutchouc were comparatively inconsiderable. In that year they amounted to about 53,000 lbs.; while, during the year ended the 5th of April, 1833, the quantity entered for consumption amounted to 178,676 lbs. Its price varies from 6*d*. to 2*s*. 6*d*. per lb. The duty has been judiciously reduced from 5*d*. per lb. to 1*s*. per cwt.

CAPERS (Fr. *Capres*; Ger. *Kappern*; Du. *Kappers*; It. *Cappari*; Sp. *Alcaparraz*; Rus. *Kaperezi*; Lat. *Capparis*), the pickled buds of the *Capparis spinosa*, a low shrub, generally growing out of the joints of old walls, and the fissures of rocks, in most of the warm parts of Europe. Capers are imported into Great Britain from different parts of the Mediterranean; the best from Toulon in France. Some small salt capers come from Majorca, and a few flat ones from about Lyons. The duty of 6*d*. per lb. on capers produced, in 1832, 1,553*l*. 5*s*. 4*d*. nett, showing that 62,130 lbs. had been entered for home consumption.

CAPE-TOWN, the capital of the British territory in South Africa; lat. 33° 55' 56" S., long. 18° 21' E. It lies at the bottom of Table Bay, about 32 miles north from the Cape of Good Hope; and on the western side of the territory to which it gives its name. The

town was founded by the Dutch in 1650; and remained, with the territory subject to it, in their possession till it was taken by the British in 1795. It was restored to the Dutch by the treaty of Amiens; but being again captured by the British in 1806, it was finally ceded to us in 1815. The streets are laid out in straight lines, crossing each other at right angles; many of them being watered by canals, and planted on each side with oaks. The population in 1829-30 amounted, according to the statement in the *Cape Almanac*, to 13,103 free persons and 5,838 slaves, making together 18,491. The town is defended by a castle of considerable strength. Table Bay is capable of containing any number of ships; but it is exposed to the westerly winds, which, during the months of June, July, and August, throw in a heavy swell, that has been productive of many distressing accidents. This is fact, is the great drawback upon Cape-Town, which in all other respects is most admirably fitted for a commercial station. At the proper season, however, or during the prevalence of the easterly monsoon, Table Bay is perfectly safe; while the cheapness and abundance of provisions, the healthiness of the climate, and above all its position, render it a peculiarly desirable resting place for ships bound to or from India, China, Australia, &c.

The subjoined plan of Table Bay is taken from the survey of the Cape of Good Hope, executed by Lieut. Vidal and others, under the direction of Captain Owen.

References to the Plan.—A, Light-house, furnished with double lights. They may be seen clearly off deck at 16 miles' distance; but they do not appear double till within 6 or 7 miles to the westward; from the northward only one light is seen. B, Lion's Rump. C, Table Mountain. D, Devil's Peak, in lat. 33° 57' 2". E, Robbin Island. F, Salt River. The figures denote the soundings in fathoms.

Port Instructions.—Art. 1. On the arrival of merchant vessels in Table Bay, a proper berth will be pointed out to the masters thereof by the port captain, when he boards them; and no master of a merchant vessel shall shift his berth without permission from the port captain, unless in case of extreme emergency, when he must report his having done so as early as possible at the Port-office.

2. Should it be the intention of a master of a vessel to discharge or receive on board any considerable quantity of merchandises, a berth will be pointed out to him as close to the jetty, or other landing place, as the safety of the vessel and other circumstances will admit. And the master will then moor with two bower anchors, with an open hawse to the N. N. E., taking especial care, in so mooring, not to overlay the anchors of any other ship, or in any way to give the vessel near him a foul berth. Ships and vessels touching in Table Bay for water and refreshments alone, may ride at single anchor in the outer anchorage; but in this case it is particularly recommended to veer out 60 or 90 fathoms, if they ride by a chain cable, as the liability of starting or fouling the anchor, or breaking the chain, will thereby be greatly lessened; and if riding by a rope or coil cable, to run out a stream or good kedgie, to steady the ship; and in both cases the other bower anchor should be kept in perfect readiness to let go. When the vessel is properly moored with bower anchors, or well secured with a bower and stream anchor, and with good cables, buoys, and buoy-ropes, the master will then take the exact place of the ship by the bearings of 2 land-marks, and the depth of the water; and should accident occur, by which the vessel may drift from this situation, or lose her anchors, a good bearing and depth of water must be taken at the time, and the same must be notified in writing to the port captain. It is particularly recommended that vessels be kept as snug as possible, to counteract the effects of the periodical winds, which at times blow with considerable violence.

The district subject to Cape-Town is of very great extent, and contains every variety of soil, from the richest level land to the wildest mountain, and tracts destitute of even the appearance of vegetation. The climate fluctuates between the two extremes of rain and drought. On the whole, its advantages and disadvantages seem to be pretty equally balanced; and the prospects which it holds out to the industrious emigrant, if not very alluring, are certainly not discouraging.

Population.—According to the official returns, the population of the Cape Colony, in 1834, consisted of—

Whites and Free Coloured.		Negro Apprentices, formerly Slaves.		Total
Males.	Females.	Males.	Females.	
66,440	56,418	19,560	16,389	153,087

Produce.—Large quantities of corn of a very good description are produced in the immediate neighbourhood of Cape-Town; but its free exportation is restrained; none being allowed to be sent abroad, except a specified quantity decided upon by government after an investigation into the state of the crops! This restriction, Mr. Thompson tells us (*Travels in Southern Africa*, p. 395.), has neither produced regular prices nor averted scarcity. It has, however, been in no common degree injurious to the colony; and it is really surprising that systems of policy universally condemned in England should be allowed to exert a pernicious influence over any of our colonies. The Mauritius and Rio Janeiro are the principal markets for the corn of the Cape.

Large quantities of wine, and of what is called brandy, are produced at the Cape; but, with the exception of Constantia, they are very inferior. Objections have been made to the duties recently imposed on Cape wines; but, as it appears to us, without any good foundation. The real effect of allowing their importation at a comparatively low duty is not to occasion their direct consumption, but to cause them to be employed as a convenient means of adulterating others; so that, besides being injurious to the revenue, such reduction of duty promotes fraudulent practices, and detracts from the comforts of the public.

Considerable quantities of hides, skins, and horns are exported. They are principally brought from Algoa Bay, on the eastern side of the colony; and the trade has increased very fast during the last 6 or 7 years. Horses, butter, beef, ivory, whale oil, aloes, argol, and various other articles, are among the exports.

The imports at the Cape consist of woollens, cottons, hardware, earthenware, furniture, haberdashery, soap, paper, books, and portions of most articles used in this country. Piece goods and teak timber are imported from India, tea from China, sugar from India and the Mauritius, &c.

Revenue, &c.—The total revenue of the Cape Colony for the year 1832 amounted to 130,808*l.* 7*s.* 3*d.*; the expenditure for the same year was 126,899*l.* 6*s.* 9*d.*; leaving a balance of 3,919*l.* 6*s.* 10*d.* in favour of the former.

Trade.—The trade between the colonists and the independent natives is subjected to various restraints, of which it is not always very easy to discover the policy. The sale of gunpowder and fire-arms to the natives has been prohibited; a regulation which might have been a judicious one, had they not been able to obtain them from any one else. But the Americans have begun to trade at Natal, on the eastern coast, and have liberally supplied the natives with these and various other articles; so that by keeping up the regulation in question, we merely exclude ourselves from participating in what might be an advantageous trade.

According to the official accounts, the values of the products imported into, and exported from the Cape of Good Hope in 1834, were as under:—

	Estimated Value of Imports.					Estimated Value of Exports.				
	G. Britain.	British Colonies.	United States.	Other Foreign States.	Total.	G. Britain.	British Colonies.	United States.	Other Foreign States.	Total.
Cape-town . .	£76,048	£7,200	£,440	£6,233	£89,921	£171,210	£106,800	£,408	£14,922	£297,574
Simon's town .	508	5,556	5,391	5,967	17,422	6,770	61	—	6,832	24,283
Port-Elizabeth .	56,908	2,430	—	19	6,117	61,428	4,789	—	66	66,283
Total.	333,430	35,096	8,740	58,640	435,706	239,268	111,550	4,784	15,324	360,926

During the same year, the ships and tonnage entering inwards from, and clearing outwards to, the undermentioned countries, were:—

Ports.	Ships Inwards.					Ships Outwards.

Articles exported from the Cape.—The following account of the exports from the Cape in 1830 is taken from the *Cape Almanac* for 1831. It is the most complete of any that we have seen, and its accuracy may be depended upon.

Articles, the Produce and Manufacture of the Cape Colony, exported during 1830.

Articles.	Amount.	Articles.	Amount.
Aloes, 375,736 lbs. and 51 casks and cases, estimated value	2,794 0 0	Salt, 258 muids	25 16 0
Argal, 22,432 lbs.	538 0 0	Sheep, 3,323 in number; pigs, 25; goats, 2	1,568 10 0
Butter, 101,519 lbs. and 192 casks and jars	5,570 16 4	Spirits, viz.	
Beef, pork, and tongues, salted, 1,780 casks and tugs	4,928 7 1	Brandy, 1,406 1-2 gallons	85 0 0
Brew, 3,205 gallons	240 0 0	Liqueurs, 24 gallons	20 0 0
Biscuits and rusk, 30,000 lbs.	238 0 0	Soap, 1,218 lbs.	24 0 0
Corn, grain, meal, &c., viz.		Saddlery and harness	25 0 0
Barley and oats, 18,556 muids	4,168 0 0	Shins, viz.	
Beans and peas, 60 muids	87 0 0	Great, 91,791 pieces and 56 bundles	514 15 0
Beans, 36,833 lbs.	131 0 0	Small, 3,323 pieces	884 0 0
Flour, 73,534 lbs.	585 0 0	Sheep, 77,543 pieces	2,785 0 0
Wheat, 24,386 muids	20,443 0 0	Calf, 1,414 pieces and 9 bundles	189 0 0
Cheese	31 10 0	Rabbit and mole, 480 pieces	14 0 0
Curiosities	497 12 6	Karosses, 1 case	7 10 0
Confectionery	29 0 0	Tallow, 12,283 lbs.	408 0 0
Candles, 11,564 lbs.	263 0 0	Vinegar, 428 gallons	13 0 0
Carriages	86 0 0	Wine, ordinary, 1,548,977 1-2 gallons	146,308 0 0
Feathers, ostrich, 530 lbs. and 34 boxes	1,917 0 0	Constantia, 3,374 gallons	2,197 0 0
Fish	1,535 10 6	Wool, 23,280 lbs. and 11 bags	1,620 0 0
Fruits, dried, 138,833 lbs.	4,380 0 0	Wood	72 10 0
Green	49 0 0	Whalebone, 13,038 lbs. and 283 bundles	1,000 0 0
Garden seeds and bulbs	413 0 0	Wax, bees', 810 lbs.	92 0 0
Gum, 16,943 lbs. and 2 cases	96 0 0	Zebra, 4 head	148 0 0
Hides, horse and ox, 78,035 pieces	83,723 15 5		
Horns, 244,810 in number	5,938 0 0		
Hay, 20,160 lbs.	79 0 0		
Horses, 314 in number	5,763 0 0		
Iron, 25,497 lbs. and 327 tuns, bundles and casks	2,798 0 0		
Lime, 72 half-asses	10 0 0		
Leather, 2 cases	10 0 0		
Mules, 48 head	622 0 0		
Oil, whale, 34,892 gallons and 80 casks	4,023 0 0		
Oxen, cows, and calves, 444 head	1,738 0 0		
Palmates	86 0 0		
Potatoes and onions, 697 muids	169 0 0		
Poultry	138 0 0		

CUSTOM-HOUSE REGULATIONS, FEES, &c.

On Admission of a Ship to Duty, &c.—

1. The ship's register must be lodged in the Custom-house, until the vessel clear again for sea.

2. The manifest of the cargo on board for this place must be deposited there.

3. The contents of cargo shipped from any place in Great Britain or Ireland for this place must also be deposited there.

From the endorsement of each cask, an extract is to be made, which will show the contents of the different packages on board, and facilitate the making out of the entries.

4. In making out the declarations, the value by invoice of the different commodities must be given by the importer, in order to enable the Customs-house to estimate the duties payable, and to send it to government, annually, the required statement of the total duties received upon the several articles imported.

In the clearing of a Ship outwards, &c.—

1. The master must produce a certificate from the harbour master, that the tonnage duties of the port have been paid.

2. The export manifest must be examined with the permits granted, in order to ascertain whether packages have been shipped without a permit.

3. Export declarations must be sent in by the several shippers, of the quantity and value of goods or produce shipped by them, in order to ascertain the amount of the exports of the colony.

4. When Cape wine is shipped for exportation to England, a bill of lading of the particular description of such wine must be delivered, and a certificate granted by the collector or comptroller of customs, to the master, of his having received such bill of lading.

5. Manifests, in triplicate, of such goods as are shipped from the Cape for Great Britain, must be delivered, signed, and sworn to by the master, before the collector or comptroller.

The original of which is to be returned to the master to accompany the cargo.

The duplicate is to be forwarded, by the first conveyance sailing subsequently to the vessel exhibiting the original, to the commissioners of customs in England or Scotland respectively, as the case may happen.

And the triplicate, written on or covered with a stamp, to remain as an office copy.

N. B.—Ships taking in cargo for other parts of the world, are required to deliver only original and duplicate manifests.

Description of Stamps required.	L. s. d.
From 1 to 10 tons of goods shipped from the Cape	0 7 6
10 - 50	0 15 0
50 - 50	1 10 0
50 and upwards	2 5 0

6. When whale oil or whale bone is shipped from the Cape for England, the proprietor of the whale fishery is to make oath, before the collector or comptroller, that the same were bona fide the produce of fish, or creatures living in the sea, actually taken and caught wholly by his Majesty's subjects usually residing in this colony; and the collector or comptroller is to grant a certificate under his hand and seal to the master, testifying that such oath hath been made before him.

7. When salted seal skins are shipped from the Cape for England, the shipper is to make oath before the collector or comptroller, that the same are really and bona fide the skins of seals taken and caught on the coast appertaining to the Cape of Good Hope, wholly by his Majesty's subjects usually residing in this colony; and that all the salt used in the curing or preserving of the same was not made in, or exported from, Great Britain or Ireland; and the collector or comptroller is to grant a certificate to the master accordingly.

8. The original manifest, and a copy thereof, of ships touching at the Cape of Good Hope, with cargoes from the eastward for England, to be delivered and run by the master before the collector or comptroller. The original is to be returned to the master, and the copy forwarded from the Custom house to the commissioner of customs.

9. If any part of such cargo shall be discharged at the Cape of Good Hope, the collector or comptroller is to endorse upon the manifest the part of the cargo so discharged, and verify the same.

10. The usual fees to be charged, viz.—	L. s. d.
Entrance	0 8 0
Clearance	0 6 0
Landing (or shipping) cargo	0 15 0
Landing (or shipping) part cargo	0 7 6
Customs: Landing (or shipping) part cargo	0 1 6
Manifest of goods taken in-bay	0 1 6

Customs: Entrance—gratis	L. s. d.
Clearance	0 1 6
Landing (or shipping) cargo	0 3 0

In obtaining Permits, observe—
1. No credit will be given to any person whatever.
2. The duties are to be collected on all imports, whether intended for private use, for presents, or for trade; except on wearing apparel accompanying the proprietor.

On opium.
On garden seeds.
On bones (exclusive of goldings).
On goods lodged in the Custom house stores for exportation.
On goods transhipped in the bay for other ports (provided neither barge nor sale of them have taken place).

On naval stores.
On government stores (provided an order be sent from government).

§ 12. 6d. is charged for every permit for goods exceeding the value of 7l. 10s. shipped or landed, and 3d. on goods under 7l. 10s. value; as also 3d. for every baggage permit.

Wharfage: Dues.	L. s. d.
Every pipe, puncheon, or cask equal in size or larger than a pipe	0 1 6
Every half-pipe, or any description of cask larger than a half-cask	0 0 8
For every butt at the crane	0 0 8
For every horse	0 7 6
For all oxen	0 1 6
For a sheep	0 0 4
For a pig	0 0 4
For every cask measuring 1-2 ton, or larger	0 1 6

Upon all vessels entering this port for the purposes of trade, per ton, 4 l. 2s.

Upon all vessels entering this port to procure refreshments, or for any purpose short of trade, per ton, 2 l. 4s.

Regulations as to Trade.—All goods, the produce or manufacture of the Cape of Good Hope, or the territories or dependencies thereof, are subject (on importation into England) to the same duties as are imposed on the like articles, the produce or manufacture of the British possessions within the limits of the East India Company's charter, except when any other duty is expressly laid on them.—(3 & 4 Will. 4. c. 58. § 9.)

The 6 Geo. 4. c. 114. enacts, that it shall be lawful for his Majesty, by any order in council to be issued from time to time, to give such directions and make such regulations touching the trade and commerce to and from any British possessions in Africa, as to his Majesty in council shall appear most expedient and salutary; and if any goods be imported or exported in any manner contrary to such order of his Majesty in council, the same shall be forfeited, together with the ship importing or exporting the same.—§ 73.

It shall not be lawful for any person to re-export, from any of his Majesty's possessions abroad, to any foreign place, any coals, the produce of the United Kingdom; and no such coals shall be shipped at any of such possessions, to be exported to any British place, until the exporter or the master of the exporting vessel shall have given bond, with one sufficient surety, in double the value of the coals, that such coals shall not be landed at any foreign place.—§ 85.

It shall be lawful for the shipper of any wine, the produce of the Cape of Good Hope or of its dependencies, which is to be exported thence, to go before the chief officer of customs, and make and sign an affidavit before him, that such wine was really and bona fide the produce of the Cape of Good Hope or of its dependencies; and such officer is hereby authorized and required to administer such affidavit, and to grant a certificate thereof, setting forth in such certificate the name of the ship in which the wine is to be exported, and the destination of the same.—§ 78.

Duties.—A duty of 2½ per cent. is charged on the importation of all articles of the growth, production, or manufacture of Great Britain, or of the British plantations in the West Indies.

A duty of 10 per cent. is charged on the importation (by British vessels) of all articles of the growth, production, or manufacture of foreign Europe, America, or the eastward of the Cape, to be levied according to the declaration of the value by the importer. No abatement or reduction whatever admitted, except of the duties and landing charges payable on the importation thereof.

An additional duty of 1s. 6d. per gallon is charged on the importation of arrack, rum, gin, liqueurs, whiskey, or other spirituous liquors, brandy excepted.

No tea may be landed, unless the permission of the East India Company's agent be first obtained. No ammunition may be landed or shipped, unless the permission of government be first obtained.

Commissions.—The following rates of commission are charged and allowed, namely—

	Per Cent.
1. On the nett amount of all sales of goods by public sale, and on the gross amount of all other sales	5
2. Goods consigned, and afterwards withdrawn	2½
3. On purchases effected from the proceeds of goods on which a commission has already been charged	2½
4. On all other purchases, or shipments of goods	5
5. On the sale or purchases of ships, houses, or lands	2½
6. On ships' disbursements	5
7. On procuring freight	5
8. On collecting freight on ships bound to this place	2½
9. On guaranteeing bills or bonds by enforcement or otherwise	2½
10. On collecting debts without recourse to law	2½
Ditto, where legal proceedings are taken	5
11. On effecting remittances by bills of exchange	1
12. On the negotiation of bills	1
13. On effecting insurances	0½
14. On the administration of estates	5
15. On cash advances	2½
16. On the debtor and creditor sides of cash accounts, on which no other commission is charged	1

Money.—Accounts are either kept in pounds, shillings, pence, and farthings, or in six-pence, schillings, and stivers.

1 Stiver	=	¼ of a Penny.
6 Stivers	=	3 Pence, or 1 schilling.
8 Schillings	=	18 Pence, or 1 six-dollar.

The commissariat department grant bills on the Treasury at a premium of 1½ per cent.

Weights and Measures.—The weights made use of in the Cape are derived from the standard pound of Amsterdam; and those assized are from 50 lbs. down to 1 loot, or the 32d part of a pound, which is regarded as unity.

Liquid Measures.

16 Flasks	=	1 Anker.
4 Ankers	=	1 Aam.
4 Aams	=	1 Leaguer.

Corn Measures.

4 Schepels	=	1 Muid.
10 Muids	=	1 Load.
63 Winch. bushels, or 4 schepels	=	3 Imp. bush.

very nearly.

The muid of wheat weighs, at an average, about 110 lbs. Dutch, being somewhat over 100 lbs. English.

Cloth and Long Measures.

12 Rhymland inches	=	1 Rhymland foot
37 ditto	=	1 Dutch ell.
144 ditto	=	1 Square foot.
144 Square feet	=	1 Rood.
600 Roods	=	1 Morgen.

Colonial Weights and Measures compared with those of England.

Weights.

60 lbs. Dutch	=	nearly 100 lbs. English avoirdupois.
160 lbs. English	=	nearly 92 lbs. Dutch.

Wine or Liquid Measures.

1 Flask	=	0.6 Old gallon, or 4.946 Imperial gallons.
1 Anker	=	94 ditto, 7.9 ditto.
1 Aam	=	38 ditto, 31.4 ditto.
1 Leaguer	=	153 ditto, 126.6 ditto.
1 Pipe	=	110 ditto, 91.6 ditto.

Saldanha Bay, in lat. 33° 6' S., long. 17° 58' 15" E., being 16½ leagues north of Cape-Town, is one of the best and most commodious harbours in the world. It is perfectly safe at all seasons.

Besides the *Cape Almanac*, one of the best of that class of publications, and the other authorities referred to, we have derived part of the above details from papers laid before the Finance Committee.

CAPITAL, in political economy, is that portion of the produce existing in a country which may be made directly available, either to the support of human existence, or to the facilitating of production.—(*Principles of Political Economy*, 2d ed. p. 97.) But in commerce, and as applied to individuals, it is understood to mean the sum of money which a merchant, banker, or trader adventures in any undertaking, or which he contributes to the common stock of a partnership. It signifies likewise the fund of a trading company, or corporation; in which sense the word *stock* is generally added to it. Thus we say the *capital stock* of the Bank, &c. The profit derived from any undertaking is estimated by the *rate* which it bears to the capital that was employed.

[The definition of capital given by the author seems to be too general. It makes no real difference between wealth and capital; for surely every portion of wealth "may be made directly available, either to the support of human existence, or to the facilitating of production." The editor has defined capital to be that portion of wealth which is not simply liable to be applied to the purpose of again producing wealth, but which is *actually so applied*. See his *Principles of Political Economy*, book i. chapter 4.—*Am. Ed.*]

CAPSICUM. See **PEPPER**.

CARAVAN, an organized company of merchants, or pilgrims, or both, who associate together in many parts of Asia and Africa, that they may travel with greater security through deserts and other places infested with robbers; or where the road is naturally dangerous. The word is derived from the Persian *kervan*, or *cârân*, a trader or dealer.—(*Shaw's Travels in the Levant*, p. 9. 4to ed.)

Every caravan is under the command of a chief or aga (*caravan-bashi*), who has frequently under him such a number of troops or forces as is deemed sufficient for its defence. When it is practicable, they encamp near wells or rivulets; and observe a regular discipline. Camels are used as a means of conveyance, almost uniformly, in preference to the horse or any other animal, on account of their wonderful patience of fatigue, eating little, and subsisting three or four days or more without water. There are generally more camels in a caravan than men.—(See **CAMEL**.)

The commercial intercourse of Eastern and African nations has been principally carried on, from the remotest period, by means of caravans. During antiquity, the products of India and China were conveyed either from Suez to Rhinocelura, or from Buseerah, near the head of the Persian Gulf, by the Euphrates, to Babylon, and thence by Palmyra, in the Syrian desert, to the ports of Phœnicia on the Mediterranean, where they were exchanged for the European productions in demand in the East. Sometimes, however, caravans set out directly from China, and, occupying about 250 days in the journey, arrived on the shores of the Levant, after traversing the whole extent of Asia.—(*Gibbon*, vol. vii. p. 93.) The formation of caravans is, in fact, the only way in which it has ever been possible to carry on any considerable internal commerce in Asia or Africa. The governments that have grown up in those continents have seldom been able, and seldomer indeed have they attempted, to render travelling practicable or safe for individuals. The wandering tribes of Arabs have always infested the immense deserts by which they are intersected; and those only, who are sufficiently powerful to protect themselves, or sufficiently rich to purchase an exemption from the predatory attacks of these freebooters, can expect to pass through territories subject to their incursions, without being exposed to the risk of robbery and murder.

Since the establishment of the Mohammedan faith, religious motives, conspiring with those of a less exalted character, have tended to augment the intercourse between different parts of the Eastern world, and to increase the number and magnitude of the caravans. Mohammed enjoined all his followers to visit, once in their lifetime, the Caaba, or square building in the temple of Mecca, the immemorial object of veneration amongst his countrymen; and in order to preserve continually upon their minds a sense of obligation to perform this duty, he directed that, in all the multiplied acts of devotion which his religion proscribes, true believers should always turn their faces towards that holy place. In obedience to a precept so solemnly enjoined and sedulously inculcated, large caravans of pilgrims used to assemble annually in every country where the Mohammedan faith is established; and though, owing either to a diminution of religious zeal, or the increasing difficulties to be encountered in the journey, the number of pilgrims has of late years declined greatly, it is still very considerable. Few, however, of the pilgrims are actuated only by devotional feelings. Commercial ideas and objects mingle with those of religion; and it redounds to the credit of Mohammed, that he granted permission to trade during the pilgrimage to Mecca; providing at the same time for the temporal as well as the lasting interests of his votaries. "It shall be no crime in you, if ye seek an increase from your Lord by trading during the pilgrimage."—(*Saïd's Koran*, c. 2. p. 86. ed. 1764.)

The numerous camels of each caravan are loaded with those commodities of every country which are of easiest carriage and readiest sale. The holy city is crowded during the month of Dhalhaja, corresponding to the latter part of June and the beginning of July, not only with zealous devotees, but with opulent merchants. A fair or market is held in Mecca and its vicinity, on the twelve days that the pilgrims are allowed to remain in that city, which need to be one of the best frequented in the world, and continue to be well attended.

"Few pilgrims," says Burekhardt, "except the mendicants, arrive without bringing some productions of their respective countries for sale: and this remark is applicable as well to the merchants, with whom commercial pursuits are the main object, as to those who are actuated by religious zeal; for, to the latter, the profits derived from selling a few articles at Mecca diminish, in some degree, the heavy expenses of the journey. The Moggrebyns (pilgrims from Morocco and the north coast of Africa) bring their red bonnets and woollen cloaks; the European Turks, shoes and slippers, hardware, embroidered stuffs, sweetmeats, amber, trinkets of European manufacture, knit silk purses, &c.; the Turks of Anatolia bring carpets, silks, and Angora shawls; the Persians, Cashmere shawls and large silk handkerchiefs; the Afghans, tooth-brushes, called *Mesook Kattary*, made of the spongy boughs of a tree growing in Bokhara, beads of a yellow soapstone, and plain coarse shawls manufactured in their own country; the Indians, the numerous productions of their rich and extensive region; the people of Yemen, snakes for the Persian pipes, sandals and various other works in leather; and the Africans bring various articles adapted to the slave trade. The pilgrims are, however, often disappointed in their expectations of gain; want of money makes them hastily sell their little adventures at the public auctions, and often obliges them to accept very low prices."—(*Travels in Arabia*, vol. ii. p. 21.)

The two principal caravans which yearly rendezvous at Mecca are those of Damascus and Cairo. The first is composed of pilgrims from Europe and Western Asia; the second of Mohammedans from all parts of Africa.

The Syrian caravan is said by Burekhardt to be very well regulated. It is always accompanied by the pacha of Damascus, or one of his principal officers, who gives the signal for encamping and starting by firing a musket. On the route, a troop of horsemen ride in the front, and another in the rear to bring up the stragglers. The different parties of pilgrims, distinguished by their provinces or towns, keep close together. At night torches are lighted, and the daily distance is usually performed between 3 o'clock in the afternoon and an hour or two after sunrise on the following day. The Bedouins or Arabs, who carry provisions for the troops, travel by day only, and in advance of the caravans; the encampment of which they pass in the morning, and are overtaken in turn and passed by the caravan on the following night, at their own resting place. The journey with these Bedouins is less fatiguing than with the great body of the caravan, as a regular night's rest is obtained; but their bad character deters most pilgrims from joining them.

At every watering-place on the route is a small castle and a large tank, at which the camels water. The castles are garrisoned by a few persons, who remain the whole year to guard the provisions deposited there. It is at these watering-places, which belong to the Bedouins, that the sheikhs of the tribe meet the caravan, and receive the accustomed tribute for allowing it to pass. Water is plentiful on the route; the stations are no where more distant than 11 or 12 hours' march; and in winter, pools of rain-water are frequently found. Those pilgrims who can travel with a litter, or on commodious camel-saddles, may sleep at night, and perform the journey with little inconvenience: but of those whom poverty, or the desire of speedily acquiring a large sum of money, induces to follow the caravan on foot, or to hire themselves as servants, many die on the road from fatigue.—(*Travels in Arabia*, vol. ii. p. 3—9.)

The caravan which sets out from Cairo for Mecca is not generally so large as that of Damascus; and its route along the shores of the Red Sea is more dangerous and fatiguing. But many of the African and Egyptian merchants and pilgrims sail from Suez, Coaseir, and other ports on the western shore of the Red Sea, for Djidda, whence the journey to Mecca is short and easy.

The Persian caravan for Mecca sets out from Bagdad; but many of the Persian pilgrims are now in the habit of embarking at Bussorah, and coming to Djidda by sea.

Caravans from Bagdad and Bussorah proceed to Aleppo, Damascus, and Diarbeker, laden with all sorts of Indian, Arabian, and Persian commodities; and large quantities of European goods, principally of English cottons, imported at Bussorah, are now distributed throughout all the eastern parts of the Turkish empire by the same means. The intercourse carried on in this way is, indeed, every day becoming of more importance.

The commerce carried on by caravans, in the interior of Africa, is widely extended and of considerable value. Besides the great caravan which proceeds from Nubia to Cairo, and is joined by Mohammedan pilgrims from every part of Africa, there are caravans which have no object but commerce, which set out from Fez, Algiers, Tunis, Tripoli, and other states on the sea-coast, and penetrate far into the interior. Some of them take as many as 60 days to reach the place of their destination; and as their rate of travelling may be estimated at about 18 miles a day at an average, the extent of their journeys may easily be computed. As both the time of their outset and their route is known, they are met by the people of the countries through which they travel, who trade with them. Indian goods of every kind form a considerable article in this traffic; in exchange for which, the chief commodity the inhabitants have to give is slaves.

Three distinct caravans are employed in bringing slaves and other commodities from Central Africa to Cairo. One of them comes direct from Mourzouk, the capital of Fezzan, across the Libyan desert; another from Senaar; and the third from Darfur. They do not arrive at stated periods, but after a greater or less interval, according to the success they have had in procuring slaves, ivory, gold dust, drugs, and such other articles as are fitted for the Egyptian markets. The Mourzouk caravan is said to be under the best regulations. It is generally about 60 days on its passage; and seldom consists of less than 100, or of more than 300, travellers. The caravans from Senaar and Darfur used formerly to be very irregular, and were sometimes not seen in Egypt for 2 or 3 years together; but since the occupation of the former by the troops of Mohammed Ali, the intercourse between it and Egypt has become comparatively frequent and regular. The number of slaves imported into Egypt by these caravans is said to amount, at present, to about 10,000 a year. The departure of a caravan from Darfur is looked upon as a most important event; it engages for a while the attention of the whole country, and even forms a kind of era.—(*Brown's Travels in Africa*, 2d ed. p. 278.) A caravan from Darfur is considered large, if it has 2,000 camels and 1,000 slaves. Many of the Moorish pilgrims to Mecca cross the sea from Souakin and Massoush to the opposite coast of Arabia, and then travel by land to Mecca; and Burckhardt states, that of all the poor pilgrims who arrive in the Hedjaz, none bear a more respectable character for industry than those from Central Africa.

Caravans are distinguished into *heavy* and *light*. Camels loaded with from 500 to 600 lbs.* form a heavy caravan; light caravans being the term applied to designate those formed of camels under a moderate load, or perhaps only half loaded. The mean daily rate at which heavy caravans travel is about 18½ miles, and that of light caravans 32 miles.

The safety of a caravan depends materially on the conduct of the *caravan-bashi*, or leader. Niebuhr says, that when the latter is intelligent and honest, and the traveller understands the language, and is accustomed to the Oriental method of travelling, an excursion through the desert is rarely either disagreeable or dangerous. But it is not unusual for the Turkish pashas to realise considerable sums by selling the privilege of conducting caravans; and it is generally believed in the East, that leaders so appointed, in order to indemnify themselves, not unfrequently arrange with the Arabian sheikhs as to the attack of the caravans, and share with them in the booty! At all events, a leader who has paid a large sum for the situation, even if he should be honest, must impose proportionally heavy charges on the association. Hence the best way in travelling with caravans is, to attach oneself to one conducted by an active and experienced merchant, who has a considerable property embarked in the expedition. With ordinary precaution, the danger is then very trifling. It would be easy, indeed, were there any thing like proper arrangements made by government, to render travelling by caravans, at least on all the great routes, abundantly secure.—(*Niebuhr, Voyage en Arabie*, tome ii. p. 184. ed. Amst. 1780.)

No particular formalities are required in the formation of a caravan. Those that start at fixed periods are mostly under the control of government, by whom the leaders are appointed. But, generally speaking, any dealer is at liberty to form a company and make one. The individual in whose name it is raised is considered as the leader, or *caravan-bashi*, unless he

* This is the burden of the small camel only. The large ones usually carry from 700 to 1,000 lbs.

appoint some one else in his place. When a number of merchants associate together in the design, they elect a chief, and appoint officers to decide whatever controversies may arise during the journey.—(For further details with respect to caravans, see the *Modern Part of the Universal History*, vol. xiv. pp. 214—243.; *Robertson's Disquisition on Ancient India*, Note 54.; *Rees's Cyclopædia*, art. *Caravan*, most of which is copied from Robertson, though without a single word of acknowledgment; *Burckhardt's Travels in Arabia*, vol. ii. *passim*; *Urkhart on Turkey and its Resources*, p. 137. p. 151., &c.)

CARAVANSERA, a large public building or inn appropriated for the reception and lodgment of the caravans. Though serving in lieu of inns, there is this radical difference between them,—that, generally speaking, the traveller finds nothing in a caravansera for the use either of himself or his cattle. He must carry all his provisions and necessaries with him. They are chiefly built in dry, barren, desert places; and are mostly furnished with water brought from a great distance and at a vast expense. A well of water is, indeed, indispensable to a caravansera. Caravanseras are also numerous in cities; where they serve not only as inns, but as shops, warehouses, and even exchanges.

CARAWAY-SEED (Fr. *Carvi*, *Cumin des prés*; Ger. *Keummel*, *Brodkümmel*; It. *Corvi*), a small seed, of an old oblong and slender figure, pointed at both ends, and thickest in the middle. It is the produce of a biennial plant (*Carum carvi*), with a taper root like a parsnep, but much smaller. It should be chosen large, new, of a good colour, not dusty, and of a strong agreeable smell. It is principally used by confectioners; and is extensively cultivated in several parts of Essex.

CARBUNCLE (Ger. *Karfunkel*; Fr. *Escarboucle*; It. *Carbonchio*; Sp. *Carbunculo*; Lat. *Carbunculus*), a precious stone of the ruby kind, of a very rich glowing blood-red colour, highly esteemed by the ancients.—(See RUBY.)

CARD (Fr. *Cartes*; Ger. *Kardstöcken*, *Karden*, *Wollkräusen*; It. *Cardi*; Rus. *Bardü*; Sp. *Cardas*), an instrument, or comb, for arranging or sorting the hairs of wool, cotton, &c. Cards are either fastened to a flat piece of wood, and wrought by the hand; or to a cylinder, and wrought by machinery.

CARDAMOMS (Fr. *Cardamomes*; Ger. *Kardamom*; It. *Cardamomi*; Sp. *Kardamomos*; Hind. *Gujarati elachi*), seed capsules produced by a plant, of which there are different species growing in India, Cochinchina, Siam, and Ceylon. The capsules are gathered as they ripen; and when dried in the sun, are fit for sale. The small capsules, or lesser cardamoms, are produced by a particular species of the plant, and are the most valuable. They should be chosen full, plump, and difficult to be broken; of a bright yellow colour; a piercing smell; with an acrid, bitterish, though not very unpleasant taste; and particular care should be taken that they are properly dried. They are reckoned to keep best in a body, and are therefore packed in large chests, well jointed, pitched at the seams, and otherwise properly secured; as the least damp greatly reduces their value. The best cardamoms are brought from the Malabar coast. They are produced in the recesses of the mountains, by felling trees, and afterwards burning them; for wherever the ashes fall in the openings or fissures of the rocks, the cardamom plant naturally springs up. In Soonda Balagat, and other places where cardamoms are planted, the fruit or berry is very inferior to that produced in the way now mentioned. The Malabar cardamom is described as a species of bulbous plant, growing 3 or 4 feet high. The growers are obliged to sell all their produce to the agents of government, at prices fixed by the latter, varying from 550 to 700 rupees the candy of 600 lbs. avoirdupois; and it is stated that the contractor often puts an *enhanced value on the coins* with which he pays the mountaineers; or makes them take in exchange tobacco, cloths, salt, oil, betel nut, and such necessary articles, at prices which are frequently, no doubt, estimated above their proper level. Such a system ought assuredly to be put an immediate end to. Not more than *one hundredth* part of the cardamoms raised in Malabar are used in the country. They are sent in large quantities to the ports on the Red Sea and the Persian Gulf, to Sind, up the Indus, to Bengal, Bombay, &c. They form a universal ingredient in curries, pillaus, &c. The market price, at the places of exportation on the Malabar coast, varies from 800 to 1,200 rupees the candy.—(*Milburn's Orient. Commerce*, and the valuable evidence of T. H. Baber, Esq., before the Lords' Committee of 1830, p. 216.)

Malabar cardamoms are worth at present (September, 1833), from 3s. 8d. to 3s. 10d. a pound in the London market, duty (1s.) included. Ceylon cardamoms are worth from 1s. 8d. to 2s. 2d.

CARDS, or PLAYING CARDS (Du. *Kaarten*, *Speelkarden*; Fr. *Cartes à jouer*; Ger. *Karten*, *Spielkarten*; It. *Carte da giuoco*; Rus. *Kartü*; Sp. *Carras*, *Naipes*; Sw. *Korfs*). The only thing necessary to be noticed in this place with respect to cards, is the regulations as to their manufacture, sale, and the payment of the duty.

It is regulated by the 9 Geo. 4. c. 18., that an annual license duty of 5s. shall be paid by every maker of playing cards and dice. The duty on every pack of cards is 1s. and is to be specified on the ace of spades. Cards are not to be made in any part of Great Britain, except the metropolis; nor in Ireland, except in Dublin and Cork; under a penalty of 100l. Cards are to be enclosed in wrappers, with such

marks as the commissioners of stamps may appoint. Before license can be had, bond must be given to the amount of 500*l.* for the payment of the duties, &c. Selling or exposing to sale any pack of cards not duly stamped, subjects a licensed maker to a penalty of 50*l.*; and any one else to a penalty of 10*l.* Any person having in his possession, or using, or permitting to be used, any pack of cards not duly stamped, to forfeit 5*l.* Second-hand cards may be sold by any person, if sold without the wrapper of a licensed maker; and in packs containing not more than 52 cards, including an ace of spades duly stamped, and enclosed in a wrapper with the words "*Second-hand Cards*" printed or written in distinct characters on the outside: penalty for selling second-hand cards in any other manner, 20*l.*

An Account of the Duty received on Playing Cards in Great Britain and Ireland in each Year from 1820, specifying the Rates of Duty charged.—(*Parl. Paper*, No. 427. *Sees*. 1832.)

Year.	Great Britain.			Ireland.		
	Rate.	Amount of Duty.		Rate.	Amount of Duty.	
		£	s. d.		£	s. d.
1820	2s. 6d. per pack	21,997	5 0	2s. per pack	2,019	14 1
1821	—	21,247	5 0	—	1,821	16 8½
1822	—	21,179	17 6	—	1,642	0 11
1823	—	22,066	13 6	—	1,657	4 5½
1824	—	25,874	19 6	—	1,598	12 8½
1825	—	22,577	17 6	—	1,559	8 0
1826	—	18,300	15 0	—	1,037	12 6

1829	—	15,543	14 0		468	11 0
1830	—	14,508	7 0		244	12 0
1831	—	14,400	2 0		104	18 0

CARMEN, of the City of London, are constituted a fellowship by act of common council. The rates which they are allowed to charge, and the regulations by which they are to be guided, are settled at the quarter sessions. In other respects they are subjected to the rule of the president and governors of Christ's Hospital, to whom the owner of every cart pays an annual licence duty of 17s. 4d.

Carmen are to help to load and unload their carts; and if any carmen exacts more than the regular rates, upon due proof, before the Lord Mayor, or any two magistrates, he shall suffer imprisonment for the space of 31 days.

If any person shall refuse to pay any carman his hire, according to the regular rates, upon complaint made, the president of Christ's Hospital, or a justice of the peace, may compel payment.

Merchants or other persons may choose what cart they please, except such as stand for wharf-work, tackle-work, crane-work, at shops and merchants' houses, which are to be taken in turn; and every carman standing with his empty cart next to any goods to be loaded, shall, upon the first demand, load the same for the accustomed rates; and if any person shall cause a carman to attend at his house, shop, warehouse, or cellar, with his loaded cart, the carman being willing to help to unload the same, he shall pay the carman after the rate of 12d. for every hour after the first half-hour for his attendance.

Every licensed carman is to have a piece of brass fixed upon his cart, upon which is to be engraven a certain number; which number, together with the carman's name, is registered in a register kept at Christ's Hospital; so that, in case of any misbehaviour, the party offended, by taking notice of the number of the cart, may search for it in the register, and the name will be found.

Carmen not conforming to these rules, or working without a numbered piece of brass fixed on the cart, may be suspended from their employment.

Carmen riding upon the shafts of their carts, or sitting within them, not having some person on foot to guide the horses, shall forfeit 10*l.*

CARMINE (Ger. *Karmün*; Du. *Karmyn*; Fr. *Carmine*; It. *Corminio*; Lat. *Carminium*), a powder of a very beautiful red colour, bordering upon purple, and used by painters in miniature. It is a species of *lake*, and is formed of finely pulverised cochineal. It is very high priced.

CARNELIAN. See AGATE.

CARPET, CARPETS (Ger. *Teppiche*; Du. *Tapyten*, *Vlier-tapyten*; Fr. *Tapis*; It. *Tappeti*; Sp. *Alfombras*, *Alcatifas*, *Tapetes*; Rus. *Kowrú*, *Kilimi*). Persian and Turkish carpets are the most esteemed. In England, carpets are principally manufactured at Kidderminster, Wilton, Cirencester, Worcester, Axminster, &c.; and in Scotland, at Kilmarnock. Those made at Axminster are believed to be very little, if any thing, inferior to those of Persia and Turkey.

CARRIAGES. See COACHES.

CARROT (*Daucus carota* Lin.), a biennial plant, a native of Britain. Though long known as a garden plant, its introduction into agriculture has been comparatively recent. The uses of the carrot in domestic economy are well known. It is extensively cultivated in Suffolk, whence large quantities are sent to the London market. Horses are said to be remarkably fond of carrots.

CARRIERS, are persons undertaking for hire to carry goods from one place to another.

Proprietors of carts and wagons, masters and owners of ships, hoymen, lightermen, barge-men, ferry-men, &c. are denominated common carriers. The master of a stage coach who only carries passengers for hire, is not liable for goods; but if he undertake to carry goods and passengers, then he is liable for both as a common carrier. The post-master general is not a carrier in the common acceptance of the term, nor is he subjected to his liabilities.

1. *Duties and Liabilities of Carriers.*—Carriers are bound to receive and carry the goods of all persons, for a reasonable hire or reward; to take proper care of them in their passage, to deliver them safely, and in the same condition as when they were received (excepting only such losses as may arise from the *act of God or the king's enemies*); or, in default thereof, to make compensation to the owner for whatever loss or damage the goods may have received while in their custody, that might have been prevented.

Hence a carrier is liable, though he be robbed of the goods, or they be taken from him by irresistible force; and though this may seem a hard rule, yet it is the only one that could be safely adopted; for if a carrier were not liable for losses unless it could be shown that he had conducted himself dishonestly or negligently, a door would be opened for every species of fraud and collusion, inasmuch as it would be impossible, in most cases, to ascertain whether the facts were such as the carrier represented. On the same principle a carrier has been held accountable for goods accidentally consumed by fire while in his warehouse. In delivering the opinion of the Court of King's Bench on a case of this sort, Lord Mansfield said—"A carrier, by the nature of his contract, obliges himself to use all due care and diligence, and is answerable for any neglect. But there is something more imposed on him by custom, that is, by the common law. *A common carrier is in the nature of an insurer.* All the cases show him to be so. This makes him liable for every thing except the act of God and the king's enemies; that is, even from *inevitable accidents*, with those exceptions. The question then is, *What is the act of God?* I consider it to be laid down in opposition to the act of man; such as lightning, storms, tempests and the like, which could not happen by any human intervention. To prevent litigation and collusion, the law presumes negligence except in those circumstances. An armed force, though ever so great and irresistible, does not excuse; the reason is, for fear it may give room for collusion, which can never happen with respect to the act of God. We all, therefore, are of opinion that there should be judgment for the plaintiff"—(*Forward v. Pittard*, 1 T. R. 27.)

A carrier is not obliged to have a new carriage for every journey; it is sufficient if he provide one that, without any extraordinary accident, may be fairly presumed capable of performing the journey.

A carrier may be discharged from his liability by any fraud or concealment on the part of the individual employing him, or of the bailor; as if the latter represent a parcel as containing things of little or no value, when, in fact, it contains things of great value. But when the carrier has not given a notice limiting his responsibility, and when he puts no questions with respect to the parcel to the bailor, the latter need not say any thing with respect to it; and though the bailor should represent the thing delivered to the carrier as of no value, yet if the latter know it to be otherwise, he will be responsible in the event of its being lost or damaged. If the bailor deliver goods imperfectly packed, and the carrier does not perceive it, he is not liable in the event of a loss occurring; but if the defect in the package were such that the carrier could not but perceive it, he would be liable. On this principle a carrier was made to answer for the loss of a greyhound that had been improperly secured when given to him.

A carrier may refuse to admit goods into his warehouse at an unseasonable time, or before he is ready to take his journey; but he cannot refuse to do the ordinary duties incumbent on a person in his situation.

It is felony, if a carrier open a parcel and take goods out of it with intent to steal them; and it has been decided, that if goods be delivered to a carrier to be carried to a specified place, and he carry them to a different place, and dispose of them for his own profit, he is guilty of felony: but the embezzlement of goods by a carrier, without a felonious taking, merely exposes to a civil action.

No carrier, wagonman, carman, or wainman, with their respective carriages, shall travel on Sundays, under a penalty of 20s.—(3 Chas. 1. c. 1.)

A carrier is always, unless there be an express agreement to the contrary, entitled to a reward for his care and trouble. In some cases his reward is regulated by the legislature, and in others by a special stipulation between the parties; but though there be no legislative provision or express agreement, he cannot claim more than a *reasonable* compensation.

2. *Limitation of Responsibility.*—Until the act of 1530, a carrier might by express stipulation, giving public notice to that effect, discharge his liability from all losses by robbery, accident or otherwise, except those which arose from *misfeasance and gross negligence* (from which no stipulation or notice could exempt him), and provided the notice did not contravene the express conditions of an act of parliament.

Notices generally bore, that the carrier would not be responsible for more than a certain sum (usually 5*l.*) on any one parcel, the value of which had not been declared and paid for accordingly; so that a person aware of this notice, entering a box worth 1000*l.* without declaring its value, or entering it as being worth 200*l.* would, should it be lost, have got in the first case only 5*l.*, and in the latter only 200*l.*, unless he could have shown that the carrier had acted fraudulently or with gross negligence. But, to avail himself of this defence, the carrier was bound to show that the bailor or his servant was acquainted with the notice

at the time of delivering the goods. No particular manner of giving notice was required. It might be done by express communication, by fixing it up in a conspicuous place in the carrier's office, by insertion in the public papers or Gazette, by the circulation of handbills, &c.; it being in all cases a question for the jury to decide whether the bailor was really acquainted with the notice of the limitation; since, if he were not, he was entitled to recover, whatever efforts the carrier may have made to publish it. Thus, a notice stuck up in a carrier's warehouse, where goods were delivered, was of no avail against parties who could not read: neither was it of any avail against those who could read, and who had seen it, *unless they had actually read it*. On this principle it was held, that a notice in a newspaper is not sufficient, even when it was proved that the bailor read the newspaper, unless it could also be proved that he had read the notice itself.

These attempts to limit responsibility gave rise to a great deal of litigation and uncertainty; and to obviate the inconveniences thence arising, the important statute, 1 Will. 4. c. 68., was passed. This act declares, that carriers *by land* shall not be liable for the loss of certain articles specified in the act, when their value exceeds 10*l.*, unless the *nature and value* of such articles be stated at the time of their delivery to the carrier, and an increased charge paid or agreed to be paid upon the same. It is further declared, that no publication of any notices by carriers shall have power to limit their responsibility at common law for all other articles except those specified in the act; but as the act is of great importance, we subjoin it.

From and after the passing of this act, no mail contractor, stage coach proprietor, or other common carrier *by land* for hire, shall be liable for the loss of or injury to any article or articles of property of the description following, viz. gold or silver coin of this realm or of any foreign state, or any gold or silver in a manufactured or unmanufactured state, or any precious stones, jewellery, watches, clocks, or time-pieces of any description, trinkets, bills, notes of the Governor and Company of the Banks of England, Scotland, and Ireland respectively, or of any other bank in Great Britain or Ireland, orders, notes, or securities for payment of money, English or foreign stamps, maps, writings, title-deeds, paintings, engravings, pictures, gold or silver plate or plated articles, glass, china, silks in a manufactured or unmanufactured state, and whether wrought up or not wrought up with other materials, furs, or lace, or any of them, contained in any parcel or package which shall have been delivered, either to be carried for hire or to accompany the person of any passenger in any mail or stage coach or other public conveyance, when the value of such article or articles or property aforesaid contained in such parcel or package shall exceed the sum of 10*l.*, unless at the time of the delivery thereof at the office, warehouse, or receiving house of such mail contractor, &c. the value and nature of such article or articles of property shall have been declared by the person or persons sending or delivering the same, and such increased charge as hereinafter mentioned, or an engagement to pay the same be accepted by the person receiving such parcel or package.—§ 1.

When any parcel or package containing any of the articles above specified shall be so delivered, and its value and contents declared as aforesaid, and such value shall exceed the sum of 10*l.*, it shall be lawful for such mail contractors, stage coach proprietors, and other common carriers, to demand and receive an increased rate of charge, to be notified by some notice, affixed in legible character in some public and conspicuous part of the office, warehouse, or other receiving house, where such parcels or packages are received by them for the purpose of conveyance, stating the increased rates of charge required to be paid over and above the ordinary rate of carriage, as a compensation for the greater risk and care to be taken for the safe conveyance of such valuable articles; and all persons sending or delivering parcels or packages containing such valuable articles as aforesaid at such office shall be bound by such notice, without further proof of the same having come to their knowledge.—§ 2.

Provided always, that when the value shall have been so declared, and the increased rate of charge paid, or an engagement to pay the same shall have been accepted as herein-before mentioned, the person receiving such increased rate of charge or accepting such agreement shall, if required, sign a receipt for the package or parcel, acknowledging the same to have been insured, which receipt shall not be liable to any stamp duty; and if such receipt shall not be given when required, or such notice as aforesaid shall not have been affixed, the mail contractor, stage coach proprietor, or other common carrier as aforesaid, shall not have or be entitled to any benefit or advantage under this act, but shall be liable and responsible as at the common law, and be liable to refund the increased rate of charge.—§ 3.

And be it enacted, that from and after the 1st day of September, 1830, no public notice or declaration heretofore made or hereafter to be made shall be deemed or construed to limit or in any wise affect the liability at common law of any such mail contractors, stage coach proprietors, or other public common carriers as aforesaid, for or in respect of any articles or goods to be carried and conveyed by them; but that all and every such mail contractors, stage coach proprietors, and other common carriers as aforesaid, shall, from and after the said 1st day of September, be liable, as at the common law, to answer for the loss of any injury *[so is the act]* to any articles and goods in respect whereof they may not be entitled to the benefit of this act, any public notice or declaration by them made and given contrary thereto, or in anywise limiting such liability, notwithstanding.—§ 4.

And be it further enacted, that for the purposes of this act every office, warehouse, or receiving house, which shall be used or appointed by any mail contractor, or stage coach proprietor, or other such common carrier, for the receiving of parcels to be conveyed as aforesaid, shall be deemed and taken to be the receiving house, warehouse, or office of such mail contractor, stage coach proprietor, or other common carrier; and that any one or more of such mail contractors, stage coach proprietors, or common carriers, shall be liable to be sued by his, her, or their name or names only; and that no action or suit commenced to recover damages for loss or injury to any parcel, package, or person, shall abate for the want of joining any co-proprietor or co-partner in such mail, stage coach, or other public conveyance by land for hire as aforesaid.—§ 5.

Provided always, and be it further enacted, that nothing in this act contained shall extend or be construed to annul or in anywise affect any special contract between such mail contractor, stage coach proprietor, or common carrier, and any other parties, for the conveyance of goods and merchandises.—§ 6.

Provided also, and be it further enacted, that where any parcel or package shall have been delivered at any such office, and the value and contents declared as aforesaid, and the increased rate of charges been paid, and such parcels or packages shall have been lost or damaged, the party entitled to recover damages in respect of such loss or damage shall also be entitled to recover back such increased charges so paid as aforesaid, in addition to the value of such package or parcel.—§ 7.

Provided also, and be it further enacted, that nothing in this act shall be deemed to protect any mail contractor, stage coach proprietor, or other common carrier for hire, from liability to answer for loss or injury to any goods or articles whatsoever, arising from the felonious acts of any coachman, guard, book-keeper, porter, or other servant in his or their employ, nor to protect any such coachman, guard, book-keeper, or other servant, from liability for any loss or injury occasioned by his or their own personal neglect or misconduct.—§ 8.

Provided also, and be it further enacted, that such mail contractors, stage coach proprietors, or other common carriers for hire, shall not be concluded as to the value of any such parcel or package by the value so declared as aforesaid, but that he or they shall in all cases be entitled to require, from the party suing in respect of any loss or injury, proof of the actual value of the contents by the ordinary legal evidence; and that the mail contractors, stage coach proprietors, or other common carriers as aforesaid, shall be liable to such damages only as shall be so proved as aforesaid, not exceeding the declared value, together with the increased charges as before mentioned.—§ 9.

And be it further enacted, that in all actions to be brought against any such mail contractors, &c., the defendant or defendants may pay the money into court.—§ 10.

It will be observed, that carriers continue, notwithstanding this act, liable, as before, for the felonious acts of their servants, and their own misfeasance or gross negligence. It is not possible, however, to lay down any general rule as to the circumstances which constitute this offence. Differing as they do in almost every case, the question, when raised, must be left to a jury. But it has been decided, that the *misdelivery* of a parcel, or its *nondelivery within a reasonable time*, is a misfeasance that cannot be defeated by any notice on the part of the carrier limiting his responsibility. In like manner, the sending of a parcel by a different coach from that directed by the bailor, the removing it from one carriage to another, are misfeasances. Where a parcel is directed to a person at a particular place, and the carrier, knowing such person, delivers the parcel to another, who represents himself as the consignee, such delivery is gross negligence. Leaving parcels in a coach or cart unprotected in the streets is also gross negligence.

At common law, there is no distinction between carriage performed by sea or land; but by the 7 Geo. 2. c. 15, and 26 Geo. 3. c. 86., corrected and amended by the 53 Geo. 3. c. 159, it is enacted that ship-owners are not to be liable for any loss or damage happening to goods on board through the fraud or neglect of the master, without their knowledge or privity, further than the value of the vessel and the freight accruing during the voyage.—(See OWNERS.)

3. *Commencement and Termination of Liability.*—A carrier's liability commences from the time the goods are actually delivered to him in the character of carrier. A delivery to a carrier's servant is a delivery to himself, and he will be responsible. The delivery of goods in an inn-yard or warehouse, at which other carriers put up, is not a delivery so as to charge a carrier, unless a special notice be given him of their having been so delivered, or some previous intimation to that effect.

A carrier's liability ceases, when he vests the property committed to his charge in the hands of the consignee or his agents, by actual delivery; or when the property is resumed by the consignor, in pursuance of his right of stopping it *in transitu*. It is in all cases the duty of the carrier to deliver the goods. The leaving goods at an inn is not a sufficient delivery. The rule in such cases, in deciding upon the carrier's liability, is to consider whether any thing remains to be done by the carrier, as such; and if nothing remains to be done, his liability ceases, and conversely.

A carrier has a lien upon goods for his hire. Even if the goods be stolen, the rightful owner is not to have them without paying the carriage.

For further details as to this subject see *Jeremy on the Law of Carriers*, passim; *Chitty's Commercial Law*, vol. iii. pp. 369—387; and *Burn's Justice of the Peace*, tit. *Carriers*. There are some excellent observations with respect to it in *Sir William Jones' Essay on the Law of Bailments*.—(For an account of the regulations as to the conveyance of passengers in stage coaches, see COACHES, STAGE.)

CARTS. Every cart, &c. for the carriage of any thing to and from any place, where the streets are paved, within the bills of mortality, shall contain 6 inches in the felly. No person shall drive any cart, waggon, &c. within 5 miles of the General Post Office, unless the name, surname, and place of abode of the owner, be painted in conspicuous letters, at least 1 inch in height, on the right or off side thereof, under a penalty of 5*l*. Any person may seize and detain any cart, waggon, &c. without such mark.—(1 & 2 Will. 4. c. 22.)

CASH, in commerce, means the ready money, bills, drafts, bonds, and all immediately negotiable paper in an individual's possession.

CASH ACCOUNT, in book-keeping, an account to which nothing but cash is carried on the one hand, and from which all the disbursements of the concern are drawn on the other. The balance is *the cash in hand*. When the credit side more than balances the debit, or disbursement side, the account is said to be *in cash*; when the contrary, to be *out of cash*.

CASH ACCOUNT, in banking, is the name given to the account of the advances made by a banker in Scotland, to an individual who has given security for their repayment.—(See BANKS (SCOTCH).)

CASHEW NUTS, (Ger. *Akajunüsse*, *Westindische Anakarden*; Da. *Catsjoemooten*; Fr. *Noix d'acajou*; It. *Acaju*; Sp. *Nueces d'acaju*; Port. *Nozes d'acaju*) the produce of the

Anacardium occidentale. They are externally of a greyish or brownish colour, of the shape of a kidney, somewhat convex on the one side, and depressed on the other. The shell is very hard; and the kernel, which is sweet and of a very fine flavour, is covered with a thin film. Between this and the shell is lodged a thick, blackish, inflammable oil, of such a caustic nature in the fresh nuts, that if the lips chance to touch it, blisters immediately follow. The kernels are used in cooking, and in the preparation of chocolate.

CASPIAN SEA. See TAGANROG.

CASSIA. There are four species of cassia in the market viz. *Cassia Fistula*; *Cassia Lignea*, or *Cassia Bark*; *Cassia Buda*, and *Cassia Senna*.

1. *Cassia Fistula* (Fr. *Casse*; Ger. *Rhonkassie*; It. *Polpa di cassia*; Lat. *Cassia pulpa*; Arab. *Khyar sheber*) is a tree which grows in the East and West Indies, and Egypt (*Cassia fistula* Lin.). The fruit is a woody, dark brown pod, about the thickness of the thumb, and nearly 2 feet in length. Those brought to this country come principally from the West Indies, packed in casks and cases; but a superior kind is brought from the East Indies, and is easily distinguished by its smaller smooth pod, and by the greater blackness of the pulp.

2. *Cassia Lignea*, or *Cassia Bark* (Fr. *Casse*; Ger. *Cassia*; Port. *Cassia lenhosa*; Arab. *Selekeh*; Hind. *Tuj*; Malay, *Kayu-legi*), the bark of a tree (*Laurus Cassia* Lin.) growing in Sumatra, Borneo, the Malabar coast, Philippine Islands, &c.; but chiefly in the provinces of Quantong and Kingai, in China, which furnish the greatest part of the cassia met with in the European markets. The tree grows to the height of 50 or 60 feet, with large, spreading, horizontal branches, the bark resembles that of cinnamon in appearance, smell, and taste, and is very often substituted for it: but it may be readily distinguished; it is thicker in substance, less quilled, breaks shorter, and is more pungent. It should be chosen in thin pieces; the best being that which approaches nearest to cinnamon in flavour: that which is small and broken should be rejected. A good deal of the cassia in the Indian markets is brought from Borneo, Sumatra, and Ceylon. Malabar cassia is thicker and darker coloured than that of China, and more subject to foul packing; each bundle should be separately inspected.—(*Ainslie's Materia Indica*; *Milburn's Orient. Com.* &c.)

The duty on cassia was reduced in 1825 from 2s. 6d. per lb. to 1s., and in 1829 to 6d. Owing partly to these reductions, and partly to the heavy duty on and high price of cinnamon, the consumption of cassia has more than doubled since 1820. Still, however, it is very inconsiderable when compared with the importation. In 1832, the duty of 6d. per lb. produced 1,907l. 2s. 10d., showing that 72,365 lbs. had been cleared for consumption. The imports in ordinary years, vary from about 400,000 lbs. to about 800,000 lbs.; the excess over what is made use of at home being principally sent to Germany, Italy, and Russia. Of 837,599 lbs. imported in 1820, 799,715 lbs. were brought from the East India Company's territories and Ceylon, 25,386 lbs. from the Philippine Islands, 6,200 lbs. from Brazil, and 5,995 lbs. from the Mauritius. Cassia was quoted in the London markets, in August, 1832, at from 86s. to 90s. a cwt. in bond.—(*Parl. Paper*, No. 367. Sess. 1832, &c.)

[See IMPORTS AND EXPORTS.—*Am. Ed.*]

CASSIA BUDA, the dried fruit or berry of the tree (*Laurus cassia*) which yields the bark described in the previous article. They bear some resemblance to a clove, but are smaller, and, when fresh, have a rich cinnamon flavour. They should be chosen round, fresh, and free from stalks and dirt. Cassia buds are the produce of China. The exports from Canton in 1831 amounted to 1,334 piculs, or 177,866 lbs. The imports into Great Britain in 1832 were 75,173 lbs., but the entries for home consumption are not specified. They were quoted in the London markets in October, 1833, at 80s. a cwt. in bond.—(*Milburn's Orient. Com.*; *Anglo-Chinese Calendar* for 1832; and *Parl. Paper*, No. 426. Sess. 1833.)

Cassia Senna. See SENNA.

CASTOR (Fr. *Castoreum*; Ger. *Kastoreum*; It. *Castoreo*; Sp. *Castoreo*), the produce of the beaver. In the inguinal region of this animal are found four bags, a large and a small one on each side: in the two large ones there is contained a softish, greyish yellow or light brown substance, which, on exposure to the air, becomes dry and brittle and of a brown colour. This is castor. It has a heavy but somewhat aromatic smell, not unlike musk; and a bitter, nauseous, and subacid taste. The best comes from Russia; but of late years it has been very scarce; and all that is now found in the shops is the produce of Canada. The goodness of castor is determined by its sensible qualities; that which is black is insipid, inodorous, oily, and unfit for use. Castor is said to be sometimes counterfeited by a mixture of some gummy and resinous substances; but the fraud is easily detected, by comparing the smell and taste with those of real castor.—(*Thomson's Dispensatory*.)

CASTOR OIL (Fr. *Huile du Ricin*; Ger. *Rizinusohl*; It. *Olio di Ricino*; Sp. *Ricinosol*) is obtained from the seeds of the *Ricinus communis*, or *Palma Christi*, an annual plant, found in most tropical countries, and in Greece, the south of Spain, &c. The oil is separated from the seeds either by boiling them in water, or by subjecting them to the action of the press. It is said, that though the largest quantity of oil may be procured by the first method, it is less sweet, and more apt to become rancid, than that procured by expression, which, in consequence, is the process now most commonly followed. Good expressed castor oil is nearly inodorous and insipid; but the best leaves a slight sensation of acrimony in the throat after it is swallowed. It is thicker and heavier than the fat oils, being viscid, trans-

parent, and colourless, or of a very pale straw colour. That which is obtained by boiling the seeds has a brownish hue; and both kinds, when they become rancid, thicken, deepen in colour to a reddish brown, and acquire a hot nauseous taste. It is very extensively employed in the materia medica as a cathartic.—(*Thomson's Dispensatory*.)

The quantity cleared for home consumption in 1831 amounted to 337,940 lbs., being about double the quantity cleared for consumption in 1820; an increase principally ascribable to the reduction of the duty from 1s. 3d. to 2d. Of the total quantity imported in 1830, amounting to 490,558 lbs., no fewer than 441,307 lbs. were from the East Indies, 39,408 lbs. from British North America, 5,139 lbs. from the United States, and 4,718 lbs. from the British West Indies. Castor oil from foreign countries, being loaded with a duty of 1s., is almost wholly re-exported. The price of East India castor oil in bond varies from 10d. to 1s. 7d. per lb.; that of the West Indies is much higher.—(*Accounts published by the Board of Trade*, p. 118.; *Parl. Paper*, No. 307. Sess. 1831, &c.)

CATECHU (Fr. *Cnehou*; Ger. *Kaschu*; Hind. *Cut*; Mal. *Gambir*), a brown astringent substance, formerly known by the name of *Terra Japonica*, because supposed to be a kind of earth. It is, however, a vegetable substance obtained from two plants; viz. the *Mimosa*, or more correctly the *Acacia catechu*, and the *Uncaria gambir*. The first of these is a tree from 20 to 30 feet high, found in abundance in many of the forests of India, from 16° of lat. up to 30°. The places most remarkable for its production are, the Burmese territories; a large province of the Malabar coast, called the Concan; and the forests skirting the northern part of Bengal, under the hills which divide it from Nepal. The catechu is obtained from this tree by the simple process of boiling the heart of the wood for a few hours, when it assumes the look and consistency of tar. The substance hardens by cooling; is formed into small balls or squares; and being dried in the sun, is fit for the market. The price to the first purchaser in the Concan is about 15s. a cwt. According to Dr. Davy, who analysed it, the specific gravity of Concan catechu is 1.39; and that of Pegu, 1.28. The taste of this substance is astringent, leaving behind a sensation of sweetness: it is almost wholly soluble in water. Of all the astringent substances we know, catechu appears to contain the largest portion of tannin. According to Mr. Purkin, 1 lb. is equivalent to 7 or 8 lbs. of oak bark for tanning leather. From 200 grs. of Concan catechu, Dr. Davy procured 109 of tannin, 68 of extractive matter, 13 of mucilage, and 10 of earths and other impurities: the same quantity of Pegu catechu afforded 97 grs. of tannin, 73 of extract, 16 of mucilage, and 14 of impurities. The *uncaria gambir* is a scandent shrub, extensively cultivated in all the countries lying on both sides of the Straits of Malacca; but chiefly in the small islands at their eastern extremity. The catechu is in this case obtained by boiling the leaves, and inspissating the juice; a small quantity of crude sugar being added, to give the mass consistency: it is then dried in the sun, and being cut like the Concan catechu into small squares, is ready for use. There is a great consumption of this article throughout all parts of India as a masticatory; it forms an ingredient in the compound of betel pepper, areca nut, and lime, which is in almost universal use. Catechu may be purchased at the Dutch settlement of Rhio, or at Malacca, in the Straits of Singapore, at the rate of about 10s. a cwt. The quantity of it, under the corrupted name of cutch, imported yearly into Calcutta from Pegu, at an average of the 5 years ending with 1828–29, was about 300 tons, at a cost not exceeding 9s. per cwt. From Bombay a considerable quantity is annually imported into China. The quantity of catechu, under the name of gambir, produced in Rhio by the Chinese settlers, is equal to about 4,600 tons a year, about 2,000 of which are exported for the consumption of Java; the rest being sent to China, Cochinchina, and other neighbouring countries.

Catechu, particularly from Singapore, has lately been imported in considerable quantities for trial in our tanneries; but with a duty of 1l. per cwt., equal to twice the prime cost, we fear the speculation is not likely to succeed.—(See *Ainslie's Materia Indica*; *Ure's Dictionary*; *Singapore Chronicle*; *Buchanan's Journey through Mysore Canara, and Malabar*; *Bell's Review of the External Commerce of Bengal*.)

CAT'S EYE, a mineral of a beautiful appearance, brought from Ceylon. Its colours are grey, green, brown, red, of various shades. Its internal lustre is shining, its fracture imperfectly conchoidal, and it is translucent. From a peculiar play of light, arising from white fibres interspersed, it has derived its name. The French call the appearance *chatoyant*. It scratches quartz, is easily broken, and resists the blowpipe. It is set by the jewellers as a precious stone.

CAT SKINS. The skin or fur of the cat, is used for a variety of purposes, but is principally dyed and sold as false sable. It appears from evidence taken before a late Committee of the House of Commons, that it is a common practice in London to decoy the animal and kill it for the sake of its skin. The fur of the wild cat is, however, far more valuable than that of the domestic cat. The wild cat skins imported into this country are brought almost wholly from the territories of the Hudson's Bay Company. The animal from which they are taken is a good deal larger than the English wild cat, and is sometimes called the *loup cervier*, or Canadian lynx. It is very courageous. At an average of the 3 years ending with 1831, the number of cat skins imported amounted to 40,006 a year, of which about 24,000 a year were retained for home consumption.

CATTLE, a collective term applied to designate all those quadrupeds that are used either as food for man, or in tilling the ground. By *neat* or *horned cattle* is meant the two species included under the names of the ox (*Bos*) and the buffalo (*Bubalus*); but as the latter is hardly known in this country, it is the former only that we have here in view.

The raising and feeding of cattle, and the preparation of the various products which they yield, have formed, in all countries emerged from the savage state, an important branch of industry.

It would be quite inconsistent with the objects and limits of this work, to enter into any details with respect to the different breeds of cattle raised in this or other countries. They are exceedingly various. In Great Britain they have been vastly improved, both in the weight of carcase, the quality of the beef, and the abundance of the milk, by the extraordinary attention that has been given to the selection and crossing of the best breeds, according to the objects in view. This sort of improvement began about the middle of last century, or rather later, and was excited and very much forwarded by the skill and enterprise of two individuals—Mr. Bakewell of Dishley, and Mr. Colley of Northumberland. The success by which their efforts were attended roused a spirit of emulation in others; and the rapid growth of commerce and manufactures since 1760 having occasioned a corresponding increase in the demand for butcher's meat, improved systems of breeding, and improved breeds, have been very generally introduced.

But the improvement in the size and the condition of cattle has not been alone owing to the circumstances now mentioned. Much of it is certainly to be ascribed to the great improvement that has been made in their feeding. The introduction and universal extension of the turnip and clover cultivation has had, in this respect, a most astonishing influence, and has wonderfully increased the food of cattle, and consequently the supply of butcher's meat.

It was stated in the First Report of the Select Committee of the House of Commons on Waste Lands (printed in 1795), that cattle and sheep had, at an average, increased in size and weight about a fourth since 1732; but there are strong grounds for supposing that the increase had been much more considerable than is represented by the committee.

According to an estimate of Dr. Davenant in 1710, the average weight of the *net* carcase of black cattle was only 370 lbs., of calves 50 lbs. and of sheep only 28 lbs.; but according to Sir F. M. Eden (*Hist. of the Poor*, vol. iii. Appen. p. 88.) and Mr. Middleton (*Agric. of Middlesex*, 2d ed. p. 541.) the weight of the carcase of bullocks killed in London, is now, at an average, 800 lbs., calves 140 lbs., sheep 80 lbs., and lambs 50 lbs. including offal; and deducting the latter, the net weight of the carcasses is nearer a half than a fourth greater than the weight assigned by Davenant.

Consumption of Butcher's Meat in London.—The number of head of cattle, sheep and lambs, sold in Smithfield market, each year since 1732, has been as follows:—

Year.	Cattle.	Sheep.	Year.	Cattle.	Sheep.	Year.	Cattle.	Sheep.	Year.	Cattle.	Sheep.
1732	76,210	514,700	1758	84,252	550,930	1783	101,810	701,610	1808	144,012	1,015,960
1733	80,169	555,050	1759	86,439	563,260	1784	95,145	616,110	1809	137,600	989,250

1757	82,612	574,960									

Down to 1820, this table is extracted from papers laid before parliament; since 1820, it is made up from returns procured, for this work, from the Chamberlain's office.

The number of *fatted calves*, exclusive of sucklers, of which no account is taken, sold annually in Smithfield from 1821 inclusive, has been as follows:—

1821	-	-	21,763	1827	-	-	20,729
1822	-	-	21,255	1828	-	-	20,832
1823	-	-	22,739	1829	-	-	20,879
1824	-	-	21,949	1830	-	-	20,300
1825	-	-	20,958	1831	-	-	-
1826	-	-	22,118	1832	-	-	19,522

(Obtained from the clerk of the market, 5th of Nov. 1832.)

The contract prices of butcher's meat per cwt. at Greenwich Hospital, since 1730, have been as follow:—

	£	s.	d.		£	s.	d.		£	s.	d.
1730 -	-	1	5	8	1785 -	-	1	17	6	-	-
1735 -	-	0	16	11	1790 -	-	1	16	10	-	-
1740 -	-	1	8	0	1795 -	-	2	2	10	-	-
1745 -	-	1	2	2	1800 -	-	3	4	4	-	-
1750 -	-	1	6	6	1805 -	-	3	0	4	-	-
1755 -	-	1	7	9½	1810 -	-	3	12	0	-	-
1760 -	-	1	11	6	1815 -	-	3	8	0	-	-
1765 -	-	1	7	2	1820 -	-	3	10	4½	-	-
1770 -	-	1	9	6	1825 -	-	2	18	10	-	-
1775 -	-	1	13	5	1830 -	-	2	19	5½	-	-
1780 -	-	1	13	6	1835 -	-	2	6	2½	-	-

We suspect, from what we have heard from practical men of great experience, that the weight assigned by Sir F. M. Eden and Mr. Middleton to the cattle sold in Smithfield is a little beyond the average. It must also be observed, as already stated, that it is the *gross* weight of the carcase, or the weight of the animal under deduction of blood and refuse; and therefore to get the *nett* weight, we have further to deduct the offal, or the hide, tallow, entrails, feet, &c. We have been informed that the following quantities may be deducted from the carcase weights, in order to obtain the nett weights of the different animals; viz. from neat cattle, 250 lbs. each; calves, 35 lbs.; sheep, 24 lbs.; lambs, 12 lbs. If these estimates be nearly right, we should be able, provided we knew the respective numbers of sheep and lambs, to estimate the total quantity of butcher's meat furnished for London by Smithfield market, exclusive of hogs and pigs. Sheep and lambs are not, however, distinguished in the returns; but it is known that the former are to the latter nearly as 3 to 1; so that we may estimate the average gross weight of the sheep and lambs at about 70 lbs., and their average nett weight at about 50 lbs. The account for 1830 will then stand as under:—

Number and Species of Animals.	Gross Weight.	Offal.	Nett Weight.	Butcher's Meat.	
				Lbs.	Lbs.
159,907 Cattle - - -	800	250	550	87,948,850	
1,287,070 Sheep and lambs - -	70	20	50	64,353,500	
20,300 Calves - - -	140	35	105	2,131,500	
			Total	154,434,850	

This quantity, estimated at the average price of 6d. would cost 3,860,871½; at 8d., it would cost 5,147,828½.

A part of the cattle sold at Smithfield go to supply the town in the vicinity; but, on the other hand, many cattle are sold in the adjoining towns, and slaughtered for the use of London, of which no account is taken. We have reason to think that the latter quantity rather exceeds the former; but supposing that they mutually balance each other, the above quantity of 154,434,850 lbs. may be regarded as forming the annual supply of butcher's meat at present required for London; exclusive, however, of hogs, pigs, suckling calves, &c., and exclusive also of bacon, hams, and salted provisions brought from a distance. The quantities thus omitted from the account are very considerable; nor can there, we apprehend, be any doubt that, with the addition of such parts of the offal as are used for food, they may be considered as more than balancing the butcher's meat required for the *victualing of ships*. On this hypothesis, therefore, it will follow, assuming the population of the metropolis to amount to 1,450,000, that the annual consumption of butcher's meat by each individual, young and old, belonging to it, is, at an average, very near 107 lbs.

This, though not nearly so great as has been sometimes represented*, is, we believe, a larger consumption of animal food than takes place any where else by the same number of individuals. According to M. Chabrol, the consumption of butcher's meat in Paris amounts to between 85 lbs. and 86 lbs. for each individual. At Brussels the consumption is a little greater, being supposed to average 89 lbs. each individual; being rather more than 3 lbs. above the mean of Paris, and 18 lbs. under the mean of London.

According to the reports of the inspectors of hides and skins, the following are the numbers of cattle, calves, and sheep, slaughtered in Liverpool, Manchester, Leeds, and Sheffield, from 1815 to 1820 inclusive:—

	Cattle.	Calves.	Sheep.
Liverpool - - - -	74,671	100,329	457,968
Manchester - - - -	95,054	98,574	489,557
Leeds - - - -	22,976	34,598	317,642
Sheffield - - - -	30,097	28,455	184,859
Totals - - - -	222,798	259,956	1,449,326

(Appen. to Agric. Report of 1821, p. 207.)

* Mr. Middleton (*Agriculture of Middlesex*, p. 642.) estimates the consumption of animal food in London, exclusive of fish and poultry, at 234 lbs. a year for every individual! And he further estimates the total average annual expense incurred by each inhabitant of the metropolis, for all sorts of animal food, at 8s. 8d. To make any comments on such conclusions would be worse than useless; but the fact of their being met with in a work, otherwise of considerable merit, is one of the many proofs, every where to be met with, of the low state of statistical knowledge in this country.

In estimating the weights of the animals killed at these towns, a lower standard must be adopted than that which we have taken for London; first, because the largest and finest cattle are brought to the metropolis; and secondly, because a very large proportion of the calves are sucklers, which are excluded from the London accounts. These considerations have not been sufficiently attended to by the framers of the estimate in the report now quoted. Sheep, in the above table, means no doubt sheep and lambs.

We extract from Dr. Cleland's valuable work on the statistics of Glasgow the subjoined account of the number, weight, &c. of the animals slaughtered and sold in that city during the year 1822.

Butchers' Meat sold in the Glasgow Market, in 1822.

	Royalty.	Subsidy.	Total.			£	s.	d.	£	s.	d.

N. B.—The weight is estimated in this statement by the stone of 16 lbs., each of 23½ oz. The office of hide-inspector having been abolished, there are no means of continuing this table to a later period; but the returns of the cattle sold in the market at Glasgow since 1822, show that the increase in the supply of animal food has at least kept pace with the increase of population.

The population of Glasgow, when this account was taken, amounted to 147,043, which shows, that the consumption of butcher's meat in that city, is, as compared with its population, but little inferior to that of London. This statement, taken in connection with the fact that, so late as 1760, the slaughter of bullocks for the supply of the public market was unknown in Glasgow, sets the wonderful improvement that has since taken place in the food of the Scotch people in the most striking point of view. Previously to 1780 it was customary in Glasgow, Edinburgh, and the principal Scotch towns, for families to purchase in November what would now be reckoned a small half-fed cow or ox, the salted carcass of which was the only butcher's meat they tasted throughout the year. In the smaller towns and country districts this practice prevailed till the present century; but it is now every where abandoned. We believe, indeed, that there has never been in any country a more rapid increase in the quantity, or a greater improvement in the quality of the food brought to market, than has taken place in Scotland since 1770. In so far as respects butcher's meat, this has been occasioned partly by the growing numbers and opulence of all classes, and partly by the vast increase in the food of cattle consequent to the introduction of green crops, and of an improved system of cultivation.—(See BUREAU.)

The introduction of steam navigation, and the improved means of communication by rail-roads and otherwise, has already had, and will, no doubt, continue to have, a material influence over the supply of butcher's meat. Owing to the difficulty and expense of their conveyance, cattle could not formerly be conveniently fattened at any very considerable distance from the great markets; but steam navigation has gone far to remove this difficulty. Instead of selling their cattle, lean or half-fed, to the Norfolk graziers, and by whom they were fattened for the London market, the producers, in various districts of Scotland, are now beginning to fatten them at home, either sending the live animals or the carcasses by steam to London, Liverpool, &c. This practice is indirectly as well as directly advantageous to the farmer, inasmuch as it enables him to turn his green crops to better account, and to raise larger supplies of manure. The same practice is also extending in Ireland; and will, no doubt, spread itself over every part of the country where feeding can be carried on, that has the required facility of transport.

Number of Head of Cattle in Great Britain.—It would, on many accounts, be very desirable to be able to form an accurate estimate of the number and value of the stock of cattle in Great Britain, and of the proportion annually killed and made use of; but owing to the little attention that has been paid to such subjects in this country, where every sort of statistical knowledge is at the very lowest ebb, there are no means of arriving at any con-

clusions that can be depended upon. The following details may not, however, be unacceptable.

Arthur Young has given, both in his *Eastern and Northern Tours*, estimates of the number and value of the different descriptions of stock in England. The greatest discrepancy, unaccompanied by a single explanatory sentence, exists between them; but there can be no doubt that the following estimate (*Eastern Tour*, vol. iv. p. 456.), though, perhaps, rather under the mark, is infinitely nearer the truth than the other, which is about twice as great:—

Number of Draught cattle	-	-	-	-	-	684,491
Cows	-	-	-	-	-	741,553
Fattening cattle	-	-	-	-	-	512,369
Young cattle	-	-	-	-	-	912,656
Total						2,852,069

New taking this number at the round sum of 3,000,000, and adding a third to it for the increase since 1770, and 1,100,000 for the number of cattle in Scotland (*General Report of Scotland*, iii. *Addenda*, p. 6.), we shall have 5,100,000 as the total head of cattle of all sorts in Great Britain. The common estimate is, that about a *fourth* part of the entire stock is annually slaughtered; which, adopting the foregoing statement, gives 1,275,000 head for the supply of the kingdom; a result which all that we have heard inclines us to think is very near the mark.

Dr. Colquhoun estimated the total head of cattle in England and Wales only, in 1812, at 5,500,000; but he assigns no data for his estimate, which is entitled to very little attention.

Exclusive of the cattle raised in Great Britain, we import considerable supplies of beef and of live cattle from Ireland.

Account of the number of Cows and Oxen, and of the quantities of Beef, imported into Great Britain from Ireland, from 1801:—

Years.	Cows and Oxen.	Beef.	Years.	Cows and Oxen.	Beef.	Years.	Cows and Oxen.	Beef.
	No.	Barrils.		No.	Barrils.		No.	Barrils.
1801	31,543	58,911	1810	44,553	71,605	1818	58,165	60,587
1802	42,501	59,448	1811	67,080	108,289	1819	52,176	70,504
1803	38,016	62,280	1812	70,128	114,504	1820	39,014	52,591
1804	15,846	59,312	1813	48,473	101,516	1821	26,725	65,905
1805	21,868	88,519	1814	16,435	83,163	1822	34,659	43,139
1806	27,704	91,361	1815	33,889	60,307	1823	46,351	69,079
1807	26,252	85,355	1816	31,752	29,465	1824	62,214	54,810
1808	13,658	88,366	1817	45,301	106,556	1825	63,519	63,597
1809	17,917	89,771						

In 1825 the trade between Great Britain and Ireland was placed on the footing of a coasting trade, so that there are no means of continuing this account to a later date; but for some further particulars, the reader is referred to Liverpool, art. DOCKS; for an account of the sales of cattle at the great fair of Ballinascloe, see FAIRS AND MARKETS.

Cattle of the Continent.—Baron Malchus has given, in his work on European Statistics, published at Stuttgart in 1826, an account of the number of horned cattle, sheep, swine, &c., in most European countries. In so far as respects the British empire, the statements are mostly copied from Colquhoun, and are ludicrously inexact. Perhaps, however, they may, in so far as regards the Continental states, be better entitled to credit. The following are some of the items in his Table:—

Countries.	Cattle.	Countries.	Cattle.
Sweden and Norway	2,647,000	Baden	421,900
Russia	10,000,000	Bavaria	1,895,700
Denmark	1,607,000	Austria	9,912,500
Netherlands	2,500,000	France	6,681,900
Prussia	4,275,700	Spain	2,500,000
Saxony	243,000	Portugal	650,000
Hanover	794,000	Switzerland	800,000
Wirttemberg	713,000	Italy	3,500,000

On the whole the Baron estimates the neat or horned cattle of Europe, including the British isles, but excluding Turkey, at 70,770,974. At best, however, this estimate can only be considered as a very rough approximation.

Laws as to Cattle.—No salesman, broker, or factor, employed in buying cattle for others, shall buy for himself in London, or within the bills of mortality, on penalty of double the value of the cattle bought and sold.—(31 Geo. 3. c. 40.)

Cattle not to be driven on Sunday, on penalty of 20s.—(3 Cha. 1. c. 1.)

Any person unlawfully and maliciously killing, wounding, or maiming any cattle, shall be guilty of felony, and, upon conviction, may be transported, at the discretion of the court, beyond seas for life, or for any term not less than 7 years, or be imprisoned for any term not exceeding 4 years, and kept to hard labour; and, if a male, may be once, twice, or thrice publicly or privately whipped, if the court shall think fit so to order.—(7 & 8 Geo. 4. c. 30.)

Persons wantonly and cruelly abusing, beating, or ill-treating cattle, may, upon being convicted before a justice of such offence, be fined in any sum not exceeding 5*l.* and not below 10*s.*; and upon nonpayment of fine, may be committed to the house of correction for any time not exceeding 3 months.

Complaint must be made within 10 days after the offence. Justices are instructed to order compensation to be made, not exceeding 20*s.*, to persons vexatiously complained against.—(3 Geo. 4. c. 71.)

CAVIAR (Fr. *Caviar*, *Cavial*; Ger. *Kaviar*; It. *Caviario*, *Cavase*; Sp. *Cosario*; Rus. *Ikra*; Lat. *Caviarium*), a substance prepared in Russia, consisting of the salted roes of large fish. The Uralian Cossacks are celebrated for making excellent caviar. The best is made of the roe of the sturgeon, appears to consist entirely of the eggs, and does not easily become fetid. This is packed in small casks or kegs; the inferior sort being in the form of dry cakes. Caviar is highly esteemed in Russia, and considerable quantities are exported to Italy. It is principally made of the sturgeon caught in the Wolga, in the neighbourhood of Astrachan.—(See *Tooke's Russia*, 2d ed. vol. iii. p. 345.)

CAYENNE PEPPER, or **GUINEA PEPPER**. See **CHILLIES**.

CEDAR (Ger. *Zeder*; Du. *Ceder*; Fr. *Cedre*; It. and Sp. *Cedro*; Rus. *Kedr*; Lat. *Cedrus*). The cedar of Lebanon, or great cedar (*Pinus cedrus*), is famous in Scripture; it is a tall, majestic-looking tree. "Behold," says the inspired writer, "the Assyrian was a cedar in Lebanon with fair branches, and with a shadowing shroud, and of an high stature; and his top was among the thick boughs. His height was exalted above all the trees of the field, and his boughs were multiplied, and his branches became long. The fir trees were not like his boughs, and the chestnut trees were not like his branches; nor any tree in the garden of God was like unto him in beauty."—(*Ezekiel*, xxi. 3. 5. 8.) The cedar grows to a very great size. The timber is resinous, has a peculiar and powerful odour, a slightly bitter taste, a rich yellowish brown colour, and is not subject to the worm. Its durability is very great; and it was on this account (*propter æternitatem* Vitruvius, lib. ii. § 9.) employed in the construction of the temples, and other public buildings, in the formation of the statues of the gods, and as tablets for writing upon. In the time of Vitruvius, cedars were principally produced in Crete, Africa, and some parts of Syria.—(*Loc. cit.*) Very few are now found on Lebanon; but some of those that still remain are of immense bulk, and in the highest preservation.

Cedar exceeds the oak in toughness, but is very inferior to it in strength and stiffness. Some very fine cedars have been produced in England.

There are several other kinds of timber that are usually called cedar; thus, a species of cypress is called white cedar in America; and the cedar used by the Japanese for building bridges, ships, houses, &c., is a kind of cypress, which Thunberg describes as a beautiful wood, that lasts long without decay. The *Juniperus oxycedrus* is a native of Spain, the south of France, and the Levant; it is usually called the brown berried cedar. The Bermudian cedar (*Juniperus Bermudiana*), a native of the Bermuda and Bahama islands, is another species that produces valuable timber for many purposes; such as internal joiners' work, furniture, and the like. The red cedar, so well known from its being used in making black-lead pencils, is produced by the Virginian cedar (*Juniperus Virginiana*), a native of North America, the West India islands, and Japan. The tree seldom exceeds 45 feet in height. The wood is very durable, and, like the cedar of Lebanon, is not attacked by worms. It is employed in various ways, but principally in the manufacture of drawers, wardrobes, &c., and as a cover to pencils. The internal wood is of a dark red colour, and has a very strong odour. It is of a nearly uniform texture, brittle, and light.—See *Tredgold's Principles of Carpentry*; *Lib. of Entertaining Knowledge*, *Veget. Substances*; *Rees's Cyclop.* &c.)

The duty on cedar (2l. 10s. a ton from a foreign country, and 10s. from a British possession) produced 2,519l. 19s. 11d. in 1832. Its price in bond varies from 6d. to 9d. a foot.

CERTIFICATES, in the customs. No goods can be exported by certificate, except foreign goods formerly imported, on which the whole or a part of the customs paid on importation is to be drawn back. The manner of proceeding is regulated by the 3 & 4 Will. 4. c. 52. § 68, &c. The person intending to enter outwards such goods, is to deliver to the collector or comptroller of the port where the goods were imported or warehoused, two or more bills, specifying the particulars of the importation of such goods, and of the entry outwards intended to be made; and the officers, if they find such bills to agree with the entry inwards, are to issue a *certificate* of such entry, with the particulars necessary for the computation of the drawback upon the goods, the names of the person and ship by whom and in which the goods are to be exported, &c. The merchant then enters the goods outwards, as in the common way of exportation. The cockpit granted upon this occasion is called a *certificate cockpit*, and differs a little in form from common over-sea cockets. Notice of the time of shipping is to be given to the searcher. Some time after the departure of the vessel, the exporter may apply for the drawback. The collector and comptroller then make out on a proper stamp a debenture, containing a distinct narration of the transaction, with the exporter's or merchant's oath that the goods are really and truly exported beyond seas, and not re-landed, nor intended to be re-landed; and also with the searcher's certificate of the quantity and quality of the goods at the time of shipping. The debenture being thus duly made out and sworn to, the duties to be repaid are indorsed, the merchant's receipt taken below, and the money paid.

Certificates of origin, subscribed by the proper officers of the places where the goods were shipped, are required, to entitle the importers of sugar, coffee, cocoa, and spirits from any

British plantation, to get them entered as such. A similar certificate is required in the case of blubber—(see *BLUBBER*); and in the case of wine from the Cape of Good Hope; and sugar from the limits of the East India Company's charter, &c.—(See *IMPORTATION AND EXPORTATION*.)

CHAIN, *in surveying*, a measure of length, composed of a certain number of links made of iron wire, serving to take the distance between two or more places. Gunter's chain contains 100 such links, each measuring $7\frac{1}{16}$ inches, consequently equal to 66 feet, or 4 poles.

CHALDRON, a dry English measure. 36 coal bushels make a chaldron, and 21 chaldrons a score. The coal bushel is $19\frac{1}{2}$ inches wide from the outside, and 8 inches deep. It contains 2,217·6 cubic inches; but when heaped, 2,815·5, making the chaldron 58·65 cubic feet. There are 12 sacks of coal in a chaldron; and if 5 chaldrons be purchased at the same time, the seller must deliver 63 sacks; the 3 sacks additional are called the *ingrain*. But coals are now sold in London, and almost every where else, by the ton of 20 cwt. avoirdupois. The Newcastle chaldron of coals is 53 cwt., and is just double the London chaldron. —(See *COAL*.)

CHAMBER OF COMMERCE, is an assembly of merchants and traders, where affairs relating to trade are treated of. There are several establishments of this sort in most of the chief cities of France; and in this country, chambers of this kind have been created for various purposes.

CHAMBER OF ASSURANCE, in France, denotes a society of merchants and others for carrying on the business of insurance; but in Holland it signifies a court of justice, where causes relating to insurances are tried.

CHAMPAGNE, one of the most esteemed and celebrated of the French wines. See *WINE*.

CHANKS, or **CHANK SHELLS**, common conch shells, are fished up by divers in the Gulf of Manar, on the coast opposite Jaffnapatam, in Ceylon, in about 2 fathoms of water; and at Travancore, Tuticoreen, and other places. Large fossil beds of chanks have also been found. They are of a spiral form, and form a considerable article of trade in India, where they are in extensive demand all over the country. They are sawn into narrow rings or bracelets, and are worn as ornaments for the arms, legs, fingers, &c. by the Hindoo women; many of them are also buried with the bodies of opulent and distinguished persons. Those which, from being taken with the fish, are called green chanks, are most in demand. The white chank, which is the shell thrown upon the beach by strong tides, having lost its gloss and consistency, is not worth the freight up to Calcutta. The value of the green chank depends upon its size. A chank opening to the right, called in Calcutta the right-handed chank, is so highly prized as sometimes to sell for 400, or 500, or even 1,000 rupees. —(*Bell's Commerce of Bengal, and private communications.*)

The fishery of chanks is monopolised by government, who most commonly let the banks for about 4,000*l.* a year. Sometimes, however, they are fished by the servants of government on its account. But as the fishermen of the coast, and those belonging to the little islands where they are found, cannot be prevented from taking chanks, the better plan, as it appears to us, would be to give every one leave to fish them; but to lay a somewhat heavier duty on their exportation. We have been assured by those well acquainted with the circumstances, that this would be advantageous to all parties, but especially to government. We have heard that an arrangement of this sort has recently been made, but we have not learned any thing positive respecting it.

CHARCOAL (Fr. *Charbon de bois*; Ger. *Reine Kohle*; It. *Carbone di legna*; Sp. *Carbon de lena*; Lat. *Carbo ligni*), a sort of artificial coal, consisting of wood burned with as little exposure to the action of the air as possible. "It was customary among the ancients to char the outside of those stakes which were to be driven into the ground or placed in water, in order to preserve the wood from spoiling. New-made charcoal, by being rolled up in clothes which have contracted a disagreeable odour, effectually destroys it. When boiled with meat beginning to putrefy, it takes away the bad taint; it is, perhaps, the best tooth-powder known. When putrid water at sea is mixed with about $\frac{1}{2}$ of its weight of charcoal powder, it is rendered quite fresh; and a much smaller quantity of charcoal will serve, if the precaution be taken to add a little sulphuric acid previously to the water. If the water casks be charred before they are filled with water, the liquid remains good in them for years; this precaution ought always to be taken for long sea voyages. The same precaution, when attended to for wine casks, will be found very much to improve the quality of the wine." —(*Thomson's Chemistry.*)

CHARLESTON, a city and sea-port of the United States, of South Carolina, in lat. 32° 47' N., long. 79° 48' W. Population in 1880, including the suburbs, 40,300. The situation of Charleston has a good deal of resemblance to that of New York, being built on a point of land between the Ashley and Cooper rivers, at their point of confluence. The exports principally consist of cotton and rice (particularly the former), which are the staple products of the state. There are a few other articles exported, such as naval stores, hams,

bacon, &c., but their value is quite inconsiderable. All the cotton sent from South Carolina to foreign countries is shipped at Charleston. In 1831-32, the exports are said to have amounted to 182,628 bales, of which 138,683 were for Great Britain.* The value of the cotton exported in 1831 amounted, according to the customhouse valuation, to 4,885,431 dollars, and that of the rice to 1,318,959 do. But exclusive of the exports to foreign countries, South Carolina sends a great deal of cotton and rice to other ports of the Union. The shipments of cotton coastwise in 1831-32 were estimated at about 43,000 bales. The imports from foreign countries principally consist of cottons, woollens, and linens, hardware, iron, and steel, coffee, sugar, tea, wine, spices, &c. The greater part of the imports do not, however, come from abroad, but from the northern and middle states. The former supply her with fish, shoes, and all sorts of coarse manufactured goods for the use of the slave population; while the latter supply her with wheat, flour, &c. Most part of the imports of foreign produce are also brought at second-hand from New York, which occupies the same rank in the Union that Liverpool and London do in Great Britain. There were, in 1830, 5 banks in this city, including the branch of the United States Bank, with an aggregate capital of 4,975,000 dollars: the total dividends for the same year amounted to 317,000 dollars; being at the rate of 6-371 per cent. There were also 2 marine insurance companies, having a capital of 750,000 dollars.—(*Statement by J. H. Gaddard, Esq., New York Daily Advertiser*, 29th of January, 1831.) The registered, enrolled, and licensed tonnage belonging to Charleston, in 1831, amounted to 13,008 tons, of which 7,147 tons were employed in the coasting trade. The total value of the articles imported into South Carolina, in the year ending 30th of September, 1832, was 1,313,725 dollars; the total value of the exports during the same year being 7,752,781 dollars.—(*Papers laid before Congress*, 15th of February, 1833.) In South Carolina, the dollar is worth 4s. 6d. currency; so that 1*l.* sterling = 1*l.* 0s. 8½d. currency. *Weights and Measures* same as in England.—(For further details, see *New York*.)

Port.—Charleston harbour is spacious and convenient; but the entrance to it is incommoded by a range of sand-banks, stretching from Sullivan's Island on the north to Folly Island on the south, about 2½ leagues. There are several channels through these banks, but only three, the middle or direct channel, the ship channel, and Lawford channel, between the latter and the mainland, that ought to be attempted by ships of considerable burden. The entrance to the ship channel is in lat. 33° 40'. The depth of water on the shallowest part of the bar at ebb tide is 13 feet, and at flood from 17 to 18 feet; whilst the depth in the middle channel at low water does not exceed 9 feet, and in Lawford channel it does not exceed 10 or 11 feet. A lighthouse has been erected on the south point of Light-house Island, bearing from the middle of the bar of the ship channel W. N. W. ½ N. It is 80 feet high, having a revolving light, alternately brilliant and obscure, the period of obscuration being double that of brilliancy; but on approaching the light, the latter gains upon the former, and within 1½ league it is never wholly dark. The light may be seen in fine weather at from 3 to 4 leagues off. After getting into the channel, which is marked by the breakers and buoys on each side, the proper course for a ship to steer is to bring the lighthouse to bear N. W. by W., and stand direct for it till you get within the banks, when the course is N. by W. But it is unnecessary to enter into further details on these points, as all ships entering Charleston harbour are bound, provided they are hailed by a licensed pilot off the bar, to pay him full pilotage fees whether they accept his services or not. In point of fact, however, they are always accepted; for the shifting of the sands, the influence of the tides, &c. render the entrance so difficult to those not perfectly familiar with it, that even the packet ships that sail regularly to and from New York uniformly heave-to without the bar for a pilot.—(See Plan of Charleston Harbour, reduced from the original survey of Major H. Bache.)

Ships usually moor alongside quays or wharfs, where they are in perfect safety.

Departures from Charleston.—The following is

An Account of the Number of Ships, with the Specifications of their Tonnage, and the Countries to which they belonged, that cleared from Charleston for Foreign Ports during each of the Three Years ending with 1831—

Nation.	1829.		1830.		1831.	
	Vals.	Tons.	Vals.	Tons.	Vals.	Tons.
British	55	18,032	51	16,230	91	26,631
United States	258	81,783	309	94,748	138	43,399
French	22	5,491	11	2,777	6	1,848
Spanish	5	639	12	1,108	27	2,671
Brazils	9	811	6	572	8	871
Dutch	1	183	—	—	—	—
Danish	1	46	1	123	1	125
Total	345	87,796	349	85,578	314	75,015

Shipping Charges.—The charges of a public nature paid by ships entering this port differ but little in amount on a native and a foreign ship. On a vessel supposed to be of 300 tons burden, entering, unloading, taking on board a mixed cargo, and clearing out, they would be as under—

	Dollars, cents.		L. s. d.	
Fee on entry at the customhouse	2	00	0	11 1 4
Surveyor's fee, on a foreign ship	5	00	1	1 4 1 4
Ditto, on a native ship	5	00	0	13 9 3 4
Harbour-master's fee	2	00	0	8 1 4
Port warden's survey, when required	10	00	2	8 1 4
Fees on clearance at the customhouse, of a native ship	3	50	0	14 11 1 4
Ditto of a foreign ship	2	70	0	11 6 1 4

	Dollars, cents.		L. s. d.	
Pilotage inwards and outwards sup- posing the ship to draw 14 ft. water	20	00	0	10 13 6 1 4
Wharfage, per diem	1	00	0	4 3 1 4

The difference in the fees on the clearance at the Custom-house of a native and a foreign ship, is owing to the former being obliged to give certain bonds which are not required of the latter.

The greater or smaller tonnage of the ship makes no difference on any of the above charge, except that of pilotage, which is in proportion to her draft of water, and is the same whether for a foreign or a native ship.

Rates of Commission.—The rates of commission or factorage usually charged and allowed at Charleston on transacting different sorts of business, are as follows, viz.—

For selling domestic produce	2 1 4 per cent.
For selling foreign merchandise	5 per cent.
For guaranteeing either of these sales, 2 1 2 per cent. additional is commonly allowed.	
For purchasing with funds in hand, or drawing domestic bills for reimbursement, 2 1 2 per cent.	
For purchasing goods and drawing foreign bills for reimbursement, 5 per cent. is charged.	
For the sale of real or personal estate, the regular charge is 5 per cent.; but where the property to be sold is of any considerable value, the parties in general enter into an agreement beforehand, and a much lower rate of commission is allowed.	

Charges on Rice and Cotton shipped at Charleston.

Drayage, wharfage, &c.	12 1 2 per barrel.
Cooperage	13 3 4 ditto.
Total	\$1 4 cents per barrel.

* This statement is taken from an American paper, and is believed to be nearly accurate, but it is not official.

On notice the charges are—		On vessel hales or bags,	
On square bales,	Cents.	Drayage, wharfage, &c.	Cents.
Drayage, wharfage, &c.	10 per bale.	Labour, mending sagging, &c.	10 per bale.
Labour, mending sagging, &c.	10 ditto.		15 ditto.
	Total 20 cents per bale.		Total 25 cents per bale.

For commission, see above.

These particulars have been principally derived from the answers made by the Consul at Charleston, to the circular queries; answer which do great credit to his intelligence and industry.

[The capital of the Charleston banks had been augmented, in 1836, to \$6,480,000; the banking capital of the entire state of South Carolina then amounting to the sum of \$7,936,318.

For information concerning the commerce and shipping of the port of Charleston, the reader is referred to the articles *IMPORTS AND EXPORTS*, and *SHIPS*.—*Am. Ed.*]

CHART (*Ger. Seekarten; Du. Zeekarten; Fr. Cartes marines; It. Carte marine; Sp. and Port. Cartas de marear*) is properly applied to a projection of some part of the sea, as the term *Map* is to a portion of the land; wherefore charts are sometimes denominated "Hydrographical Maps." They are distinguished into several kinds, as plain, globular, and Mercator charts.

CHARTERPARTY, the name given to a contract in writing, between the owner or master of a ship and the freighter, by which the former hires or lets the ship, or a part of the ship, under certain specified conditions, for the conveyance of the goods of the freighter to some particular place or places. Generally, however, a charterparty is a contract for the use of the whole ship: it is in commercial law, what an indenture is at common law.

No precise form of words, or set of stipulations, is requisite in a charterparty. The forms subjoined to this article are those most commonly in use; but these may, and, indeed, in many cases must, be varied, to suit the views and intentions of the parties.

A charterparty is generally under seal: but sometimes a printed or written instrument is signed by the parties, called a *memorandum of a charterparty*; and this, if a formal charterparty be not afterwards executed, is binding. The stamp in either case is the same.

Charterparties, when ships are let or hired at the place of the owners' residence, are generally executed by them, or some of them; but when the ship is in a foreign port, it must necessarily be executed by the master, and the merchant or his agent, unless the owners have an agent in such port, having proper authority to act for them in such matters.

A charterparty made by the master in his name, when he is in a foreign port in the usual course of the ship's employment, and, therefore, under circumstances which do not afford evidence of fraud; or when it is made by him at home, under circumstances which afford evidence of the expressed or implied assent of the owners; is binding upon the latter. But, according to the law of England, no *direct* action can be maintained upon the instrument itself against the owners, unless it be signed and sealed by them, or unless they authorize the master (or agent, as the case may be) to enter into the contract, and unless it be distinctly expressed in the charterparty that he acts only as agent.

When a ship is chartered by several owners to several persons, the charterparty should be executed by each, or they will not be liable to an action for nonperformance. But if the charterparty be not expressed to be made between the parties, but runs thus—"This charterparty indented witnesseth, that C., master of the ship W., with consent of A. and B., the owners thereof, lets the ship to freight to E. and F.," and the instrument contains covenants by E. and F. to and with A. and B.; in this case A. and B. may bring an action upon the covenants expressed to be made with them; but unless they seal the deed, they cannot be sued upon it. This, therefore, is a very proper form.

The general rule of law adopted in the construction of this, as of other mercantile instruments, is, that the interpretation should be liberal, agreeable to the real intention of the parties, and conformable to the usage of trade in general, and of the particular trade to which the contract relates.

The charterparty usually expresses the burden of the ship; and by the famous French Ordinance of 1681, it is required to do so. According to Molloy (book ii. c. 4. § 8.), if a ship be freighted by the ton, and found of less burden than expressed, the payment shall be only for the real burden; and if a ship be freighted for 200 tons, or *thereabouts*, the addition of *thereabouts* (says the same author) is commonly reduced to *five tons more or less*; but it is now usual to say so many tons "register measurement."

The usual covenant, that the ship shall be seaworthy, and in a condition to carry the goods, binds the owners to prepare and complete every thing to commence and fulfil the voyage. But though the charterparty contained no such covenant, the owner of the vessel would be, at common law, bound, as a *carrier*, to take care that the ship should be fit to perform the voyage; and even though he should give notice, limiting his responsibility from losses occasioned to any cargo put on board his vessel, unless such loss should arise from want of ordinary care, &c., he would be liable if his ship were not seaworthy.—(See *SEAWORTHY*.)

In all maritime transactions, expedition is of the utmost consequence; for even by a short delay, the object or season of a voyage may be lost; and therefore, if either party be not

ready by the time appointed for the loading of the ship, the other may seek another ship or cargo, and bring an action to recover the damages he has sustained.

The manner in which the owner is to lade the cargo is, for the most part, regulated by the custom and usage of the place where he is to lade it, unless there be an express stipulation in the charterparty with respect to it. Generally, however, the owner is bound to arrange the different articles of the cargo in the most proper manner, and to take the greatest care of them. If a cask be accidentally staved, in letting it down into the hold of the ship, the master must answer for the loss.

If the owner covenants to load a full and complete cargo, the master must take as much on board as he can do with safety, and without injury to the vessel.

The master must not take on board any contraband goods, whereby the ship or cargo may be liable to forfeiture and detention; nor must he take on board any false or colourable papers; but he must take and keep on board all the papers and documents required for the protection and manifestation of the ship and cargo by the law of the countries from and to which the ship is bound, by the law of nations in general, or by any treaties between particular states.

If the master receive goods at the quay or beach, or send his boat for them, his responsibility commences with the receipt in the port of London. With respect to goods intended to be sent coastwise, it has been held, that the responsibility of the wharfinger ceases by the delivery of them to the mate of the vessel upon the wharf. As soon as he receives the goods, the master must provide adequate means for their protection and security; for even if the crew be overpowered by a superior force, and the goods taken while the ship is in a port or river within the country, the master and owners are liable for the loss, though they may have committed neither fraud or fault. This may seem a harsh rule; but it is necessary, to put down attempts at collusive or fraudulent combinations.

The master must, according to the terms of the charterparty, commence the voyage without delay, as soon as the weather is favourable, but not otherwise.

Sometimes it is covenanted and agreed upon between the parties, that the specified number of days shall be allowed for loading and unloading, and that it shall be lawful for the freighter to obtain the vessel a further specified time, on payment of a daily sum as *demurrage*.—(See DEMURRAGE.) If the vessel be detained beyond both periods, the freighter is liable to an action on the contract. The rate of demurrage mentioned in the charterparty will, in general, be the measure of the damages to be paid; but it is not the absolute or necessary measure; more or less may be payable, as justice may require, regard being had to the expense and loss incurred by the owner. When the time is thus expressly ascertained and limited by the terms of the contract, the freighter is liable to an action for damages if the thing be not done within the time, *although this may not be attributable to any fault or omission on his part*; for he has engaged that it shall be done.—(Abbott on the Law of Shipping, part iii. c. 1.)

If there has been any undertaking or warranty to sail with convoy, the vessel must repair to the place of rendezvous for that purpose; and if the master neglect to proceed with convoy, he will be answerable for all losses that may arise from want of it.

The owners or master should sail with the ship for the place of her destination with all due diligence, and by the usual or shortest course, unless in cases of convoy, which the master must follow as far as possible. Sometimes the course is pointed out in the charterparty. A deviation from the usual course may be justified for the purpose of repairs, or for avoiding an enemy or the perils of the seas, as well as by the sickness of the master or mariners, and the mutiny of the crew.

By an exception in the charterparty, not to be liable for injuries arising from the act of God and the king's enemies, the owner or master is not responsible for any injury arising from the sea or the winds, unless it was in his power to prevent it, or it was occasioned by his imprudence or gross neglect. "The question," said Lord Mansfield, in an action brought by the East India Company, "is, whether the owners are to pay for the damage occasioned by the storm, the act of God; and this must be determined by the intention of the parties, and the nature of the contract. It is a charter of freight. The owners let their ships to hire, and there never was an idea that they insure the cargo against the perils of the sea. What are the obligations of the owners which arise out of the fair construction of the charterparty? Why, that they shall be liable for damages incurred by their own fault, or that of their servants, as from defects in the ship, or improper stowage, &c. If they were liable for damages occasioned by storms, they would become insurers." The House of Lords confirmed this doctrine by deciding (20th of May, 1788) that the owner is not liable to make satisfaction for damage done to goods by storm.

The charterer of a ship may lade it either with his own goods, or, if he have not sufficient, may take in the goods of other persons, or (if not prevented by a clause to that effect in the charterparty) he may wholly underlet the ship to another.—(For further details, see Abbott on the Law of Shipping, part iii. c. 1.; Chitty's Commercial Law, vol. iii. c. 9, &c.; and the articles BILL OF LADING, FREIGHT, MASTER, &c. in this Dictionary.)

Forms of Charterparties.

The following is one of the most usual forms of a charterparty:—

This charterparty, indented, made, &c., between A. B., &c., mariner, master, and owner, of the good ship or vessel, called, &c., now riding at anchor, &c., of the burthen of 300 tons, or thereabouts, of the one part, and C. D. &c., merchant, of the other part, witnesseth, that the said A. B., for the consideration hereinafter mentioned, hath granted, and to freight letten, and by these presents doth grant, and to freight let, unto the said C. D., his executors, administrators, and assigns, the whole tonnage of the hold, stern-sheets, and half deck of the said ship or vessel, called, &c., from the port of London, to, &c., in a voyage to be made by the said A. B. with the said ship, in manner hereinafter mentioned, (that is to say,) to sail with the first fair wind and weather that shall happen after, &c., next, from the port of London, with the goods and merchandise of the said C. D., his factors or assigns, on board, to, &c., aforesaid, (the act of God, the king's enemies, fire, and all his factors or assigns, on board thereto, during the said voyage always excepted,) and there unlade and make discharge of the said goods and merchandise; and also shall there take into and on board the said ship again, the goods and merchandise of the said C. D., his factors or assigns, and shall then return to the port of London with the said goods, in the space of, &c. limited for the end of the said voyage. In consideration whereof, the said C. D., for himself, his executors, and administrators, doth covenant, promise, and grant, to and with the said A. B., his executors, administrators, or assigns, by these presents, that the said C. D., his executors, administrators, factors, or assigns, shall and will well and truly pay, or cause to be paid, unto the said A. B., his executors, administrators, or assigns, for the freight of the said ship and goods, the sum of, &c. (or so much per ton,) within twenty-one days after the said ship arrived, and goods returned, and discharged at the port of London aforesaid, for the end of the said voyage; and also shall and will pay for demurrage, (if any shall be by default of him, the said C. D., his factors or assigns,) the sum of, &c. per day, daily, and every day, as the same shall grow due. And the said A. B., for himself, his executors, and administrators, doth covenant, promise, and grant, to and with the said C. D., his executors, administrators, and assigns, by these presents, that the said ship or vessel shall be ready at the port of London to take in goods by the said C. D., on or before, &c. next coming. And the said C. D., for himself, his, &c., doth covenant and promise, within ten days after the said ship or vessel shall be thus ready, to have his goods on board the said ship, to proceed on in the said voyage; and also, on arrival of the said ship at, &c., within, &c. days to have his goods ready to put on board the said ship, to return on the said voyage. And the said A. B., for himself, his executors, administrators, doth further covenant and grant, to and with the said C. D., his executors, administrators, and assigns, that the said ship or vessel now is, and at all times during the voyage shall be, to the best endeavours of him, the said A. B., his executors and administrators, and at his and their own proper costs and charges, in all things made and kept stiff, staunch, strong, well apparelled, furnished, and provided, as well with men and mariners sufficient and able to sail, guide, and govern the said ship, as with all manner of rigging, boats, tackle, and apparel, furniture, provision, and appurtenances, fitting and necessary for the said men and mariners, and for the said ship during the voyage aforesaid. In witness, &c.

The great variety of circumstances under which different voyages are made produce a corresponding diversity in charterparties. The charterparty of which the following is a copy affords a good example of the more complex species of these instruments.

It is this day mutually agreed between Mr. T. B. Rann, owner of the good ship or vessel called the *Mermald*, William Henniker, master, of the measurement of 472 tons, or thereabouts, now in the river Thames, and Mr. David Thomson, of the firm of Messrs. Thomson, Passmore, and Thomson, of Mauritius, merchants, that the said ship, being tight, staunch, and strong, and every way fitted for the voyage, shall with all convenient speed, sail and proceed to Calcutta, with leave to take convicts out to New South Wales, and from thence troops, merchandise, or passengers, to the aforementioned port of Calcutta, with leave to touch at Madras on her way thither, if required on owner's account, or so near thereunto as she may safely get, and there load from the factors of the said merchants at Calcutta, a full and complete cargo of rice, or any other lawful goods which the charterer engages to ship, and proceed with the same to Port Louis, in the Isle of France, and deliver the same free of freight; afterwards load there a full and complete cargo of sugar in bags, or other lawful merchandise of as favourable tonnage, which the charterer engages to ship, not exceeding what she can reasonably stow and carry over and above her tackle, apparel, provisions, and furniture; and, being so loaded, shall therewith proceed to London, or so near thereunto as she may safely get, and deliver the same on being paid freight, viz. for such quantity of sugar equal to the actual quantity of rice, or other goods, that may be shipped at Calcutta, at the rate of 5*l.* 12*s.* 6*d.* per ton of 20 cwt. nett, shipped there; and should the vessel deliver more nett sugar in the port of London than the quantity of rice, or other goods, actually shipped in Calcutta, the owners to be paid on the excess at the regular current rate of freight for sugar which other vessels, loading at the same time at Port Louis, receive; the tonnage of the rice, wheat, or grain, to be reckoned at 20 cwt. nett per ton; that of other goods at the usual measurement (the act of God, the king's enemies, fire, and all and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind soever, during the said voyage, always excepted). The freight to be paid on unloading and right delivery of the cargo, as is customary in the port of London. Ninety running days are to be allowed the said merchant (if the ship is not sooner despatched) for loading the ship at Calcutta, discharging the cargo at Port Louis, and loading the cargo there; the said lay days to commence on the vessel being ready to receive cargo, the master giving notice in writing of the same at Calcutta, and to continue during the loading there; and from the time of her arrival at Port Louis, and being ready to discharge, till the final loading at that port, and to be discharged in the port of London with all possible despatch; and 30 days on demurrage over and above the said laying days, at 12*l.* per day. Penalty for non-performance of this agreement, 4,000*l.* The cargo to be brought to, and taken from alongside at the expense and risk of the merchants. The necessary cash for the disbursements of the vessel at Calcutta, not exceeding 250*l.*, to be advanced by the charterer's agents; they taking the master's drafts on the owner for the same, at the regular current rate of exchange, and at three months' sight; and if the said bills be not regularly accepted and paid when due, the same to be deducted from the freight payable by this charterparty. The vessel to be disbursed at Port Louis by the chartering agents; sum not to exceed 300*l.*, free of commission; and the amount to be deducted from the freight at the final settlement at the port of London. Captains not to ship goods without consent. In the event of the ship being prevented, by damage or any other cause, reaching the Mauritius on or before the 1st day of January, 1831, the charterer or his agents shall be at liberty to employ the vessel for one or two voyages to Calcutta, at the rate of 3*l.* per ton of rice, or other goods, delivered at Mauritius. Fifty running days, to load and discharge, to be allowed on each voyage; it being understood that the charterer or his agents shall load the ship, as before agreed, either at the end of the first or second voyage, as the case may be.

The freight on the intermediate voyages (if any) to be paid on delivery of the cargo, in cash, or by bills on London at usance, at the option of the master. The vessel to be addressed, both at Calcutta and Isle of France, to the agents of the charterer. In witness whereof, the said parties have hereunto set their hands and seals, at London, the 2d day of December, 1839.

Signed, sealed, and delivered,
in the presence of
(Signed) E. FORSYTH.

(Signed) THOS. B. RANN, (L.S.)
D. THOMSON, (L.S.)

Stamp Duty on Charterparties.—The statute 55 Geo. 3. c. 184. enacts, that any charterparty or any agreement or contract for the charter of any ship or vessel, or any memorandum, letter, or other writing, between the captain, master, or owner of any ship or vessel, and any other person, for or relating to the freight or conveyance of any money, goods, or effects, on board of such ship or vessel, shall be charged with a duty of 1*l.* 15*s.*

And when the same, together with any schedule, receipt, or other matter, put or indorsed thereon, or annexed thereto, shall contain 2,160 words or upwards, then for every entire quantity of 1,080 words contained therein over and above the first 1,080 words, there shall be charged a further *progressive* duty of 1*l.* 5*s.*

CHAY or CHOY ROOT, the roots of a small biennial, rarely triennial, plant, growing spontaneously in light, dry, sandy ground near the sea; and extensively cultivated, especially on the coast of Coromandel. The cultivated roots are very slender, and from 1 to 2 feet in length with a few lateral fibres; but the wild are shorter, and supposed to yield one fourth part more of colouring matter, and of a better quality. The roots are employed to dye the durable reds for which the Indian cotton yarn and chintzes have been long famous, and which can only be equalled by the Turkey red.

Chay root forms a considerable article of export from Ceylon. Only a particular set of people are allowed to dig it. It is all bought up by government, who pay the diggers a fixed price of 75 or 80 rix-dollars a candy, and sell it for exportation at about 175 rix-dollars.—(*Bertolucci's Ceylon*, p. 270.)

This root has been imported into Europe, but with no success. Dr. Bancroft suspects it may be injured by the long voyage; but he adds, that it can produce no effect which may not be more cheaply produced from madder. It is a very bulky article, and is consequently burdened with a very heavy freight.—(*Permanent Colours*, vol. ii. p. 282—308.)

CHECKS, CHEQUES, or DRAFTS, are orders addressed to some person, generally a banker, directing him to pay the sum specified in the check to the person named in it, or bearer on demand. The following is the usual form:—

London, 30th October, 1838.

£100.

Pay Mr. A. B. or bearer, One Hundred Pounds, on
account of

C. D.

Messrs. Jones, Lloyd, and Co.

In point of form, checks nearly resemble bills of exchange, except that they are *uniformly payable to bearer*, and should be drawn upon a regular banker, though this latter point is not essential. They are assignable by delivery only; and are payable instantly on presentment, without any days of grace being allowed. But by the custom of London, a banker has until 5 of the afternoon of the day on which a check is presented for payment to return it; so that where a check was returned before 5, with a memorandum of "cancelled by mistake" written under it, it was held a refusal to pay. If a check upon a banker be lodged with another banker, a presentment by the latter at the clearing-house is sufficient. Checks are usually taken conditionally as cash; for unless an express stipulation be made to the contrary, if they be presented in due time and not paid, they are not a payment. It is difficult to define what is the due or reasonable time within which checks, notes, or bills, should be presented. A man, as Lord Ellenborough has observed, is not obliged to neglect all other business that he may immediately present them: nevertheless it is the safest plan to present them without any avoidable delay; and if received in the place where payable, they had better be presented that day, or next at furthest. If a check be not presented within a reasonable time, the party on whom it is drawn will be justified in refusing to pay it; and the holder will lose his recourse upon the drawer. Checks drawn on bankers residing 10 miles or more from the place where they are drawn, must be on a stamp of the same value as a bill of exchange of an equal amount; but checks drawn on a banker, acting as such within 10 miles of the place where they are issued, may be on plain paper.—(*Chitty on Commercial Law*, vol. iii. p. 591.; *Woobrych on Commercial Law*, c. 3. § 2., &c.)

CHEESE, (Ger. *Käse*; Du. *Kaas*; Fr. *Fromage*; It. *Formaggio*, *Cacio*; Sp. *Queso*; Rus. *Syr*; Lat. *Caseus*), the curd of the milk separated from the whey, and pressed or hardened. It has been used as an article of food from the earliest ages: vast quantities of it are consumed in Great Britain, and in most countries in Europe.

There is an immense variety of cheeses, the qualities of which depend principally on the richness and flavour of the milk of which they are made, and partly on the way in which they are prepared. England is particularly celebrated for the abundance and excellence of

its cheese. Cheshire and Gloucestershire are, in this respect, two of its most famous counties; the cheese produced in the former has been estimated at 11,500 tons a year. There are two kinds of Gloucester cheese, double and single; the first is made of the milk and cream, the latter of the milk deprived of about half the cream. They are of various sizes, from 20 to 70 and even 80 lbs.; but they generally run from 50 to 60 lbs. A great deal of cheese is also made in that part of Shropshire which borders upon Cheshire, and in North Wiltshire. The former goes under the name of Cheshire cheese: the latter was, till lately, called Gloucestershire cheese; now it receives its appellation from the county where it is made. A strong cheese, somewhat resembling Parmesan, is made at Cheddar in Somersetshire. The celebrated rich cheese, called Stilton, is made in Leicestershire, principally in the villages round Melton Mowbray. It is not reckoned sufficiently mellow for cutting unless it be two years old; and is not saleable unless it be decayed, blue, and moist. A rich cheese is also made at Leigh, in Lancashire. The other cheeses made in England, which have acquired a peculiar name, either from the quantity made, or from the quality, are the Derbyshire, Cottenham, and Southam cheeses. The two last are new milk cheeses, of a peculiarly fine flavour: the places where they are made are in Cambridgeshire. Bath and York are remarkable for their cream cheeses. The county of Warwick, and Banbury in Oxfordshire, are also remarkable for cheeses; the former for the quantity made in it, about 20,000 tons being annually sent to London, besides a very large supply to Birmingham. Banbury cheese is distinguished for its richness.

Scotland is not celebrated for its cheese: the best is called Dunlop cheese, from a parish in Ayrshire, where it was originally manufactured. Dunlop cheeses generally weigh from 20 to 60 lbs. each; and are, in all respects, similar to those of Derbyshire, except that the latter are smaller.

Turmeric, marigolds, hawthorn buds, &c. were formerly used to heighten and improve the colour of cheese; but annatto (which see) is decidedly the best ingredient that can be employed for that purpose, and is at present used in Cheshire and Gloucestershire to the exclusion of every thing else. An ounce of genuine annatto will colour a hundred weight of cheese.

Large quantities of very good cheese are produced in Holland. In the manufacture of Gouda cheese, which is reckoned the best made in Holland, maritatic acid is used in curdling the milk instead of rennet. This renders it pungent, and preserves it from mites.

Parmesan cheese, so called from Parma in Italy, where it is manufactured, is merely a *skim-milk* cheese, which owes its rich flavour to the fine herbage of the meadows along the Po, where the cows feed. The best Parmesan cheese is kept for 3 or 4 years, and none is ever carried to market till it be at least 6 months old.

Swiss cheese, particularly that denominated Gruyère, from the bailiwick of that name in the canton of Fribourg, is very celebrated. Gruyère cheeses are made of skimmed or partially skimmed milk, and are flavoured with herbs. They generally weigh from 40 to 60 lbs. each, and are packed for exportation in casks containing 10 cheeses each.

According to Mr. Marshall the average yearly produce of cheese from the milk of a cow in England is from 3 to 4 cwt., or more than double the weight of the butter.

For further details, see *Louden's Ency. of Agriculture*; art. Dairy in *Supp. to Ency. Brit.*; *Stevenson's art. on England*, in the *Edinburgh Ency.*, &c.

The imports of cheese, in 1831, amounted to 134,459 cwt., almost the whole of which came from the Netherlands. The quantity re-exported was but inconsiderable. The duty of 10s. 6d. a cwt. on imported cheese produced, in 1823, 69,049l. 2s. 8d.; showing that the quantity entered for home consumption amounted to about 132,000 cwt.

The contract price of the cheese furnished to Greenwich Hospital, in the undermentioned years, has been as follows:—

Year.	Price per lb.	Year.	Price per lb.	Year.	Price per lb.	Year.	Price per lb.
1730	d.	1900	d.	1814	d.	1834	d.
1740	2½	1905	6½	1815	8	1835	4½
1750	2½	1806	7½	1816	8	1836	5½
1760	2½	1807	7½	1817	5½	1837	5½
1770	2½	1808	7½	1818	6	1838	5½
1775	2½	1809	8	1819	8	1839	6
1780	2½	1810	8½	1820	7	1840	4
1785	2½	1811	8½	1821	6	1841	4½
1790	4	1812	8½	1822	6	1842	2½
1795	6½	1813	8½	1823	4	See art. PRICES.	

It is not possible to form any estimate of the value of the cheese annually consumed in Great Britain. Dr. Colquhoun states that the butter and cheese consumed in the United Kingdom must be worth at least 5,000,000l. a year, exclusive of the milk of which they are made; but he assigns no grounds for this statement; which we are inclined to think is very greatly exaggerated.—(See BURRAN.)

The quality of the cheese made in the United States has been gradually improving, and

is in such estimation that while, on an average of four years, the value of the foreign article consumed in the United States has been only \$12,800, the annual amount of American cheese exported to foreign countries, chiefly to the West Indies and the British North American colonies, has been as much as \$650,000.—*Am. Ed.*

CHERRIES, the fruit of a tree (*Prunus Cerasus* Lin.) too well known to require any description. They derive their name from *Cerasus*, a city of Pontus, whence the tree was brought by Lucullus, about half a century before the Christian era. It soon after spread into most parts of Europe, and is supposed to have been carried to Britain about a century after it came to Rome. The principal supplies of cherries for the London market are brought from the cherry orchards in Kent and Hertford. The wood of the cherry is close, takes a fine polish, and is not liable to split.—(*Rees's Cyclopædia*; *Loudon's Ency. of Agric.*, &c.)

CHESNUT, a forest tree (*Fagus castanea*) growing abundantly in most parts of the southern countries of Europe. It was at one time very common in England; and is still frequently met with. It is long lived; grows to an immense size; and is very ornamental. The wood is hard and compact; when young, it is tough and flexible; but when old, it is brittle, and often shaky. The chesnut contains only a very small proportion of sap-wood; and hence the wood of young trees is found to be superior to even the oak in durability. It is doubtful whether the roof of Westminster Hall be of oak or chesnut; the two woods being, when old, very like each other, and having been formerly used almost indifferently in the construction of buildings. A good deal of chesnut has been planted within the last thirty years.—(*Tredgold's Principles of Carpentry*.)

CHESNUTS (*Fr. Châtaignes*; *Ger. Kastanien*; *It. Castagne*; *Sp. Castanas*), the fruit of the chesnut tree. Chesnuts grow in this country, but are very inferior both in size and perfection to those imported from the south of Europe. In some parts of the Continent they are frequently used as a substitute for bread, and form a large proportion of the food of the inhabitants. This is particularly the case in the Limousin, in Corsica, and in several districts of Spain and Italy. The inhabitants of the Limousin are said to prepare them in a peculiar manner, which deprives them of their astringent and bitter properties. Chesnuts imported from Spain and Italy are frequently kiln-dried, to prevent their germination on the passage. In this country they are principally served up roasted at desserts.

During the 3 years ending with 1831, the entries of foreign chesnuts for home consumption averaged 20,948 bushels a year. The duty of 2s. a bushel produced, in 1832, 2,321*l.* 12s. 10*d.* nett, allowing that the consumption must have amounted to 33,216 bushels.

CHETWERT, a measure of corn in Russia, equal to $5\frac{1}{2}$ Winchester bushels, so that 100 chetwerts = $74\frac{1}{2}$ Winchester quarters.

CHILLIES (*Hind. Gas Murrige*; *Javan. Lombok*; *Malay. Chabat*), the pods or fruit of the *Capsicum annuum*, or Guinea pepper. This is one of the hardiest and most productive plants found in tropical climates; growing luxuriantly in almost all dry soils, however indifferent. In the wild state, the pods are small, and so pungent and acrid as to blister the tongue; but when raised on rich soils, they are large, and comparatively mild. The plant is said to be a native of both Indies. It is very extensively cultivated; and, with the exception of salt, is far more extensively used than any other condiment. In tropical countries, the pods are frequently made use of when unripe and green: when ripe, they become of a deep red colour; and in this state they are exported dry and entire, or reduced to powder—that is, to *Cayenne pepper*; which, when genuine, consists wholly of the ground pods of the *capsicum*.—(See *PEPPER*.)

CHINA ROOT (*Ger. Chinawurzel*; *Du. Chinawortel*; *Fr. Squina, Esquine*; *Sp. Raiz China, Cocolmeca*; *Arab. Rhubsinie*), the root of a species of climber (*Smitow China* Lin.). It comes from the West Indies as well as from China; but that from the latter is best. It is oblong and thick-joined, full of irregular knobs, of a reddish brown colour on the outside, and a pale red within; while new, it will snap short, and look glittering within; if old, the dust flies from it when broken, and it is light and keckly. It should be chosen large, sound, heavy, and of a pale red colour internally. It is of no value if the worm be in it.—(*Milburn's Orient. Commerce*.)

CHINA WARE. See *PORCELAIN*.

CHINTS or CHINTZ (*Fr. Indiennes*; *Ger. Zitze*; *It. Indiane*; *Rus. Siz*; *Sp. Chites, Zoraza*), fine printed calico, first manufactured in the East Indies, but now largely manufactured in Europe, particularly in Great Britain.—(See *CALICO*.)

CHIP HATS. See *HATS*.

CHOCOLATE (*Du. Chocolade*; *Fr. Chocolat*; *Ger. Schokolade*; *It. Cioccolata*; *Por. Choelate*; *Rus. Shokolad*; *Sp. Chocolate*), a kind of cake or confection, prepared principally from the cacao nut. The nuts are first roasted like coffee; and being next reduced to powder and mixed with water, the paste is put into tin moulds of the desired shape, in which it speedily hardens, being, when taken out and wrapped in paper, fit for the market. Besides cacao nut, the Spaniards use vanilla, sugar, maize, &c. in the preparation of chocolate. This article which is celebrated for its nutritious qualities, is but little used in Great Britain; a circumstance that seems to be principally owing to the very heavy duties with

which it has been loaded. The importation of chocolate used formerly to be prohibited; and though this prohibition no longer exists, yet, as the duties on it are proportionally much heavier than upon cacao, we manufacture at home almost all that is required for our consumption. British chocolate is said to be very largely adulterated with flour and Castile soap.—(See *Edward's West Indies*, vol. ii. p. 364. ed. 1819; and the art. Cacao.) The quantity of chocolate brought from abroad, entered for home consumption in the United Kingdom, in 1830, only amounted to 1,324½ lbs., producing 160*l.* of revenue.

"Alike easy to convey and employ as an aliment, it contains a large quantity of nutritive and stimulating particles in a small compass. It has been said with truth, that in Africa, rice, gum, and *shea* butter, assist man in crossing the deserts. In the New World, chocolate and the flour of maize have rendered accessible to him the table lands of the Andes, and vast uninhabited forests."—(*Humboldt's Pers. Nar.* vol. iv. p. 234. Eng. trans.)

CHRISTIANIA, the capital of Norway, situated at the bottom of a fiord or gulf, in the province of Aggerhuus; in lat. 59° 55' N., lon. 10° 48½' E. Population, according to the *Weimar Almanack* for 1832, about 20,000. Christiania is about 60 miles from the open sea: the gulf is in some places very narrow, and its navigation somewhat difficult; but it is sufficiently deep for the largest vessels, having 6 or 7 fathoms water close to the quay. It is compulsory on all ships to take a pilot on board at the mouth of the bay. The trade of the town is considerable. The principal exports are timber and deals; glass, particularly bottles; linseed and oil-cake, iron and nails, smalts, bones, oak bark, &c. Salted and pickled fish, one of the staple products of Norway, is principally exported from Bergen. The deals of Christiania have always been in the highest estimation; a consequence of the excellence of the timber, and of the care with which the sap-wood and other defective parts is cut away; and not, as Mr. Coxse seems to have supposed, of the skilful sawing of the plank. The saw mills were formerly licensed to cut a certain quantity only, and the proprietors were bound to make oath that it was not exceeded.—(*Coxse's Travels in the North of Europe*, 5th edit. vol. iv. p. 28.) This absurd regulation no longer exists. There are far fewer restrictions on industry and commerce in Norway than in Sweden. In the former, British manufactured goods are admitted on moderate duties, and are very generally made use of. The principal articles of import are corn, colonial produce; woollen, linen, and cotton goods; butter, wine, brandy, &c.

Trade of Norway.—The following tables give a comprehensive view of the foreign trade of Norway.

Imports.—An Account of the Quantities of the principal Articles Imported into Norway, during each of the Three Years ending with 1831.

Trade with England.—According to the official accounts rendered by the British Custom-house, there were imported from Norway, in 1831, 48,151 cwt. oak bark, 377 tons iron, 18,219 goat skins, 299,840 lbs. smalts, 118 cwt. tallow, 8,439 great hundreds baltens and batten ends, 10,457 great do. deal and deal ends, 4,896 mats, &c. under 13 inches diameter, and 23,527 loads of timber, exclusive of about 1,000,000 lobsters, of which no account is kept. During the same year we exported to Norway 533,491 lbs. coffee, 7,765 lbs. indigo, 8,189 lbs. pepper, 4,981 lbs. pimento, 4,585 gallons rum, 3,169 cwt. muscovado sugar, 366,021 lbs. tobacco, 83,268 lbs. cotton wool, 3,774 tons coal, 434,744 yards cotton cloth, earthenware of the value of 3,402*l.*, cutlery of the value of 3,648*l.*, 92,150 bushels of salt, soap and candles of the value of 3,933*l.*, woollen manufactures of the value of about 13,000*l.*, and some minor articles — (*Parl. Paper*, No. 556. Sess. 1833.)

Nothing would do so much to extend our trade with Norway, and not with it only, but with the whole north of Europe, as the repeal of the discriminating duty on Norwegian and Baltic timber. And, as this measure would be, in other respects, highly advantageous, it is to be hoped that its adoption may not be long deferred.

Customs Duties.—As previously remarked, these, when compared with the Swedish duties—(see GOTTENBURGH), are moderate. They amounted, in 1831, inwards, to 161,840*l.* 8*s.* 3*d.*; outwards, to 47,361*l.* 8*s.* 3*d.*; making together, 309,201*l.* 1*s.* 6*d.* To these have to be added 97,456*l.* 1*s.* 5*d.* received on account of tonnage duties, lights, &c.

Customs Regulations.—Within 24 hours after a vessel has got to her moorings, the master must deliver to the collector his annual report as to ship and cargo, or present the requisite documents for having such report made out with the assistance of a ship broker, whose services masters of foreign vessels cannot actively dispense with. On making this general report, the measuring bill is to be exhibited, and payment of the tonnage and other dues inward is to be made. If the ship have not been previously measured in Norway, and is, consequently, not provided with a Norwegian measuring bill, she is to be measured, to ascertain her burden in Norwegian commercial tons, for the calculation of the tonnage duty.

The general report having been made, the Custom-house officers in charge of the vessel are furnished with the books for delivery, and the discharge of the cargo commences under their inspection; and the consignee may make their special reports under their responsibility and signature. If they are without precise information as to the contents of any of the packages or bales to their address, these bales or packages may, at their request, be opened in the presence of the officers before report is made. If a consignee omits availing himself of this permission, his pretending thereafter that some or other goods than he had ordered, or been advised to, have been sent to his address, will not be attended to. In the reports of entries is to be stated, whether it is intended to pay the duties forthwith, whether the goods are intended for exportation, or whether they are to be landed.

Prior to commencing loading outwards, the master is to give verbal notice of his intention at the Custom-house. If he have no Norwegian measuring bill, the vessel is to be measured. This being done, the shipper or shippers of the outward bound cargo are each of them to make their special entries as to the quality, weight, and measure of the goods they mean to load. A copy of these entries is to be deposited at the Custom-house, and the loading commences under the control of the officers. This applies to all mixed cargoes; but if the outward bound cargo consist exclusively of wood, the shipper or shippers are only to notify that they intend loading wood, without specifying quantity, measure, &c. as the export duty on wood is charged according to the burden of the vessel. When the master clears outwards, he produces the proper documents for showing the burden of his vessel, and to what port she belongs, and he is then, on proper application being made, provided with a pilot, who takes his vessel to sea.

Warehousing.—In Norway, goods brought from abroad may be bonded or warehoused, with a view to their being again exported at some future period. Goods exported for home consumption may also

be bonded for a certain period, in order to facilitate the payment of the duties.

The former is called "*garnet opslag*," that is, depositing or warehousing goods for exportation, subject to transit duties only. The latter is called "*credit opslag*," that is, warehousing or bonding on credit.

1. **Transit Opflag.**—Under this system, goods from abroad may be warehoused for exportation free of import duty, paying on exportation a transit duty, which, in most cases, is 1-10th of what they would pay if entered for home consumption. If the goods are deposited in the Custom-house warehouses, they are free of rent or dues during 14 days, and if in private warehouses, under the key and seal of the customs, during 6 months. If they remain long, viz. beyond 14 days in the one, and beyond 6 months in the other case, they pay rent or dues equal to 1-10th of the transit duty per month; which, after the lapse of 8 months, as regards goods in the Custom-house warehouses, is increased to 1-4th of the transit duty per month.

2. **Credit Opflag.**—This system allows most goods imported from abroad to be placed in the owner's or importer's own warehouse, under his own lock, free of duty, for a given time, on his reporting to the customs, every 15 months, how much he has sold, otherwise consumed, or exported, and then paying the duty on such amount; the Custom-house officers, who are bound quarterly to examine the goods, convincing themselves, by actual demonstration, that no more is missing than the quantity reported to have been taken away.

This credit on the duties is no more to exceed 5 years from the time the goods were imported.

By way of security for payment of the duties on which the credit is granted, promissory notes are to be furnished.

1. **Priority of mortgages on all the goods in question.**

2. **Priority, or first right, in the property, goods, and effects of every description belonging to the trader availing himself of this credit, in as far as such property is not previously legally mortgaged.**

3. **Liberty for the Custom-house officers, when and as often as they shall deem it expedient, between the stated quarterly inspection, to look over the stock on hand, with a view of ascertaining whether there remains sufficient value for the duties; and if they are not to doubt this, full right, in default of other satisfactory security being offered, to seize the stock, and to sell the whole, or so much as shall cover the duties.**

4. **In case of death or failure of the party, an equal right to sell**

forthwith the whole of his stock at public auction, and to retain as much of the proceeds as shall cover the duties; and in case of default, an established claim for the remainder on the estate of the deceased or bankrupt, as the case may be.

In charging the duties, no allowance is made for waste or damage in the warehouse.

The warehouse rent charged on goods bonded under the transit system, in the Custom house warehouses, is as follows:—

On a quarter of wheat, for the first 3 months	s. d.
Afterwards	0 0/5336 per month.
On a ton of raw sugar, for the first 3 months	0 1/1078 —
Afterwards	0 11/3364 per month.
	1 11/7050 —

Money, Weights, and Measures.—In Norway there are no gold coins. The principal silver coin, called a species dollar, is divided into 120 skillings. There are, also, half species, or 60 skillings pieces; 1-4th species, or 30 skillings pieces; 1-5th species, or 24 skillings pieces; 1-8th species, or 15 skillings pieces; and what is denominated skillingmynt, or small change—that is, 4 and 2 skillings pieces. The species dollar contains 390.58 Eng. grs. pure silver, and is, consequently, worth 4s. 6½d. sterling, the par of exchange being 4 species dollars 42 6-17 skill. = 12. All Norway coins, except the small change, are alloyed with 1-7th copper, so that the species dollar weighs 448.26 Eng. grs., and its divisions in proportion. Small change coins are alloyed with three times their weight of copper. There are 1 and 2 skillings pieces of copper.

Weights and Measures, same as at COPENHAGEN; which see.

Shipping Charges.—The various charges of a public nature payable by a ship of about 300 tons burden, entering the port of Christiania with a mixed cargo on board, unloading there, taking on board another cargo, and clearing out, are as follow:—

1. Charges Inwards.—Pilots from Fardet, at the mouth of Christiania Bay, where all ships must take a pilot on board	L. s. d.
Bill of health, amounting that the crew, including the master, consists of 14 persons	2 8 8
Tonnage dues and light money	0 17 9
Broker's fees	0 9 10
	1 5 4
	L. 14 2 0
2. Charges Outwards.—Pilots	0 9 8
Castle dues	0 1 7
Master's roll of crew	0 1 5
Pale or stake money	0 3 8
Measuring bill	2 4 5
Charity chest	0 1 7

Nicholson's light	0 0 9
Pilots to Fardet	1 16 8
Broker's fees	1 18 11
	L. 18 6 11

N. B.—There is no difference between the charges on native ships in Norwegian ports, and privileged foreign ships, that is, the ships of countries having reciprocity treaties with Norway; nor in the duties on goods imported by native ships and such privileged foreign ships. Great Britain is a privileged country.

The shipping of Norway has declined considerably of late years; a proof, if any such were wanting, of the groundlessness of the rumours kept up in this country as to the supposed pernicious influence of reciprocity treaties on our shipping.

Banking.—There are no private banking establishments in Nor-

way; but there is a public bank, having its principal office at Drontheim, with branches at Christiania, Bergen, and Christiansund. It was established by a compulsory amendment in 1816. Its capital consists of 3,000,000 species dollars, in transferable shares, divided amongst those who were forced to contribute to its formation. These shares are now at a premium of 80 per cent. Its managers are appointed by, and are accountable to, the Norwegian parliament. It issues notes for 100, 50, 10, and so on, in species dollars. These notes should be payable in specie on demand, but they are at a discount of 35 per cent., and are paid by the bank at that rate. It discounts bills at 2 and 3 months date at 6 per cent. per annum; advances money on mortgage at 4 per cent.; and transacts the ordinary banking business of individuals. It does not allow interest on deposits. The dividend is, at present, from 2-3-4 to 7 per cent.

Credit.—Golds are sold partly for ready money, and partly on credit, but principally the former. The number of brokers in Christiania is limited to 4. Commission on the sale of goods, 2 per cent., or, *ad credita* included, 3 per cent. Brokerage is fixed by law at 5-6-10 per cent., which, in practice, is paid by the seller.

Insurance.—All houses situated in Norwegian market towns must be insured in the General Insurance Company at Christiania, which is guaranteed by the state. The premium is moderate, being, on buildings situated in towns, 1-4th, and on those situated in the country, 1-8th per cent. Sometimes, however, when very destructive fires occur, it is raised.

Provisions, &c.—Christiania is not a favourable place for carousing and repelling ships; but supplies of beef, bread, water, and other sea stores, may be had as cheap or cheaper than in any other part of Norway; but its distance from the sea is too great to allow of its being visited by ships desirous merely of victualing.—We have derived these details from various sources, but principally from the able *diapers* of the *Comat* at Christiania to the *Circular Quare*.

Timber.—A standard Christiania deal is 11 feet long, 1 1/4 inch thick, and 9 inches broad; and 81-2 such deals make a load. Freight of deals from Norway to England is calculated at the rate of single deal, the standard measure of which for Christiania and at the southern ports of Norway, except Dram (a small town on the

Drammen, about 22 miles S. W. of Christiania), is 11 feet long, and 1-4 inch in thickness. A single deal from Dram is reckoned 10 feet long and 1 1/2 inch thick.

Battens.—Three battens make 2 deals, retaining their own length and thickness. Half deals are only counted as deal ends, if they run under 6 feet; but if they run 6 or 7 feet long, then 2 half deals are counted a deal, retaining their own thickness.

Ends of Deals.—Four ends of deals, although 5 feet long, make but a deal 11 feet long, retaining their thickness, which the owners and captains of ships think unreasonable; but as the freighters of ships seldom wish to have this assortment, which commonly run from 3 to 5 feet, and are taken on board as stowage, consequently for the advantage of the ship and not the freighter, the ship ought to bear the burden.

End of Battens, called Larvick Palings.—No less than 6 ought to be counted a single deal, 11 feet long and 1-4 inch thick.

Plank-boards, when they have their proper length, are 7 feet long; 3 plank-boards are counted a single deal.

Staves for hogheads take up much room; in consequence of which more than 10 cannot be computed a single deal.

The width of deal is never noticed in the calculation of freight; a good deal ought to run 9 inches within the sap, which, not a twentieth part of a cargo does at present; but, though some may be above 9 inches wide, many are only 8, therefore one must make up for the other.

Timber, or Heavy Goods.—cannot be exactly computed according to the contents in deals, because it cannot be stowed in a ship in the same manner as deals; the freight is, therefore, agreed for by the

leap, or according to the number of deals which the vessel may have taken on board on a former occasion.

One hundred deals = 120.

A ton = 48 solid feet of timber, cut to a square.

One load of balk, or timber, = 50 solid feet.

Two loads of timber are reckoned for 150 deals.

The several bills of lading contain together an exact account of the cargo which the captain has received on board his ship, consequently billing him to deliver according to their contents: when, therefore, the deals are mentioned as usual 9 and 10 feet, and 11 and 12 feet, he cannot insist on more freight than half of the length, according to its description.

(One thousand Norway standard deals are reckoned equal to a load of coals, which is 21 tons.)

Boards pay duty as masts; capravens are above 12 and under 18 inches in circumference at the middle, and without bark. Clap-board is exported in whole pieces and unquartered. Deals from Germany pass as Norway deals; spruce deals are upwards of 30 feet in length; deal's from Norway, above 7 feet long, are counted as whole deals; above 5 feet, and not above 7 feet in length, are counted as half deals; and 2 of them pass as one whole deal.

The difference between the Christians and Dram standard being nearly 1-11th part, the freight to Dram ought to be varied proportionally. It has sometimes happened that ships both for Christiania and Dram have been in company and those for Christiania have got in, sailed, and sailed, before the others for Dram have got over Drammen, which runs very strong down in the spring of the year. —(Rondanz's European Commerce.)

CHUNAM, the name given in India to lime. The best, obtained by the calcination of shells, is employed in the composition of **BETEL**—(which see), to prevent, it is said, its injuring the stomach.

CIDER, or **CYDER** (Fr. *Cidre*; Ger. *Zider*, *Apfelwein*; It. *Cidiro*; Rus. *Sidor*; Sp. *Sidra*), the juice of apples expressed and fermented. The produce of the duty on cider and perry (the expressed and fermented juice of pears) amounted, in 1828, to 37,220*l.*; which, as the duty was 10*s.* a barrel, shows that the quantity produced must have amounted to 74,440 barrels, exclusive of what might be clandestinely manufactured. The perry is supposed to have amounted to about a fourth part of this quantity. The duty was repealed in 1830.—(See **APPLES**.)

CIGARS. See **TOBACCO**.

CINNABAR (Ger. *Zinnober*; Du. *Cinaber*, *Virmilioen*; Fr. *Cinnabre*; It. *Cinabro*; Sp. *Cinabrio*; Rus. *Kinowar*; Lat. *Cinnabrium*).

1. *Native Cinnabar*.—a mineral substance, red, heavy, and brilliant. It is found in various places, chiefly in quicksilver mines, being one of the ores of that metal. The cinnabar of the Philippine Islands is said to be of the highest colour; but that of Almaden in Spain, is the richest. The best native cinnabar is of a high colour, brilliant, and free from earthy or stony matter.

2. *Artificial Cinnabar*.—"When two parts of mercury and one of sulphur are triturated together in a mortar, the mercury gradually disappears, and the whole assumes the form of a black powder, formerly called *Ethiops mineral*. When this mineral is heated red hot, it sublimes; and if a proper vessel be placed to receive it, a cake is obtained of a fine red colour. This cake was formerly called cinnabar; and when reduced to a fine powder, is well known in commerce under the name of *vermilion*."—(Thomson's Chemistry.)

CINNAMON (Du. *Kaneel*; Fr. *Cannelle*; Ger. *Zimmet*, *Kanehl*; It. *Canella*; Lat. *Cinnamomum*, *Canella*; Por. *Canella*; Sp. *Canela*; Pers. and Hind. *Darchinie*; Arab. *Darsini*; Malay, *Kaimanis*; Greek, *κινναμωμ*), the bark of the cinnamon tree (*Laurus cinnamomum*), a native of Ceylon, where it grows in great abundance; it is also found in Cochin China, but no where else. The cinnamon said to be found in China, Borneo, &c. is merely *Cassia lignea*. It is brought home in bags or bales weighing 92½ lbs. each; and in stowing it, black pepper is mixed with the bales to preserve the cinnamon. The best cinnamon is thin and rather pliable: it ought to be about the substance of royal paper, or somewhat thicker; is of a light yellow colour, approaching nearly to that of Venetian gold; it is smooth and shining; fractures splintery; has an agreeable, warm, aromatic flavour, and a mild sweetish taste when chewed, the pieces become soft and seem to melt in the mouth; it is not so pungent but that it may be borne on the tongue without pain, and is not succeeded by any after taste. Whatever is hard, thick as a half-crown piece, dark-coloured or brown, or so hot that it cannot be borne, should be rejected. Particular care should be taken that it be not false packed, or mixed with cinnamon of an inferior sort.—(Milburn's Orient. Comm.; Marshall's Essay, quoted below.)

The cinnamon of Cochin China grows in the dry sandy districts lying N. W. of the town of Faifoë, between 15° and 16° N. lat. It is preferred in China to the cinnamon of Ceylon: the annual imports into Canton and other ports vary from 250,000 to 300,000 lbs. There are no fewer than 10 varieties of this species in the market. It is not cured, like that of Ceylon, by freeing it from the epidermis.—(Crauford's Embassy to Siam, &c. p. 475.)

Cinnamon Monopoly.—Down to the present year, the cultivation of cinnamon in Ceylon was restricted to a few gardens in the neighbourhood of Colombo; the production and sale of the article being wholly monopolised by government. Upon the transference of the island from the East India Company to the king's government, the former agreed to pay

60,000*l*, a year for 400,000 lbs. or 4,342½ bales of cinnamon; it being stipulated, that if the quantity collected exceeded this amount, *the surplus was to be burned!** But this agreement was afterwards broken off; and, for these some years past, the cinnamon has been sent to England by government, and sold on its account at quarterly sales. The revenue derived by the Ceylon treasury from the cinnamon monopoly, in 1831, it said to have amounted to 106,434*l*. 11*s*. 11*d*.; but it is not said whether this is the nett or gross revenue, that is, whether it be exclusive or inclusive of the expenses attending its management.—(*Ceylon Almanac for 1833*, p. 82.) As the monopoly could not be enforced except by confining the culture of cinnamon to certain districts, it necessarily led to the most oppressive interference with the rights of individuals, to the creation of numberless imaginary offences, and the multiplication of punishments, forming a heavy drawback upon the prosperity of the island. We are, therefore, glad to have to state that it has been at length abandoned; and that we are no longer liable to the charge of upholding, without improving, the worst part of the Dutch policy; but have restored to the natives their right to cultivate cinnamon any where and in any way they think fit. We subjoin a copy of the advertisement issued by the Ceylon government in reference to this important subject.

Notice is hereby given, that in direct pursuance of instructions received from the secretary of state, from and after the 10th of July next, the general export of cinnamon from the ports of Colombo and Point de Galle exclusively, in the island of Ceylon, will be allowed, on payment of an export duty of 3*s*. per pound, without distinction of quality.

From the same period, all restrictions and prohibitions against the cultivation, possession, or sale of cinnamon by private individuals will cease; and such quantities of cinnamon as government now has in its possession, or may hereafter be obliged to receive in payment of rent, or from the government plantations (until they can otherwise be disposed of), will be sold at periodical sales, subject always to the payment of the said export duty, and under conditions as to the completion of the purchase, and the actual payment of the purchase money in cash or government bills, on delivery of the cinnamon, similar to those heretofore stipulated at the sales held in London, and which will be fully notified and explained hereafter.

No collections will, for the future, be made in the forests on account of government.

The first sale will be held on the 10th day of July next, at the office of the commissioner of revenue; when 1,000 bales of cinnamon will be put up to sale in lots at the undermentioned prices, and will be sold to the highest bidder above the reserved price.

1st sort, per lb.	s.	d.
2 <i>l</i> — — — — —	3	6
3 <i>d</i> — — — — —	2	0
	0	9

The proportion of each sort to be put up will be notified hereafter.

The stock of cinnamon in the hands of the agent in London, in September, 1832, and which was to be sold at the 4 usual quarterly sales, in October, 1832, and January, April, and July, 1833, amounted to 4,688 bales; two consignments, amounting to 828 bales, have since been sent to England, viz. 508 bales in July, 1832; 320 bales in October, 1832; since which no shipments have been made, and none will be made hereafter.

The sales for the 2 years ending with that of July, 1832, somewhat exceeded 5,500 bales per annum.

Chief Secretary's office, Colombo, March 9, 1833.

Duties on Cinnamon.—Nothing can be more satisfactory than this document, in so far as the free culture of cinnamon is concerned; but it is deeply to be regretted, that the abolition of the old monopoly system should be accompanied by the imposition of the exorbitant duty of 3*s*. per lb. on all cinnamon, exported, without distinction of quality. Its natural cost does not, we believe, exceed 6*d*. or 8*d*. per lb.; but taking it at 1*s*., the duty is no less than 800 per cent. ! So enormous a tax, by confining the export of cinnamon within the narrowest limits, will go far to deprive the island of the advantages it would otherwise derive from the repeal of the monopoly, and will be, in all respects, most injurious. We have heard, that it is contended, in vindication of this oppressive tax, that Ceylon having a natural monopoly of cinnamon, it is sound policy to burden it with the highest duty it will bear; as the largest revenue is thus obtained at the least expense to the island. But in addition to the cinnamon produced in Cochín China, and which it is more than probable will speedily find its way to the European markets, the extent to which cassia lignea is substituted for cinnamon, shows that the monopoly possessed by Ceylon is of very trifling importance. But though it were otherwise, though cassia lignea did not exist, and cinnamon were to be found no where but in Ceylon, we should not the less object to so exorbitant an export duty. So long as it is maintained, it will confine within the narrowest limits, what might otherwise become a most important branch of industry, and a copious source of wealth to the island. According to the crown commissioners, the average quantity and value of the different sorts of cinnamon annually sold of late years has been,—

Sorts of Cinnamon.	Quantity	Rate.		Amount.	
	<i>Lbs.</i>	<i>s.</i>	<i>d.</i>	<i>£</i>	<i>s.</i>

* See an article by H. Marshall, Esq., staff surgeon to the forces in Ceylon, in *Thomson's Annals of Philosophy*, vol. x. p. 356.

It is not at all probable that the exports will materially increase under the new system but had the duty varied from about 6d. per lb. on the best, to 3d. or 4d. on the inferior sorts, we have little doubt, now that the culture is free, that the exports would, at no very distant period, have amounted to some millions of pounds. It is the high price of cinnamon,—a price not caused by its scarcity or the difficulty of its production, but by the oppressive monopolies and duties to which it has been subjected,—that has made it be regarded as a luxury attainable only by the rich. There is no other spice that is so universally acceptable; and there is none, were it charged with a *reasonable duty*, that would be so sure to command an immense sale. We know, quite as well as the writer of an article on this subject in the Colombo Journal, “that the cook who employs 1 ounce of cinnamon to improve the flavour of his dishes, will not employ 4 ounces when the spice is a fourth of the price;” but we further know, what the journalist would seem to be ignorant of, that were its price reduced, as it might be, to a third of what it has hitherto cost, it would be used by ten or a dozen cooks, for every one who employs it at present. In fact, the entire consumption of cinnamon in Great Britain is under 20,000 lbs. a year!

Should the exports of cinnamon from Ceylon under the new plan amount to 500,000 lbs. a year, government will receive from it an annual revenue of 75,000*l.*; and supposing them to amount to 600,000 lbs., the revenue will be 90,000*l.* And to secure the immediate payment of this trifling sum, every ulterior consideration of profit and advantage has been sacrificed. It is, however, pretty clear, that this short-sighted rapacity will be, in the end, no less injurious to the revenue, than to the industry and trade of the island. Were cinnamon allowed to be exported for a few years under a low duty, or till such time as the taste for it was fully diffused throughout this and other countries, it would then be easy, by gradually raising the duty, to obtain from it, without materially checking the consumption, a *very large revenue*; at least 5 or 6 times more than it will ever produce under the present plan.

Suppose that we had had the power effectually to monopolise the inventions by which Sir Richard Arkwright and others have so prodigiously facilitated the spinning of cotton; what would have been thought of the policy of those who should have proposed laying a duty on exported cottons equivalent to the peculiar advantages we enjoyed in their production? Had this been done, we should have got a *monopoly value* for our exports of cotton; but instead of amounting, as at present, to 17,000,000*l.* a year, they would not, under such a plan, have amounted, to 170,000*l.*; and instead of affording subsistence for some 1,300,000 or 1,400,000 individuals, the cotton manufacture would not have supported 50,000! And yet this is the mischievous nostrum, for it would be an abuse of terms to call it a principle,—on which we have proceeded to regulate the export of the staple product of Ceylon.

The following table shows the quantities of cinnamon retained for home consumption, the rates of duty, and the net amount of the duties in each year, since 1810.

Years.	Quantities retained for Home Consumption in the United Kingdom.	Nett Amount of Duty received thereon.	Rates of Duty charged thereon.	Years.	Quantities retained for Home Consumption in the United Kingdom.	Nett Amount of Duty received thereon.	Rates of Duty charged thereon.

In the London market, cinnamon is divided into 3 sorts. The first is worth, at present (Sept. 1833), duty included, from 8*s.* 6*d.* to 10*s.* per lb.; the second, 6*s.* to 7*s.* 6*d.*; and the third from 5*s.* to 6*s.*

[See IMPORTS AND EXPORTS.—*Am. Ed.*]

CINQUE PORTS. These are ancient trading towns, lying on the coast of Kent and Sussex, which were selected from their proximity to France, and early superiority in navigation, to assist in protecting the realm against invasion, and vested with certain privileges by royal charter.

“The ports so privileged, as we at present account them, are Dover, Sandwich, Romney, Hastings, Hythe, and the two ancient towns of Winchelsea and Rye; although the two latter places appear to have been originally only members. The services which they were

* The exports having exceeded the quantity charged with duty within the year.

appointed to perform, were either honorary, viz. assisting at the coronation and sending members to parliament; or auxiliary to the defence of the realm, as furnishing a certain supply of vessels and seamen, on being summoned to that service by the king's writ.

"In process of time the Cinque Ports grew so powerful, and, by the possession of a warlike fleet, so audacious, that they made piratical excursions in defiance of all public faith; on some occasions they made war, and formed confederacies as separate independent states. It seems, however, that these irregularities were soon suppressed, when the government was strong, and sufficiently confident to exert its powers. So long as the mode of raising a navy by contributions from different towns continued, the Cinque Ports afforded an ample supply; but since that time their privileges have been preserved, but their separate or peculiar services dispensed with. Their charters are traced to the time of Edward the Confessor; they were confirmed by the Conqueror, and by subsequent monarchs. William the Conqueror, considering Dover Castle the key of England, gave the charge of the adjacent coast, with the shipping belonging to it, to the constable of Dover Castle, with the title of Warden of the Cinque Ports; an office resembling that of the Count of the Saxon coast (*Comes littoris Saxonici*) on the decline of the Roman power in this island. The lord warden has the authority of admiral in the Cinque Ports and its dependencies, with power to hold a court of admiralty; he has authority to hold courts both of law and equity; is the general returning officer of all the ports,—parliamentary writs being directed to him, on which he issues his precepts; and, in many respects, he was vested with powers similar to those possessed by the heads of counties palatine. At present the efficient authority, charge, or patronage, of the lord warden is not very great; the situation is, however, considered very honourable, and the salary is 3,000*l*. He has under him a lieutenant and some subordinate officers; and there are captains at Deal, Walmer, and Sandgate Castles, Archcliff Fort, and Moats Bulwark.
